(15:31) information through the air so Morgan financed the \$150,000 based on Communications only Morgan knew of marone's work and some others who were racing to try to be the first Wireless as they called it in those days Morgan was uh he didn't care about all the Finesse and so forth he was strictly a finance year he was strictly interested in making money and he knew this new area was going to go and going to make money a lot of money for who ever got there first and in his opinion Tesla had the best chance to get

(16:04) there first so that's why he backed uh Tesla Tesla however was even more interested in doing a worldwide Energy System to provide energy that would be very cheap for everybody in the world anywhere on the earth and so the actual installation that he started building was this Giants installation so well known to the Tesla fans and people who read of Tesla in the struggle

between Morgan and his counterpart his counterpart almost bought Morgan's uh Railroad Company right out from under him he bought uh in

(16:40) fact control of the voting shares of the preferred stock but not of the common stock and Morgan issued orders from Europe to buy all the stock that could be bought at any cost in one day the stock made astronomical jumps uh the whole stock market went crazy we don't have anything like that in our time inflation became suddenly rampant parts and electrical things went up three times for example and suddenly everybody Furnishing Parts uh there was a panic because of the money shortage and everything and the stock we would today

(17:15) call it a crash in other stocks um so what happened is they begin demanding all their money up front to the very beginning are you saying that Tesla was forgotten after Warden Cliff that it was Warden Cliff that ruined his reputation well it was a combination of events there were many people who resented Tesla particularly among the academic Community uh number one they didn't understand at all how he worked uh he didn't have the academic credentials what they regarded the high academic credentials they had he of course had

(17:49) academic credentials he certainly was had been very vocal that the common electromagnetic Theory which he usually referred to as the Herz Theory and the Herz waves since Herz you know proved the Maxwell predicted wave uh Tesla was adamant that uh there were no transverse Maxwell Herz waves in The Ether and that he Tesla was you not using that kind of theory at all that theory was very limited and did not apply to what he was doing in other words he what he was saying to the entire scientific mind of the day was that what you're doing

(18:26) gentlemen is erroneous not only that I'm proving you're in error but because he had become a household word when you do you become a single name Tesla not Nicola Tesla you see and because of this kind of effect he had become essentially the great wizard he had given us the AC power system and everything and there was a great deal of resentment for what they regarded as an upstart inventor who was in fact essentially saying uh I'm going to usurp your science they would interpret it that way not all people

(19:00) were detractors but many were he also was not a great theoretician he didn't feel he didn't fill up books with great theories and full of mathematics uh and so he just didn't practice the game as it was being practiced he was ostracized I think primarily because of his difference and because of his radical statements and because of his pronouncements of great systems they didn't have the foggiest notion of what he was talking about he had one other unfortunate incidents which today would would laugh at but was

(19:32) very serious at the time I think it was 1901 I'd have to check my records he picked up radio signals from space you know we know today of course that planets radiate uh RF noise and so forth but when he announced this it was uh it just caused a sensation and all the scientists said immediately what a c you know what a idiot so an unfortunate reaction occurred in the scientific community that he had to be an utter coup because everybody knew that there were no signals from space and that was an unfortunate timing and contributed to

(20:04) his demise Nichol Tesla also had an ego very big and um there there's some argument for the fact that his ego or his vision of self may have undone him as well could you address that at all yes that's quite true he was arrogant um he he knew in his mind what he had done and what he could do he had done the experiments for example in his few months at Colorado Springs which proved that he was on the right path and he was hastening back to New York to get the funding from Morgan and set up his uh Warden cliff and get on with doing the

(20:38) wireless but also the the other energy at the same time he was going to do it all in one stroke and when this uh Panic came along and supplies went up and U finally he made the final fatal mistake he briefed Morgan in desperation that what he was really about because he thought Morgan would appreciate that he simply did not understand a finance year who's not interested in all of that but what is it going to do to make me money there's nothing wrong with that I'm just saying that's the way Morgan approached

(21:09) it at that point Morgan also knew that Marone was closing in on it and very close to transmitting Wireless across the ocean the Atlantic so uh Morgan knew at that point briefed on what yet had to be done and how much money Tesla needed and all that he knew the game was lost from a community ation Viewpoint that Marone was going to be first so at that point Morgan in his own mind wrote it off as bad a bad investment going sour and one thing he did not do was throw good money after bad a perfectly Sound business decision today we would say so

(21:44) he simply wrote the project off Tesla could never understand for some months there after what had happened why he couldn't get the extra money people began to quit work because he couldn't pay them the suppliers wouldn't send him his supplies because he couldn't pay them UPF front and the whole thing began to sort of grind to a halt he did get the installation in operation but he never succeeded at what he was doing and by that time Morgan was never going to finance him again uh a combination of events then

(22:14) occurred and within a few years of that to where uh suddenly things began to ship the jealousy of the scientific Community began to suggest that he was after all just a c everybody knew that thing on Warden Cliff was foolish and so he became almost a nonperson in the space of a very few years uh older man living in a hotel room uh feeding the pigeons with all his idiosyncrasy he really did have idiosyncrasies he had a morbid fear germs he would use something like 17 white napkins for a meal that he would have and meticulously lay one aside once

(22:51) he made the first wipe with it to wipe his hands or whatever he he had a lot of idiosyncrasies and of course his autocratic pronouncements uh as you say his ego also was there he also had quite an ego and so people just shuttled him aside and said well he's at best an e egomaniac who's mistaken and at worst he's just a lunatic and they simply wrote out of the books uh what he had done i f e

(24:27) e e e e

(26:17) okay well I was just muted that whole time my God chat I was muted that whole time chat you didn't let me know my God okay people who are watching the stream I'm super sorry about that I did not mean to do that oh I need a producer guys okay I'm going to say everything that I just said while I was on mute right there um so I just wanted to oh my God it's like three minutes of me just ranting on mute okay I apologize people on the stream I do this a lot Eric thank you very much man appreciate you for

(26:49) being here Eric Hecker is in the chat Antarctica um the reason why I think Eric is on point with the stuff that he's talking about is that that I feel like he's a normal guy like me that was pushed into an extraordinary situation where he found out information that he felt like the world had to know the answer and he was in a position to know it I think the reason why the world struggles with the story that he's been telling regarding Antarctica is because we have been so blinded by what is out there and hidden right in front of us

(27:20) this whole time that we just can't believe it to be true and you can look at the MH370 case that I've been looking at and people have the same reaction they think there's no way that we can potentially have teleported or warped an object from one location to the other it's just so far beyond the Paradigm and for a lot of people directed energy weapons are so far beyond the Paradigm but what we were just looking at right there with Tesla you can tell that Tesla was also the type of person that was

(27:49) looking so far beyond the Paradigm that people JP Morgan was investing in him and that they knew the investors knew that this was going to change the whole world that we were going to have stuff like television radio all this stuff that you know 100 years ago and I'm pretty sure that predates radio people would have thought as magic the stuff that we're doing right now people would have thought of as magic but Tesla was out there and he knew conceptually what was going on and what what did that do to him it made him

(28:21) a Marty so to speak or it uh you know they essentially vilified him they thought he was a crazy person um and this goes to show how science really works science is a matter of making huge leaps and when you have discoveries discoveries aren't a matter of like oh you have to advance your civilization so far before you realize it it's just a matter of people that are uh freethinking people who are forward-looking and taking risks and so I think that that's what's great about Tesla and once again I want to thank

(28:53) Eric uh in for being in the chat um Eric I I didn't see your email back I did email you so I know that's the real Eric since uh Hecker because he mentioned that I had an email that I sent him so I don't know if you can send me another one but we we need to connect for sure because I would definitely like to talk to you uh about your experience in Antarctica and anything else that I can do to help to get the information out there I think there's a very clear cross in terms of the science that explains

(29:22) stuff like directed energy weapons and also weirdly enough teleportation of a large object I think it all comes down to scalar physics and to goes all the way back to Tesla and the

scary part is how long have we had this stuff out there and how advanced has it gotten in the last 100 years behind the scenes so let's keep watching focused in on the electromagnetics because early on in my work I also became disenchanted with the present electromagnetics model to understand Tesla you must take seriously I think his suggestion that the present

(29:56) electromagnetics model is seriously flawed nobody wants to take that seriously most of the people who approach Tesla use the conventional electromagnetics and when they cannot explain what he was talking about they say therefore the man was a cook now suppose for a moment that he really was correct Suppose there is something wrong with the classical electromagnetics of course you can use the classical model to do the things we do but it means there are many other things that can be done that we cannot do because we have excluded that part

(30:32) from our model and from our teaching and from our knowledge and from our instruments let's pursue that a moment the original electromagnetics written by um Maxwell himself was written in an algebra called Quaternions what we mean here is a higher topology algebra in which you can do things in this kind of expression of electromagnetics that you can't do in vectors or tensors now the real theory that Maxwell had depending on who counts the equations and what they count uh is something like 20 equations and 20 unknowns to give some numbers to

(31:16) it when Heaviside got through translating it into a much simpler algebra called vectors which he helped create and he wrote all the modern equations that are used as Maxwell's equations not Maxwell himself none of those ever appeared in anything by James Clerk Maxwell When Heaviside modified it to a much easier algebra called Vector analysis which he helped complete the algebra itself it consisted of some two equations or so with an extra equation thrown in depending on the way you want to count that again certainly if you

(31:49) want to count the full thing four equations so you can see a remarkable reduction in the amount of variations of things you could do and that's what I mean when I say we previously had an electromagnetics that permitted lots of functioning that is no longer permitted by the kind of electromagnetics we all taught to apply and use today it's a subset of what can be done a scientist brother named Barrett a very brilliant scientist has done a very good analysis when Herz announced his discovery of the actual

(32:29) waves it's in there if you read it but actually Tesla went to see Herz to convince him of the era of his waves and showed him experiments and everything else to prove that the wave that was actually in The Ether was not a transverse string wave but in fact was what we today we would call a longitudinal sound wave a wave of rarefaction and compression he did do that and was not able to convince Herz but Herz was very disheartened by all this evidence that Tesla had given him but never revealed what the evidence

(33:05) was let's look now and see if there's any room for what Tesla was saying and I want to tell you a story of the greatest joke on all of Science in all of history because you'll never

understand Tesla till you know this joke when they were trying to write the the wave equation for the plucked string wav of course they were studying plucked stringed instruments you have a taught string suspended between two points you know in the body of an instrument and they simply pluck the string various ways and watched the waves they then

(33:46) wrote equations for the tensil forces and so forth in the string they isolated the string they assumed that there's nothing else happening but the string and using the forces and they teach the sophomore students to do it this way they derived the string wave equation first of all there is no such thing as a tight string independently existing apart from a holder anywhere in the world there never will be there is however a tight string which has equal and opposite forces and the ends of the holder that's holding the

(34:20) string and creating the tension on the string if you will apply the same approach and ask your s the full question what system was perturbed it was not just the tight string it was the tight string plus the body of the instrument what comes about is that every transverse string wave that occurred in the string an equal and opposite highly damped wave occurred down in the body of the instrument every guitar picker which I'm a very poor one knows that the body of the instrument vibrates when you pluck the string you

(34:56) depend on the characteristic of that for your sound what happened though by throwing away the holder and the anti-wave in the holder every time a mathematician or a physicist writes a wave equation he has thrown away half of the problem of the phenomena the anti-wave still exist but he threw it somewhere usually into a highly damp system and ignores it the way he gets by with that at the end where he has now described his reactions with the single wave equation the transverse wave equ equation the other wave reappears and he says oh that's

(35:32) Newton's third law reaction force because it's always equal in opposite well Newton's third law is not a law it's a description it is not a mechanism for what causes something at all if you add back in the wave that is missing guess what you get you get equal and opposite waves in the vacuum these waves are in fact longitudinal waves they are more sound like intestinal is right and all the textbooks in the world are wrong and now let's turn that make sure unmute here Kaboom Tesla was right all the textbooks

(36:11) in the world were wrong uh need to clip that for sure uh 17 minutes in I was actually planning on clipping that earlier today and fell asleep um but Tesla was right need to make sure I note that now what did he just explain there very important Concepts is that when heavy side redid the equations now when we take a string instrument like a guitar and I pluck it like this is it just the rubber band or the string that's vibrating no my hands are as well the sound is based on the structure of the instrument not just

(36:54) based on the string it's also based on the thing that's holding in the string so the same concept applies here to a wave flowing through SpaceTime so to speak is that it also depends on the ether that it's flowing through as well and this is the thing that Tesla understood that has

been Rewritten from our equations and I think this equates then to our B field equation where they just set it equal to zero they just simplified the equations and what this did was this made us not realize the nature of our reality we've been

(37:27) teaching electromagnetism incorrectly for 100 years pretty incredible from Talking sound let's turn it to electromagnetics if I examine an atom and I see the complex assem of dipoles each dipole being the electron charge and the piece of the positive charge of the nucleus I find something very similar to the holder and the string that is I have something very light the electron which is perturbed and I have something which is highly damped the very heavy nucleus by the equal and opposite anti-disturbance and we still know that exists but we

(38:06) call it Newton's third law we just invoke a description have no idea what causes it but anyway if the wave comes in from the vacuum and is intercepted by one of these dipoles in addition to the disturbance the string wave that we will see off of the uh electron in we will have the anti-wave The Recoil forces on the other in and so always we get equal and opposite we do get the opposite wave and what came in from the vacuum had both the separation between the two charges caused the separation of the two waves just as the separation between the

(38:43) string and the body of the instrument cause the separation of the wave and any wave in the plucked string instrument so we still have the same thing and we still hold to the fact there is a longitudinal wave in the vacuum not just a single transverse wave now let us see what happens when we launch a real quick so what he just said there is that there has to be an equal and opposite wave for everything that's happening and I I hope I'm saying this correctly based on my interpretation here again not a PhD but that when we

(39:13) pluck the string there's an equal and opposite wave that's happening in the O the object itself relative to the string now same idea would apply to any type of wave that we create electromagnetic wave that we shoot through SpaceTime there's going to be equal and opposite one in the the instrument that's holding it the instrument that's holding it is The Ether the underlying framework of the reality itself so there's something that we're not seeing there behind the scenes is essentially what he's

(39:42) saying wave now that we know that from an antenna when I launch away from a physical antenna the matter in the antenna is made of these same atoms in these same dipoles and in addition to launching the wave from the electron shells and the electron interactions there is a highly damped anti-wave launched at much less uh disturbance highly reduced of the anti-wave but as soon as it emerges from the antenna there is no longer any damping because there's no longer any heavy nuclear mass and so immediately it

(40:15) pops to full shape and full size and so we still have the longitudinal wave and the vacuum that we launch can I prove that in what we receive yes indeed I can and you must understand this if you ever understand Nicola Tesla now let me go to the reception of this wave in a circuit and I have some pre electrons in my circuit and then comes the wave from the vacuum the electrons in the circuit are pushing against their brothers down the road which

pushes back and it's restrained it had very difficult for it to move

(40:46) longitudinally we know that today we know that it only moves down the wire at something like 11 ft per hour the signal that moves down the wire at near light speed will have completely exited the solar system and gone on by that time so as you can see we have a very sluggish electron restrained which is spinning we know today when they wrote those equations they didn't even have the notion of the electron so it acts as a gyro and by gyro Theory right out of the book when you longitudinally disturb a gyro that's restrained it will precess

(41:24) sideways and all of our instruments measure and detect the electron precession waves that's what we put on our oscilloscopes and what we read with our instruments and yes indeed gentlemen we do detect the electron wiggle waves and they are transverse waves but a gyro reaction precesses at right angle to the actual disturbance which proves that it is a longitudinal wave in the vacuum if you do not believe that you must throw away all gyro Theory Tesla was right every textbook in the US is wrong Maxwell simply assumed out of thin air

(42:00) the transverse string wave because that's what everybody was familiar with when he wrote the first equations and it's never been changed to this day so so was Tesla aware of this and is this what Tesla was talking about when he talked about telforce okay there we go okay guys I'm just nerding out a little bit because we got error in the chat and I this is just it's nerding me out because I had never talked to Eric hacker before but when I watched him and here's here's my true opinion I'm just going to be 100%

(42:34) honest when I saw his interview on Sha Ryan six months ago when this investigation first started I thought no it this can't be true is that really is that how it works I had no idea I was still full on like my old thinking and then I started investigating like how could we actually teleport an object what would be the science that would support it and I met people that knew Thomas Bearden the guy that we are watching on the video right now knew him before he died he died a couple years ago and they didn't even really lead me

(43:09) to Thomas beard and I think I just I uncovered it through other information digging through the science and the moment I started watching about scalar physics I went holy [REDACTED] Eric Hecker is Right Eric Hecker nailed it and people don't realize and you know what I appreciate Eric you're in the chat you know what I appreciate about what you said the most is that the battle that we are waging is an information War about getting the information out to people in a way that they can accept it and I constantly think about when you were on

(43:38) Sean Ryan and you said directed energy weapons is a word that people need to get into their vocabulary that's a really great way to put it because it resonates with people people think directed energy weapon they can understand that when you dig in a lot of this scalar physics a lot of people check out now people in my chat MH370 X they they've been following along for six months they've been watching the Journey of how we've been going like we started with just legitimate like how does a circuit work and we're now at the

(44:07) point where we're looking at scalar physics out here and I am 100% certain this is legitimate and I know not just from what we're watching but from what literal contractors that work on special access programs have told me behind the scenes the people that I've interviewed that what they've told me and that it lines up with what people have already said out there the scary part is this has been hidden for decades absolutely decades and the question is how do we present this in a way where people can

(44:43) digest it and realize that it's real I think that the true problem is how do we get people to understand that this stuff is real and possible and the scary part is like I would say Eric has an easier time convincing people because directed energy weapons is now something that people are starting to wrap their brains around the idea of using the same technology to literally teleport an object it's not teleportation like Star Trek it's it's warp speeding manipulating gravity itself to move an object from one location over here to

(45:17) another that's a whole another can of worms I mean that is and that's why it's made this so difficult is like trying to convince people of that is a lot harder than trying to convince people director energy weapons which is why Shawn Ryan's afraid to talk to me but doesn't have any problem talking to Eric but also Eric saw this stuff in the equipment firsthand versus I just saw some videos and it took me you know shamefully 10 years to realize that those videos are authentic and I think people think that

(45:45) oh no those are video game effect they're not guys those videos are real and it's proven by the science here that we're looking at so let's keep going I don't want to go too much on my soap box here it was deeply involved in it Tesla made several statements for example over and over where he said there are no transverse waves in the vacuum no Hertz waves the waves in the vacuum I have already proved he said is like a gas and the waves in it therefore are like sound waves they are longitudinal

(46:14) waves and he was indeed correct today for example in modern uh quantum mechanics there is a vacuum it is a medium and it's a virtual particle flux and so indeed the vacuum is a virtual gas by today's best physics and and Tesla was right it is a longitudinal wave and I've just explained how it's split when it's received you do get what we measure with our instruments because of the electron precession and you also get the any wave at the same time proving that it was an extra wave there down in the nucleus in the materials

(46:46) which do recall and we just ignore it we know it's there but we just ignore it now let's look for example at his statement of Wireless transmission here he was talking of the transmission of energy through the atmosphere or indeed through space uh without loss as a matter of fact if this if that is true then it already exists in nature Tesla had rediscovered nature as a matter of fact today in modern Theory we know that the energy in an electromagnetic wave transmitted is already conserved if you take a wavelength at

(47:24) any length from an omni transmitter and you take the hemispherical shell of that wavelength times the entire surface area of that shell the energy that's in that shell is the same

as the energy in any other shell of any radius the energy is totally conserved and none of it is lost we already know that that part is absolutely correct the energy density course goes way down as the shell expands so that part is unquestionable now the question is can we direct that and can we control it uh in a sense if we do a laser beam we do that there's a

(47:59) better way to do it if we go to Whitaker's paper which was written in 1903 and some other papers have been written since then like by zilowski and by suu in 1993 and Zukowski in the 80s a strange thing comes about what we call the electrostatic scalar potential that is pure voltage to simplify it can be uh broken down into a directional set of wave pairs one wave going one way the other way time reversed and locked on it in space so what we call just voltage or just potential is actually got a hidden set

(48:40) incredible amount of waves going in both directions and not only we consider it just a fixed value at a point in space But as a matter of fact it's a tremendous energy flow so what Tesla really discovered was how to combine the waves so that they eliminated the gradients technically speaking the gradients opposed each other but were still there but now hidden the net gradient the net force field was gone we know today the other electromagnetics is still there and we have an energy flow in both directions he just explained phase

(49:12) conjugation chat okay if you don't know what phase conjugation is I'm going to explain it to you very simply real quick uh Dave Rossi has mentioned this several times he mentioned this on the Tim pool podcast that I went on with him phase conjugation is when you get the waves to make love to cancel each other out what he just said right there is this idea that you can get the waves to cancel out entirely now if you try to measure it the electromagnetic field you're going to measure nothing but there's still

(49:38) something there there's still a scalar there this is what people don't realize this is what seems like well I can't measure it must be nothing there but then if you take these scalars that you've created and then you create an interference pattern scalar interferometry now something comes back again because it wasn't that there's nothing there we just just cancel them out so he simply found out how to do that and yes indeed there is no loss in that kind of potential if you make a beam of that uh you can IND indeed

(50:09) transmit energy in a completely hidden fashion you can stick a normal meter right in the beam and it won't see a thing because there's no Force  $F$  uh and you can transmit it at a distance uh how effectively depends on the uh ability to make the beam how narrow you can make the beam and hold it together and the other thing depends on a slight interaction with the atmosphere in the middle you'll spill a little but you can do it 98% or so which I think is what Tesla said also there's one other thing

(50:38) we must say about that there is emerging in the last few years and has emerged in Orthodox science at an advanced level uh what I would say is the very beginning but it's it's moving pretty fast uh theory of force free fields and these are getting very close to what Tesla was doing they haven't added the any way back in yet but they're getting close at least they're

eliminating the overall force and doing something else with the electromagnetics That Remains the other thing which must be brought to

(51:08) bear and I must do this very precisely to understand Tesla is the fact that for example if you read Jackson classical electrodynamics you will find when he's first setting out in the first so many pages he points out very clearly that this Theory this very beautiful Theory only only holds when the background is reasonably well behaved reasonably linear he points out that if the background becomes nonlinear that you must then turn to the emerging field or the field that has emerged in nonlinear Optics nonlinear

(51:42) Optics in some Fashions is an unfortunate term because uh the mechanisms are fundamental they apply to all frequencies and they apply to all kinds of waves it's a matter of when the background gets sufficiently nonlinear to induce these phenomena so as long as you continue to try to keep the background linear which we're great at doing we try really to sweep out these phenomena Tesla had stumbled into this area very early on and mastered part of this area long before the terminology I'm using existed he

(52:15) knew how to do number one what today we call phase conjugation he knew how to do what we call pumped phase conjugation and he even knew how to do what we call Tech technically today amongst very few people self-targeting YSI chat make sure you are paying attention to this phase conjugation pumped phase conjugation and self targeting everything we see in the MH370 videos can be described by what we just saw here and what we just listened to now when we talk about our coherent matter wave imagine us taking a bunch of

(52:53) strings and I'm going to take a couple rubber bands here just to uh show you guys what I'm talking about so I can visualize this now we take our V our strings here these are our electrons okay let's just imagine these are strings because I don't have strings out there and they're flowing freely in every random Direction out there now what do we want to do to these electrons we want them to cohere with one another how do we do that how do we take a nonlinear thing and make it linear we weave them

(53:21) together we weave them together and now we turn them into a coherent electron wave and what happens to them their spin changes they go from half spin particles firion to full integer spin particles bons if you would want to think of it like that and what happens when we have a force we get an equal an opposite Force so if we get a one spin electron wave then we get a minus one spin corresponding electron wave that goes along with it and the minus one electron spin wave is potentially our force that we need in order for anti-gravity to

(53:58) manipulate to bend SpaceTime itself so he had some tools at his fingertips which he could use on the lab bench and build equipment he worked on an enormous number of years on which could do things that the normal electromagnetics cannot do we do some of them today in nonlinear Optics now let me talk about self-targeting so you can understand some of his transmission without loss one of the problems we have like for example in something like missile defense if I have a spaceborn laser let me say and I have a rising enemy booster

(54:35) 10 15,000 mi away I've got a problem I've got lots of power I can put the laser beam onto the booster but I must hold it on one particular spot 15,000 mi away on that exact spot a long enough time called dwell time to burn through the casing and destroy the booster so I have a problem how do I hold this beam there and keep it from wandering around on the body of the booster well it turns out you can do it very easily with a thing called self-targeting every signal that comes from there if I phase conjugate and transmit a phase

(55:08) conjugate replica it goes unerringly back to the spot including it laded a little bit because the component of its motion was on the beam that came to me and so if I continue to do that iteratively I can hold the beam exactly on the uh booster and burn through it so by targeting I can hold a laser beam on a point it doesn't have to be a booster a defense or anything I can hold a beam of energy onto a point that I have at a distance that's the main thing by self-targeting and on my own opinion I reached the

(55:42) opinion that Tesla in his tele geodynamics had discovered how to do that with the mechanical waves first of all he could transmit the full way through the Earth and he could cause the thing when it came back to be face conjugated once he had a reflection from anywhere he could narrow immediately into that point and put all his energy to that point and today there is a theoretical basis for it uh I couldn't build such equipment but I mean there's a theoretical way to go to do that and apparently according to his statements

(56:13) that's my interpretation of what he was doing he was doing iterative phase conjugation and therefore able to focus his energy regardless of what kind of Route it followed to the exact point he wanted it to go to on the other side of the Earth chat holy crap did you guys just listen to what he just said he just said that we can create a targeting mechanism that can track an object in motion no problem whatsoever now if you want to know what phase conjugation really means imagine that you're shooting a light beam onto a mirror it's

(56:46) going to bounce off of it at an angle but instead of bouncing off at an angle it bounces directly back at the target at the speed of light this is how you can track an object as well you can imagine very easily that if you can do that where instead of bouncing off the object it it bounces directly back this is the idea of radar and if you can do phase conjugation this is what begins to enable all the magic out there because the phase conjugation can also then cancel out our wave our herzan wave essentially the electromagnetic uh waves

(57:21) become perfectly counter one another they make love and all of a sudden now what do we get we get something called order effects we get an effect that we pre previously did not have at all that going on and we might not be able to see it and the only way we can't see it is because there's a Fifth Dimension that we don't perceive where that wave is TR is transmitting through longitudinally not transversally like this but longitudinally like a sound wave like a perturbation Through The Ether okay let's keep

(57:55) going now was this theoretical or was this ever demonstrated I believe he demonstrated it uh for example my personal opinion and I certainly cannot prove this in a court of law and I

want to label it as a personal opinion uh my personal opinion because of certain time sequences of some of his statements and incidents which actually happened I think as a last desperate measure while his uh installation at Long Island was still intact and still in operation I believe he fired the electrical pulse of energy that blew down that forest in Siberia

(58:30) Oliver Nicholson has done some very good work for example to look at the admittedly circumstantial evidence we can't prove it at all I just happen to hold to the thesis that it was his last ditch effort to try to solve his problems that he'd lost with Morgan by focusing attention onto the absolute power that could be Unleashed with this and it failed nobody was interested I was very curious about the time correlation between his installation still existing on Long Island still in operation and this Siberian uh

(59:03) particular blast and its characteristics which it was not a nuclear weapon it was not a meteorite so uh in doing a little work on that thanks uh to Oliver Nicholson he sent me some very good information on that and uh it's not the kind of thing you can ever say with any certainty happened certainly not but uh there is at least circumstantial evidence that he may have done that in speaking of nuclear energy and Tesla's objection to it and um some of the things he had in mind with energy uh it's pretty obvious that

(59:37) Tesla not only knew how but advocated very strongly that you could do this electromagnetically and you could do it cleanly and cheaply without U all the nuclear residue and the nuclear waste and the long-term effects and this kind of thing you know it's it's it's tough to dispose of nuclear waste now I I have mixed feelings on this uh for example I am a nuclear engineer I have a master's degree from Georgia Tech but I'm not a practicing nuclear engineer nor have I ever been the Army really didn't see fit to let me

(1:00:09) do that nonetheless I know a little bit about what they're about and so forth and a nuclear power plant is not a great breakthrough in technology at all it's a great heater and what we really do we use the nuclear reactions to produce heat and we either boil water and make steam or we just use the hot water and then it's the heat energy that we must convert uh to provide our electric power now the demand for electric power is great enough it's a big enough problem as everybody is aware if we must continue to furnish

(1:00:41) this electric power uh at our present science level there's no really acceptable alternative yet to the nuclear power plant however it doesn't mean that that's the preferable solution by any means I think it's preferable the other way which is why I work so hard to try to do it electromagnetically now at this very conference that we're at when this interview is being made I'm going to introduce what is almost the final results of my 30 years of work in this area and what we have done is very

(1:01:13) similar to what Tesla did and he provided the codes the clues on which to look what I've done okay now this part that he just mentioned right there uh this is really interesting guys a nuclear reactor is just a heater we take that heat energy and we convert it to electricity why is that important just think about that concept for a second does that seem efficient no would

would be much more efficient if we can produce Electrical uh energy just directly as opposed to heating something up and Tesla realized that we could do this

(1:01:52) without all the nuclear waste and byproducts that are out there does that remind you of any other technology that we've looked at recently chat how about the thunderstorm generator using plasmoids in a car engine to produce zero exhaust and to create cold fusion where elements are actually fusing together to form higher uh Proton elements that we wouldn't think would be possible like what Bob Greener showed Eric if you're out there and you're watching I think you should also take a look at Bob Greener and Malcolm

(1:02:29) Bendle's work as well I got a super creepy letter that wanted me to find Randle Carlson and M Malcolm Bendle and I did and I found out about this thunderstorm generator and it's real too and it's not a direct link between all of this but I think that there's a lot of Technology out there that has been brushed aside as being potentially fake where people like Tesla and other scientists that came before knew knew that it was real uh and it's it's scary man cuz I sit there and I wonder this is the last thing I'll say

(1:03:03) we'll get back to the video is that what would these people do to hide this would they kill people I think in today's day and age it's much harder I listen to General Flynn and he says that well it's harder to kill people now because there's so much forensics and if you were to do that you have to bring more people in you have to silence them they can figure out what happened exactly they can tell whether or not it was suicide Etc I think in if we had lived in the 1950s doing what we're doing right now I think that Eric

(1:03:31) and myself would have been silenced instead they use disinformation they discredit people that are out there they make them seem crazy and what have you that's how they keep the stuff hidden that's out there that's what they did to Malcolm Bendle as well and they attack their past and these skeletons they have in their closet they'll dig them up and they'll use them against them uh and and this is what is like wow how much stuff have we had out there and how have they kept this secret for so

(1:03:58) long let's keep go oh and also what would they do to hide this would they convince some kind of **debunker** that hey some DOD produced asset is has a similar Edge pattern and I'm going to use that to **debunk** like a whole video using one frame or convince some type of VFX expert that he should go out and make a video to his millions of followers that says this thing is a perfect match or that they found some picture that they took that they have no Providence for whatsoever and convince them that hey go tell the world that you took this

(1:04:34) picture and that somehow a two-dimensional picture is in a 3D video where you have accurate lighting and clouds that match in two different videos that are in perfect synchronization yeah absolutely they would go do that to hide this information that's the minimum they would do to hide this information so I want people in the chat just to keep that in mind as we go forward with this technology and you think this isn't real that's totally fine I'm not trying to convince you that this is real I just want you to know

(1:05:03) that it is and the thing about it is that you cannot hide this forever so at some point the people like Eric Hecker the people like myself the people like Tesla the people that came before us will be Vindicated in the eyes of the science guaranteed is uh taking him to heart and convince myself with a lot of investigation and study the waves in the vacuum are longitude so when electromagnetic waves break loose from their mass restriction and holding they are longitudinal waves and when they get tied up in Mass they get

(1:05:36) split into these two waves which one of which is acting upon the electrons to cause them to move sideways and they slip a little bit every once in a while down the wire creates Newton's third law reaction in the nucleus well when you go through enough analysis of this what you really find and what as of Friday of this week uh yesterday I have filed uh my associates and I I should say have filed a very fundamental patent on the creation in a circuit of longitudinal waves to flow the the uh energy freely literally in the Tesla fashion

(1:06:14) and then use it separately in a load to power a load technically it's still called displacement current what we have done we have split the normal current technically  $dq/dt$  into two comp components one being displacement current  $df/dt$  and one being that mass slippage every once in a while of these pressing electrons down the wire and what we really have done is used a a barrier invented by Bill Fogle to stop the mass flow which is all the workflow the rate at which energy is being lost in the circuit we allow only the flow

(1:06:51) past fogal semiconductor which is a patented device patented in 9 to and then we use this free energy flow which is does not disperse conventional Theory already recognizes displacement current as pure energy transport without losses for example the way to use it and I want everybody to know so they can check it if I then run the displacement current through the primary of its stepup Transformer I produce ordinary Garden variety magnetic field and store that free energy in that magnetic field that couples to the secondary

(1:07:27) which then couples to the electrons in that circuit through the load which are now free to move I don't restrain them and I pump the electrons through the load absolutely conventionally and do power in the load so what I have is absolute conservation of energy but I do not conserve work loss the dissipation of the energy I take the energy in almost freely from the battery or power source in this case it would be an oscillator cuz I'm speaking AC we can do a DC I strip off and block the component of the current that's responsible for

(1:07:59) all losses in the circuit then I take the displacement current and I couple it gather it and store it in this case magnetic field couple it to the other side and discharge it through the load completely separately none of my load discharge current goes back through my source no degradation is done to the source and yes indeed you can legitimately do overunity electrical systems and it's exactly analogous to a heat pump which is a proven overunity system that we use in our homes Chad this is the only time I'm

(1:08:33) ever going to say this on a stream so pay attention right now this is the technique that I think that people that are out there that are producing over Unity are using that exact

technique that you just heard I'm not going to go into more detail about it based on information I know behind the scenes but there it is right there overunity is possible he just described it to you there you go 35 minutes into this I just told the world how to build a free energy machine is what I told okay now if we assume that what I've

(1:09:07) explained about the way we have approached um the use of the energy which is freely available from the vacuum vacuum energy is now acceptable even in physical review Thanks to some fine work by people of the stature of Hal POF for example is very very straightforward very technical and in his now an acceptable thing we know the vacuum and it is accepted is filled with energy and Tesla always said that it was so once again Tesla has been Vindicated by modern quantum mechanics after all of these years I think uh if we look at some of

(1:09:44) the other incidents um as for example Tesla talked about being able to tap the energy of cosmic rays he talked um in fact his nephew reported as a child r in in the car where Tesla had put in um an engine of some kind which was self-powered so we find then later references to Tesla which suggest the harnessing of energy from today we would say from the vacuum so does that sound reasonable to us today from where I'm coming from yes indeed because that's exactly what we have done we take it uh in the potential

(1:10:21) across the source we simply use the hidden wave flow from the Whitaker St stuff we want to extract that and use it in this displacement current form while it's still energy flow and none of it's being lost we do not wish to make work until we store it up and discharge it in the load separately we do it just like a heat pump and I really think that's probably the way Tesla did it in that car engine he also knew there was enormous energy in what was called cosmic ray and he connected that with the whole idea of

(1:10:52) the energetic vacuum we would say today and I think that's just one of the ways he referred to it uh for example we know from T Henry Mor's work that he was inspired by Tesla's statement that the the energy of The Ether itself was literally filled with rivers of energy free for the taking it inspired him and his great undertaking today the fashion is to sweep that aside and say well you know I know what he was doing Tesla just didn't know you he was using this stuff that I know all about and so I talk about the Earth

(1:11:23) ionospheric wave guide and resonance and that's not what he was doing at all you can't do free energy for the whole world with Earth ionospheric resonance it isn't going to happen we know about that you know it isn't going to happen you know another area that often occurs in discussions of Tesla is the notion of weaponization of Tesla's true work that's relatively unknown to modern science but could probably be known to some very sharp people that looked into it because they wanted to make weapons

(1:11:52) he Tesla certainly spoke of a very large series of very powerful weapons I think that's a reasonable thing and let's approach it this way certainly I'm on record is saying the weapons exist and that several Nations have weaponized them let me explain a little bit about what I'm talking about and a little bit key points where you might look we know for a fact that for

example T Henry moay with his power supply was visited by the **Russians** and we know that the **Russians** tried to in fact take it they even tried to kidnpped T Henry

(1:12:27) moay and so we know that the **Russia**ns very early on were interested in things like free energy right out of the vacuum and they were interested in weapons there are even reports that they contacted Tesla and I'm sure they would have he certainly had plenty of headlines so if we have that then as a a starting point we have a situation where in the late 30s particularly and just prior to World War II there was at least some kind of interest in contact we know in the case of T Henry Mo they very probably got the exact blueprints out of

(1:13:03) build the device maybe a couple things missing in here and there but a really good lab could have eventually put it together from there then comes along World War II the big interrup Interruption for everyone okay at that time um after World War II we have a very strange situation which exists now first thing that exists we have suddenly thrust upon the world scene the atomic bomb if we had not done so we would have had a blood bath when we tried to invade Japan so many lives were saved by the use of the atomic bomb and I am not an

(1:13:41) atomic bomb apologist many people who are here today would not be here if their fathers had been killed by the invasion of Japan and depending on who you believe the casualties would have been about 1 million on our side alone anyway we arrived at this state in the world where now there's a very powerful weapon which suddenly frustrates one of the things that Stalin has planned to do Stalin of course had a spy in the atomic bomb project he knew we were getting ready so it wasn't a big surprise to him okay I want to make a

(1:14:13) quick comment here on this part and this is the reason why not only do I post about science but I also post about geopolitics Thomas Bearden just said that the atomic bomb saved millions of lives that if Japan had invaded the United States millions of people would have died that's a guys you need to think about that definitely need to think about that there's multiple aspects to this one is that absolutely the death toll would have been huge from a land invasion of the United States but also think about why

(1:14:52) we use weapons of mass destruction we use weapons of mass destruction for the greater good people ask the question why do we not just break out our orbs that can teleport planes or potentially incinerate and or you know vaporize entire cities well because we need to be able to use it for the greater good why do we not use it for in the Ukraine why do we not use it against **Putin** why do we not use it against um you know **China** why do we not use it in in uh Israel Hamas cuz those Wars don't require it it's not for

(1:15:28) the greater good when you do it Wars are about money so when you understand things like this you start to realize the next time that we will potentially have a huge revolution in technology is when we have to use the weapon again and hopefully we never have to at Potsdam when Truman told him that we had just exploded the first atomic bomb but he had been planning after Europe after the European war and everything wound down he would hold his armies for about two years we always beat our PL uh swords back into plow

(1:16:03) shars and go home historically it's the last war never going to be another one unfortunately human nature doesn't change and so there is another one and Stalin in about two years would keep all his armies intact and simply take over Europe in about 6 weeks that was his plan however now he couldn't do that because if he mashed his forces we would have bombed him back into the Stone Age so he had a problem there is at least reasonable reason to believe that St Stalin called in his scientific heads when he got back from

(1:16:36) poam and really laid the law down to them he said the destiny of Communism has been frustrated by this great new American development that isn't one more very quick comment right here what did he just say there he just said that **Russia** was planning on taking over the world but they realized we would just nuke them and that would be the end goodbye **Russia** we had bombed Japan we said good night Japan I mean look at what we've done to Japan 75 80 years later and Japan is still not allowed to have an external military

(1:17:11) force we bomb them and won the war instantly That's The Power of nuclear weapons so instead what did **Russia** do **Russia** said I need to find the next technology whatever's Beyond nuclear weapons whatever will render nuclear weapons obsolete I want to figure that out so from the 19 end of the 1940s until let's say the 70s maybe even the 80s that's what they did that's what he's about to tell you right now they figured out scalar physics they they went and dug through everything to find out what is the

(1:17:44) technology that will shift the Paradigm once again that seems esoteric but maybe it's not and that's what they did here we go watch going to be the last great breakthrough but I tell you you gentlemen one thing the next one is going to be Soviet so he forcefully uh ordered them to search for the next great area in my opinion to look for for that breakthrough because thereafter you find Soviet scientists combing through everything for example they took the entire scientific literature of the West loaded on copies on the boats took it

(1:18:18) back to **Russia** set up huge uh translations institutes staffed with very highly qualified scientists and their job was to go through look for anything anomalous the anomalies they laid aside then they went through them with a fine tooth comb and to see what looked promising and of course they would have found such thing we've never done anything like that they would have found such things as the Whitaker papers a lot of marvelous things I haven't even found yet that's in the literature and nobody's ever paid any attention

(1:18:44) to so my thesis is that that's what happened they started into this area for building a new super weapon immediately after World War II certainly they would have resurrected this Moray stuff they had gotten out of T Henry Moray lab through their agent they would have probably resurrected other things I don't even know about that's just conjecture but probably so at any rate they did start such a program the **Russians** have always been the greatest nonlinear mathematicians in the world they were at the beginning

(1:19:19) they are to this day and so they would have seen much more clearly into the non linear aspects of everything we're talking about than American scientist had seen to date which

means they would have picked up the op what today we call the optical type functioning which means they would have picked up the longitude and waves they certainly falsified general relativity Theory only later many years later that they openly publish the fact that it's wrong and show why it's wrong and become you know recognized critics

(1:19:50) of the conventional general relativity in this country country we did exactly the opposite we defended it to the last men so they went much deeper I think during this period into these areas than we did and I think they started building because uh as you know from my own previous Publications I put together independently a rather large body of evidence admittedly circumstantial but real nonetheless of that can only be explained by the testing of such weapons there is absolutely no other explanation for it now I could be wrong on one

(1:20:23) incident but 200 of exactly the same kind I think not so the evidence is overwhelming and you even hear now their own leaders like zerovski recently has referred to these weapons as the ellton weapons there is no question today that the Soviet Union has these weapons and if what I put together is correct and I'm absolutely convinced it is three other nations of the world also develop those weapons and resoundingly check the Soviet Union the other three are friendly to the United States not hostile and I think that played one great part

(1:20:57) in the fall of the Soviet Empire because uh the original Target date as I brought out had been 85 to achieve the freedom to move and do what they wished in the world in 1985 and they met the schedule as I've adequately reported but once checked then we have a very strange situation now communism Falls because of its Financial shortcomings and they just flat can't keep it glued together anymore and in the Chad he just said the exact thing that I had mentioned to you guys people wondered well if if the **Russia** had

(1:21:32) figured this out why did they not just win the you know take over the whole world two aspects one other countries figur it out as well and they checked them which three countries would have checked **Russia** right off top of my head I'm going to guess Germany France and the United Kingdom now maybe I'm wrong on some of those I'm literally just guessing off top of my head those three countries that I would imagine would have been allied with the United States definitely France and the UK Germany maybe maybe we took we know

(1:22:05) we we stopped the war maybe they are allied with us I think they probably were but if you guys in the chat know let me know I want make issue a quick correction the casualties would have been from us invading Japan potentially millions of lives lost we saw what happened when we had um when we invaded Germany uh beaches of Normandy and we didn't want that to happen again so we dropped the bomb on them then the other thing economics why did the Soviet Union Fall Apart economics just like Batman Begins movie there's a weapon that's even more

(1:22:39) powerful than a super weapon and not just propaganda which is another one but economics economics can cause an entire country to fail here we go dissolution here uh we have entered what I think is a much more dangerous world than anything we ever thought of

three other nations today are indeed working on what I call the Tesla weapons or really scalar electromagnetic weapons and these nations are not really friendly to the US at all so it's a much more dangerous world that has emerged the nuclear control that was uh executed by the

(1:23:20) Soviet Union is now probably been diluted uh you can hire if you're careful uh you can hire some Soviet scientist right off the project many nations today are developing nuclear weapons and they don't have to go through the pain we did they're hiring people who already know how to do that and have done so so very shortly you will see emerging throughout U the so-called third world as it's so loosely referred to uh you will see nuclear weapons you will see the extended scud for example being developed u in uh

(1:23:51) North Korea aided by the Chinese and it's being expor to the midd East and in my opinion you will see a nuclear and biological warfare in the Middle East in 3 or 4 years somewhere on that time range I could be off a year or two but it isn't going to be forever so to me it's a much more dangerous world that we live in particularly if we see the Advent in addition to the nukes and the uh biological warfare which is certainly frightening enough if we see the Advent of several other nations now possessing weapons of the

(1:24:24) ill power spoken of although it a little bit of likely by Nicola Tesla I would like to explain the basis for the weapons CU it's open if you take the two papers by Whitaker that I'm so fond of quoting and all my stuff you will find that the first one tells you if you do it in reverse tells you how to make if you wish a scaler Beam by simply assembling the necessary wave set the second paper will tell you that if you then take two such scaler beams actually hidden multi- waves and interfere the them at a

(1:24:56) distance yes scalar interferometry really exists it's just really multiple wave interferometry when you understand the wave sets what will occur at a distance will be the reappearance of the electromagnetic gradients which we call force fields in other words you'll create the electromagnetics at a distance if you bias your ground potential of your transmitters higher than the distant uh focal point uh what we call energy heat energy exhaustion of energy which should be called work heat energy will emerge in the other area and

(1:25:30) Scatter at that area energy will go in here and scatters work out the other end it's just like you had a direct pipeline at a distance is this indicative of Tesla of course if you bias your projectors the other way the energy flows in the other direction in other words you extract energy from out there and the energy you have to do something to collect and dissipate the heat back at the transmitter in every transmitter is now a two-way transmitter of energy I can make it go in one direction by biasing or go in the other at will the

(1:26:02) we okay guys we have to do a quick sidebar here on this as much as I want to play this through he just explain teleportation um so we can take energy let's say at Antarctica where we have our transmitters that are producing 2,000 volts time 5,1 160 different Doms that we have and we can send energy anywhere we want that's easy right we move the energy from here to over here over here to over here but if we absorb energy like he just described endothermic

event then the energy must go somewhere we can't cheat the laws of physics so the

(1:26:46) way he describes is okay you can absorb the energy but then you have to allow it to radiate back at the at a different location but what do we see in the MH370 videos what have we talked about why did Dave Rossi promote the idea of a fourth orb because the energy is going somewhere else what we see in the MH370 videos is we see the energy being absorbed from one location and it's going to reappear somewhere else and when it reappears somewhere else this is the part where the energy is now going to appear at the other

(1:27:22) location this is the teleportation aspect that we see so we see the orbs converging and now imagine that our transmitters are the orbs themselves we're not shooting it at it now we have three interferometers we have three radar dishes so to speak and they're these three orbs that we're staring at right here so where are we going to send this energy we're going to send it to the fourth orb and wherever that appears that's where the object is going to appear this is in sense in in some sense an Advan form of cloaking in

(1:27:57) another sense it's literally teleporting an object from one location to another the reason why someone **leaked** these videos and put in this video the these frames that we're seeing right here is they wanted us to see exactly what we were looking at a plasma object that can absorb energy from the vacuum itself to get the energy it needs to produce the effect that we see right here where we see the kulum effect where the electrical engine uh energy is increasing exponentially as the orbs Converge on one another to break the

(1:28:34) swinger limit and then Ricochet this object from its current location to another location where the energy is going to appear over here that's exactly what's happening there's endothermic event this is not video game effects that we're staring at this is being teleported to a different location if somebody faked this then they were trying to show us the future and trying to show us what would happen with uh that we would somehow find out about Thomas Bearden in the future and all of this stuff that we've been looking at

(1:29:10) here today and I just screwed up because here we go I'm going to try to get back to that patronic [Music] weapons Thomas bu by the way the n it isn't going to be forever in the fall of the Soviet Empire because the original Target date as I brought out had been 85 the nuclear control it isn't going to be forever so to me it's a much more dangerous world that we live in particularly if we see the Advent in addition to the nukes and the uh biological warfare which is certainly frightening enough if

(1:29:53) we see the Advent of several other nations now possessing weapons of the ilken power spoken of although it a little bit of likely by Nicola Tesla I would like to explain the basis for the weapons cuz it's open if you take the two papers by Whitaker that I'm so fond of quoting and all my stuff you will find that the first one tells you if you do it in reverse tells you how to make if you wish a scalar Beam by simply assembling the necessary wave set the second paper will tell you that if you you then take two such scalar

(1:30:25) beams actually hidden multi- waves and interfere them at a distance yes scalar and aeromet really exists it's just really multiple wave in aerometer when you understand the wave sets what will occur at a distance will be the reappearance of the electromagnetic gradients which we call force fields in other words you'll create the electromagnetics at a distance if you bias your ground potential of your transmitters higher than the distance uh focal point uh what we call energy heat energy exhaustion of

(1:30:58) energy which should be called work heat energy will emerge in the other area and Scatter at that area energy will go in here and scatters work out the other end it's just like you had a direct pipeline at a distance is this indicative of Tesla of course if you bias your projectors the other way the energy flows in the other direction in other words you extract energy from out there and the energy you have to do something to collect and dissipate the heat back at the transmitter in every transmitter is now

(1:31:27) a two-way transmitter of energy I can make it go in one direction by biasing AO and the other at will the weapon implications of that alone are extremely frightening and extremely powerful and now several nations are involved in developing it right straight forward to the hilt very shortly we will have an even more frightening World emerging the other thing you can do with it which I think Tesla alluded to at least in a few cases when you do these things with the potentials rather than with the force fields you actually involve time you

(1:32:04) produce time effects or you can produce effects on anything that exists in time because you affect the time Dimension when you do this uh you can affect thought and you can affect uh human beings where they live because thought occurs in time it occupies time it's just not spatial but it is time time like you can probably see if uh indeed the world has already acquired several Nations the ability to build the defensive weapons in the area that uh has been discussed here the testie weapons then there's really no longer a

(1:32:45) great compelling need to do any further uh weapons work by any private citizen so there are some other very compelling areas however of great need for Humanity that are directly involved with Tesla's approach and Tesla's work that cry out for research and development two of these areas are are fantastic we must have clean energy sources we must have some source to provide our needed electrical power cleanly and freely without polluting this entire biosphere everybody's concerned with that the way to do it is not to put in

(1:33:23) harsh laws that stop all workers and everything like this and go into absolute dictatorship that's not the way to do it the way to do it is to do it scientifically by striking for a great new breakthrough to where it can be done and done cheaply and cleanly so that's one area that you know is important and deserves the utmost effort can be put on it another area that is assuming ever more increasing urgency is the area of the medical needs allopathic medicine is failing the bugs are all changing and they're becoming

(1:34:02) immune to all our antibiotics the um the Orthodox scientific people are saying this openly in their journals and their articles and their editorials even the newspaper and

Newsweek and so forth are picking it up and writing articles about it uh within 5 years you will have a serious risk of your life if this trend continues just to go to the hospital uh the number is already over 10,000 per year I don't know the exact number since 92 but it's already well above 10,000 per year that die in the hospital

(1:34:37) because the infection that they have absolutely cannot be controlled there is one kind of staff for example that nothing that we have will affect and it has about a 30% lethality I'm told so three out of 10 who contract that die in the hospital these kinds of things are in increasing uh you now have very well recognized scientists in the in the regular medical scientific Community saying allopathic medicine is failing and there's nothing to replace it you cannot develop the vaccines or new compounds fast enough to even keep up

(1:35:10) with them we have lost that battle we must change the medical approach the medical approach if you use the extended electromagnetics if I may use that term that Tesla was talking about we then occur uh there then occurs phenomena which can be used to control and change and heal almost any infectious disease whatsoever in cure including a genetic disease such as where the genetics have changed in the cells such as AIDS now that is not an idle statement that is a very rigorous statement based on some very rigorous scientific work

(1:35:48) done in France in the late 60s and early '70s by Anan priori and a team of scientists that gathered and worked with him and these were eminent scientists well known for example one of them was Robert kuier head of the biology section of the French uh Academy of Science and also the secretary perpetuel of the French Academy at the same time poelle an eminent scientist World known many such scientists worked with directly with u the inventor antoan priori priori completed his um doctoral thesis which was rejected because of the violent

(1:36:26) opposition of the medical establishment but he demonstrated under rigorous scientific protocols that you could completely cure almost with ridiculous ease terminal tumors in lab animals he did it hundreds of times uh under all the proper rigid controls I mean uh kuier personally sent his own personal assistant to do the tumor graphs and ensure that everything was absolutely impeccable very simple you take 15 rats uh 30 rats 15 each one control group one test group every all the rats get inoculated or grafted with the same

(1:37:01) terminal tumor they're going to be dead with 100% certainty in 30 days the 15 get treated the other 15 don't they stay in exactly the same room same food same everything the 15 treated all get well the 15 not treated all die with another provision you can then take another group of 15 rats with the same tumors grafted to them you can take one drop of blood from each of the rats that got well and put in eat one of the other rats and they will all get well from that single drop of blood the ordinary medical establishment

(1:37:33) was Furious when they changed the setup of the French government to a leftist government in the mid 70s the priori team was just completing a very large installation with permission to treat uh human patients with terminal cancer and Leukemia and so forth now he surreptitiously treated Some Humans before and cured their cancers and leukemias the problem

was nobody could understand how it worked we didn't even have at the time the knowledge of this new parts of phas conjugate Optics that we needed to understand it it's no wonder they

(1:38:16) couldn't understand it nobody could and so when they suppressed that they withdrew the funding from the project it was funded by the French government and when the government changed they withdrew the funding uh every all the work ceased the equipment later was destroyed preor lat later died at any rate this is something absolutely legitimate it did use the type of electromagnetic extension that I've talked about and if we open up that extension there now is the explanation available of how it worked and yes we

(1:38:50) can cure such diseases if a proper scientific development program can be mounted and funded and it will all be based in part upon the work of Nicola Tesla okay chat I'm not going to go too much into this you guys know why I work in the healthcare industry you guys have seen covid you guys have seen what they do to people who speak out and speak about alternative uh therapies and things like that nothing I'm saying here is medical advice at all but if this type of technology is real it goes so far beyond directed energy

(1:39:32) weapons it also can explain uh warp drive uh manipulation of gravity itself but there's also medical healing aspects to it which are very crazy to think about what I'm feel comfortable talking about is that yes uh multi-drug resistant uh bacteria are a huge thing that are people are afraid of it's called super bugs that if we give people antibiotics that what happens is they become they adapt to the antibiotics and become resistant and then they spread and this is what kills people uh especially when you're sicker that

(1:40:12) you're much more vulnerable to it I remember talking to various microbiologists that I worked with from the it perspective about it CU I wanted to learn as much as I could about it and that's how it kind of works is that you know the sick th ER you are the more vulnerable you are the more uh susceptible you are to these multi-drug resistant um bacteria I in fact remember that on the Shelf they would have some of these super bugs just sitting there in little Petri not Petri dishes but little tubes and you would see the yellow of them of

(1:40:44) like the tuberculosis and the various other ones that they had that had like they would call the super bugs that they had cultured from people that had died so what he's talking about here is the idea and this is from the 80s the 80s this is he's talking about it was just getting into the scientific uh and and the mainstream media back then where now even in the 2010s uh from when I was talking about it it was becoming more and more common to understand but that we can solve these problems with scalar physics scary

(1:41:21) stuff weird stuff to think about again not promoting any other alternative medicines just letting you guys know that there's huge applications to this type of science out there it goes well beyond um Espionage and super weapons but also the idea of medical healing often has been a great curiosity about this strange thing the **Russians** suddenly injected onto the world they had done some pretesting but uh suddenly on July the 4th 1976 for a bicentennial present for us the the Soviets opened up uh some great new transmitters in the

(1:41:56) communication band which because of the chirping sound and the sound just like a woodpecker's Bill hitting a block of wood uh was immediately dubb woodpecker by all the ham radio operators who had it interfering with their Communications and so this was really massive uh communication massive transmitters lots and lots of power and nobody could figure out what in the world was going on uh it made no sense because certainly the signals as seen could do over the rise and radar work which you normally put in that same

(1:42:31) frequency band but there were also apparently lots of characteristics which didn't fit what you would do if you were designing something was just a over the rising radar at all would be no need for such complexity so there's been a lot of discussion on it and uh you know I guess the official realization was that or calling it was to say it's just simply over the Rison Radars well it built a lot of them but if you look at it through the eyes of the scaler and aerometer and I mentioned the two references and have

(1:43:03) cited them in various papers there other work on along that line too if that approach is used in what seems to be what Tesla had done if you use the Tesla approach to interpret it now one is dealing with scaler inetryconydot uh astounding potential weapon effects with the intesa uh interpretation one of the things that would result from that line of weapons assuming they are used as scalar infometer weapons uh one of the great things that would emerge from them would be to produce controlled energy at a distance

(1:43:44) for example um great huge balls of controlled electromagnetic energy or if you pulse it great blasts of electromagnetic energy the diff I mentioned uh the business of biasing the transmitters where you can produce either heat like an explosion or you could produce a cold explosion the sudden explosive withdrawal of uh energy from the local from the distant area uh and in books cited incidents that are representative of what one would find if those incidents actually were occurring on that kind of scale the incidents are there they're real they're

(1:44:20) documented they're not just Tom beon so there is a good solid set of admittedly circumstantial evidence that the Woodpecker signals because of all the phenomena that can be associated in the same time frame since they turned on these phenomena very strongly suggest that this set of weapons is not just over the rising Radars at all but are really Tesla weapon systems and if they are all the rest follows they have one other frightening area if this thesis is true that is almost mindboggling there is a Soviet physicist

(1:45:03) scientist named kachev and kachev has produced a series of experiments in two Soviet military institutes before the fall there that uh showed that you could transmit any sort of disease form between cells uh any sort of infectious disease or you can radiate one sample with uh nuclear radiation gamma radiation for example or deadly poison or infect them with viruses it can transmit between um cellular cultures into another cell another sample from the same culture the same disease electromagnetically although the organisms won't necessarily

(1:45:45) be there uh that works in literature if you pursue it kashia has several books out now that are available since the Russian system has loosened up a bit uh that work has been

replicated at the University of Marburg for example in Germany it has been replicated uh University of Sydney in Australia and it has been replicated by at least one researcher here in the United States he's trained to say if there are no force fields there's no electromagnetics he ignores the potential that's left he just sweeps it away and throws it

(1:46:14) away from where we're coming from with the Tesla approach that is the active part that's the part that is being interfered within the bodies or whatever to call cause whatever you wish to cause if we couple it with the Kossia stuff we are saying that such scalar transmitters in inetryconydot Ed he was going to visit some nuclear installations and They Carried Geer counters and it was detected on the Giger counter it's an ionization device it detects the ionization and discharge of its own gases and anything that ionizes

(1:47:06) gas it will detect it doesn't have to be nuclear radiation and so they thought at first that it was deadly nuclear radiation because all the counters went off and indeed it was not they were irradiating the presid president with this stuff with the Tesla stuff to see if we knew what was going on on uh that's a beautiful intelligence probe you pick out a high level Target like the president or you know the embassy you radiate and do some things that are obvious not too bad but are obvious so they can't be missed and then

(1:47:36) you see what happens when the system Goes Bananas trying to figure out what's going on and by their actions there's no way to fake it you either tell them you know what's going on by your action or you show them you don't know what's going on there's no way to get out of it it's 100% certain which very few things in intelligence are however if I go back to the Embassy where many Health changes and diseases and so forth you know three ambassadors died of a leukemia like illness eventually these diseases occurred only

(1:48:11) within the embassy in those areas where the force fields were absent and the potentials were there and the Johns Hopkins researchers did a beautiful job they were expert guys of establishing the force field electromagnetic pattern and since not a single case occurred in that area that's by the normal electromagnetics then reached the conclusion that therefore could not possibly be the microwave radiation actually that's a false conclusion if the radiation played no part whatsoever and you had that many

(1:48:44) changes occurred the odds are extremely high that some of those would have occurred in the area where there were force fields and some didn't since that did not occur it is a 100% correlation to the Tesla area to the area where the potentials existed and the force fields did not and I'm sorry they reached exactly the wrong conclusion because the model they applied failed them these were able scientists using only the conventional model and the model actually showed that it was the other stuff but uh LED them to conclude

(1:49:20) properly for their model that it couldn't possibly be the electromagnetics that's just one instant so the so chat I don't know if you were paying attention to what he just said but holy crap okay if you want to avoid going on the rabbit holes just go ahead and Skip ahead right now because wow so how do you confirm whether or not your opponent your enemy knows that

you have this technology simple answer you shoot it at them you shoot it at their leaders you see if they can figure out what you're

(1:49:57) doing to their leaders at a distance you shoot the scalar infer infer interferometry the cross at their leaders and you see if they can figure it out because if they can figure it out then they know the science if they can't figure it out then you know that they have no idea what's happening because it's just going to seem like magic oh they just died of leukemia from nothing and this is the crazy part related to what he just said is that theoretically we can transmit viruses illnesses and diseases

(1:50:34) electromagnetically through a distance this is scary because I thought the whole 5G stuff was nonsense I thought it was nonsense but now I wonder if there's not some tiny element of **Truth** to that idea that we can actually use this as some kind of biological weapon to spread a virus from one person to another we got people out there wearing masks thinking that a mask is going to protect you a mask is never going to protect you against this kind of thing never in a million years sorry if it hurts anyone's

(1:51:10) feelings out there but that's just the **truth** of it um the fact that this video even exists where he's talking about this from the 80s 40 years ago should frighten everybody out there who's watching this it frightens me the only way this video can even exist is if there's not some element of **Truth** it doesn't mean that everything's accurate there's not some element of **truth** to it woodpecker then would apply be able to apply because of so many signals uh the scalar stuff we might not even see with our normal detectors but

(1:51:50) yet it could do exactly the same thing for example in the United States alone now what does that imply if we are not too far out into left field here if there's really a ground as I've tried to describe Here If there really is a theoretical ground here for the use of those weapons in a Tesla mode and the use of the kashf knowledge and experimental results in here apparently confirmed by what happened in the US Embassy then those radiators which are active to this day not in the conventional sense you got to

(1:52:26) have a different detector those radiators could conceivably create within a mass population almost the instantaneous spread of mass diseases of all kind they would be anomalous you would be dying for example of Bubonic plague and you wouldn't have the organism but it represents if that part is true it represents a biological weapon of incredible implications for population Warfare I hope to God I'm wrong I don't think I am one of the questions for anybody who tries to take the Tesla View and tries to do it anywhere halfway

(1:53:10) scientifically one of the questions that certainly comes out of all this other work on what kind of possible weapons could have been built and what possible uses and demonstrations have been made the question emerges what's what about Warfare in the future well what I can do is give you my opinion and uh leave it up to each person to evaluate that as they see fit we have certain Trends however that certainly are possible we see with certainty other nations developing nuclear weapons uh shortly almost everybody that

(1:53:48) wants to have a nuclear weapon and is a nation of any little size at all is going to have one I would characterize that by the fact that weapons of mass destruction have now passed out of Chess playing hands in other words logical hands into some hands which are irrational and to me that's a much more dangerous World there is another thing uh suppose you know the fear all analysts have is the suitcase delivery system you simply slip in the weapon parts and assemble it say in New York City or Chicago someplace and perhaps the next time the

(1:54:26) US decides to intervene somewhere in the middle east or somewhere the terrorists then blow several of these weapons incredible damage to the United States this would suggest an area where not only have the great Nations been involved in strategic deterrence if I might use that term which is now falling out of fashion but all the small Nations or a lot of them will be able to provide a very positive strategic deterrence to even great Nations by the threat of nuclear warfare clandestine Warfare as I described or biological weapons which

(1:55:02) are cheap and everybody can have and build it is certainly a much more dangerous weapon that has emerg world that has emerged and the weapon spread now is just it's it's seeping out just like a torrent there's no stopping it and these kinds of weapons one doesn't know what will be the future in the slow leakage that seems to be going on in the Tesla weapons certainly it simply adds to the pile at the very best for us the the threat and at the worst it adds an impossible threat so the world is facing facing a

(1:55:43) set of dangerous possibilities dangerous threats to us all to everybody to every man woman and child um because the civilian population is no longer immune or even Exempted from these kinds of things we're facing a world of possibility of multiple Nations multiple kinds of irrational groups being able to apply enormous weapons of enormous implications to even the civilian population our military for example is facing a situation where with a lot of development in biological warfare uh if suddenly new agents that you have

(1:56:26) no knowledge of whatsoever thrust upon you you have no antidotes you have no uh effective methods of treatment and these are fairly rapidly acting agents let's say they kill in two days uh rapid infection I'm just taking an example You couldn't possibly come up with anything to do anything with the normal stuff during that time the only alternative will be the extended electromagnetic treatment because then you could treat it without identifying the agent and cure it before it even came out in illness in your troops

(1:56:55) otherwise even your military forces face decimation by a sudden unknown agents which they are unable to counter so surprise attack becomes an Ever more dangerous thing in a lot more dangerous hands the world is much more dangerous today for a much more positive application of shall I say Tesla's extension to electromagnetics that he was using though not technically describing so well something that's much more beneficial or can be to mankind humankind rather than destructive means one should focus on the imminent

(1:57:38) Advent of practical overunity electromagnetic devices these are devices which can be closed looped to run themselves and produce useful power in the load for One impact which is

highly beneficial it's obvious the most casual Observer that the use of such systems where the power to run it is actually extracted from the vacuum itself if carefully used there will be no damage to the biosphere and we will certainly eliminate an incredible amount gradually it won't happen overnight but we will gradually eliminate an incredible amount

(1:58:14) of burning of fossil fuels there's still a need for all the fossil fuels only not as fuel uh the chemical needs alone for medicine and materials and so forth to benefit mankind are enormous but certainly we will stop all the exhaust and pollutants from from those from the burning of those fuels from entering the atmosphere it just won't be happening anymore to the extent it is now on any scale it will allow us to take uh funds for example on something like uh and what I like to think could be a more sane world and a much more protective of

(1:58:50) the environment of our children and of our children's children now in all candor I must add one danger if unrestrictedly used when you produce excess energy of this type from the vacuum right in the vacuum in a local area if you produce a very large amount particularly if you do it very suddenly uh in that region you have a curvature of local SpaceTime and there can be biological effects from that that we are present certainly not quite capable of fully explaining or knowing there's going to have to be some

(1:59:29) careful incorporation of the devices so that we use care we do not inflict any kind of damage on anybody or anything like that so with reasonable scientific care we can prevent any such thing and we should do that we should incorporate such systems into our normal utility Transmissions across the lines the lines are there the maintenance of them is already there the facilities are already there they're already connected to the homes it would just be nice if gradually we didn't have to burn so many fossil fuels and

(2:00:03) gradually the power price could come down cheaper and cheaper but meanwhile everybody stays working and everybody stays involved but what we really wish to eliminate is say an older person in New York City cold in the winter very limited income can't pay the utility bill very well so it has to keep the power down freezing eating dog food we must do better than that and we can and the Tesla technology will allow us to do better than that so it must be done to understand Tesla you must understand one other remarkable ability

(2:00:38) that he had that none of his peers had then or now we can only do with great Computing simulation centers from the time he was an early child Tesla had the capability to visualize something so intensely and so vividly that he simply couldn't tell the difference between that and a real object until he was about 12 years old and he finally found a way to distinguish the difference but this unique ability that he had enabled him to visualize a system in all of its parts working together turn it over and upside down and inside out

(2:01:20) and watch everything function on any level uh that today we would do with a large CAD cam system or we would do with a very large supercomputer in a very large simulation facility so Tesla also was the world's first great simulating computer center using his own brain none of his cohorts or his colleagues or his peers had any such ability Tesla would build a device

a hundred times in his head changing it all the time until he got all the parts working perfectly in his simulation and then he would build

(2:01:55) it on the bench and most times it would work right away he had already built it 100 times we do exactly that technique today in many fields of endeavor with great effort with great cost big Computing centers Tesla could do it in his head one final question often remains about Nicola Tesla it's difficult to put oneself in a situation to believe that he could possibly have done such great things and they have passed completely away into either secrecy or being lost or just simply abandoned so a puzzling question

(2:02:42) remains how on Earth could this happen suppose it's true how could it happen actually it's not too difficult to understand how but it takes a bit of background and appreciation for the times first of all put yourself in Tesla's day when we're talking about the installation on Long Island it hasn't been very long since Custer's last stand uh we're talking about just prior to Marconi's transmission of signals across the Atlantic we're talking about a time when only recently in just the end of the 1880s in the

(2:03:29) early 1890s has electromagnetics abandoned the Quantum Theory and gone to the vector theory of Oliver Heaviside largely with some contribution by Herz and Gibbs there are only at the time prior to the turn of the century possibly about 40 scientists in the world who really understand electromagnetics at the top level there are more than that who are we might say followers but the Shapers there's only about no such thing as big government um science there are no large government organizations funding science anywhere a scientist was

(2:04:10) relatively poor person you know he wasn't impoverished but uh he certainly had no income like a businessman there was no place to get grants or to get funding for research all science is patronized somebody has to pay the freight and many of the Avenues we are familiar with today most of them simply did not exist the only way that a scientist or callman inventor such as Tesla could in fact even dream of supporting himself he had to number one discover the thing he had to keep it very very secret and patent it he had to keep it

(2:04:50) secret until it's patent actually was issued some money a scientist at the University who received a \$2,000 Grant from an industrial was in in great shape think of the economics of the time an average person might make \$500 a year when we speak of \$150,000 an enormous sum of money in that time but we're speaking of a time when there's still not many checks and balances on the great capitalists uh literally they buy the politicians at will the control of financial power had little opposition in the courts or anything else it was so

(2:05:32) bad at the time that there was a violent uh labor movement going on against the very same Industrials who kept manipulating the stock market and causing it to change and causing inflation and terribly hurting everybody Anarchy was even a serious threat uh because of the belief that all government was evil prevailing into the laboring class an anarchist even assassinated the president while Lincoln is working on long I mean while Tesla is working on Long Island so one must appreciate the tenor of the times also one must appreciate the

(2:06:08) communication industry there were very few telephones uh the telegraph which uh wasn't widespread but the telegraph existed that was the main route of communication in newspapers uh books to some extent the journals were all pretty well controlled most of them by the scientific Community who's already you know very much jealous of Tesla so you don't publish in the real scientific journals you have to publish in something like what today would call Scientific American like electrical experiment or something and many of the

(2:06:45) Publications were letter to the editor so an inventor or a person trying to make a living inside since as an independent person had a terrible job and a terrible task there was a great secrecy clamp on him just because of the situation and tenor of the times this accounted really to a large degree for test secrecy most other inventors who had not yet become highly successful or whatever were also very secret or who still needed large funding so see secret secrets and secreted was the order of the day only when you put it in this

(2:07:26) background can you understand then how easy it is to suppress it's not printed in the newspaper it's his single uh exposition of receiving signals from uh outer space caused most of the news media to Simply swing over and go against him the very news media who had simply made him a star so to speak before now couldn't get enough to get on him and continue to Hound him and call him every name in the books wow and so from that single remark a great drastic shift in the labeling of Nicola Tesla came about science itself is unforgiving

(2:08:07) there's many histories of scientist persecution of other scientists with whom they disagreed the system is very prone to either destroy condemn or buy any scientist who seriously disagrees with it to this day well documented we could make another documentary movie on just that however here was a preeminent example of a disagreement with the current scientific control and the scientific control was adamant that he get wiped out of the books and he get labeled a lunatic and that's exactly what happened he wound up

(2:08:44) with his name Tesla attached to a coil and one unit of measurement named after his name and as far as a scientist was concerned that was enough he didn't deserve anything else most of them so the scientific Community rejected him after Morgan turned his back the financial Community rejected him Jesus uh here was a loner then again absolute loner what was he to do exactly what he did retired to his hotel room and feed the pigeons and think Grand Dreams live on a small pittance which kept life from him together from his native

(2:09:26) Yugoslavia wow and once a year have a press conference where he spoke of all the grand things that he thought of and he wished to have happened but at least overtly as far as we know overtly never again was Nicola Tesla to ever have a chance to attempt any of the great things that always surged through his Restless mind I guess in summary of all of this what does Tesla represent to the Future particularly benevolently let's forget the weapons what can come from Tesla's work that's been yet unrealized that can

(2:10:04) benefit humankind everybody on the face of this Earth there are some very positive benefits that Loom the greatest thing that Nicola Tesla ever did was to continue to point out

that the present electromagnetics mod model is seriously flawed and that electromagnetics is much more unlimited think for a moment of the service that the limited electromagnetics we have has been put to think of all the electronics the communication industry the Power Systems it's changed the life of every person on the face of the Earth consider for just a moment what an

(2:10:49) extension to what you can do can add to the benefit of everybody everywhere for all time and I think when one Ponders and considers that implication then the full importance and the full implication of Nicola Tesla yet to be realized will indeed be realized wow Thomas Bearden is telling the **truth** there's no doubt he's telling **truth** he's not making up stories he's telling the **truth** as he saw it everything that we are doing right now we owe to Nicola Tesla it's so hard to absorb all this information because as you guys are

(2:11:46) probably doing right now you wonder has is everything that I had learned a lie how much is true and I'm wondering that same thing myself it seems like Nicola Tesla was somebody that understood reality before fake news was even a concept in anyone's head and that the media destroyed him because he went against the status quo but does that mean that he was wrong no it doesn't Nicola Tesla was right he understood electromagnetics better than anybody else in his time he was so forward thinking that he probably

(2:12:36) envisioned teleportation of an object before we even thought that something could be possible like that the video that we just watched I think is one of the most important videos ever and I wish I would have been able to meet Thomas Bearden before he passed away he passed away a couple years ago and the sad part is even when I met him before he had passed away I would never have been in a mindset where I could understand what he was saying was true but when I listen to him I clearly hear a person that knows inside

(2:13:19) information that the rest of the world is simply not ready for not ready to hear not ready to understand and even in the year of 2024 30 some years later I'm still not sure we're ready to understand it this is technology that's Paradigm shifting that is hundreds of years potentially Beyond where Current public scientific understanding exists today this is the challenge that that we face is how do we get people to understand that the media is lying to them that the media is not telling the **truth** it's beholden to the status quo

(2:14:06) Academia that's out there that Academia that the textbooks are incorrect and it's not a matter of having to rewrite everything it's just a matter of rewriting a couple equations and that changes everything that's out there I don't know the answer all these questions but I thank you guys for being here tonight and I thank you guys for listening and the reality is this technology is real Thomas Bearden is somebody that spoke the **truth** Nicola Tesla is somebody that spoke the **truth** and the fact that

(2:14:43) Elon Musk uses his company name without understanding the implications is is nearly a crime against humanity Elon Musk should at least understand what Nicola Tesla had figured out if you're going to use his company name understand the science of what he figured out and be somebody that honors that science using rocket propulsion while you call you have a

company called Tesla is a bastardization of the science that Nicola Tesla supported we don't need rocket propulsion we can manipulate gravity itself as Thomas Bearden just

(2:15:31) mentioned if we create an overunity device using The Ether the The Fifth Dimension of SpaceTime itself that we do not perceive this will bend create curvature in SpaceTime itself just using one of these devices if we power it up to a degree that it can that can do so this proves that the idea of overunity is connected directly to anti-gravity people should take this seriously I have independently figured out that this technology is real based on two videos that I saw on the internet that 10 years ago I would have thought

(2:16:12) there's no way they could be real that now I realize that they are that there is dozens of other people out there that are talking about this type of Technology ology the exact technology and what the implications are of it they are not lying it is easy to cover up absolutely simple to cover up as Thomas Bearden just mentioned is that the same mechanisms used back then are still used today ridicule disinformation anything you have to do to silence somebody in their opinions it's simple to do because we as

(2:16:48) human beings do not understand we want to agree with everybody else that's out there instead of going to our own opinions and determining what is real based on our own thoughts and critical thinking this is what I implore upon everybody out there the only thing I want to do here is teach you all to think for yourselves to think critically and I hope tonight that we took one step forward in that process in that level of understanding and that level of Enlightenment so thank you guys for being here tonight have a great night MH

(2:17:27) 370x peace

Transcript:

(00:29) e e e you've probably heard of the observer

(01:53) effect the fact that our eyes don't necessarily see what is actually in front of us and that light when it is observed does something very different in every aspect of Our Lives the most we could possibly ask for is **truth** and somebody who is pursuing **truth** is my friend Ashton Forbes now he may have been ridiculed he may still be the object of some people's jokes univers but he is trying everything to Sol first what we're going to do is wait for the room to fill up a little bit I'm going to play a little

(02:53) bit of while we're M37 briefly cover what it is we're going to be discussing today it pilot

the three hundreds Souls on board 2020 by to do the patents are the the triangular shaped anti-gravity craft room temperature superconductor energy engine we're going to be talking also a littleit about to get disclosure in every aspect of your life ask nothing works and why it is that we haven't heard about these things only in things like you know the quote unquote conspiracy theory UFO Community for so long so um with that

(03:55) with that said um I'm going to play a little bit of music here um and then we're going to get started okay chat uh what's going on with my sound here hopefully that's good what the hell okay chat uh Hey everybody for being on here tonight uh thank you everybody who's already jumped on uh appreciate you guys being out here with us um we're playing a little bit of music and then we're going to get started here with this stream uh so tonight we are looking at salvator Pas patents we're going to look

(04:39) at them here with Jake Chanley uh I've got them pulled up we're going to go one by one through them do a little bit of uh explanation of the significance of them and then uh we'll do a little bit of kind of what what it means in general for us let Jake give his reactions on the stuff and uh then we'll probably pull up talk about the significance and let people give their own opinions weigh in on them what they think about them Etc I think these patents are really important so should be should be

(05:13) fun uh let's just go ahead and say hi to everybody we got in the chat Sandy William Bizzy Lizzy lamp starduster Sil Joe Antonia nice to see you as well in the chat uh cogniz and ape good to see you PJ Mike uh **Mick** James we haven't seen Pig James in a while I think that's most of the people uh no I just finished work and uh going straight from work into to this space here tonight guys so it's going to be uh it's going to be a busy one I'm definitely going to have to take a nap after this and then I'm going to also

(05:50) push out the next hard **truth** podcast uh which was been recorded actually for about a week and a half uh that's going to be tomorrow I'm going to push that out with uh Martin Gibson so that'll be fun that's to review unification theories a little bit of a change of pace and I'll work on editing um the uh interview that I did last week with uh Jack sarfati as well so hang in there just a couple minutes guys and then we will get started let's see how the volume relative volumes look here I drop this one more how's that

(06:28) let's see okay that might be a little too think we're going to need to put it right about there thank you very much also guys if you did not check out the uh vetted podcast check that one out if you guys did not check out the uh Professor Simon Holland check that out on YouTube as well um and I think here we go that song is called talking Hawking by Pink Floyd on their Endless River album if you haven't listened to that album it is absolutely incredible and I would recommend it to anyone and everyone who digs Pink Floyd it's the

(07:08) last album they produced shortly after Richard Wright died um anyway Ashton good to see you Jake man how's it going how are you doing today doing very well my friend doing very well so glad that you're here and decided to do this space yeah this is going to be awesome man

so just I would do a little bit of background for people if that's okay while we have people fill filtering in um so what we're doing here today I think if you guys uh jumped on early Jake was saying that we're going to be talking over the

(07:37) salvator Pas patents if you guys are familiar with Jake Chanley which I think a lot of you are he has been doing a lot of interviews similar to I've been doing interviews but he very specifically was on with Tucker Carlson and he brought up these patents uh with Tucker Carlson I thought his Tucker's reaction was interesting that a lot of people don't know that these patents are out there and that's why I really wanted to talk with Jake about it and get the information out there to a broader audience because

(08:04) um these patents are real they have been approved they're not just sitting out there or in some other weird status and the implications of these patents are huge in terms of what it means for our society and so what I'm hoping that we can get out of this is we review these patents and look over them together is more awareness for them and get the word out about their existence because these patents can potentially change the course of our entire civilization so just a quick uh Brief Review in terms of who

(08:34) Salvador Pas is he is a US Navy engineer um I've interviewed him twice on my hard TRS podcast if you want to check those out you're free to check those out my YouTube channel is the same as my Twitter channel uh it's just X Aston you can check that out on the on the podcast highly recommend looking after looking over that um the story of these patents um a little bit of this is is trust me bro but I was told these patents only got approved through some kind of loophole that potentially happened they were approved under the uh

(09:06) Trump Administration between 2016 and 2020 and that uh these patents had to get special um that basically the Navy had to step in because the patent office uh the officer did not think that especially the energy densities could be possible that these patents uh would produce and so the Navy had to come in step and say no these These are possible they they have seen them and um and that's what allowed these three patents uh to get approved so I think it's really exciting uh because it goes to show that the government went to some

(09:44) lengths to convince uh regular people that would not have thought this type of technology is possible that know it actually is and it speaks to this idea that the government has secret advanced technology that we haven't been aware of these may be some of the first patents ever that have been uh you know not classified out there in the public that clearly show technology that we would consider to be either magic or some people may consider to be alien technology I'll leave that for you guys to figure out where the origin of this

(10:16) stuff is um and so I was hoping to go over these I want to get Jake's thoughts and opinions on them because I know he's got this huge Rich background in terms of not just ufology but um in terms of just science and and uh the the kind of what quantum mechanics means for our everyday lives uh so I think we're going to have a really fun space here tonight as do I um I I'm actually gonna post up in the nest here um the brief clip from the Tucker Carlson interview

that that you uh the the one minute

(10:55) thing that you posted on your account Ash um where I talk about these patents I've also got um a video up there where actually you and I first met which was in that uh kim.com space where I talked about all the technology that is being suppressed and what we know about it Etc um but before before we get into the patents and what they are if you're okay with it I'd just like to briefly go over the context of how it is that things like this being kept secret is even possible are you cool with that really

(11:30) quick as yeah do it do it all right so let's talk for a second about this notion that of the deep state so the founding fathers Define tyranny as the three is as the three branches of government legislative law writing executive law enforcing and judicial law adjudicating being Consolidated into a centralized power where a centralized control system has a monopoly on all three of these aspects of government so the founding fathers divided our government into three branches with checks and balances so the

(12:09) Deep state is in fact comprised of three things the checks and balances portions of our government being circumvented through corruption and therefore power being centralized through that circumvention so if you uh corrupt the checks and balances portions of the system you need not corrupt the whole system just the checks and balances portions that keep the system from being co-opted and power being centralized so that is one aspect to the Deep State the checks and balances portions being corrupted the second aspect to the Deep

(12:48) state is the bureaucracy which is over 500 Federal regulatory agencies that have the ability to quote unquote regulate commerce so they are writing the regulations for our economy that tell us what we can buy what we can sell what is legal what is illegal and in that sense these Regulatory Agencies which are comprised of unelected officials rather appointed officials that stay in power for far longer than those that appointed them these individuals in these agencies end up writing these regulations which is in a

(13:19) form uh in a way of creating law so that's legislative these bureaucratic agencies also have the ability to enforce these regulations on the American people so that's an executive element to each of these bureaucratic agencies and they also have their own administrative courts that are outside of the federal court system and therefore they are adjudicating these regulations so that's judicial that's tyranny now their third aspect to the Deep state is the international corporations and the international

(13:52) banking cartels that are lobbying our government or are paying people off or blackmailing people in the checks and balance bces portions and within the bureaucracy and if you want a good example of the kind of bureaucrats that are at the heads of these agencies and how they're colluding with International entities just look at Anthony fouchy and look at the medical system that we have right the the regulations are being written by these International corporations and banking cartels so that they can monopolize our resources our

(14:24) labor and our currency and they can move our public tax dollars into their private hands through subsidies bailouts and government contracts so that is essentially what the Deep state is now if you think about it these NOS these big energy companies and stuff like that if they want to monopolize our energy grid then they have to use the regulations Within These bureaucratic agencies in order to enforce those monopolies which means that anything and everything that is going to compromise that Monopoly is therefore subject to

(14:59) the executive elements of these bureaucratic agencies coming in and saying you can't do that that is a disruptive patent that is a disruptive technology what that basically means is that it would disrupt these International entities and their monopolies uh and that being said the these entities these International entities who are writing these regulations and then using the government's Monopoly on the initiation of force to reinforce their monopolies on our resources labor and currency they essentially own the entire

(15:32) grid right and they're all using taxpayer funded money they're all using taxpayer dollars for the most part to ensure that this these monopolies stay intact now let's talk for a second about where these Technologies whether they especially if they're like um government funded or taxpayer funded where it is they're being done they're being done in the deep underground military bases there's literally hundreds of them all around the country a couple of examples would be NORAD would be Area 51 or even

(16:08) in in one I guess it's a private deep underground base would be the Denver International Airport these things are built to basically be underground cities and they are built through the use of things like tunnel boring machines or nuclear tunnel boring machines they cost billions of dollars to make and each of these different military bases these deep underground military bases is in one way or another kind of like a stove pipe of compartmentalized research based on different elements of the economy and its

(16:41) infrastructure and that basically means that each of these different basis is operating based on different research and development projects that we essentially are funding and most of the time if not all the time the individuals doing the research and development in these bases are actually corporations the very corporations that are using the government's you know Monopoly on the is initiation of force to take our tax dollars and then through that taking of those tax dollars they get the government contracts to do this research

(17:15) and development in the Dums and all of these corporations and their employees are compartmentalized they are compartmentalized through things like non-disclosure agreements security clearances and if you want an example of how all of this stuff can go on without the public being any of the wiser just look into things like the Manhattan Project and how easy it was for them to keep the truth about the atomic bomb and the building of a city out in the middle of nowhere in the me New Mexico desert a secret from the public there's also

(17:46) other elements to the compartmentalization that's things like special access programs the black budget black projects things that are like what are called umbrella projects which

basically means that the Congress knows about a very specific project that they say they can that they will fund they will use our taxpayer dollars a fund but then there's all these other smaller projects underneath that umbrella project that most people in Congress if any at all don't know about they don't know anything about these projects below

(18:18) this umbrella project that actually are the things that are these special access projects getting funded so in a way we actually have a breakaway civilization that is underneath our feet quite literally they have their own laws like non-disclosure agreements security clearances and the laws that apply there they have their own money when and and we're talking like billions of dollars here then the the money and the resources uh all kind of uh bind together they have their own resources they have their own water they have

(18:53) their own food they have their own transportation system between these deep underground military bases they have underground tunnels that have like uh trains magnetic trains that go mock to so they could go from DC to LA in 30 minutes they have their own technology they have their own weapons and they and many people even say they have their own religion and there are currently Within These deep underground military bases and within this deep State um top secret or Above Top Secret apparatus there are literally five to six thousand patents that

(19:31) are classified disruptive patents that we the American people paid for the research and development but they have been kept from us because they would disrupt these three-letter agencies and their colluding uh corporations monopolies on our grid system so this is where the tr3b the Zero Point Energy engine and the room temperature super conductor come into play because the implications the functionality and the applications to these technologies will basically disrupt and render void and obsolete this entire grid system that's

(20:05) being used to enslave the planet and maintain this power grid this power structure not just in the United States but across the world so there's the context this is how this stuff can remain secret now let's get into Ash and I I leave you the mic let's get into this technology how it was released what Salvador Pas had to do what the loopholes were how the technology works the implications for our economy and the applications for our socioeconomic system yeah thanks Jake I think that was a pretty good summary in general um I

(20:42) want to add a little bit on to what you just said is that a lot of this is happening in private Labs that are out there I know this because I've talked to the scientists and Engineers firsthand so I've gotten a little bit of insight 100% accurate in terms of the special access programs saps if you're not familiar with that term get used to it get in your in your vocab this is Above Top Secret this is the highest levels of secrecy possible this type of Technology goes even Beyond nuclear weapons that's

(21:10) how disruptive the Technologies are and just like Jake said this is the reason why it's being kept secret it comes down to power and uh maintaining power over the populace if we had stuff like free energy for example then it' be much more difficult to kind of enslave us to the

lives that we are we are stuck in here uh with respect ECT to keeping it secret as well it's very easy to keep this stuff secret that's something that everybody needs to realize a lot of people think well if this was out there

(21:38) they people would be saying it first of all they are they've been talking to me openly on my hardre podcasts people ignore it people don't think it can be real people get discredited and if people really do have ndas which a lot of them do and they can't say certain stuff if you listen to Salvador Pas on the two appearances he did with me he has to keep some of the information back because he doesn't want to help out our adversaries and if he were to break any ndas that he has then he might go to

(22:04) prison over it his whole life will be ruined his whole family's lives will be ruined and this is a very powerful motivator in order to keep this information secret out there but despite that we were still able to get these patents my opinion from having talked to salver toas many times and twice on my my part podcasts um and I will always tell you my true opinions anytime you want is that he has seen this technology in action technology that we would would think is Magic potentially anti-gravitational technology we're

(22:32) going to be talking about piso electric induced high temperature superconductors we're going to be talking about craft using an inertial Mass reduction device and we're going to be talking about high frequency gravitational waves today as Jake said extremely disruptive patents so the one I wanted to start with here today is the piso electric induced high temperature superconductor now this is the one where I think it's going to take the most kind of abstract uh understanding the other two I think are going to come to people

(23:03) right away in terms of what the implications are but not a lot of people understand what superconductivity is or what high temperature superconductivity is so real quick what I will say is that a superconductor is a semiconductor that is perfectly conductive this means that the electrons can flow without any resistance whatsoever and why is that important is that usually when we have a semiconductor the reason why they heat up is because the electrons as they're moving run into the atoms and when that happens it causes friction things heat

(23:31) up this is why your computer heats up why your phone heats up Etc so now imagine that what happens in these superconductors is that we can uh we can achieve this superconductive state which is like a Quantum State they call it Cooper pairing uh and these coer pairs then begin to float freely without any resistance whatsoever and there may be more than one way to achieve this one way is by metam materials by producing an element mixing things together at the atomic layer where you can produce a state where now these electrons are

(23:58) flowing freely and the way that this patent is going to uh propose that you can do it is through a vibrational effect um potentially getting into a resonance with the particular um insulator and and Metal Coating that you put around it so that it creates this super conductive effect through vibration so the patent abstract here and you guys can look these patents up yourselves I'll try to get them in the nest but my uh app I'm using right now for this is is not uh I

place the patents in the nest thank you very much good sir

(24:29) appreciate that so the present invention is a high temperature superconductor consisting of a wire which comprises of an insulator core and a Metal Coating the Metal Coating is deposited around the insulator core and the metal is coating deposited on the core when a pulsed current is passed through the wire while the wire is vibrated high temperature superconductivity is induced and some of the uh I'm not going to read through all of this here just for the sake of time but I want to read through some of the

(24:56) the kind of powerful terminology that comes across here is that the achievement of high temperature superconductivity represents a highly disruptive technology capable of a total Paradigm change in science and technology rather than just a paradigm shift hence the Military and Commercial value is considerable so simply put a high temperature super conductor can be enabled in a current carrying special composite metal wire which is abruptly vibrated by mechanical magnet magnetic electrical and or electromagnetic means the wire is a bulk

(25:29) insulator with a thin coating of a normal metal such as aluminum or other practicable coating the coating has a thickness on the order of the London penetration depth which is how far the magnetic field can penetrate into the the object um and and an externally applied magnetic field is applied to the metal for the electrically uh driven vibration the wire coated with lead zirconium titanate uh pzt ceramic pore metal or any other material which the piezoelectric effect can be induced since the high temperature superconductive current

(26:01) may be generated along the metal insulator interface boundary this wire configuration can be termed an unconventional superconductor now the other thing I want to say here is that it says that a high temperature superconductor is a material is capable of exhibiting superconductivity at high temperatures above 25° C that is very hot now this is important because superconductors as we know them right now require very cold temperatures so somewhere on the order of -200° or even colder than that now this is important because the issue of

(26:36) superconductors right now we know they can do magical type Quantum effects but it takes a lot of energy to cool something down to that degree so if we can achieve a high temperature superconductor now we can have those magical effects without inputting a bunch of energy into it that's the secret that we're trying to achieve here with respect to this we know superconductivity exists we want to do it without having to expend a bunch of energy in order to achieve it so Ash really quick I have a question

(27:03) for you yep because I just want to condense what it is that you said in layman's terms so that I understand it what you're basically saying is that through metal alloys and through magnetism and understanding the the electron spin resonance shall we say of certain Metals if you layer these things properly then the electrons can flow through this hybrid metal electromagnetic layer cake of sorts so that there is no rubbing of the electrons against the atom exactly and then therefore we have no resistance so

(27:39) if people want to think of what this could do is imagine your computer can be you can overclock your computer for our computer nerds out there that speed up their processors overclock your computer a thousand times because it's no longer going to heat up imagine that your phone doesn't ever heat up anymore either imagine that we could produce a wire that can transmit electricity over long distances from the west coast to the east coast of the United States with no loss of power due to heat when you look

(28:08) at power lines just the heat alone causes at least 30% of the energy to be lost just in transmission so you can imagine if we have perfect transmission of energy without loss of heat now we could collect solar power on the west coast and transmit it to the Midwest or the East Coast or we can take wind power from the Midwest and transmit it somewhere else that alone is a paradigm shift where we don't even need free energy or any of these other exotic energy sources in order to just completely change our world and when we

(28:39) look at Super conductivity one of the big things that we see something called flux pinning and the mezer effect now what this essentially means is you can take take the superconductor you can place it over a magnet and when you place it over the magnet it will get stuck suspended in midair but not just stuck that if you have like a magnetic let's say RAC track you could shoot it and it would just follow the racetrack and skim around it and that seems cool because you can imagine a hoverboard but it gets even crazier if

(29:09) you were to take that same magnet that's underneath your superconductor you can actually rotate the magnet around the superconductor and the superconductor will stay stuck in place you can move the magnet above the superconductor and the superconductor will just stay perfectly in place and the reason for this is that some of the magnetic fields are passing Direct through the superconductor and others are passing around it which gets it stuck and when you think about this in your mind at least for me the first thing that comes

(29:36) to mind is this idea of UFOs and how they can hover out there so this is the secret sauce for how we can begin to understand where we might be able to achieve some type of anti-gravitational effect the last thing I'll say is that I spoke to uh Dr Jack sarfati last week and I asked him specifically about what the role of superconductivity is in anti-gravity and while I don't understand all the equations I'm not a PhD the main thing was that superconductivity essentially is um like an exponential growth so that when you

(30:10) put it into your equation it gets to a point now where uh the equation means that I I'm going to probably say this somewhat wrong I'm going have to go back and and double check my interview with him but uh that it exceed the the magnetic field goes so strong that from terms of the math equations now it makes it very easy to a achieve the power levels required in order to make the object uh essentially not negate the force of gravity but create a counter force that can cause it to levitate cause it to float um and you can imagine

(30:38) that because that's exactly what we see with when we see the flux pinning effect and the mezer effect that's out there um go ahead Jake do you have any thoughts on that well only

that I think that in layman's terms what you're basically saying is that this why alone this super conductivity uh room temperature or high temperature super conductivity enables the transmission of energy in a way to where there's no loss of energy therefore that makes the entirety of our grid system obsolete yeah pretty much I mean it's

(31:18) going to it would change everything if you imagine that we would change our electrical wires to using some type of superc conductive wire um then yeah it's going to change everything when we look at the uh large hyron collider the particle accelerators they actually use superconductive magnets uh in order to make those particles accelerate to near speeds of light and then crash into one another the other place where we see superc conductivity used is in quantum computers this is part of the reason why they have to keep them at basically

(31:46) absolute zero temperatures um to uh ensure that the uh entanglement effects that they use do not get disrupted by decoherence as well as for the superconductors to work as well so super conductivity we're talking about stuff like hoverboards mag trains uh zero loss of energy due to distance and transmission we're talking about our quantum computers that we use um and and really everything that you would think of as kind of just really advanced technology out there is based around super conductivity so to me well that

(32:21) but that also means that our entire grid system is based on losing energy yeah yeah definitely I mean right now we lose a huge amount of energy at the moment which is a big issue with respect to our energy crisis and problems that we have out there I mean if you imagine that we lose 30% of energy due to heat right now and all of that were to go away we were just to get 30% more energy just overnight just imagine the giant implications if you're somebody that believes in green energy this is your savior right here if you're somebody

(32:56) that just wants to transition from one type to another another type of energy it just opens the door up for that and if you're somebody who just wants the benefits you know you just want that hoverboard or what have you you can get that if you're somebody who wants your super fast computer you can get that as well or you know if your if your phone doesn't heat up as much anymore either you can imagine this might increase your battery life as well so there's even implications for your phone potentially

(33:19) being able to last 20% 30% maybe even longer due to uh making batteries that use like super conductive material now there also no really quick but it would make sense now why it is that this patent would be disruptive and why it would be classified if the international corporations that are monopolizing our resources in our grid system and our energy are actually the ones writing the regulations for the government because then that means that they no longer have a monopoly on this obsolete grid system if just this one patent alone gets out

(33:59) to the public yeah I personally believe that super conductivity room temperature high temperature superc conductivity sometimes you'll hear it used either way um is being suppressed I think it's probably been suppressed for decades uh I've looked back at some of the scientific papers and this goes back to um priene as well as even probably people before him

and we're talking going back to like the 50s and 60s so this goes way back um if you guys followed lk99 uh both last summer as well as I think just a month or two ago

(34:32) there was a American physical society meeting I think it was in Minneapolis and uh there was a new variant of lk99 which is called something else they have different names that they tested and they had proven with various videos that these room temperature rocks are just floating freely over a magnet um and that yes like I said they we were seeing flux pinning and the mezer effect that's out there which makes you wonder um both from last summer I think what happened last summer is that and this is where we

(35:03) have to be very careful I find that there's a lot of science influencers out there that uh are very suspicious to me because when you listen to what we've been talking about here you go who would not be interested in this who does not want this to be a reality everybody should want this and yet what immediately happened is people started to try to recreate it but this is kind of like if I give you the recipe for a really good lasagna is everybody's lasagna going to come out the same no everybody's lasagna is going to come out

(35:30) a little bit different and so some people started to recreate it and one one person comes out and says no they're not able to recreate it and they go oh this must be **debunk** this is fake but that doesn't mean that's not how logic and reason works that just means we don't know how to make the recipe like the first people that made it did and so then what happened in February here is that they came out with some different variants of the recipe and they proved that these different variants were also

(35:56) producing high temperature superc conductivity and showing all the same effects zero resistance um showing the the mezer effect and flux pinning out there and then it just disappeared once again this should be like front page news on every single newspaper like what Jake was talking about how disruptive this type of technology is it's going to literally change every single thing about our planet and to me that's why when I look at this patent when you guys combine these patents together you're going to

(36:21) find well these get called UFO patents because when you combine these together you realize this is how you can make a craft float but to me any one of these patents just alone would absolutely change everything about our entire civilization the superc conductivity the one I think it itself is probably the biggest out of all of them just because of all the implications we just discussed well and let us not forget there's five to six, thousand classified disruptive patents out there so if these three patents alone which as you said

(36:56) earlier and I do think it's true we've had for decades if these three patents have these kinds of implications imagine how much they've expanded upon the knowledge that they had to create these patents to create more Innovations and more efficient Technologies yeah and so I even forgot the biggest one guys I forgot the biggest one is that when you have these extremely powerful magnetic field effects this is also what it would take this is they use superconductors in one more thing fusion power devices so you

(37:27) guys probably heard about some of these fusion power devices they've got out there they're building they've got a giant one in Europe and there's various ones out there they've been in the news periodically talking about that they can turn on for like 5 or 10 seconds and produce more energy than what they what it takes to get them started they all use superconductors and imagine now that those superconductors we don't need to cool them down we don't need to put that energy in in order to get that this is

(37:53) where you can begin to get fusion power just like we see the sun but in the palm of our hand miniaturized portable fusion power that's what superconductors high temperature superconductors can lead to so we can actually achieve what we would think of as overunity or you can call it free energy but really when we talk about over Unity what we mean is coefficient of performance greater than one and what that means is that we are getting more power out greater than one than what we put into that system there

(38:21) locally and we know this is possible because we can look up at the sun we can see the sun doing it every single day the thing that we really want to be able to achieve is we want to be able to miniaturize it to the point where we can have one that's the size of a building or maybe the size of a computer something that you could put into your home and you could just now run energy freely within your home and not be connected to the Grid at all now going back to Jake's Point how disruptive would that be well and this is why I'm beginning to

(38:51) wonder okay all of the we have three patents here that we're discussing that have the ability to transform socioeconomic omics and geopolitics for the rest of human history and when we talk about the Dums and compartmentalization is it possible that you know one deep underground military base is doing research and development on room temperature super conductivity or high temperature super conductivity another military base across the country is doing experiments on anti-gravity or inertia propulsion and then another one

(39:26) is doing research on things like Zero Point Energy engines and stuff like that so that all of these ingredients don't ever get to basically come together and the scientists working on these things don't actually get to collaborate and Converse about what it is that they're working on oh absolutely you hit the nail on the head this is why I like talking to you because you always you've got the other thoughts that I haven't got out there like ready to go we're on the same wavelength is that the way this

(39:52) works and again this comes from what I've been told by the people that literally work in these types of labs is that the individual pieces of the information are out there rarely do we get what we're doing here today which is where you put them all together and so they maybe producing one aspect of this or researching uh condensed uh plasma physics uh matter physics on the East Coast they might be looking into room temperature super conductivity on the west coast you know in the midwest they might be looking into various

(40:20) anti-gravitational effects and then there's certain places where they potentially get put together like let's just say Los Alamos uh Laboratory or Huntsville Alabama which is NASA

Marshall uh space laboratory you know so there may be various locations but this is how you compartmentalize the information so that the pieces of the information are out there but from the scientist perspective they don't all necessarily have it and from the public perspective we see these advancements incrementally from these different

(40:46) aspects but nobody's really putting together to figure out what this all means if we were to combine it and then when you combine it this is where you start to get what we would think of as just straight up magic technology okay so now let's move on to the Zero Point Energy engine because the room temperature or high temperature superconductor actually allows something like an infinite clean energy Supply to be transmitted and to be sent from coast to coast or in somebody's home or whatever without the loss of energy so

(41:20) now we actually have a way of sort of containing this infinite amount of energy that's coming from the quantum foam of SpaceTime itself we have a way of transmitting it without it being volatile is that correct is that what happens when you combine these things yeah and so the I think the thing for people to understand is we don't need new physics to describe this but we do need to understand that there's an extra Dimension I'm going to refer to it as The Fifth Dimension and that's not just

(41:45) because of some movie term or anything like that we have three spatial Dimensions we have up down we have left right and we have forward and back we also have one time Dimension which we perceive is moving forward all the time but quantum mechanics would tell us that it's time is a flat circle much like the True Detective uh TV show we need to understand that there's that extra Dimension out there why is that important because that means that we can tap into the negative entropy of The Fifth Dimension think of it as just a

(42:12) blank slate that's out there and everything that we see the complexity the entropy all around us is what's painted on top of that and if we're able to tap into that that means that we can achieve stuff like faster than like communication but that also means that um free space is not empty well it looks like emptiness to us is not empty and we can utilize that and create a system that can use that energy and that's how we can get something like coefficient of performance greater than one without

(42:38) potentially violating the laws of thermodynamics which would otherwise say that we cannot get more energy out of a system than we put into it we open that system up and we allow it to borrow energy from the vacuum of SpaceTime and now we can potentially get over Unity so the next pattern that we're going to talk about here which that's kind of our foundational one think of super conductivity as something that we can achieve through uh you know this invention or that we can achieve through metam materials and that's going to be

(43:08) the foundation we need in order to induce these other effects that we're going to be talking about the next one is craft using an inertial Mass reduction device patent and this one's by salvator Pas that was uh accepted by the patent office in 2017 also under Trump and I'm just going to read off you guys can check out my Twitter profile if you want to see it self but a craft

using an inertial Mass reduction device comprises of an inner resonant cavity wall and an outer resonant cavity and microwave emitters the electrically

(43:38) charged outer resonant cavity wall and electrically insulated inner cavity wall form a resonant cavity the microwave emitters create a high frequency electromagnetic waves throughout the resonant cavity causing the resonant cavity to vibrate in an accelerated mode to create a local polarized vacuum outside the outer res cavity wall artificially generated high energy electromagnetic fields and that's what we can potentially create from the super conductivity such as those generated by the high energy electromagnetic field

(44:10) generator which is another one of salvator Pi's um inventions interact strongly with the vacuum energy State the vacuum energy State can be described as an aggregate or a collective State comprised of the superposition of all Quantum field fluctuation permeating the entire fabric of SpaceTime high energy interaction with the vacuum energy State can give rise to emergent physical phenomenon such as force and matter Fields unification according to Quantum field Theory this strong interaction between the fields is

(44:46) based on the mechanism of transfer of vibrational energy between the fields the transfer vibrational energy further induces local fluctuations in adjacent Quantum fields which permeate SpaceTime these fields may or may not be electromagnetic in nature matter energy and SpaceTime are all emergent constructs which arise out of the fundamental framework that is the vacuum energy State everything that surrounds us ourselves included can be described as macroscopic collections of fluctuations vibrations and oscillations

(45:22) in Quantum field mechanics matter is confined energy bound within those fields Frozen in a Quantum of time therefore under certain conditions such as coupling of high frequency axial spin with hyperf frequency vibrations of electrically charged systems the rules and special effects of quantum field Behavior also apply to macroscopic physical entities macroscopic Quantum phenomenon last paragraph if we can engineer the structure of the local Quantum vacuum state we can engineer the fabric of our reality at the most

(46:00) fundamental level thus affecting a physical system's inertial and gravitational properties this realization would greatly Advance the fields of Aerospace propulsion and power generation so when we're talking about this what are what are we talking about here is that the resonant cavity is essentially take like two walls and the area between those two walls is our resident cavity and if we can give that a very strong chart then we can create a situation now where we can separate the object itself from

(46:33) the vacuum of space time around it and now this is the idea where we can create with a high enough charge high enough electric field electromagnetic field this idea where our object can get grab uh you know we think of it like creating a bubble around the object and now what can happen is we can get Mass reduction meaning that our object is going to get lighter from because it's not going to be connected any longer to the SpaceTime around it and now this is how you can think of how it could be achieved the

(47:03) properties of quantum so now that you could take an object the size of your cell phone you put a bubble around it similar if you have a bubble underneath the water and something and now it's just going to begin to float because if its mass gets reduced to zero at least from a local perspective in our SpaceTime now it's not going to be affected by gravity anymore now it's just going to be able to float freely out there and this is where we begin to think of the idea of back to the name of the patent craft using inertial mass

(47:29) reduction for Trans medium travel so this is we're talking about traveling through the air we're talking about traveling through the water and we're talking about traveling through the space and how can it do that because it's created a bubble in SpaceTime itself where it's moving around this can even achieve super luminal speeds and what I say super luminal relativistic speeds and the reason why I say that is because if you're inside the bubble it just seems like you go from one place

(47:58) and now you're in the other place but if you are looking at it from the outside it would look like the object moved faster than the speed of light at one moment is over here and the next moment it's somewhere else and now how does this make any sense because again we have a Fifth Dimension that we do not perceive Jake what are your thoughts and that's what I was gon and that's what I was gonna ask because based on what you were saying earlier about like this fifth dimensional place where it's

(48:23) basically filled with potential and it's like a blank slate if we are a able to take the the quantum probability wave that is at this basic Quantum level and then basically magnify that probability wave into a probability bubble of sorts that is around an object then we are able to essentially place that object into that Dimension and then at that Dimension the potentiality of where it is that it goes is infinite it's no longer stuck in the 3D world it's now because of this bubble around it it's

(49:05) almost like it has merged into this other dimension that is beyond physicality and in a realm where it's like Quantum and Cosmic are essentially one and the same am I correct yeah and this all goes back to the double slit experiment so the double slit experiment is where when we don't observe or measure the photon as we send it through two different slits we get an interference pattern a wave pattern or you can think of it as like we don't know exactly where the photon is when we measure it all of a sudden it becomes

(49:38) deterministic the wave pattern breaks down and now we can see exactly where it is and this goes back to Thomas Bearden in scalar physics uh this idea that the wave function collapsing causes us to go from the probabilistic location of the object to the deterministic location in the object but now imagine we reverse that process imagine where we have something that's in a deterministic place and time an object that I'm holding like my wallet that I'm holding right now and instead we rebuild the wave function we say this can be either

(50:12) over here or over here and we trick the universe and now we have the capability where this object can go from a deterministic point to a probabilistic one and that seems like a

conceptual you know almost like a paradox but it's been proved proven experimentally that not only with the double slit experiment does the wave function break down but you can rebuild the wave function again in the same exact experiment and they've done this through something called the delayed Choice Quantum eraser experiment

(50:42) where they entangled the photon they split it in half they sent one half down to a normal detector and the wave function is broken down and they send the other half down to a randomizer and the randomizer basically rebuilds and says we don't once again you make two different and randomizer so you have two slits your left slit and your right slit you send them both to a randomizer and you say okay now I can go one to uh one uh to any one of four different detectors and the randomizer is going to shoot it to one random one that we don't

(51:09) know what ends up happening is the wave function rebuilds itself because now the universe doesn't know where it's supposed to go so we know that we can rebuild the wave function the question is how do we do that at the level of a a macrosized macroscopic sized object you know something that we can actually hold in our hands not something that's just a single Photon and this is why in my mind just reading this Pat nobody comes up with this patent unless they've seen it firsthand in the laboratory it's too out

(51:41) there it's too specific and it Salvador pises even said that he had to leave the secret sauce out of this but I think that just from describing and reading through this patent you can get the idea of what we're talking about here we're talking about rebuilding the wave function this idea that we can tap into that extra dimension and use it as a tunnel like a wormhole now it's not going to look like a wormhole from you know Star Trek potentially but instead what we're talking about we're not

(52:07) talking about teleportation like Star Trek teleportation we're not dematerializing something and rematerializing it from the perspective of the person who's inside the craft you're just it's going to look like you're going through a doorway you walk through the doorway and now you're on the other side of the planet and your time it seems like you just only took one second but from the people on the outside it's going to look very weird all of a sudden you're going to be in one spot and then there's going to be a

(52:32) time dilation effect where from the outside perspective it may show up like you may look like you showed up five or 10 minutes later on the other side of the planet and this is weird because time is not this time is not a um constant time is variable dependent on the Observer and there's something called time dilation as well and the faster that you move the slower your time goes and so this means that actually technically we don't all age the same it just seems like we do because we're all on the planet Earth

(53:03) and we're all moving at the very similar speeds one experience the same amount of gravity but the more gravity or the faster you move at the speed of light the slower your time goes relative to other people so what this means from if we were thinking about it just practically is that if I were uh and I like to use the interstellar uh example guys so if you haven't

seen that movie check it out this is where I learned about time dilation it's very uh Matthew MCC and an Hathway go onto a planet where they are next to a black

(53:32) hole and that's a huge amount of mass and they go from a space station that's much further away and they are only supposed to spend a couple minutes there they get stuck there for a couple hours and they go back to the space station and 20 years have gone by for the person who's on the space station this is real so what would that look like though if you are Matthew MCC and you're on the planet your time is going to look like it's moving normally when you look up up at the space station it's going to look

(53:58) like the Space Station's moving in super speed like the Quicksilver from the X-Men movies just going to be like shooting around super fast because the time is moving differently if you're in the space station and you're looking back down at Matthew MCC on the planet it's going to look like it's moving in slow motion and that's time dilation that's a real effect that we've measured using atomic clocks that we sent up on airplanes so that's how I want you guys to think about this type of craft now

(54:28) Jake what are your thoughts about the implementation of this type of craft how long do you think we've had it out there and do you think this could relate to something like the tr3b absolutely and in order to produce so enough energy to create time dilation or to create something like an anti-gravity bubble you would need a massive amount of energy to do that and you're what we're talking about I think here is the merger when you say we're kind of flipping the observer effect around we're talking about the merging

(55:03) or the the the opening up of a Quantum realm and then using that Quantum wave probability to encapsulate a object and then it's almost like the object is actually going Beyond microscopic and and it's using Quantum wormholes that are already existent in SpaceTime in order for us to make choices we're using Quantum wormholes to dilate time and move an object through space and time in this other dimension now the implications of this are basically going from LA to DC in the snap of a finger the implications of

(55:44) this are that we could literally go across the planet through an elevator like what I've heard with some of these secret space program people that they go to a building they get an elevator they go down the elevator they feel something strange for a second and then lo and behold they are either on another planet like Mars or on in another location all the way across the planet like going from DC all the way to Australia or something like that so what we're talking about here is a evolution in transportation we are

(56:20) talking about the reduction in the price of transporting goods and Services into a nan which the whole reason why so many things are expensive especially now is because the price of fuel has gone up dramatically which means that the price of all the goods or services that it's going to take to move those uh resources or to move those Services across space and time is going to go up dramatically as well because it costs more to get things from A to B so this actually would impact our supply chain dramatically and the tr3b would enable

(56:58) us to do things like transport food to the third world in the snap of a finger without it you know biodegrading uh it would also enable us to do things like go to the bottom of the ocean and Survey the bottom of the ocean it would enable us to do things like mine asteroid fields or the asteroid belt that's in between Mars and Jupiter which means that the mining corporations are going to take a hit here on the planet it would enable us to do so many things that would shift the Paradigm in such a way that all of these

(57:32) people that are running the Deep state would no longer have a monopoly on these industries and therefore they would no longer be able to hold us prisoner or hold us hostage based on this illusion of scarcity yeah and so I want to add some more stuff just to really drive home the feasibility of this and practicality of this is that what we're talking about out here is alobar warp drive it's really that simple when it comes down to manipulating gravitational fields in order to create a bubble around an

(58:05) object how do we do that how do we break through the fabric of SpaceTime the answer to that is we break the something called the swinger limit which is uh very high energy densities that are required where now you can actually cause a breakdown in the fabric of reality to get to that underlying layer that we know is there in order for this to make any sense but we don't see all around us we never perceive all around us now how do we do that well the thing about kums law which tells us the electric force is that the electric

(58:37) force is divided by the uh the square of the distance between the forces so if we have two extremely powerful um electric uh let's say uh charged objects and we were to jam those charged objects together the closer they get to one another the amount of force is going to increase exponentially so if we take some very very powerful let's say three objects because three objects is the minimum number you need in order to create a triangle a two-dimensional shape in a 3D environment and we Jam those together as

(59:13) they get closer and closer to one another the electric force is going to increase exponentially and at some point it's going to hit that shringer limit and then po you are going to get your Wormhole so to speak and then you're only question is how do you direct the travel of that well we have a mechanism for that as well it's called entanglement so if we potentially have these entangled you can imagine a rubber band you take your rubber band and you spread it really far apart and then you take your coolum's law and you have your

(59:43) objects converge next to one another and then poof all of a sudden you go from one location and you rep in another and whatever energy that got pulled from one location whatever object now it's going to immediately appear in a different location you potentially going to have that time d dilation effect uh proportionate to the distance traveled now the implications of this like Jake just said there's huge socio economic and uh implications to this in terms of you know mining asteroids Transportation changing overnight and we don't need

(1:00:14) airplanes anymore if we can walk through portals like almost like the show Stargate and things like that but it also has a mental impact on people because for this to be real and

have that extra Dimension people are now going to start to wonder are do we live in some type of construct that has been created for us like in the movie The Matrix and this is actually something that will potentially break people's minds out there and to me this is the reason at least with this patent why you hide this information first of all

(1:00:45) there's huge military applications you guys can imagine I mean if we can uh you know teleport or warp a nuke onto somebody now we have what we would call a warp nuke and there's no stopping it it's just going to show up right on top of the Kremlin or you know right on top of uh you know any adversary one North Korea or they can shoot a nuke at us and we can just turn it right back around on them or we can send it to the Center of the Earth or to the Sun or anywhere we want so this technology traffic Aon what

(1:01:14) do you think about traffic with the tr3bs yeah the traffic situation I think the big concern would be like uh I think that even if the waves when you rebuild the wave function even if they were to go through each other wouldn't matter because you're on that extra dimension that we don't perceive they're just going to pass right through each other so traffic might go away but if we only have certain portal locations where you can walk through them you know maybe in the beginning at least then they I

(1:01:37) imagine everybody's going to be sitting there like we go to the airport but now we're going to the portal Port you know then we have to walk through that portal but the neide idea about that is that this technology seems like magic to a lot of people and I think that I would have said this technology is a thousand years more advanced than we are right now but we're staring at it we're looking at in the patents right now and it makes me wonder that okay what does it actually look like now if we had

(1:02:00) these Pats tomorrow versus where we might be a thousand years from now it might be that tomorrow we go to the portal port and we walk through it and then maybe a hundred years from now we have a handgun that you can create a portal in your house and then you can walk right through it so that's the stuff where I want people to think about is that kind kind of like Rick and Morty yeah exactly I was thinking about Rick and Morty I love it you're a fan of Rick and Morty as well but yeah that's the beauty of it too is that even if we get

(1:02:26) this access this technology there's still so much further to push it and stuff like quantum computers and AI can help us do that it can also help us find The Meta materials that we need to potentially have our first patent that we talked about the piso electric high temperature superconductor so those are our first two do you have any other thoughts on on the um uh craft commercial Mass reduction I do so let's just say for the sake of argument that the government or the military or these corporations have had

(1:02:58) this technology for a long time but they've been kept keeping it suppressed from the public but they've been using it not just had it but been using it how is it that they would use this stuff to create very specific timelines if they are able to go outside of time and almost like look down at Earth and say okay we're going to take humanity and civilization in this direction

then they would actually be able to watch the propaganda and all of the stuff that's in the Mocking Bird media and in schools

(1:03:38) kind of play out almost like in um like in uh Interstellar where he's in that that place where the he's in the like library at his house and then you have all of the like the tessera type Dimension where he sees all of these different uh time and and play all these different times in the same place layered on top of one another and then he's kind of able to manipulate in this other dimension what's going on in the physical one then I think that what we are witnessing now is actually a feud between different factions of the quote

(1:04:18) unquote deep state that have access to this technology and there are certain factions that wish to do things like reduce the population move us toward Ai and transhumanism and basically hijack human civilization to create a more technocratic tyrannical system where they are the ones in charge of everything all the resources all the labor all of the currency and then we have another element where of the deep state where you have individuals that are like no we want to release this technology to the people and in that

(1:04:55) sense there would actually be a bifurcation of these different versions of the world there would be a place within this other dimension where there's two different ways that the particle that is the earth could go one slit or the other and I think that what we're witnessing is the use of this technology to to create scaffolding for both of these uh timelines and these technology are being used to guide Humanity like a guidepost in this other dimension to move humanity and steer them toward one timeline or the other and the real

(1:05:37) Battlefield here is actually the minds of the human beings because the kind of effects that you're talking about with these craft and almost like the reversing of the quantum probability wave and all that we as human beings do that moment by moment through quantum computation we as human beings are tapping into that Quantum probability wave 40 times a second and we're choosing which reality that we're going to bring into existence by moving our minds and our bodies through SpaceTime to specific realities and

(1:06:13) based on the frequency of our thought similar to the frequency of the that's surrounding these crafts based on the on our thoughts and our frequency we are tapping into that Quantum realm where we are branching to another reality in SpaceTime but we're not doing it at such a high speed that we're popping in one Wormhole and out another where we're if we want to go up and get ourselves a glass of water we actually have to walk across the room but it's almost like we're walking through one little

(1:06:41) Wormhole after another to get there that is for us just normal reality but when it comes to these craft we're talking about jumping minutes or months or years ahead if all depending on the speed so my thinking is then that this is the reason for the propaganda apparatus is to influence the minds of the population so that not only does this technology remain suppressed but also that our minds are Guided by this scaffolding that is being created by these interdimensional vehicles surrounding the planet so that they can guide us

(1:07:20) toward a civilization that is based on artificial intelligence transhumanism and and geoengineering bioengineering and then there's this other faction maybe Salvador Pas and the Navy are a part of that I would like to think that they are there's this other faction that is like no no no we want this information to get out to the public we want people to have this understanding that we have that essentially we are living in a matrix and it is possible to get out of this Matrix that has been constructed by less than 1% of the

(1:07:49) population who've been keeping this technology suppressed yeah and I want to speak on a few of those different aspects you brought up there a lot of really important stuff out there so first with respect to the sides that are out there and I don't know who's on what side I do have a pretty good authority that just like you mentioned there are different factions within the government some of them that want the information out some of them that don't uh my opinion is that at least the Navy and potentially the

(1:08:17) defense intelligence agencies want the information out um the people that I correlate to those uh agencies would be Salvador Pas related to the Navy uh General Flynn related to the DIA he was actually the director of the DIA Once Upon a Time whether or not you like these people or not it's kind of irrelevant I think politics is a little bit of a game anyway um you know General Flynn has actually been following me on Twitter which I think is pretty amazing and then you also have the CIA which I don't know exactly where they fall on

(1:08:48) this whole thing I do know they haven't been silencing me yet so I appreciate that uh and then I've been told that the dod and the Air Force are potentially on the side where they want to keep this information under wraps now I think that both sides are probably justified in their own reasons the side where I think Jake and I would probably fall on is the side of getting this information out there to the public where the people deserve this it will you know reduce the power of the centralized government in

(1:09:13) the Deep state if you want to call it that and give power back to the people uh but look at it from the other aspect and we're going to talk about this in the last patent is what if this technology has weaponization purposes clearly we've talked about them already with respect to warp nukes gets a lot darker than that then you could imagine that the other side would be afraid that we are going to destroy ourselves or that when a conflict occurs then we will destroy ourselves or if terrorists were to get hold of this type of Weaponry

(1:09:39) instead of you know just having blowing up a few people that can destroy the whole planet this is something that would be extremely scary now let's talk briefly uh about what Jake said about um unification theories and timelines so and I I here's where I'll tell you I don't know exactly what the answer is I think that if you're a proponent of string theory you believe that we create alternate timelines if we were to violate the laws uh or violate the speed of light that if we go faster than the

(1:10:07) speed of light there's going to be some causality issue you can show up somewhere before an effect has occurred and that begins to create the Paradox the grandfather Paradox

where you potentially could have you know killed your parents before they you were born that type of issue um that's one approach to it is where we create different timelines that's one resolution and that if the timeline shifts then there's infinite timelines out there Multiverse Etc the other idea is this idea of retrocausality and this is something

(1:10:34) that when I talked to Dr Jack sarfati about he's a big proponent of and I think that delayed Choice Quantum eraser experiment actually in my opinion proves that retrocausality is real meaning that the future impacts the current the the present um and this is a very unusual thing to think of the TV shows that I think of uh and movies that address this are the movie tenant and the TV show dark which is the idea that whatever happened always happened so we can go back in time but if we go back in time or send messages to the

(1:11:06) past if I were to call my younger self I always called my younger self and the only reason why I don't remember it is because I didn't realize I was talking to my older self when I was younger and this is how you correct the Paradox that's out there um so these are the ways where I leave it to you to determine what you think is the you know more iCal approach to it but what Jake said about um these these miniature wormholes what he's talking about there is something called Einstein puloski

(1:11:35) Rosen epr which is quantum mechanics what we see from the double slit experiment where the idea of how does the wave function actually break down and this has to do with our perception of time is that time is not linear it just seems linear because we're in these biological bodies but from the universe's perspective from The Fifth Dimension perspective time is Flowing not not linearly like we perceive it you can go forward or backward in time and that's how we have stuff like non-locality and quantum teleportation

(1:12:06) so how do we unify these theories that's what unification theories are and the answer the one that I like the best is something called ER equals e so Einstein Rosen puloski epr quantum mechanics equals Einstein Rosen Bridge wormholes wormholes from the general relativistic sense the idea that we can rip through that fabric of SpaceTime and now appear somewhere else those concepts are very similar and especially when you think about them like quantum teleportation you just think well if I scale that up what does that mean and just like Jake

(1:12:40) said our brains the whole reason why we can have intuition and be have creativity how we can think about what might happen in the future you could argue that that is a form of entanglement a form of us looking through that those Quantum wormholes and perceiving the different realities that might happen based on our actions it's a form of almost like uh looking very briefly into the future um the last thing I want to say and then uh we can go on to the next oh there's one more comment about that is just that the you may Wonder then about

(1:13:14) stuff like the Mandela effect you know I think that that's something that I like to broach the idea of but again I leave it to you guys to determine what you think is the reality of it but if we can manipulate time then you could have this uh perception especially if there's like

multiple timelines that if you were to shift timelines all of a sudden now the stuff you remember from the past might be a little bit different like the Fruit of the Loom I always had a cornucopia on it which I'll fight

(1:13:36) anybody who says it didn't have a cornucopia on it definitely did um but they claimed that it didn't out there and the Monopoly guy had a monacle there you go yeah I remember that too actually there's there's a lot like that so if that's the case then you might have stuff like the Mandela effect but what is more powerful than a super weapon what is more powerful than the ability to time travel what is more powerful than a warp nuke I would argue what's more powerful than that is propaganda

(1:14:03) controlling someone's minds and thoughts and the way they think and I would argue that's the reason why the government wants to control social media because social media Tik Tock Twitter **Reddit** you know X all these platforms Facebook this is how people think we use um the ash Conformity experiment we all want to conform we're in a world right now we're in a post-**truth** world where people don't even care about what's true or what's not they care about what other people told them to think and that's the

(1:14:33) whole reason why we're here doing this right now is we're doing the opposite of that we want people to think for themselves we want to get the information out there that a lot of people are going to go nope that can't be real I wasn't told that that can be possible well now you're being told it any other thoughts oh yeah absolutely um so if we as Humanity we as human beings have the ability to basically travel through these Quantum wormholes second by second through um decoherence uh through through coherence of

(1:15:07) into a of the quantum wave uh probability wave into a Quantum wave function then what are the implications then of the collective consciousness of humanity and the effects that our thoughts and emotions have on the vortexes on the planet and how that's feeding energy and frequency into the grid system and how that is actually warping SpaceTime in a much bigger sense in a sense you could also kind of view earth like it's a magnificently large and beautiful spacecraft that's moving through space and time and it based on

(1:15:42) the frequency or the consciousness of humanity in the planet we are then moving to and towards specific realities within this much larger Quantum probability wave so propaganda being disseminated affecting the collective consciousness of humanity is essential in order to govern which reality we Branch to in space and time now part of why it is that I advocate so heavily for Tesla Towers or Zero Point Energy is because when you understand how these Technologies work you begin to think in terms like what Tesla said of energy

(1:16:20) frequency and vibration and the implications for that for Collective human Consciousness are absolutely astounding it would literally create a crescendo of Consciousness and evolution in Consciousness so much so that the trajectory of the planetary Destiny in human civilization is moved toward a higher frequency within this Quantum probability wave when and the creation of a mass Quantum wave function where we actually Branch to another reality and

are no longer constricted by the cabal's craft that are creating a scaffolding

(1:17:00) for our minds and for our Collective Destiny moving us toward Extinction so I think that you're right the and I've said it many times the mind is the battlefield that this is the where we have to fight the hardest is to reclaim our minds to regain sovereignty over our minds and independent thinking and that's what these patents and able us to do is they create an evolution in both individual and Collective Consciousness which disables and disarms and renders obsolete this system that has been created by less than 1% of the

(1:17:38) population to enslave us into a matrix and a grid system that is entirely entirely illusory it's entirely based on misinformation it is not based on **truth** it's based on confirmation bias it's based on the compartmentalization of millions of people into misinformed realities where they argue with one another and hate one another because they believe different things so if there is an infinite clean energy source or an infinite free clean wireless energy source I think everybody especially the climate activists would

(1:18:17) be for that and they would say well that needs to be released to the public in spite of the fact that it'll have dramatic implications on oil companies or solar panel comp companes or wind turbine companies it who cares if it means freeing human civilization and Humanity if it means cleaning up the planet then let's do it that's something that could unify the Consciousness within this larger field and that's where we kind of get into what you were talking about about Unity energy and and unifying these fields except on a

(1:18:46) Consciousness level e e

(1:20:24) e e e e

(1:22:24) e e e e

(1:24:00) are so high that the energy densities will allow us to create a a localized fusion power device and we can create super conductivity through this as well but then the most disruptive one is the idea that we could completely destroy our entire planet with this this is a super weapon beyond anything we've ever seen before more power it's like a death star it's like the Death Star right it's like the Death Star it's basically creating an interference pattern of such magnitude that it could encapsulate and destroy the whole planet

(1:24:36) and basically suck it into this massive Wormhole yeah so that's the idea and I mean this makes me wonder whether or not we could create a black hole with this type of Technology if we were able to achieve energy levels that are high enough and just scale this up this is makes me think of could we destroy our entire Sun as Bob greener in my second hardre podcast mentioned but it also makes me wonder could we create our own big bang with this type of technology so when people talk about like the CERN and the Large Hadron Collider potentially

(1:25:08) you know destroying our planet I'm not even worried about that thing that's like a little peashooter I'm worried about this type of Technology where you know we could take let's

just say some orbs and we could take that kalam law that we were talking about and have our energy densities increase exponentially and we start off with a high enough energy source and now we get to energy densities that are unfathomably high and now what can that even lead to so I think it does take a lot of the same

(1:25:38) Concepts that we see from like the CERN hydron collider you know accelerating photons to the speed of light using super conductivity and it takes it to an extreme now in terms of the historical references of this and I think Jake will probably be so much at familiar with this is that I've been looking back at how far back this type of Technology might go and this technology in my mind can go potentially as far back as 1943 with the Philadelphia Experiment and project rainbow where Tesla didn't even want anything to do with it he left

(1:26:11) it up to other people like Albert Einstein and other Engineers where they literally built a battle cruiser with the idea that they were going to put these big de gazers on it to create extremely powerful electromagnetic effects thinking that it was going to Shield the object from uh radar so that no one would be able to see it but it did something they didn't expect it created a bubble around the entire craft from SpaceTime itself and then what we think of as happened is that the object teleported but if you've been listening

(1:26:41) today to everything we've been saying it's not that the object instantly teleported it's that their time got sped up relative to the or their their time was slowed down relative to the outside which was moving faster which gives the perception of Instant Transmission but from their perspective they're just going to look like they were going somewhere from the outside perspective it's going to look like they instantly appeared somewhere else so this technology could actually go as far back

(1:27:06) as 1943 that was 81 years ago so to Jake points before how long have they been keeping this suppressed has this been getting suppressed from us due to National Security or the disruptive nature of the technology for that long that's scary to me go ahead Jake well dude the Nazis and the Nazi Bell are something that we know they were working on and they got the schematics for how to build the thing from the Hindus from from the Indians uh when they got a hold of the mahabarata and the Bhagavad Gita and the schematics for these things so that

(1:27:49) hearkens back to literally Antiquity that is thousands upon thousands of years old and if we get into what you were talking about earlier about those rocks being able to be float like floating and suspended in midair then we might just very well have unlocked how it is that like the ancient pyramids were built so I think that what we are witnessing is not anything that's new but rather something that is remembered from ancient ancient times it's like an archaic revival of sorts where this ancient understanding is now

(1:28:24) now creating a Resurgence or a reemergence in our Collective mind because the information is literally in our DNA it is in the very fabric of SpaceTime itself now I want to note something that you said earlier because when we're talking about infinite amounts of energy let us not forget that the universe is made up of infinite amounts of energy and the singularity this

omnipresent source of energy is everpresent everywhere within SpaceTime as we know it right so essentially what it sounds to me like is is taking place

(1:29:06) here is that we have understood the laws of physics so much so that we have essentially hacked into this Divine Matrix of infinite energy that has the capacity not just to power our civilization for millions of years but also has the capacity to destroy our planet the solar system and maybe even neighboring star systems all depending on how much energy we take from this infinite energy source and move to a very very small and specific location within our physical Dimension now when we talk about the Deep State and we talk about these

(1:29:47) dueling factions what this means is that we've had this technology for for a very very long time at least since the Nazis and if not way way longer before that I mean the mahabarata and the bhavat Gita talk about an ancient nuclear apocalypse they talk about it like it's yeah this happened of course and there's places like mohenjo daru in India and numerous other places across the planet by the way that have vitrified stone combined with Radioactive isotopes that could only be generated through

(1:30:26) artificial nuclear explosions and this is a global phenomena it's not just local to India so this says to me that we're kind of coming back to the same place that we were Millennia ago and now I think because we're coming into the age of Aquarius and because we're stepping into this new awakened State of Consciousness we have all of this data that is literally in our DNA and in our Collective psyche we have all of these lessons that we've learned and I believe that we are at a juncture in human

(1:31:05) society and civilization where we can use these Technologies without destroying ourselves we can use these Technologies for anything and everything Beyond a nefarious agenda or some sort of malevolent purpose and I'm of the it's my contention that trusting the cabal that has had this technology and sought to keep it suppressed for quote unquote national security reasons I if if we look at any of the things the Myriad of things that are taking place now these people don't care about National Security these

(1:31:42) people don't care about keeping people safe what they care about is maintaining their power and their control now what it makes me wonder is are we dealing with people that would rather destroy the world then lose control of it and if so what would it take at these higher levels of compartmentalized power to ensure that they don't have access to the kinds of technology that would allow them to destroy the world before they lose control of it but I also want to throw in there this we as human beings are far far more

(1:32:19) powerful than we have been led to believe we just explained the quantum computation elements of the brain and how we're essentially moving through space and time similar to one of these craft but we're doing so so incrementally and so quote unquote slowly that we don't quite perceive that we are actually bending SpaceTime to a singularity and creating from the quantum probability wave a single Quantum wave function that is embodied in physical reality so that means then that we are constant L tapped into this

(1:32:56) infinite energy source that could power our civilization for millions of years which also means that our Consciousness our spirit as individuals and as a collective is just as if not more powerful than any sort of technology that could be created by the less than one centers that also means that we at this point actually are our own saviors we have the capacity to emerge from this Matrix of Illusion and misinformation and Triumph as not just individuals but as a collective species and also evolve without the necessity

(1:33:41) for technology but what it's going to take is understanding how these Technologies work in order to fully understand the capability and the capacity that we have as human beings in our connection to this infinite energy source and the shall we say creation of the pro Quantum uh wave function and the manipulation shall we say of SpaceTime itself to these Singularity moments that are actually the only thing that makes it possible for us to move our bodies through the room to get a glass of water yeah that's where the mic came in

(1:34:25) with the Consciousness if whatever you have that's outside of you you have to be a part of it in order to move through it in your non-local Consciousness how you were how you were speaking through that if we watch how everything moves through everything we have to be a part of everything that we see at the same so integrating that reality of the mirror of what's around us into our own selves giving us the capabilities is a really good idea I really liked what you guys are saying by the way I'm like freaking

(1:34:49) out over here because I'm so excited I just want you both to get my props this is awesome I think we both love you too Jenny so thanks for being up here with us um just to add on to what Jake was saying as well you know this brings up all the stuff that we've been talking about here brings up some very large questions about the nature of our reality and where we came from where this technology came from and I don't have all the answers for you uh I wonder a lot about these big questions all the time this is what why I wanted to host

(1:35:18) this space here with Jake um because I want us to know that salvator P has put the patents out there not for personal gain whatsoever but for us to think about these types of questions and know that this technology is actually out there and operational not just theoretical and that if we talk about him and we talk about these patents that can go a very long way to getting this information to a broader mainstream audience where people can begin to ask these questions themselves and so I I wonder stuff like is this really ancient

(1:35:51) technology is this even current technology are we rediscovering something that we already knew in the past like the idea that you know how maybe they did use some type of anti-gravitational effects second order effects like this to move giant stones that were required to make the pyramids it makes me wonder have we been reset our civilization only our H common history that we can remember only goes back about 10,000 years everything before that is just kind of avoid why do we not know more about our reality given

(1:36:21) the fact that we're currently talking right now I'm talking on a live stream we're talking through electromagnetic devices here communicating with one another with hundreds and

hundreds of people together it makes you wonder how did we get this far Advanced right now did we reverse engineer this from ancient civilizations did we reverse engineer this from our past selves now that we talked about the idea that time is not linear did we get this information from our future selves did they send a message back in time to us

(1:36:49) that we were then able to reverse engineer and catch up did it come in every civilization there's that story where someone is visited and given a clue that there will be some sort of a you know a cataclysmic event so that that occurs frequently in different civilizations in their lore well but also let us not forget though hold on a second here like we are dealing with and anybody that looks into like ufology and uaps we are dealing with almost like a breadcrumb type Donation agenda where supposedly the craft or the uaps that we're talking

(1:37:34) about a lot of the time they will like drop something to the ground and in many cases they found that what they dropped to the ground is like like a an alloy a metal alloy that we look at and go how the hell did this get created and then we reverse engineer it and then we begin to build off of that reverse engineering understanding so that makes me wonder if what Ashton said is true about this notion about is this us from the future now think about this if these craft have the ability have the ability to Traverse

(1:38:09) SpaceTime if they have the ability to essentially time travel then is it possible that we are dealing with sort of a convergence of energy moving from the past and moving uh to the Future and energy moving from the future and moving to the past that we are dealing with a convergence of these timelines similar to like what happened with tenant in the movie tenant and are we dealing with these like breadcrumb donations of metal alloys and Technologies as a way for the good side shall we say the alliance as uh David Wilcock likes to call them uh

(1:38:53) the alliance trying to create a scaffolding for us as Humanity to Branch to this other version of Earth where we are enlightened and we understand the infinite capacity and capability of not just the human Mind and Spirit but also our technological innovation and branching to a version of human civilization where our technology and our Humanity evolve together so that we can literally evolve technologically socially economically while we're evolving spiritually you also sometimes wonder whether or not um there were ancient

(1:39:35) civilizations that were survivals that you know did survive any sort of an event and and maintain that control over technology on their own yeah breakway civilizations that might be out there and this is why this is why I think the idea of the deep State you know and uh you can call it whatever you want to call it is that there people out there that have been holding this power over us for who knows how long out there and then it makes me wonder about other stuff too like we haven't really broached the idea of aliens cuz I think

(1:40:01) that you know it could be us from the future could be us from the past which is pretty damn weird maybe there are aliens out there somewhere I I happen to think there's life probably all over the cosmos and if you have this kind of technology that we've been talking about today then even though it may be super far away you know that's now a surmountable

challenge something that can that can uh we can overcome makes me wonder about stuff like Mars some people in my chat brought up Mars you know Mars used to have oceans on it

(1:40:27) you know what if we figured this technology out we maybe we were martians once upon a time we figured this technology out maybe we destroyed that planet um and this is very scary thought is that there's something called the fmy Paradox out there which is why do we not see techno signatures everywhere there's a couple different answers to it maybe we're just not looking correctly maybe they are out there but maybe any civilization that reaches a certain level of technological advancement based on the essentially magic type technology

(1:40:53) we've been talking about today maybe they destroy themselves because it's just too powerful it's it's a singularity and power itself like like Jake said Infinite Energy out there so this makes us question stuff like the nature of our reality as well as the nature of our entire civilization and so I hope that if anyone if people get anything out of this today is that we think about those big thoughts and what in my opinion this is what I call true disclosure is that true disclosure isn't necessarily about the the nordics and

(1:41:24) the Grays and the reptilians and the mantids and what have you the various alien races out there it's not even about having crafts crash and US retrieving them it's about the technology the technology that would change our world reshape our world potentially could be our past and can be our future all at once well you brought up Mars let's talk for a second about Sidonia and there's a lot of people that say oh the face on Mars is just a natural uh object that had shade on it that made it look like a face and

(1:42:00) because of parodia we assumed that it was a face but the thing is that if you look at the area where this quote unquote face on Mars actually is located there's a complex of pyramids that are also there that are so mathematically precisely laid out that it creates a merkaba and then we also have to get into the fact that Phobos the Moon that is Mars moon is also kind of like in a tidal lock the way that our moon is where the face of the moon is always facing the planet and there is an obelisk that is like a mile high that is

(1:42:40) always pointing down at Mars and in in many cases uh throughout the orbit it actually lines up with Sidonia with this complex of pyramids in the face on Mars and NASA now we all have to take what NASA says with a grain of salt but NASA has said that they have detected radioactive isotopes on Mars that can only be generated through artificial nuclear explosions now let's also not forget the the uh elongated skulls that have been found in digs all throughout the world in particular in Peru and the fact that

(1:43:22) these skulls are actually comprised of two plates for the skull as opposed to three like human beings and like okay hold on a second when we look into ancient lore there's talk about things like Ancient Giants with elongated skulls so what exactly are we talking about here when we start talking about the moon and its placement in our in in orbit around our planet we talk about the metal Alloys that are on the moon that can only be created through human or intelligent interference in the in the artificial creation of these Alloys

(1:44:05) the fact that the Moon is hollow the fact that there's supposed to be uh not just a Nazi base on the moon that they created in the early uh 40s but also there's supposed to be these massive structures on the moon that are indicative of an ancient civilization that used the moon like a Starship of sorts moving and traversing the Galaxy the old-fashioned way through natural wormholes and through the magnetic field of the orbital rotation patterns of stars and planets so and then we cannot forget the planet I believe it's called

(1:44:48) Tiamat according to the samarians it was this massive earth-sized planet that was in between Mars and Jupiter and it is the destruction of that planet that created the asteroid belt and that makes me wonder did they destroy themselves through the kind of technology that Ashton is talking about or supposed supposedly according to secret space program whistleblowers it was actually a cosmic war between the beings on that planet and actually beings that were existent and using Mars I'm not Mars I'm sorry uh Saturn as like a weapon and

(1:45:28) that the rings around Saturn were kind of like a massive energy weapon like a death star there's also moons that surround Saturn that have square craters like well hold on a second like what do you mean Square craters there's no such thing like the nature doesn't do squares and hard lines like that so in my my opinion when we start talking about the types of technology that we have come to at least I believe in this room believe that are real where we're talking about creating and traversing

(1:46:04) wormholes we're talking about Infinite Energy we are talking about superc conductivity the bending of SpaceTime faster than light travel Etc if we have come to this conclusion and if we even believe for a second that ancient people came to this conclusion a long time ago enough to make nuclear weapons and anti gravity vehicles uh enough to create the pyramids all over the planet and move millions of several ton stones into mathematical precise placement so much so that we cannot replicate it now then that in my opinion is evidence that

(1:46:41) there is something else that is guiding civilization and many of these ancient civilizations believe in this notion of interdimensional or hyperdimensional entities the gods the Titans or uh the the ancient uh Gods of Hindu and viic tradition Etc the ancient shamanic Traditions talk about star beings and star knowledge and all of this stuff they the the sacred sites all over the planet are places where there are vortexes massive energy vortexes that are natural in a part of the landscape so much so that places like yes

(1:47:27) Skinwalker Ranch have these areas marked so in my opinion it's a given based on the evidence the question is I think then what direction is Humanity being guided in and believe because I believe in a benevolent Creator and a benevolent intelligent Force I think we are being guided toward Evolution we are being guid toward spiritual technological economic and physical Evolution so much so that we will become Galactic or Intergalactic citizens a part of something that is so much larger and Beyond this little Matrix that most

(1:48:10) people's minds cannot fathom yeah yeah so I think these are some pretty big thoughts

only last thing I want to add on there very quickly is that there's even more than one monolith there's a monolith on Mars and there's a one on F one of Mars's relatively tiny moons out there so if there was I said that yeah I said that yeah and it points down at Sidonia points down at the pyramids on Mars yeah that's pretty wild to me so um just because I don't want to go super late do you want to pull a couple people

(1:48:43) up we can do a few questions I don't want to go too long in the question so we can have a few speakers come up maybe do like 20 minutes of Q&A or people have thoughts they want to do the for Jake and I when we bring people up uh you know we kind of we we love everybody's thoughts out there but we don't want people to go into a lot of stories I know that everybody's got their own personal experiences and stories uh what we really want to do is we want you to keep it on topic keep it topical

(1:49:08) relevant to the discussion that we're having here and as brief as you can keep it while getting your point across 100% please keep it to questions we want to create Clarity so you know we don't want grandstanding we want clarity forgive you know the bluntness but that is the case um let's go to um I see we got Levi go ahead Levi oh he dropped bumper um go ahead and request again we brought you up there Levi I don't know what happened go ahead Source Hey Jake thanks this is a wonderful space um Ashton first time I'm

(1:49:49) hearing from you awesome um do you know uh this Tech technology does it have anything to do with what we've heard of called the hutchesson effect which is um you know a couple of um interfering strong toroidal electrical fields and bombardment of the interference pocket with uh highfrequency uh tuned microwaves and I've seen a few patents with this on it as well and do you know anything about that thank you e

(1:50:56) uh US Government Can Do the US government has technology that's much much more advanced and capable than what uh you know a guy in his garage has and this is where you can begin to think of you uh scale up this technology and it makes me wonder too about ufology where a lot of the stuff that we've been hearing out there is like about drones that they're seeing out there get always gets talked to about drones but you can imagine if we could have these types of effects and maybe **China** and **Russia** even have them at

(1:51:30) this point you know some of the stuff we might be seeing out there is quote unquote drones might actually be things using the Hutchinson Effect and other anti-gravitational Technologies to have unconventional propulsion based on these same exact patents that we've seen out here it could even be that the only reason why these patents came out is because the United States government knows that **China** and **Russia** are either catching up or have caught up and now they want to get these patents out there because they don't want somebody else to

(1:51:56) get the patent out there and now it gets really awkward where the government has to come out and say oh yeah well we had that uh 20 30 years ago and because then what's the legal implications after that so you might argue that they had to put it out there because people have figured it out great question everybody and let's throw this out there I think I failed to

mention this earlier when we were talking about interdimensional entities or ancient civilizations and that's the Black Knight satellite the Black Knight satellite for

(1:52:26) those of you guys that haven't looked into it is a object a massive object that is floating counter to the Earth's orbit so it can't be a satellite the way that our satellites go with the Earth's orbit this thing is going counter to the Earth's orbit they don't know how old it is but Tesla speculated that he was getting a transmission that could not have come from any Source on the planet but it was of such mathematical Precision in its patterns that it could very well have come from elsewhere

(1:53:00) somewhere else in the Galaxy or in the solar system and then we come and we find the Black Knight satellite and every time we try to get close to this thing it literally evades us and we don't know where it's going to be or when or Etc so that's another element to this notion of capabilities of craft out there that are ancient and beyond our Realm of understanding that like you said if the government has this I mean if this guy in his garage has this kind of technology to do this stuff what does

(1:53:30) the government have and if there's civilizations that are literally millions of years ahead of us somewhere in the Galaxy or in the universe then what kind of Technologies do they have um Levi we tried to bring you up but you got dropped down go ahead dude hey thank you thank you so much JK hon good to see you again um I just wanted to make a couple of points um uh first of all thank you Ashton um I think the establishment the US government fars um you the most and people like yourself and Jake who are trying to bring this

(1:54:04) this technology out or talk about this technology um and um if you really look at um if you really look at the pattern uh especially the one that talks about the craft using the neral mass reduction device um and the interview with Ashton I encourage everyone um that is one of the most important uh Ash don't laugh trust me that that particular um um interview is one of the most significant interviews out there um and the reason I say that is um and if you look at the interview and um I I actually happen to do the

(1:54:44) timelines for Ashton and you know thanks for allowing me to do that for you um and I um and and one of the important thing that that people need to notice there is the reasons he said he said that why they brought out the patents it was because it the US government could control um the um the the military industrial complex from actually charging an arm and a leg to the US government that's so important because if they want to mass produce this right they would be at the mercy of these these companies these private locked

(1:55:18) Mars or the Rons and so on and so forth that was a primary reason and secondly um he he mentioned and I totally agree um that the verbiage used in these patterns were so uh were designed to detract um from people figuring it out right it was it was purposely convoluted so if you actually look at look let me put it this way um I've Had The Good Fortune of sorting out this technology so when you actually actually read that in context right it will all make sense so let put it this way the craft using the inertial mass gravity once you

(1:55:56) figure out technology you will worship it as a temple of science if you if you really understand the technology you will consider as a temple of science second point is if you look at the that particular uh patent with all of the flamboyant physics and the um the the numbers that have been put out there focus on the claims that's really important focus on the claims and the claims made is literally four claims literally for all of the uh flambo there it's just four claims that is what creates that particular plasma which

(1:56:41) actually is the the source of you know the space time energy um uh you know and mass and that is the glue that actually B BS uh and creates that Fifth Dimension and that is that is the one and in that particular uh claim it also uses the other patterns that uh he's uh um assigned to that is the um uh the feo uh electric room room temperature superconductors and the high temperature ones so that particular uh patent is uh like which I mentioned the Temple of science um is it uses all of these Technologies The High Frequency

(1:57:27) gravitational wave generator um in and that so so basically what they've done is they've broken down out um the uh the the first pattern into and the components used to which is used in that craft using inertial mass reduction into the different components as to for how to create the high frequency gravitational generator and then Super Fus all works in Synergy and in sync and in unison in the the craft using inertial mass uh reduction uh device so once you figure out technology which God has blessed me with that knowledge and I

(1:58:02) mean um that once it once you figure out it all makes sense it all says wow this this makes all makes sense but until you understand the technology it'll be like we can talk about hours like we can spend five hours and we'll be beating around the bush and we'll get nowhere all I can say is that um you know and and because there's a pattern in the US we can't make this or test this device in the US however if there is another country that um um you know someone is able to experiment with this

(1:58:35) um I think um I personally think there is within five years we can get a prototype that we can actually negate the um negate uh gravity to begin with I think we need to really focus on rather than going from interplanetary you need a lot of energy and you need to figure out out how to get that immense amount of energy let me put it another point and I'll end with that I don't want to overstay my my welcome here uh just I think the humans have already figured this out I'm sure all of you use um uh

(1:59:06) you know your noise cancelling headphones this technology works exactly like that this is some food for thought right exactly like that the one thing that is shared by gravity and and sound which is actually uh he mentions that in his in his uh pattern high frequency gravitational wave generator yeah sorry can you hear me destructive interference Levi yeah yeah so yeah so sound and gravity share one thing in common is the inverse Square law is really important the inverse Square law right so if sound can be manipulated and cancelled out via head

(1:59:52) NOS canceling headphones it's the same philosophy that applies and if you use put two into together you will figure it out but I'm not here to spoon forood speed anybody um 8

this this technology is real um Ashton is on the right tracks the orb videos are absolutely real um and anyone who doesn't believe it perfectly fine a time will come where you know you will appreciate Ashton for his hard work and um yeah and I just thank God for giving me the knowledge on and how to figure out this technology

(2:00:24) thank you so much yeah uh thank you sir and I I can tell that you looked at those patents and you're familiar with it based on the reference to the the Salvador Pas interview is the one he was talking about um I don't really like to self-promote very much but that is an extremely important interview both the one I did with him as well as the one I did with him and Dave Rossey out there uh they actually there's a little clue in there which I'm not going to go too much uh elaboration on that is related to

(2:00:50) spin and to sound which does begin to unify the idea that sound waves can be used in a similar way where uh we can create gravitational effects it has to do with second order effects so taking your uh standard sound waves and having like you said interference destructive or constructive interference and potentially having second order effects uh come from them so yeah I think that also the last thing I want to say is just like he said um you know whether or not you think this technology is real the thing about it is

(2:01:22) that technology like this is a discovery just like the discovery of fire so it doesn't even matter whether or not you believe in it or not at some point if it's true it will become public knowledge and it will be publicly known I think our objective and goal here is to give you that information before everybody else figures it out um so use use this information what you will uh take advantage of it uh profit off of it if you want I leave that up to you everybody's got to eat out there so thank you very much Le I appreciate

(2:01:49) those comments all right let's go to um and please once again let's try to keep it short Ashton we're probably looking at like another 10 minutes maybe 12 at the most so um let's go to I believe I had AJ Nick up next Hey Jake hey Jenny hey everybody um this will be really quick so I was watching the Shawn Ryan podcast uh specifically the interview with Joe mcmonagle excuse me and with remote viewing um TCT which got me keenly interested and um I've been getting um you know deeper into researching stuff like this and

(2:02:29) then I came across something called hemisync or listening to these certain frequencies that can help put you in a state to do like a sort of um remote viewing process I'm wondering if any of the hosts or perhaps the speakers have experience with that or would like to talk about hemisync and remote viewing well I just want to do a quick comment then I'll let Jake because this is more of his thing probably I I don't know if it is or not but um so generally with esoteric stuff even like remote viewing the science that

(2:02:57) we've been talking about enables that in order for that to be possible you have to come up with this idea that the distance itself is an illusion and that every point is actually connected and we just don't perceive it and what do you need for that a Fifth Dimension the exact thing that we've been talking about faster than light communication faster than light

travel so to me if the stuff and science that we've been showing is real it opens the door up to remote viewing and other what we would

(2:03:21) consider like psychic power type stuff Jake what are your thoughts yeah well you said it pretty well in all honesty the only thing I would add is that uh the CIA has done experiments where they have had people across the world transmit thoughts to one another and these the thoughts they have found travel at the speed of a seventh of a second across the planet and if everything is interconnected through quantum entanglement and everything is coming from the same omnipresent Source then when you dissolve the illusion of

(2:03:58) separation and integrate your Consciousness into the **truth** of unity and become one with the omnipresent source of energy then all things are possible because at that point you're influencing the schematics of physical reality itself you're influencing the creation of the quantum wave function you're influencing the quantum probability wave con consciously to manifest very specific results now when we talk about that I think it's important to note something that actually Ashton posted not too long ago

(2:04:32) about the dod threat scenario and it says the science exist for an enemy of the United States to manipulate both physical and cognitive environments in order to penetrate us facilities influence decision makers and compromise National Security now one of the things that is on this long list here of ways that this could be done is actually the alteration or manipulation of biolog biological organisms as well as anomalies in the SpaceTime construct so and as well as things like penetration of Solid Surfaces um that being said that is

(2:05:08) indicative to me that it is entirely possible to say quote unquote penetrate one of these secret you know dumb facilities one of these compartmentalized facilities and also integrate your Consciousness into things like the computer data if if everything is interconnected and if you're at a certain level of understanding where everything is consciousness and wave vibrations and those wave vibrations transmit information then you're able to do things like that which to some people would seem like science fiction uh but

(2:05:42) it when you break it down and I think it actually says in that in that um in that post at the bottom of that uh asset that a that Ashton posted it said what was considered phenomena is now quantum physics so in my opinion not only is astral projection possible or bilocation or remote viewing not only is it possible you're able to travel the cosmos the that guy uh Igor Swan I think or Ingo Swan something like that he he literally remote viewed Jupiter and told them there were rings around Jupiter before anybody knew anything about it so

(2:06:22) so yes it's all possible and it relates to this technology that we're talking about because what is essentially taking place is they are attempting to create technology that replicates the ability of the human Spirit to Traverse the cosmos instantaneously um let's go to sorry one followup really quick with that J we don't really have the time is it gonna be short okay I can DM you thanks okay thank you um let's go next to um Aller alleron alaron can't hear you you gotta unmute your mic there bud alaron alaron I'm

(2:07:08) sorry alron Al alron Al alron okay well we're gonna move on to hey Al Jake hi um I think I got a fake touch on my phone or the universe said that I needed to talk to you guys because I did not select pull myself up there um okay well I mean if you don't yeah I mean do you have a question I have a lot of questions about this stuff but I don't feel like I've read up enough on it so I'm gonna let the mic go and uh keep listening thanks God bless um all right let's go to um money pen and then energy of the

(2:07:55) universe hi guys um Jake amazing as ever um people are really fascinated in this um so I'm so glad you guys are doing it Ashton and I did a show four days ago it's had over 2,000 uh people look at it 888 people have done a replay on it um people love this topic they really do um so I was just going to say uh thanks for continuing the inspiration um just one point I wanted to make for other people that are interested and want to know more the three body problem that you may have watched on Netflix as a short film

(2:08:30) has been serialized as the um original from the same book in in Chinese but you can watch it with subtitles on Amazon Prime it goes much more detailed into the scientific stuff into the quantum physics the quantum engineering it goes into the broadcast of signals the frequency the vibrations it talks more obviously about the um the nature of the physicists and the scientists that were looking at um for example um very very fine very thin very strong thread now I didn't even realize the significance of this until I started to look at space

(2:09:05) ladders or escalators to be built from the earth going up towards the the satellites and the space headquarters where we could build space escalator that's going to be my my next post this evening but stick with it Go and listen or watch to the Chinese version you will find much more in it about exactly what's being discussed tonight thank you thank you dear okay energy of the universe yeah hello um what I was going to say is everything you said tonight is very good um you know you can hear a lot about what you have mentioned also on

(2:09:40) Ancient Aliens I'm sure you're aware of that program those guys are pretty spoton they go over all the different structures around the planet and discuss most like the by most ly um you know um Superior being that either help the human to construct these pyramids structures or they did it them because as we know there's pyramids outside of Mexico City no any sense ofc because of that most likely those Mexico City probably were built by Superior beings directly so that's great you said is fantastic but what I was going to say is

(2:10:31) that we need to come together collectively and start maybe put call it contribute lab and we start working on these projects no matter how small of of it is that that we start off with we get to the point where we make we finish because we cannot enti like T and we call them they and who [Music] are he's rubber Bandon super bad am I the only one that hasn't rubber B rubber Bandon really bad yeah I I'm sorry dude rubber really badly not a bad idea though let's go to Source maybe he has I think he had his

(2:11:18) hand up for a second we can do a quick follow up on him oh wow absolutely thanks um yeah I I Jake knows this is like um something I'm very excited about um spiritual mimicry

masquerading as space fairing technology and that the meraba and the actual light body itself is what we're using these Celestial principles and um have you heard about this the actual the things that we're talking about are um maybe Celestial maybe these are planetary forces themselves and so it would be difficult to engineer them from logic as

(2:11:57) such but a Divine sort of intuiting of these forces may have been easier for our predecessors um is that something that you that any any thoughts at all on that thanks Jake you when you say intuiting let me ask him a question when you say intuiting are you talking about like with Consciousness in a way of not having a priori knowledge like um no trial and error whatsoever just by a hunch or maybe um oh I don't know this gives me chills I can't find the words um that thing you know the the bones of Prophecy

(2:12:34) um somehow we intuited these things like iasa you know they said the the jungle came alive and told them the spirits of the Jungle told them how to make it otherwise it would be too complicated they would never have gotten to that point nothing would have guided them there but a hunch you know and so these Celestial principles it's yeah I will just say that our DNA is antenna our brains are antenna for a data field and that data field is constantly evolving uh in one of my previous spaces with Holo Cipher we talked about how the

(2:13:09) entirety of creation is a series of infinitely nested electromagnetic fields inside of an infinite energy source that is constantly evolving sending and receiving transmitting data and information and that it literally uh mutates and and manipulates the fabric of reality in a way to where the input of this new data changes the DNA of human beings and the way seeds are produced inside of plants Etc so I I don't know if you you would agree with this but the when somebody brought up hyn and and there was a person who spoke

(2:13:48) of thought forms and you know how Consciousness could exist outside the brain that's something that's a very big topic now so you know what I'm saying when you're talking about like infinitely nested bubbles could we be creating those you know as a Creator type with our conscious yes well yes but that that's it's non-local Consciousness exactly it's the energy source but and and that's what I'm saying it's constantly evolving based on the input of this new data and therefore

(2:14:16) SE to our wi so that we can then evolve to send and receive this new signal of this new inform uh this new data that is uh a result of this feedback loop of constantly evolving information so whether or not it's Cosmic in the sense of extraterrestrials or interdimensional or it's this hyperdimensional Consciousness that is doing all of this it really is negligible the point is that human beings are a part of the very fabric of reality and in intuiting this information is a form of perception it doesn't have to come through

(2:14:56) intellectual stimulation Einstein himself said that none of his theories or any of his data came to him through logical deduction or rational thought but rather they were given to him in an instant he also said that imagination is more important than knowledge he also said you know when our technology surpasses our Humanity we will have a generation of idiots holy I

love this guide everyone here you better follow Jake this is amazing I'm I'm I'm floored amazing well thanks that was so thank you uh case in point it's in our

(2:15:33) DNA we literally have 13 billion years worth of information in our DNA and when you activate all the antenna that are on the DNA that are responsible for sending and receiving lighten information your frequency heightens your vibration heightens to the point to where that larger data field that Ashton was speaking of earlier this fifth dimensional field of data and Quantum probability ends up becoming accessible to your hyperdimensional Consciousness once it has popped into that other dimension through the frequency of your

(2:16:05) Consciousness penetrating through that dimensional uh wall shall we say which is this illusion of separation and when you do that then you have the capacity to do things like astro Projection or bilocation at the snap of a finger um you're you're referencing the earlier we had spoken on the the CIA document I don't know if you have read that yet but it goes back to multiple people say that like the universe is the mind or mind is Universe vice versa that document is very interesting to to look at if you

(2:16:36) haven't seen it yeah well I mean the mystics have said it for thousands of years you know but um let's give it to Ashton to wrap it up yeah just uh quickly respond to that I think that uh two aspects is one that I think I like the idea that you can look at this through the whatever lens you want if you want to look at through a spiritual lens or Angels and Demons lens or aliens or whatever you want I think that that's the beauty of it is that you can interpret it through M multiple different ways um and the other thing

(2:17:05) too that I like is um the idea of our soul being some kind of omnipresent uh thing and our bodies are just the receivers for receiving the soul that's out there uh Andy Weir has a video out there called the egg that I think about a lot as well which is the idea that time is an illusion that we are all the same person living out these lives uh simultaneously in our own frames of reference which is uh I think in my mind a very beautiful thought for what the meaning of life is in general uh so just to wrap it up though so today guys we

(2:17:39) went over the salvator pasas patents say salvator Pi's name he is a really nice guy I get to talk to him pretty frequently uh whenever I want really um he can't really do my LA or interview right now I'm not going to go into depth on that uh but I believe 100% these patents are real technolog is real technolog is out there it's operable be vigilant look for when they're using this technology we can probably catch them at some point in the future either just as Citizens looking up in the sky

(2:18:08) looking around or potentially from future military leaks as well uh talk about the patents that are out there talk about them with your family talk about them with other people on social media when these types of high technology discussions come up bring these patents up these are a really unique opportunity where they have a lot of credibility to them they're patents that have been approved um so I think that's what I would say in the end I just want to thank everybody for being up here people that are listening we had

(2:18:33) a huge audience here tonight um make sure you guys are following the people in the speaker panel that you liked up here Jake myself Jenny especially as well as money Penny who's been working with me a lot on a lot of different things so I hope you guys appreciated this tonight I know I had a great time I hope you guys did too as did I thank you Ashton for lending us your Brilliance my friend and I'm really glad that we did this space and uh you know the patents are out there and that you're doing what you're

(2:18:58) doing and um if at any point Salvador Pas is open to talking to a shamanic practitioner it would be an honor and a pleasure to chat with him I understand uh if he wants to keep his distance considering you know the whole January 6 but you know maybe a good word from you might uh might jar his uh his curiosity a little bit and uh I would just I wouldn't we wouldn't even have to have him on a space I would just love to talk to him and thank him for everything he's done so um God bless you all and

(2:19:29) Namaste much love and uh stay free okay chat I'm G close this okay chat so I want to go back over this part you guys didn't hear this uh but thank you guys for being here on this particular space if you missed the part where it was muted and I talked about the high frequency gravitational wave generator I'm going to say that one more time it'll take about two or three minutes uh so here's the high frequency gravitational wave pattern you if you're just listening on audio here we go it

(2:20:03) may be possible to for to generate high power high frequency gravitational Waves by high frequency accelerated axial rotation or accelerated high frequency vibration of an electrically charged possibly asymmetrical structure high frequency uh high power high frequency gravitational waves are gener erated by enabling the gersin Stein effect that is the gravitational wave production by propagating electromagnetic radiation through strong magnetic fields controlled motion of charged matter under rapid acceleration transients may

(2:20:37) enable macroscopic Quantum coherence namely possible quantum mechanical behavior of macroscopic objects objects that we can see if multiple high power high frequency gravitational waves were to be focused on a particular particular point in the SpaceTime locality they could induce A Spacetime curvature Singularity namely a distorted and disrupted patch of the space time fabric this is your Wormhole mouth the opening of The Wormhole from a propulsion perspective a craft enabled with the plurality of high frequency

(2:21:06) gravitational wave generators induces curvature singularities in its close proximity generating a gravitational well in its flight path thereby rolling down this SpaceTime curvature dip in a matter analogous to surfing this is how we can potentially use these as a propulsion mechanism this hybrid hybrid craft would be able to move with great ease through air space water mediums by being enclosed in a vacuum plasma Shield due to the coupled effects of em field induced air water particles repulsion in the local vacuum energy

(2:21:44) State polarization this is the bubble plasma bubble does that sound familiar the controlled motion of charged matter under rapid acceleration transits may lead to room

temperature super conductivity we may be able to say that highfrequency gravitational wave generator device has the capability of inducing a local phase transition from a turbulent regime to a laminar regime thus allowing for smooth sailing of a hybrid craft through specially conditioned vacuum of space this is your Wormhole bubble flowing Through the

(2:22:19) Wormhole nuclear Fusion may also be able to be engineered using the concept in hand given the extremely high plasma densities and temperatures as well as the high energy confinement times which can be achieved with the generation of ultra high electromagnetic field intensities this is the power of the sun and the palm of your hand at this disruption Point Energy may be Amplified to such a high degree as to generate A Spacetime curvature Singularity leading to the total Destruction of a planetoid or asteroid this is doomsday this is doomsday weapon

(2:22:52) so we have the capabilities here of uh propulsion we have the capabilities here where we can make a wormhole we have the capabilities here where we can create room temperature superc conductivity where we can create fusion power and with all those things we may also be able to destroy ourselves using the type of Doomsday weapon so this was a good stream guys uh just to close it out I want to thank everybody who is in here today who was watching and listening everybody who's watching on the according thank you very

(2:23:21) much as well um my whole goal is just been able to get this information out there I don't know what else to do other than to talk about it as much as we can talk about it I hope you guys appreciated it tonight and uh have a good one guys thank you very much MH 370x you guys are the best peace all

(02:24) Malayan 370 contact 120 decimal 9an 37 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(03:29) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds oh that's not the right one hey Chad hey everybody how are we doing there tonight uh let's get our light fixed here one second apologies there we go we'll go with the

yellow tonight hey everybody hey thank you everybody for jumping in the chat oh we got a lot of people already Aaron Pistol Pete Jess Chris sham John hold Justin channels Willie Sam Danner nice to see you Roy Marshall

(04:34) thank you for naming your child after me that's it's really nice Sandy Tyler hey everybody zapino good to see you man William Bill nice to see you as always Arwin in the chat tonight we got a lot of people in the chat tonight Adrien thank you and I don't know if I said hi to William but there you are hey William I saw your your post William on Twitter did like 65,000 views pretty crazy pretty huge man keep up with the good work a blur a bird flew into my dining room today Arwin says wow hey finle

(05:10) how's it going yeah so um I am still planning on potentially start streaming on X as well um I'm getting uh somebody to help set up uh new templates so that I can uh use streamyard a little bit better so it's not so lame looking and once I have that in a few days then I'll switch over to uh doing streamyard and streaming on X and Twitter at the same time or X and YouTube at the same time probably even Rumble we'll see okay guys you guys ready what are we going to talk about tonight so tonight we are going to do a

(05:45) uh relatively quick stream probably like an hour or so we're going to look at the Taiwan earthquakes we are going to talk about scaler physics um and the potential implications I it's even hard to even say this but the potential implications that the earthquake was caused by a weapon and maybe other earthquakes have been caused by weapons in the past um the statements by Eric Hecker regarding Antarctica which are all of a sudden extremely relevant and uh then we will potentially look at a little bit of the Antarctica

(06:20) stuff as well but that's mostly going to be for tomorrow on the investigate Earth podcast where I'm going to be a guest so thanks everyone for being here let let's dig right into it uh I've got my Martini over here ready to go you know how it is I got to I got to have my Martini chat we'll just leave that that flew over there full screen okay so to start we're GNA just oh where's my video camera there it is oh it's kind of small kind of tiny over here a little bit wee bit bigger I

(07:04) think go like that how's that chat is that look good might still be a little too small something like that okay cool okay so I want to watch some of the videos because guys this earthquake was no joke so the only reason why I didn't jump on the earthquake stuff a little bit more was because I hadn't seen videos yet and I wasn't sure if it was a hoax or whatever cuz it was like right after April fools that it began I've been watching videos today and yesterday and wow so if you guys are

(07:40) not familiar with how earthquakes work and how we calculate them on the RoR scale the difference between a 1.0 earthquake and a 2.0 earthquake is that a 2.0 earthquake is 10 times stronger than a 1.0 earthquake this was a 7.5 7.2 7 anything over seven is a huge earthquake like if it got to eight that would be like one of the biggest earthquakes ever in history so this was a gigantic earthquake some of the videos we're going to watch here I don't you guys have probably seen them on social media are incredible just wow and I've been in an

(08:19) earthquake only a couple times one of them which is now making me wonders I was in an earthquake on the East Coast like 15 years ago um where I was in Baltimore and there was an earthquake on the East Coast it was only like a 4.5 but I remember the whole building shaking and that was only a 4.5 this is a 7.

(08:40) 5 like 30 times stronger so let's start with some of these videos sorry that was a little bit loud I always forget that it Maxes it out hold on got to fix my sound oops oh my goodness look at that in the background out here chat look at this that's just like snow or something coming off the [Music] mountain Landslide yeah it's a [Music] landslide wow huge Landslide I mean you were underneath that you're done you're just you're gone no way around it some of this music we could do without the music look at this building what the build I

(09:34) mean we have buildings falling over like this is in the movies look at this building just collapsing also is this film not a Nokia people need to upgrade their phones man this is in this in the subway okay if I'm on the train and this is happening I I'm definitely just praying cuz it's it's over I would just assume it's the end times look at this train I'm surprised it didn't come off the tracks holy crap look at the disaster on this like buildings were collapsing this is crazier than the

(10:21) movies yeah and thank you everybody in the chat for the nice words that's nice of you holy crap that's just the first one guys that we haven't even got to the Crazy Ones yet look at the niku here so this is a niku which means a neonatal ICU or it could be a piku as well pediatric ICU this is where they keep the babies potentially like when they have stuff that they were born prematurely and stuff like that wow the nurses Lov grab it so what did it lasted like how long you can see it begin here so the whole thing starts

(10:56) right now 5 4 seconds in the generally only lasts like 30 seconds or less 15 to 30 seconds so 4 seconds in oh so it kept going yeah about about 20 seconds now it's slowing down 20 20 second long earthquake okay this one this one chat my God this one is like something straight out of the movies [Music] the music they were listening to this is like right out of the movies I didn't even think this was real when I was watching this at first just wait for it wait for it Chad if you haven't seen this video yet I almost posted this earlier because

(11:49) this is one of the craziest videos I've ever seen watch this I didn't even think this could be real look to the right this is like Jurassic look at that Boulder what look at Holy that car avoided death by look at that look at [Music] this chat are you effing kidding me we got to watch it again the just like you can hear the alarm start going off right this is that's like the earthquake alarm and you can see it now you're feeling it and this is just lodging dislodging rocks from the top of this mountain that would normally

(12:49) have been stationary cuz they're huge and once they start rolling they're rolling down the mountain I wonder if this car up front saw something here oh yeah they definitely did saw something and they start backing up how lucky is this car this car avoided certain death by just like a meter look at that oh my God I do not want to go out that way chat look at this this guy's like okay honestly like I don't even know look at this look at these rocks f you just pray that you

don't get hit what do

(13:32) you do I feel like you go over towards the left here as far to the left and you look up to the right and you try to dodge any incoming rocks like I don't I honestly don't know that is the wildest stuff ever wow man I mean it just didn't even look real look at look at the chandelier years in this place I'd be afraid the buildings are going to collapse in in in an earthquake like this I would be getting outside I would not be sitting in the building like this lady is this lady's just chilling this chandelier is about to fly

(14:13) off and kill this woman and she's just chilling there like she doesn't even have a care in the world guys I want to tell a quick Story related to this if you guys have not seen I might have to look up the name of it the uh there is a Netflix uh special about the volcano eruption uh that was like what in New Zealand or some small island let me let me look it up volcano Netflix what was it called rescue from wakari uh watch the volcano rescue from wakari 2019 uh volcanic eruption in New Zealand if you have not seen that

(14:54) documentary on Netflix go watch that tonight the thing that you need to learn from from it is many people don't even have a survival Instinct apparently what they were doing is these people had gone onto a boat onto an island and they were it was it's supposedly an active volcano one of those things where you go visit an active volcano but you don't there's not supposed to be any danger or anything like that and they get onto the island and the people while they're in front of the active Volcan they're taking

(15:26) pictures of it all of a sudden smoke just starts coming out of it like huge amounts and what do the people do they all start taking pictures of it and it wasn't until like a couple people that have like a survival Instinct look at one another and they just start to run because they know that that's not normal while you've got people trying to take Tik Tok videos and crap of it you know this is the part where like humans have to realize what danger looks like and a lot of those people died the only people

(15:57) that survived the whole incident spoiler alert are the people that like sprinted away and got far enough away and even a lot of those people died like they literally had their skin melted off of them that's how horrific it was the Pyro uh clastic clouds that the volcanoes create just melts the skin right off of your body um pretty wild so anyway spoiler alert but there you go the program again was escape from wakari I think it's called w a w a k a a r i you can find it on Netflix if you just Google earthquake but that's what this

(16:30) reminds me of when I watch this where you've got a literally chandelier about to rip off and a woman just sitting underneath it being like Oh I'm just going to direct traffic here and like all these people sitting around in the building like ducking and covering what does ducking and covering do for you here like yes it's smart to be in the doorway here because this is like where the um the load bearing stuff is right if this building collapses it's going to collapse down here where this lady is

(16:55) but heck I'm getting outside I don't give a crap I'm going outside this happens to me I'm getting outside as soon as possible away from any buildings that could collapse I mean we're going to watch some other videos of buildings just falling apart look at this look at this straight up Avalanche this guy's like yeah I'm out okay also chat Avalanches are nothing if you see a cloud like this and this goes back to the oh sorry I'm not even showing it this goes back to the volcano thing you see smoke coming at

(17:24) you like this even though this looks far away it's not get the hell out of there also tsunamis if you see water that looks like it's coming at you it's not going to look like a huge wave it's just going to look like a rising tide do not underestimate it just get out of there get to the highest ground you can get to like people need to learn like what's surviving from nature looks like this Cloud can close in on this car and where these cars are filming within 30 seconds or less you need to be out of there like

(17:55) if you guys watch videos of avalanches people like vastly underestimate how far away they are same thing with the volcano situation again watch that special on Netflix later tonight I think it's only I don't remember how long it is but it's it's crazy yeah look like this this red car right here from the beginning to the end of this 30 second long video not even 30 seconds long it's already starting to get uh completely covered by the dust and debris that's just flying down from the mountain in this

(18:26) Avalanche and this dude's car is destroyed he got hit by a rock this car got hit by a rock this dude is like I'm out these people in the red car are like just now getting out of their car see this this is exactly what I'm talking about those people are still in the car right here you see this coming at you and you're in your car that's destroyed get out and run they don't even get out till like look how close this is to them at this point now only now they're getting out of the car right here you need to be

(18:54) bolting man you need to be bolting hey Heather birdie there you are how's it going okay hey this might be this might actually be like a good news thing here we go children being rescued oh everybody uses the same music this must be must be some no copyright music so I hear the same background music in like all these videos ah children being rescued I mean this building is at a 45 degree angle yeah okay oh this should be be good look at the water what is this an aqueduct yeah look at the water imagine you're in a bathtub and you're just

(19:42) rocking back and forth gives you some perspective of what's going on here man this is wild okay what else do we got so we've already seen these videos we saw that video uh oh boy what's this one holy crap does everybody have a Nokia in Taiwan or you think some people got iPhones at this point oh my look at that building just collapse uh wow wow this building is just like goodbye hopefully nobody was under that there's no way only seven people died in this there's no way this this is the death total has got to be in the

(20:27) hundreds at least right look at that building I mean did a car explode right here what is this I can't even tell cuz of the Nokia quality here this building just falls apart it doesn't surprise

me cuz this earthquake is huge I mean did this person just die this person right here um also was there [Applause] holy dude imagine being in the water right here I mean I guess this guy's like yeah I'm chilling he's like I'm chilling dude look at that building this is the Leaning Tower of Pisa all of a

(21:16) sudden how like I'm surprised these didn't collapse look at that how did only seven people die no there's no way there's had to be more this guy's just chilling it kind of looks like Trump too this right here how unsafe would you feel if you are in this building if you're anywhere in this building this is absolutely wild to me the guy in the pool is maybe the best yeah you can see the wavelength of the of the of the uh Shake in the water yeah yeah so I guess you can see the wavelength based on the the Peaks here

(22:07) right is that the wavelength I mean that's just nuts this is like those W they have wave pools out there that aren't even this crazy where they like have fake waves that they make for people like in the midwest where you don't have an ocean um I can't get over how this guy is so casually just chilling he's not even not even concerned at all it's like I'm in the water I'm good this this video picture here though is just wow how's this building even standing it's just like Defying Gravity

(22:39) right there okay let's see if there's any more that's probably the most of them oh video wall Landing what what's going on here oh I think I was accidentally pressing the space space bar my space bar is very sensitive wall Landing that seems dangerous it'd be crazy to look down at the ocean while it was happening while from an airplane seeing the whole ocean just rocking uh when's it going to happen hey welcome to your Taiwan oh by the way it's Quake time okay is this is this a jabate I think I got Jed

(23:39) guys think that that one didn't actually have anything in it okay anything else um oh yeah so is this lady an idiot was there actually a tsunami guys was there a tsunami that hit is this is this real why are the video so loud guys guys what did I what did I just say about people not having any survival instincts this is exhibit a this this look on This Woman's face right now while she's literally being hit with a tsunami with a selfie stick taking a video of it this is exhibit a for no survival instincts I'm not trying to

(24:32) make light of the situation but my God guys everybody out there who's watching this all like almost 200 people who are watching this right now on YouTube please never be like this lady please if you see this is exactly what I'm talking about if you see this coming at you like this this doesn't look big but it's just going to keep coming and keep Rising that's how the tsunamis work like she's just going to get sucked away she's like hey it's fun it's a wave look at this are

(25:00) you out of your mind plus I can't believe this is real I actually can't believe this is real look at what was she [Music] thinking take take the selfie stick take the selfie stick are you kidding me lady are you kidding me huh guys do we deserve teleportation technology do we deserve free energy I I have I don't think we do guys I cheers I I don't think we deserve teleportation tank I've changed my mind guys the Pyromania VFX is a perfect match um we

don't deserve disclosure I think we just

(25:46) got to go back to being cave people this is I'm losing faith in humanity here I'm losing faith in humanity goira goira sorry hopefully that's not racist they're not Japanese so I don't think it's this wow yeah this is almost like a death selfie I'm just going to presume that she lived this I mean I can't get over that one guys that one's too wild for me okay let's see if there's any this one this one this one is actually the best video this is the best earthquake video of them all um this is called not

(26:22) giving a [REDACTED] right here this dude has no [REDACTED] left to give he's just chilling living his best life there's a 7.5 earthquake going on he looks like he's at the top of a building right here because you can see these this stuff in the background and he just doesn't care this man is just like if this building's going down I'm going to be in the pool while while it happens I'm just living it you know he's just loving it he's loving life this actually makes me want to post this video that's how crazy this

(26:50) is yeah yeah I I definitely question whether or not we're deserving of any of this um oh okay did this did they turn this on they have a mass dampener here so this is supposed to catch the the Shake on a 91 story building 91 story building so that the building doesn't collapse did it work and they need to have a video of this thing I wonder what what this thing was doing this is oh this is a on the 91st floor is the the tune Mass dampener it's a counterweight to the earthquake oh is this is another one

(27:35) another look at that okay okay let's start this one's a short one it's only 14 seconds guys if you are anywhere near this and you see this coming for you don't be standing around like these people are standing around get the hell out of there this is not far enough away like yes you probably are safe here but do not take any chances this is the kind of stuff I'm talking about you don't need to be taking selfies or or whatever these people are doing just get out of there like no it looks cool though but

(28:07) you don't realize how fast it's coming down at you man yeah I wish that one was longer cuz I want to see if they get engulfed uh what else we got I think that was most of the videos I saw Tsunami alert in Japan oh wow wow boats just getting sucked away huh okay we're almost I think ready to look into the next piece of this okay underwater earthquake oh okay let's take this let's take a look at this no way this isn't real is this real is this is this [Music] real is this real

(29:27) chat guys is that real yeah that that was not the earthquake okay yeah that's not real um okay this is honestly a little bit of faith in humanity here right these guys are chilling they're having their lunch and everything starts to shake immediately medely out this dude look at the reaction time on this guy this guy feels the shake he's out just like that one second that needs to be you guys chat these guys right behind him are like oh that guy wants to live they don't sit around they leave their drinks

(30:11) behind this dude lefts his beer here he's he's Bolton these guys are at just zero to 100

piecing out this lady's like oh I I should run away yeah get away from this building oh no she's like no I'm going to sit there a little bit longer you know these people are just like they've accepted their fate uh let's see yeah this building is crazy let's see anything else any videos we haven't seen wow massive disaster I didn't think there was to be this many videos I haven't looked at all these before okay

(30:47) I think we we've looked at those I think we've probably seen all the ones that we are going to see here for tonight the cats cat's just sleeping up here wow that the reaction to animals is interesting wow the reaction of animals is wild okay now I don't have the exact clip lucky drivers manage to escape from a landslide in during earthquake um yeah okay I do not have the clip of beard in talking about the directed energy weapon but what do I have I have uh where did I post it so I think the explanation of the of

(31:55) how scaler weapon could do this is what I want to look at now where's Matt R's response and I think we're going to look at uh Williams as well look at this laser and this is where it kind of digs into Antarctica in fact let's listen at first to this clip to go down to the South Pole station in Antarctica for an entire year by rathon polar Services as an employee of a third-party contractor for the National Science Foundation I functioned in a dual roll capacity as a Tradesman and a firefighter my

(32:26) responsibilities required me to be more informed than most of my crew and offered me complete access to the facilities what I learned from this unique experience needs to be shared with the entire world the technology at the South Pole station certainly can do what it has presented as its primary purposes and unfortunately much more the Ice Cube neutrino detector is presented as a passive listening device for the purposes of the science as presented but I'm going to skip right through the chase folks uh I have provided

(32:57) documentation a that proves that the 5,160 what they call Doms that are embedded in the ice can actually transmit at 2,47 volts each that gives us a long list of things to consider 2,70 volts each 5,160 devices rough math says 10 million volts of electricity it is effectively a multifaceted directed energy weapons plat form that I will uh list rapidly a few things that it can do vehicle detection we're learning that these offworld Craft on Worldcraft ours or other nations are also emitting neutrinos so this makes the South Pole

(33:42) station effectively an air traffic control station for this new level of equipment that nobody's discussing in addition to the ability to detect neutrinos and the Exotic vehicles I provided documentation that shows that this is also a system for faster than light Communications in the past Gary McKinnon has hacked NASA found the offworld fleet the list of captains and it's apparent that if we have faster than light vehicles moving throughout the system we're going to need faster than light Communications this is that

(34:13) facility unfor I have other bad news the season that I was there 2010 to 2011 we converted from uh construction to operations and maintenance in both the elevated station and the detector array unfortunately when they first fired it up that was when we had the

earthquakes in Christ Church New Zealand 2011 there two incidental shots before they were able to Target it correctly this is an earthquake generating device as well this is the weapons of war that we have to deal with now and what Ron's hiding there's an elf system at the South Pole

(34:44) station that when I was arrived I was told it was off dismantled and completely defunct in my work I will rapidly just tell you I had to figure out the circuitry for certain other repairs and I found that this system is in fact completely energized up and running and being utilized with the other systems for nefarious purposes as well the atmospheric research Observatory is uh in what we call the Clean Air sector I witnessed myself a very powerful green laser shooting green laser chat remember the green laser

(35:16) Fiasco from a few months ago or like a few weeks ago where there was green laser sitting down from the sky out of the top of this facility into the cosmos this I believe is a secondary form of longrange communication and or a defense system so that could be a faster than light communication system or just a defense system question of power comes into play for all of these facilities that are present I assure you I knew what was going on I knew the load demands of the facility and all of these new items exceed the demand for the

(35:49) systems that I was presented I have doing due diligence and research I believe there is either a secondary power supply there that is either nuclear that that uh was there prior to the start of the Antarctic treaty which prohibits such things and or that there is some sort of exotic uh power supply system there that just is not in the verbage of the treaty so it negates the responsibility to the parties involv I'm just going to be honest I think they have a free energy device there I I know they're real so if they have some kind

(36:19) of powerful free energy device here and they have a capacitor that can just Store The energy they could be using this to build up energy and then just zap things out of the sky with it using scalar physics you negate your electrical and your magnetic potentials also when guys I just remembered something Tom Monto we need to look at the Tom monok video so remember what these look like in the beginning the clips look at what these Doms look like these Doms here are spheres that they send down into Antarctica this is

(36:55) the picture of them this is what they look like they they drill them down here where are the Doms they don't even show us what the Doms look like they don't even show you what the Doms are but if they're little spheres let's go to the video I posted yesterday morning before I do that where's Matt re's response I we can look at Williams he basically says the same thing people really think this guy's a scammer huh fine by me I don't really care uh something about building the capacitance up well we'll look at

(37:34) Williams here in a second maybe it was in the Antarctica post maybe it's up here in this one here it is oh weird not there remember where his post his reply was um so each of those has 2,000 volts times 50 5,160 Doms and this person pointed out a good comment here it's unbelievably cold and they built them in the ice you know what that does is it keeps it very cold there's several things it does one of them keeps it very cold now high temperature super

conductivity is not absolute zero but what if these things are super

(38:25) conductive and this it being super cold would be one big benefit of that is that you can have potentially High um temperature super conductivity which is you know let's say 0 deg and you know the ice there because of the cold temperatures could be allowing them to maintain superc conductivity without excess energy input pretty huge yeah the redacted is going to be money I think all all three I I spoke today as well uh sorry to go on a little tangent spoke today to uh Professor Simon he's the one who's talked about

(39:06) fast like communication and that he's got sources that say that we've gotten like contacts with 18 different civilizations from seti and that it's been suppressed and he and I had an awesome conversation today that's why I wasn't going to stream uh I spoke to vetted yesterday for two and a half hours I want to say really great conversation he already edited apparently this morning um I think that all those conversations are going to be good uh Simon and I mostly talked about like how you deal

(39:37) with the people in the media in terms of social media how you deal with people who think that everything's fake stuff like that um vetted and I talked about the the videos what common people think about the videos why people think that they might be fake we went through all the evidence really well and deep and I think that vetted uh Pat realized as well like there's a lot more to this than just a couple videos um and yeah I talked to sarfati I'm going to repost that video after I edit out a few a few casual racisms and

(40:08) things like that that he threw in there and him peeing as well I'm going to edit that out I'm going to re-upload that um but it's out there if you want to see the unedited version and then redacted I spoke to Clayton um several days ago had a I would say about an hour long hour and a half long conversation with Clayton super nice guy really liked him a lot I actually asked him about this will prove to you that this this has happened when it shows up on the recording um I asked him about the

(40:38) Tucker Carlson interview that he did when they both said that they think the nature of the phenomenon is really dark uh because if you go look at the clip that I posted from Tim bersett earlier today uh I don't think anybody in congress has any idea what we're dealing with here I'm not trying to be offensive or egotistical or whatever or arrogant but I don't think that any of them have any idea I think that they think oh well maybe aliens are visiting us but I'm talking about you know we can teleport objects

(41:14) what does that mean for our reality this is a lot darker than aliens being out there I'm talking about what if aliens are just us from the future or as somebody else pointed out today I mean there's a lot of possibilities bioengineered organisms that we have produced in the future and then somehow got back to us or you know there's a lot of stuff out there that will literally shatter people's minds and maybe drive people to Suicide or self harm and or just to not care about anything that's

(41:42) happening in the world anymore scary stuff um okay I'm just going to go to this because basically what uh Matt said in another post I'll see if I can find it here real quick if I just go digging through his replies like a creeper um he posts don't don't be posting all day I'm not gonna be a to find your post Matt Matt why you posting creepy stuff um okay Matt re dude I love this guy I love he just trolls people doesn't give a crap also we follow some of the same people um where I'd eat him guys we're uh we're

(42:26) we're exposing Matt R's uh message all his post today he was asking earlier today I can't even find his reply now we said something about the earthquake P here we go we're get close Dam maybe not oh here here we go here we go here here we go oh come on not like this I responded to too many people sorry about that chat um here it is much easier than that send electrical charge to any plate on Earth I'm actually just going to copy and paste this cuz I need to just like absorb this information later in tomorrow okay okay

(43:27) send the charge any plate on Earth carry enough voltage to build pressure and you have a moving tectonic plate now this is going to feed into what William's going to say here in a second before I go show us the William thing I want to show you guys the Tom Monto video again from yesterday remember the Doms circular devices that are out there Cycles are playing around a tech that may end up killing all of us our only hope is to survive is the intervention of aliens like theyve done in the past R nuclear I hope that if

(43:59) there's aliens out there please come down before the election come down take all these politicians away uh you know take over the planet or whatever we got to do cuz you know I don't have a lot of faith left anymore guys in terms of our own ability to uh live through this so if we go to Tom Monto who I'm also potentially planning on talking to here in the future so this was his video I clipped back in February CLE months ago when the electric scal potential changes with time in a let's break those down so normally as

(44:36) we discussed magnetic Vector potential curls into a magnetic force field but when it doesn't curl and instead diverges or converges magnetic monopoles chat these are magnetic monopoles he's just showing right here so if you zero it out what do you get you get a monopole or converges that's what scalar physics says produ prodes a gravitation so what did he just say he just said if you can produce a magnetic monopole you can get a gravitational potential you can get some type of scalar effect a scaler effect is just a measurement of

(45:09) uh increase in potential without a vector a scaler so you're just charging something up so to speak potential dience of the magnetic Vector potential is key Divergence is a math term meaning that there is some kind of expansion or compression in the field in other words the field vectors point away from or towards a Common Center I want to talk to Tom talk about this curl which involves the field circulating around something rather than converging or diverging from it so thinking around it think of like the Earth we got our

(45:42) magnetic field around it that would be how it normally would work but then if you want to think of it as a as for the electric scal potential gravitational potential under certain conditions

normally as explained the electric scalar potential has a gradient that forms an electric force field and if this electric field changes over time then according to Maxwell's famous equations you get a curling magnetic Vector potential that produces a magnetic field but what if the curl of the magnetic Vector potential is

(46:12) suppressed or canceled out what if you set things up so that the magnetic Vector potential does not produce a magnetic field a simple example of that for anyone curious would be a spherical capacitor with an oscillating electric field what uh what spherical capacitor with an oscillating electric field does that sound familiar chat how about the Doms we were just looking at isn't that what those potentially can be I'm going to see if I can find a graphic of it do they have any pictures of the dos oh there it

(46:59) is what is this chat what is that [Music] yatsi uh h i mean I'm no Science Guy but this looks like some microchips and a lot of electrical stuff going on here okay and um spherical capacitor with oscillating field um I'm just going to go ahead and imagine that this can do that and that's the whole reason why it's in a sphere is that it can spin around freely because otherwise why would you build it in a sphere like that yeah we're going to go ahead and throw this we're going to be talking

(47:45) about this tomorrow guys I don't think you want to miss the investigate Earth podcast tomorrow first one on Rumble this is uh hm interesting what is what does my man got to say brief in scalar physics 2014 wait what was the date of this May 23rd 2014 yeah this this is a little bit too much right now for us tonight uh JK but I'm going to look at this later yeah so I and each of these can produce 2,000 volts guys I don't I'm a I'm a coincidence theorist here I I don't believe in coincidences this is pretty

(48:28) weird that this is the exact example he gives sphere shape is because the outside is a discharged sphere the surface area for surface area reasons that makes sense I don't know exactly what that means but I'm write that down because it seems relevant wow uh yeah then what you get instead is a changing gravitational potential so instead of a transverse electromagnetic wave you would get what's called a longitudinal electr gravitational wave transverse yeah so instead of the electromagnet wave because we zeroed out the magnetic field

(49:08) so the difference between transverse transverse is going to be like this longitudinal is more like I think it's like a sound wave Maybe I'm Wrong on that you know even the sound has a wavelength but it's more of just straight up perfectly perpendicular so you're just sending out just like the magnetic uh monopole sending out the energy everywhere Electro gravitational wave trans and then we have two options we can either Bend inward or we can bend outward oh my God I just realized that so depending on which way your monopole

(49:40) faces you're going to have a different and opposite effect if it's a monopole where it's pulling inward then you're going to have one effect if it's going outward you're going to have an opposite effect bending SpaceTime inward or outward either Contracting SpaceTime or expanding SpaceTime wow that's what it is I just figured that out I mean of course people have

figured this stuff out before I'm just learning it as we go along here I I'm almost sure certain that's the thing I've been

(50:05) talking to Dave about it a lot and I've been trying to rationalize how this all scalar stuff works means that the field Wiggles side to side here's transe which is what electromagnetism normally does and longitudinal means that it compresses and expands in the direction of travel which is what these artificial gravity waves do I'm talking about things like ball lightning and exotic vacuum objects the B failed Brown effect thesis Wireless Energy Systems longitudinal forces and rail guns the exploding wire phenomenon

(50:37) Stefan Marino's magnetic ionization device low energy nuclear reactions plasma based free energy systems so with that one postulate that the magnetic Vector potential and the electric scalar potential can each produce a gravitational potential under the right conditions you open the door to Star Trek level technology oh Star Trek level technology chat that's that my jam right now I want to boldly go where I've never gone before I want to die in the Andromeda galaxy while I'm visiting Ambassador

(51:13) beu okay now let's look at uh okay so let's first look at Williams thing and then we will look at at uh I want to look at the Thomas beard and thing so we can understand how they can actually manipulate this to cause um an earthquake and yeah Chris the jackler F podcast was pretty awkward uh you know he was trying to PO in me so I had to kind of be a little more hostile towards him on that podcast but he was pretty damn funny I told Dave to listen to it he was cracking up at some of the parts um specifically uh there's one I got to

(51:56) find where what he texted me or he was he was dying when he was listening to it I told him he could skip the politics part and he he didn't skip it at all uh what did he say I told him that when he when he had his s force paper up I pulled up the the the Salvador P Super Force and and superimposed it over the top and he was laughing he was cracking up dude uh what he say I was trolling him super hard dude but now it's okay Jack's awesome I actually I I actually like Jack you guys like I like people even when they're

(52:30) when they're trolly like that in general um I think it was yesterday you know why Clinton [redacted] the military because of that [redacted] wife of his I'm GNA get my my blocked here when he posted that he hates Hillary Clinton of course so anyway I thought that was really funny um yeah that was just one quote I'm going to snip some of the quotes from Jack as well probably like three or four and post them because they're hilarious thank you comper appreciate you brother appreciate [Music] you he was invited to **Russia** do I

(53:09) understand okay we're not going to make this a jackar fty thing but I probably should have done a followup for the jackler FTI Emily McKenzie in the chat how's it going Emily nice to see you hope all is well with your move and everything like that healthy dive thank you very much appreciate you healthy live has one where I can't like click on it someone's got to teach a boomer like me how this works oh yeah Dave sends me a message he quotes Jack and goes no Ashton there's no way we have anti-gravity Tech but **Putin** does

(53:43) and then Dave responds okay Boomer L LMFAO which I thought was perfect because Jack thinks that like **Russia** is still more advanced than us but like **Russia** hasn't been more advanced than us since the fall of the Soviet Union like like in the 80s uh so I just thought it was really funny that's where like when I listen to Jack like he's got he's very very knowledgeable at the physics clearly um his politics leave a little little room uh but they are funny but uh his I think his understanding of like where the

(54:14) various countries are in 2024 um needs a little help now this is relevant for this conversation because I believe that absolutely **Russia** has this technology I think that **China** has this technology I think that we have this technology I think **Russia** got it first it makes sense cuz **Russia** let's just be honest Eastern Europeans and Asians are smarter than us no doubt we're probably more conniving which is why the CIA is trying to kill other scientists and stuff like that uh but we caught up we caught up probably

(54:45) in the 80s and 90s we have been controlling chip manufacturers in Taiwan this this to me tells me 1,000% the motive for taking the plane was the freescale semiconductor scientist with the chips those microchips are potentially the key that unlocks this technology to Magic levels because Ai and quantum computers are how you control this stuff you don't control this with humans just like the letter said the limitations of the technology were all because of humans once computers can run all this stuff now we

(55:17) can do magic with this stuff and I actually think we could cause localized earthquake or at least induce an earthquake that was potentially already going to happen or make the the microwave or the um the earthquake stronger it is definitely about the microchips it was about those free scale semiconductor scientists I'm 1,00% convinced okay so should I read through this yeah let's read read through this the purpose this design is to create a weapon that could cause an earthquake in the South **China** Sea and

(55:48) make a tsunami sweep over Taiwan Taiwan from east to west I'm going to use the principles of good old fashion electricity and a trillion volt capacitor so our capacitor is our our battery this is the thing that's going to store up the energy the device is buried deep underground is basically two iron rods arranged like an antenna a special wire should be laid on the seafloor to be attached to a metal grounding Stone in the Eastern side of Taiwan west of Japan the whole device is hooked up to a generator saving up

(56:16) energy for a long time the capacitor will have to be enormous and make to made to turn loose a trillion volts so imagine that these things that we have in Antarctica these Doms that we've got over here imagine that this whole array this is an array right it's a bunch of Doms set up together linked together at very specific distances from one another and they are just storing up energy all the time just charging up uh where is it okay the whole device hooked to gener State energy for a long time uh the

(56:55) volts are potential so when the charge is let loose it will create an arc flash on the grounding Stone vaporizing the entire Cable in the process now this is where you're going to

have your low energy nuclear reactions happening similar to what Bob Greener talks about if a trillion volts were to flash on the ocean floor it would result the result would be Beyond catastrophic a spherical shock wave would instantly open up a giant void in the ocean floor and the electricity would turn much of that into hydrogen and O oxygen and

(57:27) ignite it immediately causing an even bigger earthquake or shock wave this underwater void would immediately be filled and the entire ocean would raise up and then splash back down onto itself causing waves to Ripple out from the east coast of Taiwan to the west coast of Japan this device would not take much to build and if and given it enough time anyone could save up a trillion volts that's the key so what Bob Greener mentioned was that with these types of devices it doesn't even matter how much energy is being put in into them because

(57:57) it just builds up over time and it's just building up and building up and building up and building up so even if you only have 10 million volts at once 5,000 time 2,000 it's still pretty easy to get up to a trillion you can do it within a few days probably it would also be unable to control the size and range of the tsunami and I was just making that up with the the days I don't know how long it would take um with the resources of a nation state laying the copper cable on the seafloor and tossing a big chunk of the

(58:31) metal into the ocean would not be a challenge by understanding the principles of electricity a weapon like this uh is only the beginning of things we can do with scalar Technologies this idea goes from frightening to downright terrifying the world needs to understand what we're dealing with I actually 100% agree with this and scalar physics takes us to the next level we don't need wires and cables in the ocean we can just do this with a raid that are thousands of miles away and this is where we go back

(59:01) to how to teleport your aircraft a particle of mass is in fact a trap scalar resonance I'm going to give you a quick once over about scalar of resonance we go on take a normal resonance system with a wave moving back and forth in a cavity so that it's in phase and coherent suppose that there were two waves moving along together but the second wave the electric and magnetic field were 180 out in the first when that's a scalar resonance system your normal instrument won't even see it we can build Special detectors in have that

(59:33) will see it that's all a mass is but you can make a current of that kind of resonance and you can pipe that current down a wire or you can add to that resonance in the system or you can take it away what did I say I said you can pump the mass and inertia directly into an object and increase it or you can pump it out of there and if you pump all of it out of there it'll dematerialize on you and the statements I am making are based in part on experimental evidence in the laboratory private proprietary Laboratories you are no longer confined

(1:00:33) to the speed of light at all if you're clever you can get almost any velocity you want to whether it's slower in speed of light or faster Tesla reported speeds off 50 times the speed of light I have personally participated in an experiment which kicked out an electromagnetic wave of this type at eight times the speed of light okay I'll repeat that cuz I was muted so the

important part here again was that he has seen this experimentally in the Laboratories he has personally seen this in the special access programs

(1:01:00) just like um potentially some other people that we've had on our podcasts I know Dave Rossy has is a DOD contractor very similar to uh um our man here uh Thomas Bearden and he's come out in support of the video saying that he on Tim pool I remember specifically him saying that he has seen this type of technology in the Laboratories makes me wonder if he was not talking about scalar physics himself and indeed when you interfere this way you break up the coherence of the substructure they now no longer sum to zero and guess what

(1:01:33) that gives you it gives you a non-zero Vector in the E field and the B field out there real energy now appears at a distance out there from a two transmitters or two wave projectors from two transmitters or two wave projectors now imagine let's just still assume that we need two and they haven't figured out a way to just do it from one now now let's just imagine that our Ice Cube neutrino detector is one of those that's one of these is one of these transmitters and wouldn't you think that the South Pole is a really good location

(1:02:10) for if you want to send a wave or a signal somewhere South Pole is a good spot because you can send it anywhere you want on Earth it's at the very bottom of the planet you can look any direction you can find anything that you want and there's nothing in the way it's just a bunch of ice and snow and then you cross it with another one from any other Vector Direction and at the intersection Point Kaboom destruction and in fact you can send this scalar potential down to the bottom of the ocean and then you can

(1:02:40) potentially cause an earthquake constructive interference as uh JK pH just pointed out and faster than light faster than light he mentioned as well now that speaks to the fact that there's an extra Dimension and that the speed of light is only the speed of light in free space but if there's something underneath free space real emptiness The Ether the construct The Matrix then the speed of light does not have to travel at the speed that it travels in free space speed could be next to infinite for all know we have no idea but Tesla

(1:03:14) said it was 50 times faster that he was able to measure and yet what's in the so this means that when we're doing this here sending these scalar potentials to a long distance this is going to happen instantly the range is almost inconsequential is not energy flow in the normal sense that we transmit an ordinary electr Wave It's really an artificial potential the closest thing we have the calling it is an electrostatic wave a more accurate description is what even is electrostatics it is a direct wave in

(1:03:43) the curvature of SpaceTime itself it's a general relativistic wave or a gravitational wave so if we have two projectors and they might be two this the best one I mean look at this right here this is the perfect description of how we would imagine it you know imagine one of these is our Ice Cube neutrino detector and we can use one of them if we want we can send a signal out to outer space potentially faster than the speed of light using a scalar using scalar physics and scalar potential it's going to go faster than the speed of

(1:04:09) light faster than light communication or we can beam this and we can have it uh shoot somewhere else on the planet and we can have it cross with another one and where they meet that's where the magic happens Kaboom or maybe suction of all the energy out of there and we intersect them at a distance we can produce energy at a distance producing energy in the SpaceTime of that intersection Zone it doesn't matter if that's inside a mountain or inside a missile inside an airplane or inside a human body if I

(1:04:38) lower the inside do you guys read this part doesn't matter if it's inside a mountain inside of a missile inside of an airplane or inside of the human body wow he's talking about Earth earthquakes he's talking about teleporting a plane he's talking about annihilating a missile he's talking about uh Havana syndrome the psychotropic psychotropic effects of this on the human body body if I lower the potential of my projectors below zero in other words I make negative potentials I'm pretty strong

(1:05:18) negative what happens in the intersection zone is not the appearance of energy but The Disappearance of energy when I bend SpaceTime if I bend it in one fashion the local region looks like a source it looks like it's producing energy if I bend it the other way it looks like a sink it looks like energy is disappearing this is real this is general relativity what really happens is I either put the energy in here and get it out there or I take it out from there and I get it back here and I better to dump it or I'll burn out my

(1:05:43) projectors well it's you make a dump and you simply transform it in the other mode and switch it over to the dump well if you were weaponizing that for a big weapon if you hit this thing explosively with your projectors and you fire two pulses so the pulses meet an interesting thing occurs if you fire it in the high potential mode you get an electromagnetic explosion at a distance if you fire in the low potential mode you get a cold explosion at a distance the sudden withdrawal of energy in the intersection

(1:06:12) Zone guys that to me is one of the most amazing clips that I've ever seen in my whole life and without having seen the MH370 videos I don't know if I would have been able to even understand it now if we look at the MH370 videos after this we can understand how you can teleport an airplane we're looking at the endothermic event here we don't need two transmitters we have three transmitters this is a zero point system what even is a zero point system the zero point system is the same as having the weight

(1:06:56) waves phase conjugate and cancel each other out that's why it's a zero point system when the W when the beams shoot directly at the center of the mass of the plane from all three directions they're all canceling each other out perfectly that means the total magnetic potential in the center mass of the plane is zero it's literally creating a scalar potential around the plane and this is doing the sucking out of the energy in the area around the plane just like Thomas Bearden describes that's exactly what we're seeing right

(1:07:26) there sucking this energy out and the energy is going somewhere else now imagine we do the opposite and we do what he said here with the picture and instead of sucking the energy

out here we put the energy in here now we can create an earthquake now we can add energy just like William subscribed just like we read just like what um Matt re mentioned adding the voltage to the tectonic plate putting a current through it and next thing you know it's going to start shaking you're adding a ton of energy to

(1:08:01) it maybe even causing an explosion this is also when Dave Rosy I finally understand his analogy that he said um he said either the waves make love or they fight when they fight one another boom when they make love they're canceling out now we're getting our second order effect which is gravity manipulation we're either infolding SpaceTime or we're unfolding It generally depending on what we want to have this is how you teleport a plane this is how you cause an earthquake this is how you destroy somebody's body from

(1:08:36) the inside uh with a scaler weapon I strongly believe that the Havana syndrome is caused by scalar weapons it's not M it's not microwave the reason why it's not microwave is because microwaves can't go through concrete scalars can go right through solid matter but microwaves cannot that's why my microwaves got a cage around it because the microwaves don't go through the the microwave object itself so if somebody is in a Embassy and they're getting hit by a weapon they're getting

(1:09:09) hit by that weapon somewhere else also back in the 80s or 70s if they were doing this they would have had to have a huge array that they're shooting from a distance and then they're potentially having the the Rays the beams connect over one another and people are just seeing it happen because you don't see the electromagnetic fields um but it's still impacting them but now if we can miniaturize the scaler weapon down to like the size of a gun where you can just fire it at somebody that's going to be what I

(1:09:42) imagine that's actually being used might just be some type of smaller device that can pull it off so pretty wild guys this is this is what we're dealing with I could never imagine even even months ago I didn't even comprehend all of this and how this post is unavailable oh I couldn't even imagine how deep this would go I and so here's I want to play this clip as well here okay because a lot of people have been giving comments saying that Eric Hecker is a fraud fake whatever guys everybody says everybody's

(1:10:21) fake out there people say that I'm a grifter even though I've literally just not even tried to make money off of this um and like so for people like if the only thing the evidence or the criticism I will give is that yes you probably shouldn't trust anybody who goes full zip uh if you go full zip here uh that's just it's kind of weird like unzip this a little bit why is this going all the way up to your neck like unzip this a little bit also why is he wearing his whole suit anyway like I you just can't

(1:10:53) you just just dress like a normal person we don't we don't need this for extra credibility or whatever um so that that would be my only criticism on this front oh sorry I wasn't was I not showing it yeah never go full zip on this right like this right here guys you know just zip it down a little bit right you don't see me do I I don't go around like this you know like I don't

wear it like this right you wouldn't would you trust me if I wear my my shirt like this chat if I wore my shirt like this you would

(1:11:19) definitely not trust me like look how I look like a like a total sketch ball like this like you know maybe I'm ready for Antarctica but you know I'm probably going to you know you're not going to leave me with your children or something like that right but if I zip it down like this now I look now I just look like a professional you know now I look like somebody you can trust okay anyway people said that he's he's full of crap I think the reality here is that he doesn't fully understand the

(1:11:48) science so he understand he was he understands the engineering because he helped build some of the stuff so he knows there's something something going on there he was most likely talking to people and he those people told him what was going on and he figured it out and he knows the implications of it he knows kind of what it can do but he doesn't know all the ins and outs of it and the reason why I've deduced that is because it's very similar to my own experience where this is a discovery of figuring

(1:12:15) this stuff out and he doesn't have two plane videos watching a plane disappear either so he may not even understand the full implications of the science but he understands the impacts on what it can do that's my assessment of him I actually like you guys or like some of the people who are skeptical I I used to think this was all nonsense what he was saying even several months ago I was very reluctant to go down this path but now that I've understood the scalar physics as explained by Thomas Bearden

(1:12:41) absolutely they can do this now even when Dave was saying some of the stuff about directed energy weapons um back if uh on the Tim pool podcast I was like oh Dave I I felt like Dave was getting too much into the woo and now I'm going no no he just understands the implications and this goes back to even people like uh uh Amy Eskridge where this is the part where when you realize this type of Technology scalar physics is possible the line between reality and fiction becomes blurred because they can pull off anything they can pull off a

(1:13:18) 7.5 earthquake and the whole world just thinks it's a random accident but when you then find out that **China** has got warships outside of Taiwan ready to go you're like wait what they have warships ready to go outside of Taiwan and they just hit them with this massive earthquake that I mean you saw the damage that it caused it almost seems like an attack especially a covert one where the whole world just going to think it's an accident and if anyone goes oh they' got an earthquake generator they're going to

(1:13:49) think you're crazy the same way if somebody were to teleport your airplane away and you come out and say oh United States is teleported to my airplane they're going to go no you're crazy that's disinformation this is covert stuff at the highest level this is why people like Amy esgd then begin to wonder if they're the targeted directed energy weapons because they know what they can do and why Dave is talking about all kinds of this this stuff as well which seems just like so out there but it's

(1:14:15) like no he just knows what the science is capable of and then you like this is where you have to stay really grounded which like for me now when I look at this I go okay I'm glad that I don't give a crap about if they were to take me out because otherwise I'd be paranoid as hell about what are they doing my phone earlier today was like flashing red and blue and I'm sitting there going okay did I get hacked and I had to do like a forc restart and it comes back on but this is the part where you have to like

(1:14:42) prevent yourself from falling down these like conspiratorial rabbit holes where you think that everything going on in the world is like being conspired against you could it be yeah sadly it could be because that's how crazy and dark the government is One Last Thing Before we play this video is that somebody was posting uh posted a reply saying you should thank God that you're an American imagine if you didn't have the protection of being an American and the CIA targets you the CIA can take you out anywhere they want on the planet

(1:15:14) anytime they want and it's just like Child's Play no one would ever know they will never find out that the CIA was behind it at least as an American citizen the C CIA is not legally allowed to come after me the CIA can technically only do actions on foreign people and as American citizen we are protected to some degree now could they still take me out yeah yeah they could figure out a way but there's at least this L thin veneer of protection there scary stuff guys so let's listen to this because

(1:15:45) this is also clipped up but this also the last thing I want to say real quick is that this sounds like a guy who sounded that the way I sounded when I was on the investigate Earth podcast because when I was on the investigate Earth podcast I was scared the very first time I was you could hear the shaking in my voice I was so scared CU I did not know what the world was capable of I was just Awakening up to the possibilities of annihilation of an aircraft and this is what I get the feeling I get from him opened every single door in the facility

(1:16:20) I had complete access to every compartment they manufactured what are you blowing the way was that there are Technologies at the South Pole station that people can't even consider that exist on this weapon systems is something that people need to get in their vocabulary fast the Ice Cube neutrino detector is not simply a passive listening device as presented for the science that they're claiming it to do it also has the capacity to transmit there are embedded in the ice what are called digital optical modules

(1:16:50) Doms they're about the size of a basketball the array embedded in the ice is 1 km by 1 km by 1 km it is the world's largest telescope and now because we have proven that it can transmit it's the world's largest telescope H if it is a telescope you'd imagine it can transmit the world's large directed energy weapon system it is responsible for the earthquakes in Christ Church New Zealand I physically held a key that opened every single I don't know guys I believe him now the thing about causing

(1:17:24) the earthquakes seems a little bit incidental it's it's hard to prove that it caused an earthquake um and that and that's the part where I'm going to try not to push too hard on

because how do you prove that you caused an earthquake I don't think that's going to necessarily be very easy but from the science perspective it's certainly possible to do and that's the reason why I said for scalar weapons it's theoretically possible to induce earthquakes they definitely can the question is did they yes or no this is

(1:17:56) the same question with the plane is you know can they teleport a plane absolutely you know uh I think that they did based on what we see in those videos that's just what the what the physics shows um but there's a difference in terms of what they can theoretically do and what we know and what we can prove um I know the United States government knows what happened to that plane in fact I do think we prove that but we always have to keep these terms in mind the **debunkers** never do keep those terms in mind if you're a **debunker**

(1:18:24) person you probably saw some of people I was very briefly feuding with in some of the DM and some of the replies where they're trying to say that people are full of crap but they have no actual arguments um those are that's the type of people that are just full on NPC mode they can only believe whatever they've been told anything beyond that is uh too much for them to be able to absorb um so let's see anything else guys in the chat I think that's pretty good actually I think we found him for some good stuff

(1:18:55) um I may try to talk to him for hard **truths** honestly guys I'm I'm starting to get more high-profile now there's a lot more people who are reaching out to me and replying to me about looking into some of this stuff so it might be possible to get to get in touch with them uh we'll see but also at the same time I've got a ton of content going on guys so um yeah it's I've been getting busier and busier at some point we're going to hit a Crossroads with my old job and I'm gonna have to choose if I still want to

(1:19:26) do the old job or if I want to uh move on to the next thing um but for right now it's it's just it's working out just the nature of what's happening with my job and um and I'm still able to do both but I I just you can tell I'm kind of falling behind in terms of uh getting the hard TRS podcast edited and out there and and posting Clips which is another thing that I really want to do is just so much work um the name of my podcast oh yeah it's still going to I think I just decided still going to be

(1:19:55) hard TRS with Ashton Forbes and then I'm just going to have you know feat or special guest whoever uh yeah but oh and also so Shawn Ryan I think I got pinged like I don't even know how many times it's got to be super awkward to be Shawn Ryan uh where was the on his post he asked which three guests would you like to have and like half the answers are me and I start getting H down so I decided to reply on it as well here's what three guests would you like to see he asked Randall Carlson who he thinks

(1:20:31) he should have on one of them I think he says is Malcolm Bendle um and you can see mine I think 8,000 views mine might be the top reply I just told them when you're ready to talk about scalar physics cold fusion and macroscopic phase conjugation oh boy do I have a story for you and it seems to coincide with a number of your previous guests in ways that I would have

never predicted including Eric Hecker uh who we just talked to Carlson here uh as well as Steven Greer previously now I'm basically 100% certain that uh Shan Ryan doesn't think

(1:21:05) that those videos are real probably thinks that it's some big hoax or whatever because that's that's the sad reality is that and a lot of these big podcasters have to be careful in terms of you know are you getting played with or whatever but if Shan Ryan's out there listening or Joe Rogan or these other guys you are going to see one day in the future that this is real stuff that we're talking about not science fiction uh I think that based on some of the other guests people I mean he's had all

(1:21:33) these guys have had like remote viewing guests come on their shows right these are people that are just making up stories and we're just taking them at a complete face value I've got a story that's supported by more evidence than possibly any court case in the history of the world is it hard to believe yeah teleporting a plane is super hard to believe super hard but it's consistent with scalar physics it's consistent with einsteinian physics it's bending SpaceTime gravity manipulation is what it is now if you

(1:22:09) just look through here one of the ones like somebody put me in the name Tucker Carlson Candace Owens and Ashton Forbes guys this is thank you for people who are putting me in the in the same sentence with these people who are huge huge celebrities and podcasters and and influencers honestly blows my mind but look at Sandy thank you I mean absolutely wild Robert Lano yeah it's got to be mad awkward when you see like I'm look how many times I get listed in this look at look at this guy look at you guys this whole row is just Ashton all

(1:22:54) the way going down David grush and Ashton so thank you guys very much definitely Ashton Forbes Ashton Forbes again you guys didn't even some of these people didn't even tag me um yeah look at that oh my God guys absolutely wild man okay so I appreciate you guys uh posting that stuff here tonight we we got a lot of viewers here tonight checking this guy this out so what I would want for people who are out there is keep an open mind if the MH370 videos are real which I believe they are Beyond any shadow of a doubt I think

(1:23:29) that they POS they post way too much of a a real story then the situation is that the es the levels of Espionage that are going on behind the scenes are way higher than we imagin and to the people who are saying remote viewing is is consistent yeah the remote viewing is actually consistent with the science that I've put forth now I'm going to be honest with you guys even with that being said most of the people that are out there that are remote viewing are full of crap that's just this I'm that's probably hard to

(1:24:01) hear but that's the truth there's a lot of people out there that think they have psychic powers when they don't really have psychic powers uh because anyone can close their eyes and imagine a situation that doesn't mean that situation automatically happened now does that mean that there is no remote viewing no think you could still potentially pull it off um but I think you need to be extremely skeptical of somebody that's telling you something that does not have physical evidence extremely skeptical and this is the

(1:24:29) reason why whether or not it people can do it or not is the reason why I do not delve into it because there's no way to verify it's unfalsifiable and uh the other part then is that again if you can have an extra Dimension if all the points in SpaceTime are connected then psychic stuff does become theoretically possible the only criticism I was giving there is that these are people that are willing to listen to people that can make up stories with no verifiable proof and yet when I bring the verifiable proof when I

(1:24:56) explain the science to people then all of a sudden they get cold feet seems kind of weird in my opinion so um but yeah guys uh so just guys keep our minds open because if they can pull off teleporting in a plane they can definitely pull off earthquakes I think we need to look at everything through the geopolitical lens which is part of the reason why on my Twitter it's about the science but it's also about the geopolitics CU now we can see the world through a slightly different lens and of course we should still be skeptical we

(1:25:24) shouldn't assume that everything that happens out there is because of Nations using super weapons but we should keep in mind that it is possible it's very interesting stuff okay guys um check out uh the interview tomorrow guys uh with investigate Earth I have a feeling there's going to be thousands of people watching the investigate Earth Antarctica thing tomorrow because I think it's going to be pretty incredible and uh make sure you guys check it out uh it might be cool if like if I got into a permanent gig with

(1:25:55) investigate Earth that would be pretty sweet those are like on my short list of people that I would like to hang out with and look into more topics like this and uh dig like really deep into them and get hard evidence that we can look at I think it would be sweet have a great night everybody this has been awesome and uh Emily McKenzie says Andrew Tate king of remote viewing Emily Tate's hilarious okay guys I appreciate you you guys get some sleep I'm gonna get some sleep have a great night uh if you guys find any sweet

(1:26:25) links if you find any good Antarctica stuff uh ping it to me DM it to me post it in our Discord uh I want to make sure I come in with a lot of strong evidence but tomorrow I think we're going to blow people's minds with the uh the rotating uh orbs thing and um yeah miles I posted that thing I posted the the Chinese thing miles just FYI for you in there I I check my Twitter I posted it okay guys have a great night we will talk soon peace everybody

Hard Truths - Dr. Jack Sarfatti (Retro-causality, superconductivity and quantum mechanics) - YouTube

<https://www.youtube.com/watch?v=3xXLng1rSQQ>

Transcript:

(00:02) okay and we are live here today with Jack sarfati this is the hard truths podcast with Ashen Forbes today my guest is Dr Jack sarfati legendary physicist who's an author and author of multiple scientific papers advancing the concepts of quantum mechanics and discovering the secrets of Consciousness Dr Jack sarfati thank you very much for being here today nice to be here with you Ashton so even though I even though I didn't agree about your uh what is it that thing called the thing that disappeared maybe

(00:32) it disappeared I don't know that made 370 videos yeah we can talk about those later 37 video yeah we talk about that later yeah let's jump in though let's get right into the politics I know everybody wants to hear about the politics here today so what are your political thoughts go ahead Jack okay I just uh I want I want everybody to know about this important new book by my friend my friend um and I we're almost Brothers we know each other for yeah half 50 years old my God how long is it almost 50 years probably 50 years yeah

(01:07) Michael Savage and um I mean basically we're in great danger you know the America I believe is now a communist country we are under communist domination the Democrat Party is not the Dem Democrat Party of U Harry Truman well I I remember World War II you know I was born 1939 so I remember I remember Harry Truman very well even though I was like five six seven years old I can remember har I remember him playing the piano I remember him getting pissed off remember har getting pissed off from somebody somebody from the New York

(01:50) Times some shithead from The New York Times that liberal piece of crap propaganda thing well it was better back then yeah and and and and somebody and this this guy this guy a columnist or something from New York Times I forget his name he criticized his daughter's piano playing and trumman just you saw wanted to punch him in the nose the presis United States he he was a character so everybody like I mean I like Harry Truman I remember Frankl Delo Roosevelt everybody love FDR though uh found to St about him that wasn't so

(02:29) good later on but uh yeah we're all very patriotic and uh and the uh and and I remember of course JFK yeah when when he was killed uh but the Democrat party today is not the Democrat Party of before in fact U uh John F Kennedy would be considered a you know a right-wing terrorist by the Communists in the white house um you know it's it's getting bad I mean now we had the FBI FBI is knocking on people's doors to what they're posting on social networks it's the sty yeah what would you say to the

(03:08) people that say that Trump is a fascist how would you respond to those kinds of claims okay now you have to understand something everybody who says Trump is a fascist they're the fascists and this is this is the Playbook I forget the guy's name so olinski salinski who uh Hillary Clinton was like a a protege you know depe of salinski and salinski in his Rules for Radicals you know the 60s and I was part of that whole thing I was brought up you know I was brought up with all the lefties all my friends

(03:40) parents were Communists were in the 30s they were you know card carrying Communists literally you know like the rosenbergs you know things like that so uh lisy says

accuse your opponent of what you were guilty of projection they're the fascist what's the fascist they're putting they're putting uh was it John Eastman they're putting him in jail for what and Hunter Biden walks like you know like he's the son of the mafioso hunter the crack addict the piece of pedophile what would you say the

(04:12) people they're saying that they're protecting democracy uh by you know arresting people that are threatening it what we say if you've read they they're doing just the opposite just what I said just the opposite you read George Orwell 1984 that's where we're in we're in Oceania right now now they're the ministry of Truth okay and if people want to ask me I mean I can provide all kinds of details I was part I grew up in this thing you know and I you know with like Bernie Sanders those people you know

(04:43) New York City um uh yeah I was part of the um I mean I was New York Times They called me the countercultural physicist the New York Times back in the 60s you know look at how the hippies save physics I was you know I went to an ivy league school was in the the the the Peace and Freedom Party helped create the Peace and Freedom Party uh in Cal in San Diego uh who's the guy um yeah was well getting my bid mod I'm 84 years old right so uh who's the uh who's that black woman um uh with the I don't comment all right free I

(05:24) don't want to freeze like McDonald McDonald are you saying that there's kind of a propaganda war information war going on right now would you say that we're in World War III right now what I you're kidding me right I mean you're being um you're not saying it's strong enough that there isn't I mean it's obvious that there is right it's you're being sarcastic I think right I'm just trying to repress you a little bit on your convictions yeah yeah so what would

(05:50) you say though the people that say like that you know we need to censor misinformation and disinformation because it's harmful to people what would you say about that yeah well you you know that's first of all that they are the enemies they the real enemies of it they're they're they're trying to destroy the Constitution the United States that's you know destroying the first amendment they want to of course destroy the Second Amendment but that's the first amendment but um let me

(06:17) just uh uh quote a little bit from Michael's Michael's book uh just read the uh the let me just read some of the chapter headings get an idea says the Civil War is here the Biden baiton switch the leftist Insurgency stalinist Biden the new kulok the real armed Insurrection a post-constitutional society in any case uh if you go on my x.

(06:51) com Twitter feed I've put in some important excerpts uh from this book and uh actually people people in live stream uh in the chat they could look on my Twitter uh U feed and ask questions based on what I U you know posted here so okay let's let's continue so what do you think do you think that there's a foreign influence in our government would you say or do you think it's mostly just from our own our own officials no it's the it's the Enemy Within it's it's not Vladimir Putin that's that was going my next

(07:24) question go ahead yeah no it's not Vladimir people first of all I mean explain something Vladimir **Putin** is not the enemy of the United States the enemy of the United States are the people sitting in the white house right now and people are you know they're they're the real the Enemy Within do you think they think they're the enemies themselves from their own mindset or do you think no of course not of course of course not they're all brainwashed they're mostly brainwashed now if you want to what may be okay

(07:56) listen half the country half of the United states are so crazy you know and I mean the people in The W I mean all the I mean mainly the Democrats not all Democrats I mean I'm I'd be very happy with RFK I'm you know I'd be happy with RFK you know I may not agree with everything RFK junior says but he's an intelligent man he's an honest man he says what he thinks and he's risking his life you know for the country he's a real Patriot yeah I mean not a what everything he says about Co

(08:31) I'm not sure I'm not a doctor I I don't involve myself in the co controversy because I know the limits of my own expertise and that's not one of them yeah I talk about the physics okay uh so okay so we asked me the question oh who's the enemy so okay **Russia** okay **Russia** modern **Russia** is not the Soviet Union the Soviet Union was a legitimate enemy okay they were legiate but Vladimir **Putin** his is not Stalin he's not Hitler anybody says uh **Putin** is Hitler is either very stupid and very

(09:07) ignorant that doesn't know what the they're talking about has no idea of the history of anything or is does know and is a liar as an evil liar lying bastard okay did you see the interview between **Putin** and Tucker Carlson of course I saw it what were your thoughts on that I was it was great I mean okay I agree on that interview I with Scott Ritter's analysis of the interview that Tucker did not really do his homework I mean you know time pu says look who's this schmuck you know I mean you gotta understand

(09:44) something the **Russians** in general the people in charge in **Russia** are very smart people they know their history they have a Long View okay these are s what when the old AGB serious persons our people are idiots in comparison it's like they're pay you know they they're playing what four dimensional chess and uh Biden can't even figure out Tic Tac Toe you know I mean Biden I feel sorry look but it's a crime B the reason Biden is staying in power because Biden knows that if Trump gets back in Trump will do to Biden what Biden's

(10:27) doing to Trump lawfare right okay you know pendulum always swings back the other way right yeah it'll go the other way and the point is Biden really has has committed crimes Trump trump hasn't done anything really I mean all the same with the fraud with the with inflating the uh the value of marago and and Trump whatever the hell that is first of all they all do it and and nobody was hurt by it nobody was defrauded everybody made money yeah the banks made money plus there's disclaimer there's a disclaimer

(11:02) in the contracts that you know when Trump or any other real estate person uh you know does tries to get a loan there's always a caveat and the bank does their own evaluation they

don't depend on that so this is all it's all like it's a stalinist it's right out of Stalin Banana Republic I read the yeah go ahead keep going sir sorry yeah oh yeah John Stewart is he that that from the The Daily Show CNN Central yeah he's a he's a piece of man the piece of okay yeah go keep going what's what the actor daire well I

(11:40) like the you know I'm you know I come from the same Hood as daire we're about the same age actually and actually I used to hang out with Francis for Copa you know when he's doing The Godfather all that stuff San Francisco so you you you how daire comes on about Donald Trump you know being an evil bastard okay daire you and I we should yeah we we just get to debate me and daire you want you wna you want to talk you want to talk good Fellas you want to talk good Fellas I grew up in Flatbush the 50s my grandfather my grandfather was a

(12:10) friend of Sam Cohen right okay you want to talk good Fellas I'll talk good Fellas with you so okay right let's go no you're doing great I like it so uh you know going back to the Vladimir **Putin** interview there's a couple aspects of it I want to discuss with you one we'll segue to our next conversation the first is what do you think about the whole question about the nordstream pipeline and how **Putin** responded saying that it wasn't necessarily cost beneficial to get into a propaganda war

(12:34) with the United States you know you say that the the **Russian** people are you know their government officials are a lot smarter than ours how would you reconcile that with the idea that United States potentially has a better propaganda apparatus or more control over the media than **Russia** does and do you agree with that assessment uh well I don't know but fact you the the question is a little broad here just let me try to understand the question sure uh when you say uh does if does America control its own propaganda sure it doesn't control the

(13:06) **Russian** doesn't control the **Russian** okay does **Russia** control us no I wish they did no they don't okay nordstream let's first up northstream Biden ordered the nor was about what's his name uh the uh um you know the guy um herfeld the guy wrote the article um Biden weeks before said he was he said he was going to blow it up and he did we blew it up I mean **Putin's** not gonna blow up his own pipeline all pu has to do is switch if he doesn't want the gas to go to Germany he just switches it off yeah the media

(13:45) made everybody think that oh well we we might have or you know they might have done it to themselves which seems kind of nonsensical in my opinion so anybody who believes that is y s the Brooklyn Bridge Ian that's so stupid how could you be so stupid to think that that's you know that's idy well what about his CL go keep going sir sorry I I'm apologize forup what do you think about **Putin's** claims about um super soldiers and Hypersonic weapons why do you think he's talking about that so openly interview Carlson what oh well

(14:17) that's all true yeah so in fact I I we have a super soldier program here in fact I I I there's this guy um there's this guy uh uh uh who I who is one of those super soldiers he's genetically modified yeah you we've had that that start in the yeah we in fact in fact when I was in the 1980s I was being paid by a uh St a chief of station of the Central Intelligence Agency Harold

Chipman and chip chip want to be he introduced me to this guy Joe peop these were people involved in Iran Contra uh

(14:57) you know with the you know what's the current colel you know what's that that guy the the Marine the marine guy I yeah thinking his name any case they wanted me to go to this um facility in New Mexico I think it was in New Mexico it's a mountain where they were doing among other things they were doing the genetic experiments for the super soldiers okay and recently I met one of these kids he's he is he's in the military actually his father worked with General Millie Mark Millie I saw the

(15:33) picture I don't remember his name but yeah I saw when you were posting about this yeah yeah yeah M Michael and he's um clearly Genetically Enhanced and I know he he knows he is his mother was in his mother was there his mother was you know his mother was part of that program she' worked at Los Alamos and stuff like that but and he was he's done tours in Iraq Afghanistan he was a soldier and he uh he got seriously injured you know War I don't know if it's a worry but he healed very quickly really they like n

(16:06) okay his he you know he's healed so he's genetically modified I ask is it mental or is it physical enhancements or or both or what you think it's definitely he looks a little bit like the bulk like the Hulk the bulk I saw he's huge could play linebacker yeah yeah yeah yeah oh yeah and uh but the point is we know he's Genetically Enhanced because of his the his healing you know they have in fact what am I talking about what am I talking about because my sister-in-law I'm not going to neighbor

(16:38) my sister-in-law Works in that area they're doing they have all this new way of quick W for wounded soldiers that if they can wounded on you know to re reconstruct them so all that's true and of course the Russians the Russians are you know I'm sure they're working on it yeah so um so roughly speaking yeah that's uh so uh that kind of I think goes to our next point which is you know I want to talk to you a little about UFO phenomenon uh in general and okay wait okay I want to spend I want to spend most of the time

(17:10) on that of course but there's a few about about Russia let's just say about Russia keep going um okay Russia is the natural Ally of the United States and in Europe they natural Ally they're a he's now a it's not the Soviet Union they're an Orthodox Christian country but they also have a lot of Muslim population and like the CH the Chet uh Chia you know they they're now the the cin soldiers on in the Ukrainian front are uh very loyal to to to Putin even though they they had problems like

(17:48) 20 years ago um and so uh when the you know when Putin first took power uh from yelon like 23 years ago or so Putin wanted to join NATO Putin's main interest when I say pu I mean Russia you know the people the Russian government right their main interest is to um economic you know Economic Development everybody win okay they don't they have no interest Russia has no interest in going Beyond you know into taking over Poland reestablishing the Soviet thing that's all that's all but that's all a

(18:28) big lie that our military industrial complex is trying to sell us so they could Rob over a trillion dollars a year from the taxpayers from you stupid taxpayers you don't understand what how you're being over by these greedy vampire okay so when you say that they are just trying to take back their you know some of the old Soviet lands where the people are more ethnically Russian or what do you think they're OB here no I I just said they're not trying to do that yeah they're not trying to do that

(18:58) who is you know he he Putin thinks that the destruction of the Soviet Union was was a tragedy he say but he accepts the reality no Putin will not does not want aggressive NATO we look at crazy macron he's GNA send send French troops and you look at uh you know all these people in NATO what's it um jens's whatever Stenberg whatever name is a one of these guys's father was the Nazi uh one of the Nazi uh SS and then yeah I mean the EU today is basically the fourth right except now they themselves because

(19:35) they because Germany's going down because of northstream which B which America did to them and now the Germans are just their their economy is they're collapsing the Russian economy is doing very well the sanctions we did just back everything we've done is stupid now do you think B got it okay so I didn't quite I didn't finish on on Putin so the point is yeah all Putin want yeah I I know one want to say Putin will not accept Ukraine in NATO Putin would rather go to war with nuclear weapons and wipe out my beloved

(20:16) London I love London I'm in London a lot of time wipe out Paris wipe that destroy the whole thing you know then then let then let Ukraine be part of um you know part of NATO for the same reason he will not they and the Russians in general they're all Bor you know Russia is now very unified United States is split the two Americans you know the the crazy commies you know the progressives and all that and the Maga the trumpies right that we we're in a civil war actually we're in a IDE we're

(20:49) a psych yeah we're in a cultural Civil War very bad here so America is fraction America is not United there is no United States anymore there's there the ununited there are two Americans at war with each other Russia's very unified we unified it how did why did why did Putin go into Ukraine put went into Ukraine because when uh when the Soviet Union fell uh uh the the U Bush the first Bush guaranteed that NATO would not move East okay and they broke the promises they broke the promises so now allowing

(21:34) allowing Ukraine to have NATO weapons on Russia's borders right there that's like you know we had the we the Monroe Doctrine here we almost had a nuclear war over Cuban missiles the Soviet U missiles in Cuba with JFK so Putin today is just doing what JFK did back in 1963 I must also say that the reason kushev put the nuclear missiles into Cuba was because we had nuclear missiles in Turkey see there was that you know so already then we were we know we were aggressive so so the point is we're not the good guys America's not the good

(22:13) guy I'm an American Patriot I'm not I'm not an asan of Putin okay I'm an American Patriot but I know some history I with these none are these in power on our side they're they're

incompetent they're stupid they don't know history and they're greedy and their care up every last one of those even Republic I'm talking about Republicans and Democrats there are a few good Goods on both sides you know but in general and but and a lot of them are communists are you know the neocons

(22:41) Victorian nand Kagan uh uh stink and blinkin our Secretary of State Hillary Clinton I these are all they're all I I grew up with them I know what they are because yeah I grew up with these they're they're red diaper babies they're Russian Jews they're Russian Jews I'm Jewish so I say they're Russian Jews whose parents told and grandparents told the horror stories how the kasak rap that went in and killed all the Jews in the Shettles there so they're all crazy they all have a post-traumatic stress syndrome and they

(23:13) were and and they're all brainwashed by the uh communist propaganda in which by the way there's a guy named um Yuri bz would have been my age St the the Russians killed the the old the Soviets killed them they because what he was his uh Yuri bz's father I think was a friend of lenon you know he was in the elite uh he's part of the elite communist thing he was Moscow State they put him in the KGB he could have had a brilliant career he could have been like Vladimir Putin but he he went to India

(23:48) they said the KGB this is back like in the 60s yeah when we were all young they sent him to India and he got involved with the gurus got you know the new age maybe took asset who the hell so he defected to the CIA he defected to the CIA back in like 1980 something like that in any case Yuri bezman up you go on YouTube you watch Yuri bezman up in 1984 being interviewed and he talks about the Soviet how Stalin you know they were very smart back in the 1930s how they started this psychological warfare operation in the United States

(24:26) also of course in in um in the UK you know uh Kim filby all those English guys who became Soviet spies you know during defected you know there's all those John L Car novels writes about them and the same thing happened here because they took advantage of the depression and all the intellectuals they might you know all yeah all the thinking people in America most of them you they went to linol Brigade uh they all became Communists plus the free sex all the new age stuff in the 60 the pr seex that's all part of the Communist the Communist

(25:02) Party the Soviet thing fanof explains it back in 1984 and he describes after four generations what it's going to be like he describes America today he describes cancel culture the whole phoning the black lives matter phony racist stuff everything we're seeing here everything that's happening here best of says and see the problem the thing is even though the Soviet Union fell this whole Indo psychological warfare operation brainwashing operation which was very effective they used all these pavlovian like Manchurian

(25:38) Candidate stuff most of our guys in the White House they're Manchurian candidates they say certain words and then you know but it so it's like the Frankenstein monster the Frankenstein monster been let loose and that's what we have in this country now so half it's like

a mind virus yeah so half the country half the country is in Ed with The Walking Dead they're like zombies and I include the president of the United States he's not even you know you look at him the way he walks you know he

(26:08) he has he has dementia he has you know he's Parkinson and dementia Michael Savage Michael Savage this book Michael has a PhD from Berkeley in biological science okay biological science and he has some medical training and Michael has said and I've spoken to other I you look just at the way Biden you know loses his well sometimes I do it too but that's probably normal for 80 year olds but um the way he walks his gate and the way he falls the man I mean you know it's actually senior abuse senior abuse so

(26:46) that he's a corpse I mean right now and he's likely to be reelected because they're rigging the election the 2020 was all rigged so do you think do you think that we this has weakened America where would you say the power Bal America we America first of all **Russia** okay Ukraine let's St I to clarify real quick because what I want to say is you've made statements saying that you think that **Russia** is like more powerful than NATO and I I wonder yeah oh yes yes right now we're a paper tiger we we're we're like the

(27:20) wizard of o d behind our curtain let me explain why you know first our weapons are that the the Abrams tank is crap the F-35 is crap compared to what the **Russians** had and they they proved it on the battlefield they're knocking out the Abrams Tanks you know why one of the reasons why it's a death trap the in the it's a death trap why what you know they put in an aircraft jet engine in that in that tank it runs at a th000 degrees runs very hot so of course you know the infrar signature gives off to

(27:59) the **Russians** they see it right away you can't H you know it's stupid plus it breaks down you can't run for more than eight hours without having to be refueled and it's been breaking down it's not it's not reliable it's too it's too Hightech and that's true of the F35 it's true of most of you know it's true of a lot of our aircraft it's true of our guns artillery that stuff with so the point is **Russia** has um their equipment is more Suited for the actual battle conditions with the mud and stuff

(28:31) in Ukraine okay they have better equipment and they have more of it now we've given all our stuff a lot of our stuff you know to the ukrainians uh and of course Ukraine you know all right there's all kinds of stuff wait first why did **Putin** even go into what why did February 2022 happen the reason it happened was because Victoria ner who's one of those **Russian** Jewish people that I grew up with you know a neocon and uh and they're really trites they would grew up in the Communist but they're more like TR and they became

(29:10) like conservatives they joined the Reagan thing I KN I knew I knew a lot of these I actually work with them yeah and um so she went over to in 2014 uh and arranged the the bab you know the revolution to get because the the president who was do who was who was elected who was you know honestly elected president of **Russia** then was was friendly with **Putin** now they're corrupt Ukraine we all if you look at the history everybody said you knew that

Ukraine was corrupt and in fact Joe Biden our president of United States he

(29:43) you know he got money to hunt to bind is The Bag Man right they're all being bribed by the oligarchs okay so in any case Victoria Nuland goes in there helps arrange the the coup against the pro **Putin** govern guy they get this new guy in and you have the these Stephen Bandera neo-nazis who involved in World War II you know the Hitler supporters they killed a lot of people actually and they so they so what they got enough influence in the new government so he had this je this **Russian** Jewish woman who hates **Russia** you know aiding and abetting

(30:22) the Bandera Nazis to take over the military of Ukraine in 2014 and what did they do they started artillery attacks on the **Russian** speakers in eastern Ukraine they killed 14,000 **Russian** civilians over the 10 years and that's one of the reasons why **Putin** because okay **Putin** is a nationalist you know **Putin** you know you have to understand **Russia** the Mother **Russia** he explained the soul of **Russia** these are you know these the **Putin** and these guys they really believe it you they're P they're **Russian** they're

(30:55) Nationals **Russian** Patriots you know they're going to go to the **Russian** Orthodox church now you know he's he's not a communist that's why the Communists here hate him because he's not a communist our go our people we're the Communists but **Putin** is not so the point is one reason **Putin** went in was because to because they were attacking the native **Russian** speakers who want to be part of **Russia** and now of course they are part of **Russia** crime and then and then you know to have nuclear Dukes coming

(31:24) in you know unacceptable and and then so what happened when Zelinski got in Zelinski got in on a pro peace platform so what did **Putin** do **Putin** sends you know that column down 40 miles to KB and the Ukrainians they still yeah we were training we had 10 years training the Ukrainian Army Elite Army from 2014 NATO NATO training them okay so uh **Putin** calls it a special military operation he said he didn't send in his best troops about 90,000 you know mainly you know conscripts with old equipment he didn't send it his best tanks or his

(32:05) best armor it was he called special military operation he was was called a faint he wanted to say to Zelinski Hey listen I'm serious we gotta talk so Zelinski said right away okay let's talk this is what happened back then but the idiots today they don't know any they don't know any of this basic history this is dumb schmucks we kind of ignore history it feels like and but what I would ask they don't know anything right I would know finish this is very important I got this got to you make a coherent narrative you

(32:34) slide the water bottle that'd be great as well just off the table um let me just take a yeah go for it I oh wait so this is important so Zelinski meets **Putin** in Istanbul Erdogan the president and even at that point even the even the prime minister of Israel was there okay and **Putin** is and they had and they they they work out a deal they're both accepted both of them there's gonna be a piece okay what happens Boris Johnson who I used to like Boris Johnson becomes Biden's lap dog just yeah our guys by they they send

(33:18) Boris Johnson to Istanbul and Boris Johnson says to zalinski no listen don't sign this deal he sabotaged the deal said we're going to help you we're going to because they want to weaken the Russians they see at that point they thought they could beat the Russians they thought you know they thought like yeah they thought they they' win a bunch of aggressive arrogant stupid Schmucks okay they were wrong they were wrong so Boris Johnson Boris Johnson has blood on his hands I'm sorry Boris you know I know I

(33:55) have friends who are friends you know I I I when I'm in London if they'll let me back in there when I'm in London I belong to the club you know the private clubs where they all go okay and I I have friends who are you know they play bridge together that kind of thing it's a small world yeah yeah I I have dinner with gchq MI6 Mi all these people you know British the London met commissioners of London met British intelligence stuff like that and I worked with I worked in you know there's a whole thing for that but um any case

(34:27) so Waris played the Lackey and and and has caused a war along with Victoria new so what do we have now we have the FL um Ukraine is destroyed so the you know the flower the youth at least a half a million youth Millions have left I mean I think Ukraine had like 40 million 42 million people before this war started now they have like 20 million or 18 million if they have that the war's lost they never had a chance and Russia has got we've made Russia stronger the Russian economy is is growing 3 and a half% and the

(35:03) German economy is .1% because because they let our guys I mean United States Joe Biden committed an act a war on Germany he destroyed the German economy they were Germany was getting cheap gas 40% of their gas from Russia the whole thing is stupid okay now you that's segue into UFO yeah because what I was going to segue actually there is that of the the hypersonics and the super soldiers if we're in the if Russia's in this war why are they not deploying their Advanced weapons what what is your thoughts on that then that can move

(35:37) that's obvious that okay that's even you're a schmuck you don't know what's going on although maybe you just maybe you do maybe justar okay let me explain that because there's so many stupid people asking me stupid questions don't know first of all I mean gotta understand what it's a civil war in Ukraine so Russ these these people people they're fighting they're like brothers most of them Putin is being very restrained he's doing the minimum if Putin wanted to he could have bombed he

(36:10) could have he could he could have turned Kev into Rubble he could have done that two years ago with his bombers okay he doesn't want to do that and by the way by the way the fact is if you go online there are people who uh there's this guy Alexander murus he's in London very smart man he goes to detail what's happening on the Battlefield there's uh Douglas McGregor there's a whole bun you know there's a whole bu there's Ray mcgoverin these are all excia guys Larry Johnson Colonel Daniel

(36:41) Davis US Army you go on YouTube and you'll see here you'll get the details what's really going on in Ukraine not the everything you read in the newspapers everything in the New York

Times by Ukraine Washington Post PBS CNN even Fox it's all it's all lie it's all like 1984 it's all propaganda there's no truth to anything they're saying okay the opposite is true so uh so so Putin has been very restrained and he's doing a policy what's called aggressive attrition aggressive attri

(37:15) they're holding he doesn't want territory well he'll keep the territory he has the East the dbas because that's R that's now Russia that's the buffer zone Putin is going to take car up and he's going to take a des so uh Ukraine is now going to be a rump State without any direct out to the Black Sea or to anything like that uh the Polish Farmers don't want the you know I mean Ukraine is destroyed what might happen is that Poland and Lithuania and Hungary and uh I think Slovenia too uh Romania Romania Hungary

(37:50) Poland Lithuania yeah they all want pieces of uh Western Ukraine because they used to be it used to be part of those countries so they may you know they may work at deal there is no more Ukraine is destroyed yeah Boris Johnson Joe Biden Victoria nulan Anthony blinkin all these these idiots they have destroyed Ukraine it's over there's no there's no way Ukraine's ever gonna win this war and and if mcon if he would if NATO would send in troops you know what's going to happen to those troops NATO's

(38:26) going to send in troops Putin I said mid you m by the way you get rid of Putin and whoever comes to take replaces F's going to be much worse than Putin let me tell you they're GNA start you better you Putin's keeping everything kind of restrained okay compared to what they're they're ready to do and they're pissed that they will do it put if Putin wants Putin can take a Hypersonic missile and he could he could pinpoint it now they have greater accuracy like 20 met they they greater accuracy he could he could put a a

(38:59) Hypersonic missile in the Alesia Palace you know not a nuke just a he can do it to the ministry of Defense in London he could do it to uh yeah he could do 10 Downing Street he could do it to Berlin he could do it to he doesn't want to do that he could do it and they can't stop him we don't have anything anymore so do you think not think that we have uh that type of technology or even more advanced if that's what they're saying publicly do you think that there might be even more advance that they have secret that

(39:29) they're not talking about do you think they no they don't because you know they don't because our guys are stupid look at their tanks look what they're sending our our equip is so good I mean we only have okay the F35 was a piece of everybody knows it's a piece of for years it's a total boogle Swindle only onethird of the f35s are even operational and maybe only about half an hour Dule submarines are operational and look at the British Navy the British k they had the they had the defensive Min

(40:00) I forget his name sprag or whatever I foret his name Ian something and and they had they had him on on on the nuclear sub the British Navy nuclear sub and they tried to launch you know a missile and the missile dropped it almost hit the submarine that was at the submarine the aircraft car none of the two aircraft car that they're not working yeah and they had a the

Royal Air Force they had a decommission like 35 typhoon Jets because they don't have the parts for it they the money for it the British army is a joke British Army

(40:32) it's now 72,000 the whole British Army would fit in a in a football match you know of the soccer matches that they have you know in London there the entire British Army you know pu **Putin** has I think by this summer he's gonna have over two Mill like over two million men underarms two million they already have over a million he has like 750,000 Reserve forces ready to go you know move into uh into uh Ukraine if needed do ground troops even matter though if you have capability to just use drones and drop missiles on people

(41:05) like we did in Iraq and Syria it feels like you don't even need you see that's Bo you don't know you don't know anything you don't know nothing about okay let me tell you something yeah please when I went to Cornell when I went to Cornell 1950s late 1950s we all had to take military you had Reserve Officers Training Corps we had to do that okay and I had courses in military you know I had some basic Elementary things about tell you bombing we had B out bombing that was in the Air Force RC in Civil

(41:38) Air Patrol before that and um and the answer is no first of all what's been proven by the uh the fact that the **Russians** even when they were weak at the beginning they're weak you know first year they were weak they were able to you know Wipe Out the Ukrainian the best forces that Ukraine had who were trained for 10 years by NATO our training is no good you know why because our army is no good anymore why is our army no good anymore and I'll tell you exactly why because we never okay what who are we who have we been

(42:19) fighting since Vietnam we're fighting poor people who did not have an Air Force they don't have tanks they don't have modern they don't have real artillery what did the Taliban have who they fighting in Afghanistan and Iraq oh oh yeah what do you call it oh wait Saddam in Iraq he had some stuff but we had a good army back then under Reagan and Bush the first Bush we had a powerful Army then and and in fact Douglas McGregor who was in that campaign and Colonel Davis they talk about you know we had a good army but as soon as as

(42:56) soon as Clinton got in Clinton destroyed the defense of the United States why did Clinton destroy the defense because Hillary Clinton's wife is a communist agent like you know she saw Linsky she in Victoria Newan okay we destroyed and also what's happened is that our fourstar generals and like our current Secretary of Defense they go it's a revolving door between the defense contractors and the Pentagon so what we've done we've built these high tech weapons which are too advanced and require too much okay do

(43:35) you know cars at all you know what it's like to have a Ferrari or a McLaren a lot of Maintenance right and know you can't use them on the street they're meant for special you know yeah things so that all our weapons we have Battis we have Ferraris the McLarens we have the **Russians** well they have Toyotas I mean in terms of their you know this stuff is not you know their stuff is much suited their stuff works even it breaks s like redundant have you seen the thing like the eth Air Force in World War II where they're bombing uh

(44:11) Nazi Germany and they get you know the wings fall off but the planes keep flying because they have enough redundancy okay so the Russian the Russians have Superior Equipment for actual Battlefield conditions plus the tactics the tactics that NATO taught um the Ukrainian army with tactics that were not suitable to fight the Russian army in the uh conditions the land conditions of Ukraine they were using tactics they learned how to fight you know the sand guys in their little Toyota with their little with the rifles and the IEDs they were they were

(44:45) talking they were teaching those kinds of tactics against a much lower enemy not against an enemy like the Russian army where you know they still have all that Soviet equipment okay the other thing is the other thing is this all goes to Clinton the first Bill Clinton okay started this whole downward Spyro what did he do we went all our manufacturing offshore to China it all corruption so we can't we we can't make the we we don't we can't make enough ammunition to supply Ukraine and neither can can can the EU so we outsourced all

(45:21) our manufacturing but the Russians they still have from World War II who they kept they have all their factories in Siberia which is too far away for us to reach you know by can't reach they have all and they beefed it up so the Russians I mean the Russians able to make you like three million artillery shells a year we can't even make one tenth of that okay yeah and yeah so so the point go ahead go ahead go ahead I I kind of want to ask a tangential question try to translate this more into the UFO side do you think the U the Russian have

(45:57) a UFO reverse engineering program do you think we have one or Advanced science in that respect you know technology that's well beyond any of the stuff that we've kind of discussed right now well okay let's put this way all right now we're gonna get into the fun stuff now all all right let's let's talk about that all right um we have a little bit of History here who is Jack who am I who's Jack sbody say oh Jack is the he has a a cunning what he talks in third person great no I'm just I'm talking who is

(46:39) Jacka bu who am I okay when I was a kid when I was a little kid in New York um my grandfather worked for the Army okay and I was living my parents were divorced and I was eight n years old was living with my grandparents my grandfather working for the Army and um so after school and doing I used to go down to where my grandfather worked at the Army quartermaster Corps in the Garment District Manhattan near the John 14 Street around there you g District it was kind of and I was like a kid you know things were pretty simple

(47:22) back then and here's this 10 10 year-old kid I was able was the Army quartermaster car was my playground I yeah they had all these Labs here they had the the hot the hot tropical uh uniforms cold alas the cold weather uniforms and and I was I was given free rain I was able to like run around do whatever like a playground okay for me okay yeah I was like the only kid just and then I would these army officers would come and talk to me and I was yeah was a smart kid you can imagine what I was like right you

(48:00) know in science fiction reading the astounding the 20 yeah elron Hub was you know all these uh the 25 cent you know Isaac aob all that stuff and talking about rockets and then but

years later to jump forward Leap Forward a little bit when Colonel Corso Phil Corso published his book The Day After Roswell yeah I open up the book this is like 19 when was it the 80s and 90s 1990s I opened up the book and I see the photograph of corso and like a a recognition you know he's older and uh I I I'm pretty sure that

(48:41) one of the main army officers who are encouraging talking to me about UFOs talk to Flying sources these army guys are telling me you're flying saucers back when I was like an eight n year old kid Okay so I'm pretty sure well I'm a nine-year-old kid right of course I believe you know I'm I'm driving around Army Cs and Grandpa's driving the car we're sitting and we're you know talk and but do you understand what I'm telling you now this is like two or three years after after Roswell

(49:14) for four years May 49 for 50 and um and and I who I think is Colonel Coro somebody like Colonel torso you know encouraging my interest in rockets and and you know science and tell them the flying saucer and stuff like that so what do you think the nature of UFOs is all about what's your opinion you're jumping you're you're you're jumping too fast there a whole history here okay okay so then I'm in high school in Brooklyn and I get recruited into a a a special after school program from

(49:56) Columbia University headed by a guy named U well was Eugene Eugene mcdermit was if you look at who Eugene mcder is he's one of the founders of Texas Instruments okay and he he was actually from Brook and he was a you know a top guy in World War II you know with like a m an mj12 kind of guy he just was he created the university one of the universities of Texas you know it's his money the Texas Instruments up um uh you a major a major figure and um um so he had this program they had this program to for but the super kid super

(50:38) kid program to get these genius kids in math and physics and they would after school they would tell it's like the X-Men so like is it like the X-Men you know with that this movie we were they were testing us to see if we had psychic you know that if we could do psychic kinesis telepathy they doing all that stuff and encouraging flying sources you know work on flying saucers stuff like that all through high school all through high school so they believed it enough to sign you up and and get you involved is that what you're

(51:09) saying well yeah yeah not only me a bunch of kids other kids was ER Geller with you as well not there ER Geller's in Israel there got it 7 years younger than me he's in Israel he okay he's in Israel uh but yeah I met Isaac is nice just got parties with Isa this group okay and um ion ran people around ion ran Fountain and but the point here's the point yeah so throughout high school and I was I was skipped in grades so I graduated high school at 16 and uh this good this guy Walter Breen uh he wrote they wrote this uh

(51:57) said they wrote a 10-page report on me on you know uh a report which apparently they sent it to MIT to Cornell and to University of Chicago they wanted me to go they actually wanted me to go to University of Chicago for some reason any case I got you know graduate high school I got scholarships to all three to MIT uh Cornell and uh in US University of Chicago for various

reasons I my mother didn't want me to go too far I don't know but oh I got more money from Cornell than from MIT and my mother didn't want me to go as far as

(52:34) Chicago you know because I think is only 200 miles from from New York so I wound up going to Cornell and the physics department Cornell was all the guys who built the atomic bomb did you see the movie Oppenheimer yeah I saw my pars good yeah okay well Hans beta Hans beta was one of my tutors he was the head of theoretical physics at Los about Phil Mars and lot these guys you they all the a team for Oppenheimer okay so those are the guys who taught me physics at Cornell and of course Cornell back then this is you know late 1950s I'm class of

(53:11) 60 Cornell and of course ivy league you know Cornell is an Ivy League school and uh you know this the CIA recruits from you know from the IB League especially back then and uh and also a lot of my professors were from Eng lot of my friends from I and you know they connected with British intelligence so you know in fact I had I was ask Gilbert Sullivan opera singer in too and uh and my voice teacher was was Keith bner who later became sir Kei fauler but he was a he was U like a a British Air Force uh British Naval uh officer in World War II

(53:52) he's kind of famous of Keith Keith forner any case but you know I think I was it there's a movie called The Good Shepherd there's a movie called The Good Shepherd it's about James Angleton at Yale in in right before World War II and how uh James Angleton whose grandson is a friend of mine know his grandson okay and how James Ang's like yeah he's in the Gilbert in Sullivan Society okay and then the the movie opens up the movie and I think dairo dairo I think is in that movie yeah I think I think Robert

(54:25) dairo is actually in the movie and Matt hell what you know that Matt you know the guy from Harvard any case so the scene opens up where they're doing in Gilbert and Sullivan and the James Angleton character he's dressed as a as a woman because they they had the women the only men there Yale 1930s skull and bones that whole thing and he's recruited by the British intelligence to help form the CIA this is a true B based on a true story okay same thing happening you know just part of that you know and

(55:01) um and so um so what happens okay so various things happen I I I go to uh um in in the in 1966 I'm with Vera Heisenberg you know Vera Heisenberg was the Heisenberg I'm spending I spent the summer I spent July I think it's ju 1966 with John archal Wheeler familiar yep Heisenberg and some other people at the max ban Institute in Munich and and Munich only 10 6 what 20 years after World War II do you think they took UFOs seriously or no no wait just wait yeah just wait we'll get there okay but I

(55:46) wanted and uh but here with Heisenberg and these guys uh and um but about general relativity no they they didn't talk about UFOs I was by the way this is a NATO this was a NATO summer school NATO Summer School from there I go over to Her Majesty's atomic energy research establishment at Harwell okay which is kind of like the Lawrence like Los Alamos you know that but British the Bri you know smaller scale the British version and you know I I go there and um various things happened and then then what happens okay so I'm yeah I'm

(56:29) jumping to now uh I'm then uh an assistant professor of physics at San Diego State yeah which is a Navy town Navy town and you know very patriotic it's name this is like the late 1960s and we ran the program of float college education for the US Navy out of San San Diego State okay so used to go on Navy ships he teach our Navy ships and in 1970 now we're getting to UFOs so in 1971 1971 I was on the USS tyon dooga which is like a small aircraft you know it's it's old aircraft carrier main a helicopter thing and we sail from San

(57:17) Diego to Pearl Harbor was that down the Ty yeah this was T 71 7 yeah I think well maybe late 60 I'm not sure exactly when those a long time ago and um but while there there's this guy the naval int intelligence guy on board yeah we physics PR teaching physics and so he got and he started talking to me about UFO yeah was sitting you waiting on on the Pacific Ocean you know going across you know Pearl Harbor yeah so we spent a lot of time talking about UFOs back then so s with the Navy back then at least

(57:57) okay explicit and um oh yeah I must say you know this is kind of this I'm not I'm not an agent of Vladimir Putin you excuse Meck your ass I'm talking about you I'm talking about konel John B Alexander that schmuck that evil schmuck okay but uh but the point is so we're sailing the Pearl Harbor you know they get all the sailors and you know we're all standing there we go past you know the Arizona you know the world I mean you know like I even I I tear up even now thinking of that so you know

(58:32) you know I I remember World War II my my uncle my uncle was four and a half was four years in combat in the South Pacific yeah you know the whole time so you know I I really remember World War II even though I could remember it yep uh all right okay so here okay so so UFOs okay so now I'm back at San Diego State now now it's going to get weird now it's going to really get weird okay let's and now now now URI G enters the picture so it's like 1972 I guess 1972 late 1972 and I'm living on campus off campus

(59:19) with this other physics Professor named Fred Allen wolf I don't know if you heard of him he's kind of well known at the time two both got divorced stupid you okay W go into all detail you can read about have Hipp say physics that book yeah a lot of the history is already out there I'm more Curious with your opinions on the phenomenon yeah yeah and so uh uh Fred gets a call from his high school Chicago high school buddy named Bob Tobin and and Bob says he wants to come out to you know want to pay a

(59:53) visit Bob is a zany guy but he has a lot of money made a lot of money on the Chicago Commodities market so he's he's rolling in money Bob comes and move stays with us and Bob starts he says this this is R psychic named URI yella he's able to bend metal with his mind yeah now at this time you got to understand Fred Wolf very straight he you know he he had working in nuclear Atomic physics of nuclear explosions he had Air Force contracts I was actually working on Air Force nuclear explosion contract at the time and we straight you

(1:00:37) know Bermuda schz uh yeah Austin healing and I had a what did I have I had a I had alha May spit by whatever you know and um and a Navy town and he said he says uh he says to

Fred listen I have a a book contract and I have a a television thing we want to do like a Ser do a show on Erie Geller and we need physicists to explain how can Erie Geller do what he does and we didn't know I mean yeah we didn't know anything any case so we said yeah okay we didn't know you s brainstorming with them but okay one

(1:01:24) thing leads to another let let me let me let me see how to do this now and we um uh he leaves he leaves but Bob leaves and um Fred gets a call it's like now the spring early spring of of 73 Fred gets a call from a friend of his both in Paris and in London that he's offered to teach Atomic physics at the University Paris and also teach it at the University of London Burke be College well I had actually been I had been there myself too with David bones David B and uh so he'd be commuting he'd be living in Paris and London he go like

(1:02:10) teach one day a week in Paris one day a week in London just commute they pay his way and teaching Atomic physics okay yeah then I I get a phone call I get a phone call from Abdus Salam who I had already know because I'd been working back and forth I was at I was at the British atomic energy commission you know with back and forth you know stuff like that AB Salam is the chairman he's a Pakistani but you're Brit a British xad well like Pakistan you're living England and he's he's the head of the he

(1:02:44) the head of theoretical physics department at the Imperial College of London was like the MIT of of England but he also runs a International Institute of theoretical physics in triest Italy which is partly it's UNESCO it's a un so it's **Russia Russian** physicist Indian physicist African and you know French American all stuff it yeah and he says I he was following some of my work he's that that he was interested in says Jack why don't you come to trest Italy work at I you I'm invited there you py that and we

(1:03:25) want to leave San dieg anyway it was getting boring so you know so so we both wind up okay so we're on our way to Europe but now um I'm on my way to Europe but before going to Europe This is now like uh maybe it's June maybe it's June of maybe it's uh May I'm not sure you know early um early uh spring early summer 1973 and I'm in I'm I'm about to fly from San Francisco to London on my way to triest now it gets very weird it's gonna get very weird all of a sudden do you see some

(1:04:12) UFOs just wait I'm eager I imagine I want I want to hear about the UFOs you know goe yeah well you know be patient this more than it's UFOs and more I got you more than of a you know I'm I'm in bed my girlfriend at her mother's house in Carmel Valley it's beautiful place in near big near near uh near big sir and um and Sharon's mother brings in the Sunday paper Sunday Chronicle magazine I open up the magazine section I get this this is Twilight Zone now this is like okay this is this is UFOs on steroids okay

(1:04:59) you want UFOs don't leave me spense here yeah well it's Twilight Zone yeah okay believe it's worth it I open there's a big article multi-page colored article guess it's about it's about iie yell who you just we're on our way over to oh yeah also we because Bob said Bob Toby they giving us money so don't worry about money I'll give you all the money I'll meet you in

Europe Bob we're now so it was Bob toin telling us to go to Europe and then we get phone calls from

(1:05:28) from the uh from England and you know for for B for for Fred and I to go to England turns out this is all a CIA operation it's all Central Intelligence Agency right okay we wa and um so I open up the thing and I see iie gella and and and have their testing all these psychics the psychic powers and I say to Shar they say hey Shar this is exactly what Bob tolin is sending us over to Europe for paying you paying paying for the tickets paying everything okay coincidence look as I said it's Sunday so I said

(1:06:10) Monday but we're leaving on I'm leaving on Wednesday I'm flying to SFO on Wednesday that's Monday morning I Monday morning I gotta call these guys I get the phone number I call and this guy this Irish guy Brendan oan gets on the phone get this now say ah Dr saati we were hoping you would call us you understand how weird that is yeah synchronicities I think that they say you know and well more than synchronicity especially explain this by yeah but you can't how do they know that Sharon's mother is going to bring in the

(1:06:53) newspaper and I'm going to read the new I'm going to first thing I turn I'm going to turn and I see the article yeah how could the CIA even this can't this is much more than CIA yeah CIA is part of it so do you think CIA do you think there's a link between the CIA and the Consciousness and the UFOs then oh okay but you're jumping too fast because your mind you're like a you're like a you're like a little old transistor radio and I a big German Broadband CL pun you can't

(1:07:23) imagine what I'm going to tell you maybe you can't if you heard some of the ear earlier earlier things but you're not you're like tuck a c with Putin and I actually I was thinking about that this is kind of like that because you're telling the history story like Putin was but all I want to know about is the UFOs yeah because because your mind is too small technology try I appreciate because yeah CA you you're suffering cognitive dysfunction and I'm gonna give you a little bit I'm give you a little bagger

(1:07:52) for your to your mind okay yeah yeah got bear with me just bear with me okay so now wait okay so so Brendon says says can you drive they know where I am an hour away suring me right okay who knows yeah and so I said KU you we'd like to talk to you TR so so I get my carck I drive up to Sr it's like 10:00 in the morning on Monday morning remember I'm leaving on Wednesday morning okay and I met at SRI there and Brendon meets me and he says he first he said takes me across the street to the Institute noetic science

(1:08:38) and guess who I meet the first guy I meet besides Brendan is Edgar Mitchell do you know Edgar Mitchell the astronaut yeah I think he's made some pretty profound statements about life and UFOs yeah yeah yes yes yes I meet him I'm if I shake hands I'm I'm sitting in an Mitchell office right M with with Brendon brendon's Irish National by the way you from Dublin from Dublin and I think he's he he comes from a f from you know the family who run the Irish Times or something like you know the he's kind

(1:09:10) of like an Irish Aristocrat typ guy British intelligence right this is Cia this is Cia you know how put off okay so I wind up we lunch or something I guess with edar bringing sandwiches or something then they take me to a guy named Dean Brown Dean Brown Dean Brown is one of these original Stanford remember this is now you know the Stanford the vure Silicon Valley vure Capital guys is Dean Brown and okay now it turns out the CIA tape recorded all this and somebody sent me part of that tape recording from 1973 which is now on Soundcloud if you

(1:10:02) go to SoundCloud to Jack sarati CIA 1973 you can listen to the meeting in which I am introduced at Dean Brown's house to Harold POF Russell to and a bunch of other people there too and in that tape you can hear Russell to talking about how they think flying sources are time machines from the future you just is a Russell time you don't take my word there it is and then see I had remembered when I was 13 I was contacted these weird phone calls yeah I heard about that but said it was it said it was a conscious

(1:10:53) artificial int conscious computer on board of space from the future and that they wanted to te I was part of a group of kids that they wanted to teach their technology too in any case I had you know Brendan kind of knew about that so I had been talking with Edgar Mitchell and Brendan you about about my I had remembered my my experience at the age of 13 oh and then but they said I would meet the others in 20 years this is 1973 so it's 20 years later and here I am at SRI okay like okay in any case so you'll hear me talking on that tape I

(1:11:33) say to Brenda said Brendon should I tell what we talked about brend yes says go ahead you hear it you hear it you hear me you know you hear the actual event and I talk about what happened and you'll hear Brendon say oh yeah we have we have data on several hundred incidents of that kind they the data on it okay so there we are so so you want and then they talk about you know so it wasn't just you there was other people that have had similar experiences oh yeah including Hal put off apparently Hal put really yeah I don't know exactly

(1:12:06) but Hal told me in 19 Hal told me we're on a bus in London with kit green you know Christopher green is kit green the CI okay I'm with kit green and Al put off we on a bus got seart Hammer off he trying to get on the bus we're going from the temple some the meet dinner at the temple over I for where we're going and how he said you I started how said yeah when he was a kid he had some strange stuff and and then uh um somebody interrupted the conversation so he didn't tell me the full details but

(1:12:40) if you ever get how p on ask how what before he dies he's older than me you know before he dies what what happened to him as a kid okay yeah and um so there we and and then they say well why why am I at why am I there they want me to help set up tests ofri Geller at the University of London see if he's psychic which happened yeah well no they they wanted other labs to corroborate you know test and okay all this is in the you know this is all in how to hi you say physics my book Destiny Matrix yeah there's a new book by um there's a

(1:13:17) new book by uh a guy David glass on Amazon called the Great race it goes up to David gush talks about David gush meeting okay so so there we go now do you understand the whole

point me telling you this story is that the only way to understand those events from 1953 predicting I was going to meet Hal P all these guys in 1973 which happened is that that this is all being manipulated by the nonhuman intelligence of the Tic Tacs you know of the nbits encounters they are manipulating all this from back from the future it's all time travel you have to

(1:13:59) sense time travel the only way to understand this the CIA back then look look how stupid the CIA is now we got some really stupid people running the CIA it's not Burns they're idiots the people who got me into this back then were smarter than people now we have real idiots running the CIA they're totally incompetent yeah so do you think that UFOs then are just us from the future you think it could be aliens from the future or how do you what are your thoughts on that why why why is it why is it a zero why

(1:14:29) is it one both it can be both too oh sure you think it's both it's definitely it's definitely both interesting and what do you think about the UFO Community like some of these celebrities that are out there let's just say you know Dr Steven Greer Lando Jeremy Corbell there's others okay let's be precise though let's slow down okay you want to go one at a time one at a time well let's start with Jeremy Corbell because my opinion is he thinks that it can't be us that it's got to be aliens what do

(1:14:56) you think about him he's an idiot Corell he well he said well you he's a schmuck K's a schmuck he's a dumb what does he what does he know what is his educational background what is what does he have a does he have a degree in physics definitely not does he a degree in mathematics is he an engineer no this is all a phys this is all a technical problem you got to understand there all technical problem now he you know he's a he's he's an air head yeah okay let's go what about Lando

(1:15:29) no let's let's rapid fire these out what about Lando what do you think about him well yeah he's a military guy yeah he's a military guy you think he's got some inside information yes oh he definitely has inside information now okay blue okay blue is a soldier he again I don't know he doesn't have much of a technical background and he was basically drafted into this by Schmucks and the wherever the Schmucks above him didn't know from Shola and so you know he's he's like David

(1:15:58) grush except David I think has a little bit more physics math background than Lou so um my beef with Lou was that he was too much of a wimp when um when uh Frank Milburn you know Frank milburn's this um uh ex SAS British soldier suffering from PTSD a little bit but you know he's a he wrote These two papers for the beginning Sadat uh load IDF think tank at Baron University of Israel he wrote these two things and I'm in it and you he describes my stuff pretty well does a pretty good job on and also Lou in it

(1:16:38) and Chris M we're all in it right and then when when when people have asked uh Louie about the sarfati physics he just said he's you know he he didn't want to save it that partly because he's not a physicist so actually maybe good but um and uh you think there's aspect

where he has an NDA and he can't speak about some of it because it's national security issue well of course well that's what he says doesn't he so you gotta believe what he says that's fair uh and and um

(1:17:11) all right so I think Louie is trying to do the right thing but Lou is involved with some people who are who who I don't like Louis is involved with you well Chris melon maybe Chris and I will make up who knows and Gary Nolan Gary Nolan's pissed off because I pissed him off he's he's emotional and uh who else colon John Alexander and Eric Davis some of these people you know uh there's a whole other story okay so go ahead ask me so I guess the next one is Dr Steven Greer do you think he's had inside

(1:17:45) information he has some Greer I almost got into a fish fight with GRE did you that's funny in 2004 we're on the same at Santa Fe yeah I I know what he said because I think I thought G was a communist yeah he saying oh I know he saying back then I was a schmuck myself I I think I was sort of a Neo comat because I was for I that's right I believed all the yeah about Iraq yeah uranium and all that stuff yeah yeah all that stuff and and actually I maybe I G apology because he said something bad about the president

(1:18:22) about you know about all that and I think I I but he's a big guy oh he's huge he's jacked really steroids right yeah he works out I don't okay so um so okay but the thing about gria he's a bit of a i he he struck me as being a bit of a a cult leader you know he gets these gullible people they go out in the desert there but he charges money you know he makes money off it so that makes me suspicious but I think some of the stuff you know he did you know some of the people Witnesses yeah it's true I I know

(1:19:00) it's true I read we haven't gotten to that yet so G is a mixed bag got it okay cool and we'll talk a little bit more about some of his opinions here in a second because um and we make come to some other people those are the main three that I wanted to get your opinion on what I want to know next is since you talked about this idea of retrocausality with this idea that information from the future can float to the Past what do you think the best evidence in science and physics is of retrocausality do you

(1:19:23) think the double slit experiment can expl explain that or do you have some other better evidence although I guess that's good enough possibly and are you familiar with now okay wait at this point we got to get into my now you want to do physics okay just AE just a minute we got to do screen right you want to do the equations yeah yeah because the only way to do it otherwise you also I'm losing my voice already I can't yeah I I have a weak vocal cord I strained it too much when I was singing I qu oh hang on

(1:19:57) make sure you hide your only zo my what hang on what happen to my joining the Mee what happens to I joining the meeting here I join oh damn wait uh what's hang on a minute sure hang on a minute I gotta do why why don't you talk to your guys while I'm doing this okay hold on I'm gonna unshare the screen real quick from you I think okay five 39 oops [Music] can't you can't we're back on this all right okay no I wantan to uh no I'm going to uh I I want to get back on

on screen again okay wait okay sure yeah

(1:20:40) because I'm ready now I'm ready I'm ready go ahead and reare Okay no Okay so we you see my thing no I don't see it yet you don't no do you see it now no still don't oh all right what happened oh wait okay share screen got to do it again [Music] screen start broadcast there we go now I can see it okay there we go okay there we go so okay okay do you see my do you see my white pad yep we see it go for it looks good all right all right okay ask me the question so yeah so I guess the question

(1:21:21) is what do you think of what's the best evidence of retro causality would you say the delayed Choice Quantum eraser is a good uh Pro sort of sort of no let me okay let me go okay retro quality yeah you see that y my mity the idea I Gotta Get Right better I got get right better if I if I carry this sure all right yeah still all right okay now you first have let me the history history we can't see your face either but go ahead oh you can't see my face I covered up or something it looks like oh all right that's the problem with this thing

(1:22:00) okay yeah you that's the problem okay okay all right so now um the history around 1940 oh actually we go 1940 wheeler wheeler so what you got to do guys findan we why you go to Wikipedia even though even though go to Wikipedia how do you spell Wikipedia pedia you got it all all these key wordss you just go just put in real aining you got to do your homework this is you know you know this is serious stuff you can't get it s you know for attention def disorder okay we find advanced advanced potentials advanced

(1:22:58) electromagnetic potentials that's SE back from the future future got it but it's classical this is not Quantum okay this is all class that's a classical it's classical physics physics okay then um let's jump then we have uh um uh Fred hoil oil and Cambridge Isaac

(1:24:02) Newton Newton Professor Stephen Hawkings took his job oh no it was Dennis an I thought the intelligent intelligent Universe it's a book intelligent Universe all right 1986 or so a book get you know get that book or look at look look up that book he talks about retro causality that the Universe has created from the future yeah okay that's Fred Hoy all right around 1964 we have a student student of David B look up all these people David B who worked with Einstein yeah aof B effect yeah yeah yeah and but he but but

(1:25:08) yaka Yak not he's still alive 91 I think yeah yeah I saw I saw him not too long ago he was there all I can tell you about Let Me Tell I saw all the leg Yeah he was there there with put off and I mean with uh kit green and and and and put off in London because the B we got the bone FAL how do you spell I think that's yeah I think that's it yeah what's called weak measurement Theory weak measurement B measurement look at that for a minute and then uh uh Quantum Quantum this is quantum mechanics yeah mechanics and this is practical stuff

(1:26:04) this is stuff that do in the laboratory it's not just theoretical and basically what that is this is here now now and this is what's called This is a this is time this is space okay and this is what's called a a future uh boundary condition condition and this is past a past boundary and

then he has what's happening here you have a there a side wave side Destiny he calls it this is his language side side Destiny that's fine that's not a it's

(1:27:09) not an art contest okay and here you have another wave SE second wave s history and they sort of they create what happens there yeah okay okay so both the future and the past are influencing the present yes this is future cause future cause and past cause yes course oh let me make a little digression here sure you know who's Stephen Stephen Stephen wol Dam Mathematica you know do you know about Mathematica it's the main prod you know it's it's a he's he's a smart guy he worked with M he's a you know he's

(1:28:09) British we worked with M any case he has this thing called computational Universe computational Universe you know are we simul are we living in a simulation that what I was going to ask do you believe in the holographic principle what is your thoughts well this is wait a minute jump into you know I'll get that that's a good question but just remind me keep that on the back I will it's on my list yeah okay he has this but you know he's kind of like that we're living in a Sim I mean what he's

(1:28:46) saying would be consistent with that we're living in a simulation you like with someone else's video game right yeah if time has no meaning if it's just you know the future and the past impacting the present well it has meaning don't say it has no meaning it has meaning you're right I doesn't have the meaning you think it has true doesn't have the mean you think it has don't oversimplify as as Einstein said keep it as simple as possible but not simpler than is possible and that's what all you guys do

(1:29:17) you make you you know you like cartoons you that's you know you're like you're like as you said Tucker Carlson Vladimir Putin yeah serious you tell you my generation what can I say we're full add we uh just want to know the ansers yeah yes yes I know I know I know that but you know what okay but here's an important thing while you're bringing that up yeah most of the American kids are that way absolutely and that's why that's why that's why America is a PE is weak that's a big national security

(1:29:50) threat and to some extent it's less England's going that way Eng D that but guess it wasn't that way the Russia kids are not that way and especially the Chinese and the Indians there's something called bricks so the America what's happening sorry you I didn't want okay let's yeah let's just keep going basically yeah let's keep it on the physics but basically we're being being destroyed from within yeah because because people most American Kids cannot you know it's just

(1:30:25) too much for them we're trying to get some of them up to speed here right now in fact I think a lot of our CH americ they want to know more about this yeah yeah but also I think you know guess who's watching this guess be you got a lot of Russian Chinese and Indian probably kids from all over the world watching this okay so they're gonna get it they're judging your handwriting right now yeah whatever they can they uh so what about the holographic principle though so wait wait wait okay so wait so wait

(1:30:55) finish my point okay keep it going I'm I'm on a trajectory I'm on a narrative yeah let's keep it going wol from is wrw Wolf is made a big wol from Wolf's uh Folly because the his his algorithm algorithms only run one way in time past depress right they only have S history okay that's why don't work yeah they don't work they they left out half of it they left out half of it now so the point is okay and the other Schmucks who are the other Schmucks other

(1:32:01) Schmucks yeah wolam we have wolam we have Weinstein Eric Weinstein Eric Weinstein okay yeah I wanted to know your opinion of him yeah erstein we have um uh we have uh what's his name Sam Alman oh yeah the AI guy guess what he's my next door neighbor he's my next my next door neighbor get him on here tell him he's a schmook I do well he's going to make the world end with his AI programs near yeah no worry neighbor oh good we got to get that on there yeah yeah Sam chat and um and uh El R I think you just doc Stam

(1:32:49) Alman well yeah yeah well they have to I have duck myself Elon Musk I want to know your opinion on him as well like why is this guy work on Rockets you know like what yeah yeah yeah we're g talk about him good the grock and Rockets Rockets yeah these guys brilliant in their way okay but who else who oh yeah another smar is Lex Freedman why don't you like Lex Freedman I like him that's Shu doesn't mean I don't like him oh what does schuck does that mean he just doesn't understand ADV science yeah mean

(1:33:21) SL you kind of yeah you know you're making stupid mistakes yeah no I actually agree with you on all these people to be honest with you I think that they're not forward looking enough in terms of what the sign and and Joe Rogan too who are some of the other yeah let's get Joe Rogan on that list for sure he thinks he thinks the 70 videos have video game graphics and them when they're showing uh yeah all right macroscopic phj because okay okay so what so the point is let's go what what I doing I'm definitely getting canceled

(1:33:49) from Joe Rogan I burnt that bridge yeah you did okay that's okay now here we go to the next one okay so the point is all ai ai is not conscious yeah just language learning models right yeah not conscious why because in order to make them conscious you have to have the thing coming from the future you have to have sigh history s destiny and then that's going to generate Consciousness inocent Consciousness almost not almost almost almost you need need both of them yeah the computer sorry go ahead I didn't interrupt yeah

(1:34:37) well I mean what is what is okay s let's go s history is memory our memory that's called uh that's uh that is quantum and entanglement epr quantum entanglement entangle y me signaling signaling signaling past to present it's it's actually what it's like Frank will will chck will sex Nobel Prize a Nobel Prize I think I another right uh time Crystal effect it's a Time Crystal we are we are that's us we we we

(1:35:44) we are like time C when a memory when when suddenly a memory pops into your Consciousness right you get an idea you remember something suddenly that think you know that that that's that's uh that's the effect of the um of the uh the history Quantum waves in your in your brain it with the they set where certain certain memories will pop up at certain times in

your stream of Consciousness okay but what about the other one the other one's destiny that is intuition intuition creativity yeah I read about this in

(1:36:38) your paper uh yeah you Mozart Mozart you know Mozart yeah you Mozart said when he wrote his music he said he was just listening to him it was just popping up in his mind he was remote viewing his future performance that's called The Loop in time Loop in time this guy Namnovop physics noop Igor Igor noop Moscow he I think he's dead he may be Moscow book river river of time River of time get that book this let me yeah this is a book everybody okay eigor noov book River of time also some of what I'm talking about just get uh David

(1:37:46) Gladstone David Redstone great race great race goes up me it's about me and up to David grush David grush you know his Congressional at Congress y yeah the that's on Amazon get Amazon get the Kindle it's cheap Amazon Kindle Kindle I don't know if we put that on there but yeah okay got all right okay all right so now where where were we now so what were you asking me about well so I guess the thing is in terms of um time in general do you think it's deterministic or do you think you think it's more like

(1:38:29) string theory we have different timelines now I think you've done a good uh you've presented the science here and and the people who are responsible okay now wait okay now wait now here's the thing there two views exactly two views one is one is many worlds m okay so now but you have to look at Max Tark Max T Mark at MIT just look up and he has uh U he has this this there's this's level one one two three and four okay uh there are different meanings out there this is levels one and two is all

(1:39:29) classical classical uh matter and level three is mental by the mental worlds okay side these side waves okay so it depends what you're talking about okay it's the different level see people are too sloppy about this so what do you mean by you know the universe itself okay now I have to do a little cosmology uh here is the let's say the uh initial Singularity initial white hole let's go a white hole okay and this is going to be this is this will this is the time and now you have I'm got to use

(1:40:32) different this okay oh no that's not what I wanted just a minute just a minute this is called the past this is the past boundary condition I talk about before the past boundary I'm not going to go into the full details boundary and here we have and here we have this is the future boundary and this this pretend pretend you're an immortal god you're an immortal God this is you this is Ashton nice okay this is let me let me just uh he it can be enough suppose suppose you're suppose suppose you're an

(1:41:35) immortal you know one of the you're like a Greek god I'm looking down on the universe in all time well no no no you're actually here you're you're living this is this is your this is a this Ashton okay Ashton Ashton's worldline got it World line you know from you've lived you know from from the like this is pretty close to the big bangers around down there big bang okay and you and this is and this is like the end time the end time sure actually this is called conformal time so it's a it's actually

(1:42:14) infinite clock time and there's a whole lot this has to would P this is what I called um uh hang on this is what I called um actually called um um P it's like a it's similar to a pen row What's called the pen rows diagram so this is actually conformal what called conformal time it's it's not the regular time for the clock it's this is actually this is this a finite it's it's actually infinite clock times what's called conformal Infinity you no mathematic is year with the mathematic

(1:42:56) fine but here but here's the point here's the point here's the point suppose you're here suppose this is now 2024 okay 2024 you're getting you're getting what your mind by the way the side waves just say side waves are mind waves mind waves see that's the big thing all you are well you are you Soul you're just a you're you're you're you're a pair of side waves you you have advanced and you have your destiny and history okay and so information you're getting let's see I

(1:43:40) want do screen I want do this is your your mind your brain so to speak and this is you're getting information side history okay but you're also getting information you're also getting information from the future yeah yeah I'm with you there for sure say say s Destiny that's your destiny your karma karma if you want Karma yeah so that's the way it works okay what does this mean though with respect to it being deterministic or not though like are there more than one timeline or do you think there's

(1:44:22) just one timeline whatever right now here there's only one here there's only one timeline right one timeline there was only one timeline that's I haven't talked about the other possibilities there you know it's not that simple you're jumping you know you're making jumping ahead too quick and you know and you're losing information this is the situation okay within within a single this is your timeline right this the timeline there your timeline but really you we only exist in like little little

(1:44:52) piece like that yeah Bor right okay and it's observed and dependent now the point this is called the causal Diamond it's called the causal causal Diamond this is the observable universe observable y Universe this is assum be vacuum and these are light signals see these are also these These are also two TR the speed of light light signals too well they're light signals I'm I'm oversimplifying a little bit I'm assuming that the side waves also can travels like like light Fingal um maybe even electromagnetic

(1:45:38) okay it's too much F you I can't really explain it properly that's okay we don't need you to on here I just I want to really hear the conceptual side of it honestly now look okay now look um hang on a minute let me just let me just change the color let me just change the color um me um um okay this is Ashton ashon and I super we overlapping This Be Jack but we each have our own wa I'm the the the causal diamond diamond is Observer dependent so we have slight but but the universe is so big that we might being

(1:46:39) the same one you know what I'm saying observe it depending so we're creating our own universes that are then overlapping we not creating we're in it well well it's well we're not creating it well yeah I wouldn't say we're creating we're receiving it so to speak you know we're

being influenced these are all like influences external influences on us okay okay now now this is all matter this is all like class this is you know this is matter this is this is the classical matter matter but the side waves are

(1:47:17) like mind mental waves or mental signals okay but now you could have say we have a bunch you know right now say we're in this causal Diamond now there might be another causal diamond out here right this could be other dimensions so now this one they talk about other dimensions yeah what are your thoughts on that what does it mean but there could be this could be an alien and this is us okay normally normally they can't you know we're a part there's no we're separate however with war sarani this

(1:48:17) field being a little warp drive warp wormhole oh I let's call it tick tac Tech okay so we can get from all so you know this is what when David grush and knows what is he like extra extra dimensionals yeah it's the new hot thing he may mean this see maybe he he does I don't know I don't think he knows what he's to yeah he's not he doesn't know enough physics he knows some but he doesn't know enough he may have this in mind I don't know that this is a possibility so with this type of thing

(1:49:04) do you think it's possible to have Zero Point Energy do you believe in Zero Point Energy with extra Dimensions yeah no that's that's I mean you're not asking a question that makes any sense you're your question okay how do you say that how gang W gang how one of the fathers not not even wrong wrong you don't speak you don't speak the language capiche I mean you don't you or or your sentence your sentence is ill posed okay for for for us scientists for us for serious for serious people well let me write it say

(1:49:59) in a different way then because I've looked at this paper between you and Ken's shoulders where you talk about exotic vacuum objects and their ability to BL who Ken shoulders you and Ken's shoulders energy conservation from the Exotic vacuum R yeah yeah yeah no no first of all forget that paper I actually didn't write it he wrote it and that was back yeah the whole story Ken shoulders he was doing experimental the he actually had some interesting things but he didn't know any physics I didn't

(1:50:26) actually write the paper I never actually approved it I sort of letter he's a nice guy so I can say yeah I'm not acad yeah I'm out of Academia anyway I didn't give a but you know just if that's your source of information I just did a little bit of research I'm just curious yeah yeah okay but it's a I I haven't looked at that thing for like 30 years 25 years whenever he wrote it he's interesting that's a whole story he spent the whole hour about Ken shers he was he was a

(1:50:51) spook he's cute you see he's one of these guys who made all these instruments for the CIA you know all these secret you know little pens that do this and that you you read James Bond a q j q and James Bond yeah yeah he was for the Americans he was the American Q yeah he knew how put off in all these guys he's an interesting guy creative man and he had his own he had his own Auto Gyra his own little private One Man helicopter and he lived he had all these turkeys on big turkey farm in the he's a real character eccentric

(1:51:23) interesting that guy but yeah okaye now ask a qu try to ask me another question I'll see if I can yeah okay so my next one is going to be do you think we can achieve super luminal speeds going back to what you were showing before with the David grush stuff in terms of how these tix May operate you think those are yes and the answer is yes the answer is yes and now you have to go on Vimeo Vimeo well maybe I can do it from here yeah you again wait a second wait a second wait yeah wait a second wait a second wait a second wait a second let

(1:51:59) me go to uh let me go to uh we're gonna see your whole search history here so yeah that's all right up honey he's got nothing to hide chat nothing honey um video see what comes up [Music] uh where's they have a lot of this thing are you looking at the one that I I clipped the other day with the had your thing no that that yeah no that that's a good one but that that's yeah that was good I like oh that's this the one okay one hopefully we'll this I'm not sure we're going to be able to hear it but

(1:52:52) yeah that that's the one oh yeah okay so say you okay now since you don't have a lot of patience let me get to the part where is the part let me go let's see am I able to uh I have a lot of questions for you I want to make sure we get through asit AIT a can hear you he got to the induc warp field yeah wa wait wait wait wait wait let me let meit let me herec system oh no right and what it shows is that the Einstein is basically reciprocal of what you might call in string theory the string tension which is basically the

(1:53:39) reciprocal of the force in Newtons so string tension is like the space-time stiffness of of the fabric of uh of I didn't really want to do thate the resistance the bending by energy so these are just uh different ways of looking at uh this concept which is helpful for physicists to conceive new ideas this is the most important idea in all of Einstein's relativity Theory both the special theory of 1905 which uh didn't have any gravity in it and the 1915 theory of general relativity that incorporated the gravitational field

(1:54:22) using the equivalence principle of weightless warp drive and um the action reaction principle and uh so this is the light basic light cone structure it's an invariant all observers no matter how they're moving whether they're accelerating not accelerating will see the invariant local light cone this is a Bedrock upon which the or this is the uh Cornerstone of the Temple of Einstein's relativity Theory here we have a picture from the Stanford Encyclopedia of philosophy showing A four-dimensional

(1:55:08) Spacetime in which there is no gravity it's it's totally flat in the four-dimensional sense and you think of the light cones like little arrows little spins analogous to to Magnetic moments in a ferromagnet or analogous to electric dipoles and Stewart Hammer offs microtubules that might be the seat of our Consciousness and you see they're all lined up parallel there's no relative tilt of neighboring light cones to each other that means there's zero curvature this picture of curvature of SpaceTime as the tilting the relative

(1:55:44) tilting of uh lyes is due to Roger Penrose who recently got a Nobel Prize along with Steven Hawking for their work on black holes so here we see again a key construct in the

classical theory of relativity uh I say classical because it omits quantum epr entanglement effects that changes the ball game but uh we won't get into that now that's a more advanced topic that uh in particular rodrik Sutherland down in Australia in his papers has shown how to extend this notion but this is the notion of a causation which is also the

(1:56:27) basis of Bill's locality inequality which is actually violated in quantum mechanics so uh here what this only works in vacuum and Alice's past light cone must intersect Bob's future light cone in order for Alice to see what Bob is doing using what are called transverse polarized far field uh electromagnetic signals um Einstein called them light rays but it's more General than that now this is what fast and light travel is not this is what people tend to think it is where where the UFO is actually traveling outside the light

(1:57:15) cone when it's outside the light cone it's like a tachon as fast and light but that's not what warp drive is warp drive is very different warp drive is motion without motion it's the actual controlled tilting of light cones of neighboring light cones the relative tilting that is controlling the curvature field directly with small amounts of energy that's the key small amounts of energy this again is a slide from the U Sanford encyclopedia philosophy on relativity and it shows the formation of

(1:57:50) a black hole with the Event Horizon I will not go into detail on that at this particular time but just check out the Sanford uh encyclopedia philosophy on light cones here we have the extreme case of the correct way to think about fast and light warp drive which may contradict actually I'm not sure all the published papers by alub and everyone else notario all of them uh they may not uh understand this but we'll see time will tell and here what's happening Alice is in Fast and light warp drive relative to

(1:58:31) Bob and so what we see is that Alice's light cone is now tilted at 90 degrees to Bob's light cone this is the extreme case so light cones are perpendicular to each other and therefore Alice is able to see what's in front of her future from radar signals from the future light cone of Bob see this is unusual you see normally normally Alice's past light cone must intersect Bob's future light cone that's when there's no gravity when there's no curvature at all that's the way it is

(1:59:10) but when you have warp drive in an extreme case when it goes globally faster than light even though locally it's it's not it's not faster than light inside the light cone but so when Allan now Al's red future cone intersects Bob's Red future cone and that's the situation so you see there is no Event Horizon the way some of the uh uh papers say there is there in other words Alice is not blind at all she can see what's she can see Bob in front of her so there we are so Alice controls the orientation of her UFOs locally

(1:59:49) cone relative to the cosmological Hubble flow with with small amounts of energy using the effect I first revealed at the DARPA NASA 100e Starship Orlando October 2011 meeting so here I have a picture of what I was talking about before hopefully a little bit clearer and you can see that Alice departs the Earth and say goes to Mars very quickly and one can see in the middle

of the flight there that Alice at uh position a CES uh uh C at position C ahead of her because the light Ray from C reaches Alice at a that is because A

(2:00:37) again Alice's future light cone intersects uh bobs at C his his future L cone so when the two future L cones intersect then uh there is no more Event Horizon in the sense that alubari and others have said there is I think I think they're just mistaken they just made a mistake about that I could be wrong we'll find out time will tell and here we have what I've been getting to here we have time travel back from the future and we don't have to worry about Stephen Hawkings chronology protection

(2:01:16) conjecture because this is not really a closed Tim like curve it it it's it's so a close timelight curve is like a short circuit but this here you see it's an open circuit we haven't shorted out so there's no catastrophe at all and uh I think this is not just a theory this is an explanation of observations the all weird observations of the flying sources from time in Memorial for thousands of years can easily be understood on the basis of this this picture this is I think a real conceptual break breakthrough which none

(2:01:53) of my colleagues well maybe a few of them now maybe Jose Rodell understands it maybe a few but U uh none of none of the the big the Top Guns I think understand what I'm suggesting here maybe I'm wrong we shall see okay there we go so real quick I I have to use the restroom but can you explain to the audience while I go what time dilation is and what your thoughts are on that and I'll be yeah yeah no no I'm not gonna you know what element this is like physics element this High School physics well I the reason why I asked is

(2:02:29) because I I want to know if there's an impact of time dilation on the video that you just saw if that can help explain why there's no Paradox or if you think that we don't need that because time might be deterministic in the sense that if we went back in past we always went back you what your question makes absolutely no I it's like I'm listening to a schizophrenic talk word show it makes no sense to me I don't it makes not this the whole point about warp drive if if you understood out you very there's no time

(2:02:59) dilation at all in the warp drive but you can make it so there's time duration you can make the time but in the in the uh what's called geodesic warp drive the internal clock of the crew inside the ship remain synchronized with the clocks outside the ship okay so how does that how do you get away without a paradox then I guess is the question well why is there a paradox well if the time if the clocks stay in sync we don't have a time dilation effect as I approach the speed of light then isn't there going to be a situation

(2:03:37) where I can go to the PA because you don't understand because you don't understand you understood nothing what I said because you're thinking like elen musk you think that there's a ship is going through space it's not the ship is not moving through space it's not special relativity it's General and the problem is that most of you humans are just not you're just too stupid to get it I think I'm sorry you I'm half alien n yeah that's okay lay it on me tell us dumb humans how are yeah yeah

(2:04:11) I I my mind was I mean by like by the way uh CIA John Ramirez and Gary Nolan and Scott Tyler all of us were most of us are hybrids you know Gary Dolan said he's discovered that there's a an extra brain structure in all the experiences all the contact te you know about that right you know about that uh no tell us about that while I go to the bathroom I'll be right back all right well you should get going on what but okay take a p to take a break that

(2:05:29) come on okay are we uh what do we got going on here chat did we we took a we took a coffee break yeah just a minute I don't know can you hear me yeah I can hear you are you able to oh you can hear me really oh oh yeah you not mute yourself oh we're going to listen yeah the Bluetooth the BL the Bluetooth reaches over to the toilet just a minute I'm walking back make sure my pants are make sure I look decent here just a minute see if the chat could hear you that's all right didn't they here did they hear that I'm not sure I can't

(2:06:15) tell from the chat it sounds like maybe they didn't because no one said anything um wait just a minute I got to put this on prop little intermission there uh that was good a little a little no we had and we had some emissions too how about miss all right so where where were we at now how about we uh stop sharing for just a second we can just have a conversation and then if we need to go back to the Whiteboard we can pull back up again okay okay okay so how do I do that down again uh should be at the top

(2:06:43) to sh yeah there we go okay just stop sharing all right okay because I want to get some I want to get your opinion on a few more people so I'm going to thr some names out there oh we got double Jack arear fighting let me remove this person got I think you gave away the uh gave away the zoom to a few too many people um okay so what are your thoughts on Thomas Bearden and scaler physics in general do you think that that's a way to achieve gravity manipulation uh with zero electr it's total crap why raes my blood pressure because

(2:07:18) he's an idiot he doesn't know what the he's talking about he was a spook he's a the crackpot okay nothing to it okay how about uh Thomas touts Brown what do you think about him do you ever get to meet him no more more okay what what about uh Salvador pz who has a Super Force Theory it seems very similar to yours oh crap another crackpot incompetent okay uh and what about uh actually that's all I have for names how about the idea of super conductivity do you think lk99 you follow that at all

(2:07:54) this last summer or I think there was a American physical Society thing what are your thoughts on that why should I don't have any thoughts on it you think it's real or do you think that people have tried to **debunk** it and say it's not really super conductive metam I why you ask me such a stupid question it's a stupid question to ask me why I I'm not working in it I don't know and I'd love it to be true yeah be greater is true and that's my next question because so I guess the

(2:08:21) better question smarter question is I've seen you say that you think that metam materials can achieve super conductivity through potentially precise crystal lattice structures uh what why is that important for anti-gravity or whatever you want to call anti-gravity sorry that's

a better that's a better question it's room temperature high temperature yep okay now I have to go back oh we gotta go back to the Whiteboard okay let's get it back up yeah yeah yeah yeah and while you're doing that do you think

(2:08:53) that AI can help us find those types of metamaterials of course yes absolutely do you think we'll see gravity control in next 20 years 25 years you think we already have it now you're asking kind of a dumb question okay we're seeing it all the time that's what the UFOs are okay but those are us from the future right some of them we don't know some of them are yeah not all of them let's see what happened there you see yeah okay are we seeing my stuff yeah yeah we're seeing you okay so all right

(2:09:44) so wait all right so all right so what are you asking now ask the question again um yeah so I think we were talking about superconductivity and why it's important room temperature superconductivity why is it important for Gravity manipulation okay first of all superconductors for the chat those are uh semiconductors with zero electrical resistance they can produce the Meissner effect and flux pinning if they yeah yeah if they don't even know what a superconductor is they shouldn't even be watching this just in case yeah yeah but okay

(2:10:28) they are thermal thermodynamic equilibrium equilibrium what I call closed systems in other words this is environment this is a superconductor this is your insulating wall in other words you cool it down it's that's me you know temperatures temperature yeah in order to get the Cooper pairs to form yeah you very low temperature right there you

(2:11:41) go mirror like a mirror M mirror a mirror you have you have a pump you have photons pump photons come in you have atoms like two level atoms the pump photons come in and they excite the atoms into excited states and then and then it then the you know there's a decay a decay the excited state and outcomes coherent coherent matter laser photons your laser beam right an open system not equilibrium not equilibrium now

(2:12:54) back to superconductor superconductor has a giant giant wave function wave function coherent inside yeah the Cooper pairs Cooper own What's called the Bose-Einstein condensate they collect same here there's like a giant wave function there oons yeah so in a certain sense a laser is is actually equal well it's neutral so be a superfluid is a nonequilibrium equilibrium uh superfluid like like like helium

(2:13:58) superfluid yeah condensing all the the laser the photons onto one another right yeah yeah wave like that done equilibrium okay now General metamaterial you have the you know you have the The Meta artificial atoms artificial artificial meta atoms metamaterials so we create specific structure here then yeah let's think of what some go Quantum dots look at look up Quantum dots it's a good example for example Quantum dots okay okay but they have you have you have pump pump photons coming

(2:15:06) in M laser and what happens is okay here's a photon phonon and here is a meta atom and there's actually a bunch of and there a bunch of meta and The Meta atoms are are

interacting with each other okay The Meta atoms any any many particle system any many particle system forms emergent emergent uh what I call got quasi particles the particles and also Collective modes Collective modes alsoo you look in the look up normal modes normal modes of

(2:16:13) oscillation modes of illation okay so now so the these little

(2:17:28) Wiggles those are let's call them the Quasi particles the Quasi particles okay now like bons they they're hybrids hybrid some photons photons with with the meta we there like 're things like polaritons like polaritons polarons like they're like phons phons plus electric dipoles electric dipoles The Meta atom The Meta atom is electric

(2:18:32) dipole by the way we are are microtubules in know in our body micro tubules we are metam material we are meta material metam material in fact all living matter is metam material matal in fact we're artificial artificial artificial right we're we're organ yeah we're or we we are um organic organic um organic uh molecular right and um you can think of it think the

(2:19:40) microtubules are are are like rolled rolled metac circuses if you go to hammer up you go to steid hammer up yeah we might have to just for T brevity we might have to skip the Whiteboard here because I think that you could just we can just say some of this here in general we recording no no really no I can't I don't want to skip it it organizes my mind organizes my mind visual I think visually I don't think in audio oh okay and you know people that have weak minds they they you know this is not for everybody this is only the best and the

(2:20:29) brightest the best the brightest with strong Minds we're like the Marines you know what I mean oh yeah we don't want no no more weak pukers no more weak pukers no no no snowflakes flakes this is not a space not a safe space definitely not this is definitely not a safe space not a sa I might getting struck down for this we'll see yeah yeah come on okay so back to Super conductivity though um we were trying to get to what the nature of it related gravity is so let's let's focus on that I'm getting there but you can't get

(2:21:19) there too fast or you don't have you have you get there too fast you're like P you have P you got towns and brown I'd love to get you in room with with Salvador P that would be a great conversation I feel like between you guys no it wouldn't I wouldn't waste my time because you know what he's actually a very nice man I've see him he's a nice Italian man yeah he's really nice nice guy and I don't want to destroy him personally because I I just destroy him you think so I think it' be

(2:21:46) good absolutely no absolutely no I'm a PhD in theorical physics trained by Hans spa and he has some kind of you lowlevel degree I think he's got a PhD as well though actually from where I have to look it up and see look up you keep going you keep going though yeah no yeah but what are his back I'm curious now what is his what is his uh educational background okay so we're gonna so yeah so he has his PhD in mechanical and aerospace engineering in 1999 under the subject of bubble generation or reduced Gra conditions for

(2:22:21) both co-flow and cross flow configurations uh it was from uh Case Western Reserve okay but not a bad but you know what none of what he learned is relevant to the physics not he's not a theoretical physicist that gravity he was doing was observational stuff on Newtonian gravity had nothing to do with general relativity he doesn't understand it his equations are pretty similar to yours I thought but go ahead no they're not because you're an smuck doesn't know what the saying that's no idea about like mine oh okay

(2:22:56) there's no comparison because you don't know anything yeah you're totally ignorant of how Academia Works different special what physics is different specializations he's an engineer he did not take the kinds of courses I took and he doesn't know what I know and I don't know what he knows by the way this science is Big it's very spe he's specialized I'm sure he knows you know his narrow field of mechanical engineering in certain pie he knows which I would not pretend to know well so he to know what I know he's

(2:23:28) not qualified okay wait it's like it's like with doctors there's a guy say who fixes broken bones and he's and it's a brain surgeon it's a guy who fixes your broken bone you don't want him to operate on your brain they're two separate things they're both doctors and in their respective fields in their respect same thing here he's not qualified in this field what he says has no weight in fact it's wrong period respectfully I think that you guys are just and it was and it was

(2:24:04) a scandal that the Navy is incompetent the people around him in the Navy they should be fired you think so SC don't you think like my opinion is that he's actually like seeing some UFOs personally otherwise how would he come up with oh well that's different I'm not talking about I'm not talking about that I'm talking at the patents they wasted money on patents that any good physicist right away everybody knows it what considering I'm not the only one it's a consensus of a competent

(2:24:32) people okay well I guess we'll see he's a nice he's a nice man I don't want to be you know nice man personally I have nothing against him personally so you think those patents though are uh what do they call limited hangout is that what they call it where it's like you think it's disinformation or what no just that that the people are stupid people in The Paton office are stupid the people in the Navy are stupid high is stupid and it's just the triumph is stupid we're living in an idiocracy

(2:25:00) we're living in a very stupid Society right now and it's because because everything's been dumbed down got bad education for three four generations and and that's why the United States is going down we're going under we're going under because because compared to other countries we have a lot of stupid people running things and then we get into that so let's get back to yeah let's go back to the superc conductivity here so I think you kind of explained how it worked a little bit you

(2:25:28) yeah yeah so the meta material let me let's go back we found off a lot of people that's okay so so here's the UFO this is a a meta material meta material you think that's bismuth

magnesium zinc potentially as The Meta material they talk about I don't know if it's I don't I don't know about this see I don't know I don't don't ask me it's exct stupid okay we don't know what you know what there's a whole other thing we have to get retriev material from the

(2:26:03) UFOs well that's a whole other story yeah that's fine don't worry about it I don't I I'm not I'm not ask Gary Nolan or ask Larry lmy I'm not you know doing the research on the bism I I have my doubts about it but yeah I don't know I don't have to know that that's not the way that's not the level I operate on that's not what physics is what theoretical like me do okay sure now now the point is the point is I say okay so the point is there's some energy source in here there's an energy source

(2:26:35) like a energy source yo it's a pump a pump okay it's an energy source and that energy source is activating you know so you it's forming a uh what's called a Fric a Fric room temperature temperature um let's call it like a you know uh let's call let's call it a macro quantum coherent coherent uh uh they call it's technically called an order parameter order parameter you could think of it it's a giant it's like a giant wave function

(2:27:39) like a giant s like a matter wave coherent matter wave maybe yeah yeah yeah yeah of of these of these quading particles yeah locky Martin has actually patent for a coherent matter wave beam pretty cool well I don't know don't don't bring in ex quasi particles it may be simp related it may not be I have to see it all right so now once you have that once you have let's say this is sigh this giant wave function just like a superconductor but it's a room temperature I'm going say it's the

(2:28:18) square root of  $n$  e to the I Theta this is what called This is a complex function complex number this is what's called The Polar po polar representation sentation I can't of a complex of a complex number like here's a complex plane and this is this would be  $n$  and this is like Theta this is the the this is what called the real part of  $z$  Oh real part of  $s$  hang on side this is a real sign there imaginary sign and that's what this is now this is a giant thing this  $n$  is very big it could be like like  $10$  to the  $23$

(2:29:21) something like that the this is like the number of this is the number of metamaterial Quasi particles in the same single particle Quantum State like MOS Einstein cond say okay now you look that material that that those that material has a resonance has a resonance okay now we get to the nitty gritty here that resonance is that some called um I'll call it esar this is called the um electrical permittivity it's like like dielectric so like roughly speaking like it's similar to dielectric constant but it's a pure

(2:30:12) number it's what's called a relative constant okay  $\epsilon_r$  is equal to  $\epsilon$  over  $\epsilon_0$  this is the vacuum vacuum pertivity where  $c$   $c$   $s$  is one over  $\epsilon_0$   $0$  is  $3 * 10^8$  m per second in vacuum in an inertial let yeah in vacuum in vacuum okay but the speed of light the speed of light in in  $B$  is different in matter call  $C$  Prime squ is  $c^2$  time Epsilon R mu mu okay it's different and and if you want uh this the the square root of Epsilon R I'm only doing up  $\epsilon_r$  here the square root of that that's called the that's

(2:31:14) sort of the index of refraction index of refraction this is all standard physics okay go back so now standard so far so  $\epsilon$  is  $1 - \frac{\Omega_p^2}{\Omega^2 - \Omega_0^2 - \frac{\gamma}{2}\Omega}$  this is a resonance formula this is called This is called  $\Omega_p$  is called the plasma frequency plasma frequency and  $\Omega_0$  is the resonance frequency resonance frequency of the of like the meta atoms from The Meta atoms say roughly I'm I'm over simpling and  $\Omega$  is the pump external pump

(2:32:19) frequency this looks at this if you plot this this looks like it's like a resonance this is frequency and this is  $\gamma$  and here this  $\Omega_0$  that's the res and this is  $\gamma$  the width the WIDTH the width okay the width of the resonance you know spectroscopy you know right okay so that's the actual math okay now what you do let's get look at  $\epsilon$  at the resonance at the resonance frequency and if you do that that's equal to  $1 - \frac{\Omega_p^2}{\Omega_0^2 - \frac{\gamma}{2}\Omega_0}$  the first you just have  $\frac{1}{1 - \frac{\gamma}{2}\Omega_0}$

(2:33:23)  $Z$  okay and I can write that I could write that  $\frac{1}{1 - \frac{\gamma}{2}\Omega_0}$  is equal to  $-i$  IM imaginary unit and  $\mu$  you call it plus I it's this is It's a complex number okay yeah but but here's the trick  $\gamma$  remember  $\gamma$  is the width width of resonance half width that's  $\gamma$   $\gamma$  it turns out is one over to roughly uh square root of  $n$  yeah square root of that's  $\gamma$  now this comes from this is derived from heisen [Music] Eisenberg Heisenberg's certainty

(2:34:34) principal principal what's called number and  $\delta$  this is Phase this is the phase of the coherent wave you know where where where  $s$  is the square root of  $n$   $e^{i\theta}$  that's his  $\theta$  got a piece of Apple stuck in my thumb Newton's Revenge I started eating Newton's Apple okay now let's go so now  $\epsilon$  at resonance to  $1 - \frac{\Omega_p^2}{\Omega_0^2 - \frac{\gamma}{2}\Omega_0}$  the resonant frequency times now but that  $\gamma$  that  $\gamma$  turns out to be  $\propto \frac{1}{\sqrt{n}}$

(2:35:40)  $n$  see that square root of  $n$  because it was in the denominator this is algebra now you have square root of  $n$  so  $\epsilon$  is proportional to the square root of  $n$  but the square of  $n$  is going to get very big and and the condensate it could be it could be you know like 10 to the 30 or something it could be very big so so so Bas so what is  $\epsilon$  so the the the the width  $\gamma$  is like one over the square of  $n$  but the height is scaling as in that's the trick that is what  $\theta$  has discovered boys Russians know this the Russ you

(2:36:29) know Putin sent his guys over to interview me uh when Obama was President they they came over twice so the Russians know all this in fact in fact I after they invited me to Moscow last while I didn't go so you you early a question are the Russians ahead they probably are because they have smarter people than than we do all right so let's go on so is the trick here that the super conductivity  $\mu$  due to the amp this nature of the greater  $n$  increasing here is that this is the secret sauce  $\epsilon$  essentially for this is it yeah

(2:37:06) this is it this is it but but but most people be too stupid to even understand anything I'm saying so that's why you like I'm talking to a bunch of Apes at the model it all right this is the way it works understood all right so now Einstein's field equation in a simple I'm over simplifying Einstein's field equation 1915 is  $\frac{8\pi G}{c^4} T_{\mu\nu}$  new but that's the vacuum they

made a mistake what what all the all the kings meant understand it shouldn't be the vacuum should be what's

(2:37:50) inside the material there why should this is this is inside the material so why use the speed of light in vacuum where there's no material you see the whole thing is stupid yeah the speed of light's not constant as I were saying due to the primitivity of the element free space or the element itself yeah yes yes so and you know it's it's a little more complicated I'm oversimplifying it a lot I appreciate it there all kinds of there are all kinds of problems about what's called Co variance and the variance of a

(2:38:21) cut tensor but you know we could yeah yeah the same time it's nice to just you know simplify it for all right so now look yeah now look this number  $8\pi G$  over  $C$  to the four this for vacuum that's equal to  $2 \times 10^{-43}$  Newtons Newtons to the minus one reciprocal Newtons the new is a unit of force in MKS where this is the gravity this is gravity and that's measured in one over meter squared that's curvature meters squared one over area okay but now we stick in now but the  $S$  but okay let's go here one over  $C$  to the

(2:39:15) 4th goes as  $\epsilon \mu$  squared goes as the square I forgot I I I'm forgetting about the  $\mu$  because that's you know I'm trying to make it as simple as possible the  $\mu$  is the magnetic that's it with the magnetic permeability I'm only talking about that the the dielectrical part you know just keep it as you know just as simple as possible without it being simpler than is possible so now so what we have is that  $g$  you knew is  $2 \times 10^{-43}$  times this thing is uh is  $n$  and then what I have let's see I I had  $n$

(2:40:03)  $\Omega$  uh  $\Omega$  to the fourth  $\Omega^0$  squared and then I have a to to squared times  $T \mu$   $T \mu$  okay this is what's called This is a stress energy tense this is like from the pump the electromagnetic pump you could say okay this is the resonance now and and uh this and and could be like a and could be like say what 10 of the what do we want let's let's say and say like 10 of the uh some big number anything say be 10 to the 40 sure why can't be 10 40 why not why not and then we this could be big too now normally WP

(2:41:00) over  $W$  normally this is uh less than one what's called far Fields but what's called the near field which is all more interesting nearfield this could be pretty big also but we you know so so the point is this this is so this this strengthens so this is this is the this is the secret so we're able so what this means is we can make a desire we we have a desired  $G \mu$  we you know in order to say we want to cancel the Earth's gravity suppose we have a UFO it's hovering it's hovering right here you're standing

(2:41:52) under it this is Travis Taylor K there that skin walker Ranch and I forgot to show you could also make you can make it anti-gravity I because there's a fade that eye in there because of the ey that's in there oh because because because sigh goes as and  $e$  to the  $I$  Theta by playing with this parameter I can change the effective sign of the Gravity from attractive to repulsive okay it's it's like getting negative Mass without negative Mass see there's all kinds of stuff this thing is so beautiful leaves everybody in the dust

(2:42:41) so why do I get pissed off I don't want to hear about idiots PES you know Town they're monkey you understand they're monkeys playing a typewriter they're the Apes at the monolith in in Space Odyssey you know grunting around they don't know tell they don't know what to look for this is the real theoretical physics of Albert Einstein that's taught to me by people like Hans Vader Richard vinman you know the top guys not the mechanical engineers you know fixing the toilets at Case Western Reserve University you

(2:43:16) understand what I'm saying here this is simple now it turns out it turns out that any top theoretical physicist students at Cal Tech at MIT at least about years ago I don't know how it is now at Harvard you know before they before the woke took everything over they could have been you know if I they could be having a PhD oral exam and I could be the examining professor and I tell them give certain hints and I say tell me how to solve the problem and they should be able to solve this problem because it's very

(2:43:47) Elementary it's not hard it's easy it's an easy problem not a hard problem except because people are so stupid and don't know basic physics that they think it's a hard problem so anybody tells you that they don't that we don't understand the technology it's a million thousand years in the future that guy is an idiot or he's lying deliberately lying okay so that guy okay that's it they are fake they are false prophets they don't know what the they're talking about or

(2:44:15) if they do they're misleading you deliberately but I generally they're just stupid but SCH who don't know you know they don't know the from sh all about this say so there it is so now great so so where are we okay okay so let's just so the idea is you have a desired  $G$  youu and it's equal to  $2 \cdot 10^{43}$  times this this  $n$  times this other ship and team you knew so you keep this fixed this is something you you desire to cancel the Earth's gravity I can I can show you how to calculate it but

(2:44:54) that's already doing too much you use What's called the Divergence Theorem Divergence Theorem in a special case use Divergence Theorem and you can calculate the  $G$  field the  $G$  field and you make it anti-gravity you can cancel out the Earth's field you cancel out the Earth's field by by choosing  $n$  and  $\Theta$  there's there's actually a  $\Theta$  you know hidden in there you can by by making  $n$  big enough and choosing  $\Theta$  just right you can reverse the sign so it becomes anti-gravity okay for small this is the

(2:45:30) energy input for small as this as this coefficient gets big this is fixed this gets small you understand that's what the idea is you want to make this coupling big enough and this small enough so you could do it simply and the point is we know we've see these things flying around they have this technology to do it it you know this exists I agree this is operational okay this is but this is how it works this is how it works now the problem is back to Travis Taylor and the guys at Skinwalker they got sick because when it's

(2:46:08) anti-gravity when it's hovering in other words when there there's the uh okay so there is the Earth's gravity this is the earth gravity right and then there's the ship makes anti-gravity do

this the UFO the anti-gravity minus G to cancel it we want to cancel it right so are you with me yep do you see what I just did yeah it's not raking the G they're raking the G to cancel the the blue G cancels the red G but this makes this makes a blue shift that's a blue shift a blue shift what's that noise that's ionizing

(2:46:56) radiation ionizing radiation you got radiation sickness it's like it's like being in a nuclear explosion yeah you don't want to be underneath these things huh it's GNA make you is that yours yeah it's not me who is that um so we only have a few more minutes I appreciate you're going through this do you want to take a quick look at some videos that I've got that may show this effect I want to get your opinion if that's okay all right okay okay go and then I got to drop because I

(2:47:27) do have another engagement but I've appreciated this time this has been awesome so I'm GNA go and share my my screen here real quick and and let's take a look at these videos here okay wait a minute do you I don't see let me see what's can you see it wait a minute let me go down my other laptop hang on uh well go ahead show well can I make it bigger how do I make it bigger oh yeah you can see it can you make it bigger let me see oh did I just crash it okay there we go how's that can you see

(2:48:01) it I lost you no you're muted I can't hear you somehow you muted yourself I think yeah we can't hear Jack looks like the chat says as well says your timer bleeping can't hear you I'm going to play the video Even though I can't hear you though yeah I'm just going to play it okay so I just wanted to show you this uh even if you can't hear me or you can probably hear me I just can't hear you so the reason why I'll show you this is the the videos that I've been uh talking

(2:48:34) about I'm not going to go into all of them but to what you just said with anti-gravitational aspects this is why I want to talk to you because when we're looking at these orbs come in I think that we're looking at that type of anti-gravitational effect I actually think there's two anti-gravitational effects Happening Here the one is that they're displaced from SpaceTime um and then you see them do this pattern where it seems like this pattern has some purpose which I would wonder if this is er equals e at work

(2:49:00) maybe at Einstein Rosen bridge I can't hear you at all by the way Jack uh Dr SFA I can't hear you but no I didn't I didn't mute him uh and and then what we see here in in a in an Essence here in a second is potential amplification of the energy here which makes me wonder about the equations that you just posted where where the plane disappears yeah see if you can fix the sound on your side while you're doing that I'm going to play the other video as well yeah chat says we can't hear you I

(2:49:38) can't hear you either unfortunately don't have you muted you're definitely not muted I'll just commentate while you are figuring that out on on this one we can see the heat signatures of the orbs and you can tell that they are displacing gravity themselves but they're also pulling themselves forward here at the same time still can't hear you no oh wait there you go say something again jack say something that I heard some feedback there so it sounded like

you were you're getting sound through one of your

(2:50:26) devices I don't know which one it is can you say something still can't hear you no microphone's still dead no can't hear you I can see your lips moving but I can't hear you still can't hear you you can't you can't hear me now I I can hear now yeah you're you're in I can hear you now oh okay I think what happened I don't know what happened some with the Earp pods you can hear me now right yeah yeah yeah you're good you're good all right so what do you think

(2:50:57) we're are we looking at video games effects here what do you think I don't think anything of them you know why why because anything could be CGI I'm not an expert in in eval I'm not a CIA analyst in in evaluating there were people who can evaluate that that's not me it's not my job it's a waste of my time I don't give a because I don't know I can be fooled as easy as an exavian I know the limits of my expertise so this looks like bad CGI to me anything be fake you know the Deep

(2:51:30) fakes now you can't believe anything you see it's true you think know they this has to be done by you know by there's a forensic this guy one three I know he has a guy in Israel if they're still alive they can do it they know they they do a computer analysis and and check the make sure it's not artificial you know so so this is worthless there's no evidence nothing it's worthless because we don't know we don't know we don't know how this was done who made this so there's no way to tell just from a

(2:52:02) physics standpoint if this is what it would look like there's nothing here don't you understand it's nothing it has no value whatsoever unless it's analyzed by the proper people with the proper equipment to check pixel by pixel whether it's fake or not fake they can tell I can't tell that's not my field of expertise and you should be intelligent enough to know the difference what I'm able to talk about I can't talk about that one way or the other oh I just wanted to see what your opinion was that's fine like

(2:52:31) anybody else the Deep fakes are very good that's true could be artificial intelligence we don't know if it's real where' you get it from who gave it to you oh we found it on the internet from 2014 well then that's you can't believe any anyone who believes what they're seeing on the internet without checking as an idiot I I Che I think I found the guy who those videos that's why that's why we have a war in Ukraine because people are stupid like you and everybody most Americans idiots naive

(2:52:58) gullible Schucks no I'm pretty sure those videos are real but you're entitled to your opinion for sure yeah there's no my opinion is worthless your opinion is worthless because you don't know what the you're seeing you don't know if it's real or not I'm pretty sure it's real there's a way of finding out if it's real but you haven't done your job you haven't done any due diligence well I did find a Le I found the leak of the videos so you can give it I can put you in touch oh wait a

(2:53:24) minute you know Juan Faria yeah yeah we'll get in touch with him okay so you tell you get you give the the file to Juan he gives it to his friends in Israel and they'll tell you if it's real or not yeah he has guys who can do that that's expertise that's you know that's like the highest like the national reconnaissance office National Security Agency they do that the nro they do that oh I foiled the nro I sent them to the A as well so I hope they come back to me no no not the national resear National

(2:53:54) reconnaissance office n not the AR they're a bunch of idiots yeah they're just they're dumber than you are that's fair the point is this the point is this all the stuff you see on the internet is worthless it's worthless there no scientific value whatsoever no evident and by the way that's probably why a lot of at the Pentagon there they said know there's no evidence if that's the kind of evidence you give them of course there's no unless they two military videos though let's put if it's real they'll classify

(2:54:29) it I have seen oh wait now I have seen the real thing oh you've seen the real thing you haven't seen it I've seen it oh okay okay I've seen it so that's why I'm in because I know the stuff is real but not the you're showing me oh I saw you know stuff that's vetted by the military you know that's just from the horse's mouth and you know did it look like a Tic Tac or did it look like an orb I'm not can't say I you that like not trying to get you in trouble here

(2:55:00) but yeah I'm curious I no I I don't want to get my source in trouble ah okay gotcha okay but I thought you heard it first I thought You' seen it firsthand though what I thought You' seen it firsthand though you just said You' seen it I've seen it I've seen it I've seen firsthand evidence from my active military s who's in charge of the project yeah okay okay all right see but I know I know what I'm seeing is not fake because I know who this guy is I work with I know who the guy is he's The

(2:55:30) Real McCoy and the reason they're showing it to me is because they know I can I I they were not able to explain it yeah that's why they came to me they're not stupid makes sense okay so and also they're not American oh say they're not I don't want you get your Source in trouble here but yeah I appreciate it sir americ and that's why that's why that's why our President Biden listening to and blinkin and stinking and Newland all that that's why they've loost they uh yo I I was at Bohemian

(2:56:10) Grove this place called Bohemian Grove a couple years ago heard the rumors yeah and I heard Robert Gates was talking somebody asked him a question he was giving a talk up at the Lake there you know where they have the ceremony you know with the owl and uh and somebody asked them this is back preco you know uh this is when Biden was uh when Trump trump was the president then and and Biden there was no longer vice president and somebody asked Gates somebody from the audience asked Gates what they thought of Joe Biden and Gates just

(2:56:41) looked and said every foreign policy decision that Joe Biden was involved with ended in disaster yeah this about like 2018 2018 right at the Bohemian Grove and so now we see it the

Afghan the pull out from Kabul was totally botched by the idiots the incompetence and now Kiev what let me just say if you look at do your research um Putin is now preparing in offensive that's why they're bombing pulling out the power stations with the missiles Putin is going to destroy make an unconditional surrender of zinski in Kiev before the

(2:57:30) election probably before by the only reason we that which we're still trying to support uh Ukraine is so Biden is afraid he's going to lose the election in other words there's going to be a humiliating defeat before November 2024 in Ukraine so they've already lost but it's going to be obvious every lost and and and that way Putin is interfering in the election but we interfered in his stuff too so tip forat so real quick thank you I appreciate your time I have to drop because I have space I've got to join here but I want

(2:58:03) to give you a moment to plug anything you want to plug but before that I want to go ahead and just make you an honorary member of MH 370x we ADV we look into advaned science no don't that I made you listen let me just say don't don't sh just listen my final I'm just messing what you're say may have happened I don't know if it happened or not happened I know I know okay it may have happened but you don't know you have no information because that evidence you presented is worthless

(2:58:32) until you get it okay you send the files to Juan and if Juan is able to get his friends to work on it and if they say it's legitimate then you have something right now you got nothing oh no but but the organization MH 370x isn't necessarily just based on the videos it's just about Advanced science which I appreciate you showed us here today which was amazing so thank you for going through those equations and everything with me today I thought it was awesome I appreciated the political commentary as

(2:58:56) well I thought it was very interesting I think we don't get a lot of that okay but understand that understand that that in order to be uh uh in order not to be just a propaganda just to be some flake that's pushing all kinds of doesn't know P this you know like all the other flakes like Jeremy Corbell of George nap all these all these idiots is just spreading some of the stuff you know some of it is true some of it is is true but they're too stupid to know what's true or not or what you know methods are that if you want to

(2:59:23) present evidence make sure you got real evidence and not that you got off the internet absolutely so that's it thank you sir do you want to plug anything real quick as well I know You' what do you want to plug any uh you know anything you're working with or working on I'll plug uh um you know get the great Race by David Gladstone on Amazon five bucks and you'll get some some decent information awesome very much Jack have a great day sir I appreciate you Dr surfa and everybody else who's

(2:59:52) been following awesome thank you guys very much okay so how many did so how many people

## Superweapons - Thomas Bearden Part 2 - YouTube

Transcript:

(00:29) e e e e

(02:28) you probably heard of the observer effect the fact that our eyes don't necessarily see what is actually in front of us and that light when it is observed does something very different in every aspect of Our Lives the most we could possibly ask for is **truth** and somebody who is pursuing **truth** is my friend Ashton Forbes now he may have been ridiculed he may still be the object of some people's jokes but he is trying everything possible to solve what is clearly more than just your average

(03:33) mystery MH370 did not crash it did not have a suicidal pilot it did have hundreds of souls on board and it did have something to do with the US government we deserve answers we deserve **truth** and it's about time that somebody managed to get disclosure in every aspect of your life ask nothing more than for **truth** and honesty and then perhaps we can go to bed at night with a calm Soul knowing the deception the deflection and the

(04:39) destruction of our government is something we no longer have to worry about wouldn't that be nice thank you for watching it's m Benny saying by look after your loved ones and to the **truth** hey everybody how are we doing tonight yeah I was just watching that again that is a very emotional uh video tribute appreciate that a lot from money Penny that was uh wow that the nicest thing anybody's done for me probably that was pretty good so hey everybody hope everyone's doing great tonight on this Friday night uh let's see who we

(05:29) got in the chat here tonight Amanda I see you thank you for being here as always salty decimator armstr Johnny party weona Chris D Kathy D Lis Louise Joe His Highness armst thank you very much for that donation much much appreciated Aaron how's it going uh I miss anybody up here Jack trading I see you as well thanks for being here everybody appreciate you creating awareness awesome weona see you yeah if you do me a favor and hit the like button on the Twitter for uh to get more attention here to the science now right before we

(06:11) begin I do want to go over Oops I did not mean to press that button I want to go over this uh slide nine thing that uh I pulled up here because I think that there's another connection to ufology that we potentially might have just missed and I think we want to take a look at it oh and by the way what we're going to do tonight we're going to go over the next video in the Thomas beard and Saga um another thing about scalar physics and weapons that are out there I haven't watched this one yet so this

(06:43) should be pretty interesting I don't know why I can't see Heather birdie in the chat it's

very weird very weird G have to try to figure that out um anybody else I can't see in the chat I'm sorry I didn't know that's a that's apparently thing so without further Ado let's get straight to this um this is slide nine I think you guys can see it just fine now I had never paid enough attention to this slide this is some UFO thing that dropped a few years ago and even a few years ago cheers by the

(07:19) way happy Friday happy Good Friday even a few years ago I would have looked at this slide and I would have thought this is disinformation but this slide is coming to the focus again because Havana syndrome was talked about on 60 Minutes which of course they did a terrible job in terms of talking about it but that's what it is uh it's 60 Minutes what do you expect it's like CNN brain on steroids um but when you look at this again I'm just going to read this off DOD threat scenario atip subfocus

(07:53) areas the science exists for an enemy of the United States to manipulate both physical and cognitive environments in order to penetrate us facilities influence decision makers and compromise National Security they can use psychotronic weapons that would be like our Havana syndrome cognitive human interface I don't even know what that means we might ask Jack sarfati about that penetration of Solid Surfaces instantaneous sensor disassembly now the penetration of Solid Surfaces I mean what we talking about tele quotation there um alteration and

(08:32) manipulation of biological organisms right there I think super soldiers like what Vladimir Putin said anomalies in the SpaceTime construct to me the anomalies in the space-time construct sticks out pretty well here because now we're talking about gravity manipulation this slide isn't a joke unique cognitive human interface experiences this makes me want about AI in general now the dod advantages let's read those DOD has been involved in similar experiments in the past DOD has relationships with renowned subject

(09:11) matter experts now when they say that that makes me think it's not just Americans that they have relationships with you know the best scientists aren't going to necessarily all be American in fact given our education system probably aren't DOD controls several facilities where activities have been detected what going back to what Thomas Bearden said this makes me wonder about scalar physics like everything on this list is consistent with scalar physics and what he was mentioning in 1985 but it's the last part that nobody

(09:46) really looked at that we need to take a hard look at what was once considered phenomena is now quantum physics now this is the part where this is the Bingo what they're saying here is there's a unification theory of quantum Quantum field Theory and general relativity and they've got it figured out the world hasn't figured out our enemies have it figured out I don't know how far long ago this slide goes but this is an important slide I think that this is the slide the UFO Community jumped past a little too

(10:21) quickly because they didn't understand the implications of this this is what Lando can't talk about the science and the technology is the part they can't talk about because it's a matter

matter of National Security they can talk about aliens and flying saucers no one cares about that it's not a that's not an issue of National Security us having the technology whether or not it was reverse engineered or we figured out ourselves I still don't know I don't know with any certainty but we have the

(10:52) technology that's what this slide is saying the last part at the bottom is is the key spot anyone who says oh this slide looks too janky this can't be a DOD whatever I would have thought that too but turns out their slides like they're like high schoolers when it comes to like making presentations it's kind of sad really and you'll see that's pretty consistent when it comes to like these weird DOD security briefings and what have you because they want to they have to keep the niche small right you

(11:19) can't have you can't pay like uh Laura over here to you know make a good presentation cuz she's going to be reading like all the secrets that are out there you and then she go what goes home like a secretary can't do that so the Nerds are the ones who make the slides so yeah this this right here is to me pretty much proof that we've got quantum mechanics and that everything we've been talking about here is accurate and everything we're going to be looking at here too I believe absolutely is real

(11:47) technology what Thomas bearden's about to talk to us about and I haven't even crazy part is like I haven't even watched this video yet and I'm already pretty sure it's going to be accurate just based on what we've been learning what we saw yesterday which was mind-blowing I still haven't clipped it yet some of those clips yesterday wow um so anyway let's get to it guys it's going to be fun and thanks everybody else who has jumped in uh happy Friday guys if you're hanging out

(12:14) with us tonight with MH 370x cheers I am going to be talking to jackar F in a couple days I do want to make sure that he's okay with it being Live recorded that's why I haven't announced the time yet as long as he's uh fine with it being live which I I think he will he's he's a smooth talker I think we're going to have a fun conversation I do kind of want to press Jack a little bit I want it to be kind of a fun interview but informative and I want it to feel really natural I don't want to be sucking them

(12:44) off too hard pretty much give him a give him an HJ you know it's got to be a little bit uh I'm not gonna I'm not wouldn't go like full Julian Dory or Danny Jones on him but you know I do want to make him ask some more interesting questions that people wouldn't have thought of where's my thing okay okay I'm I'm a little worried because I had to steal this off of um uh Dutch uh duchies stream dutchin stream so go ahead and follow that person uh just in case they want to copyright me or whatever then

(13:22) like I'll at least have promoted their stream find it what was it crap oh Dutch's NY dutches NC I don't know I don't know how to spell this or Dutch siny no idea I'm going to put it in the chat then there you guys go you've got it so follow that person they're really good uh yes Beware of the diddler P Diddy Beware of the diddler the the P didy stuff I check the stuff out if

you want to watch if you want to know more about P Diddy um watch the stream that I did with investigate Earth and Dave from the investigate from

(14:14) uh Alien addict the PDD stuff is dark man he bought a homeless white girl he bought a homeless white girl I guess her skin color doesn't matter let's just say he bought a homeless teenager okay Dutch sense okay oh it's dutch sense got it thanks guys oh the sound was too loud okay whatever here we go sound where's sound oh it's not there yet secret super weapons I'm going to move the chat over we're going to full screen this is it going secret super weapons that drive disarmament NE negotiations this is

(14:57) going to be crazy so we basically tell him we got some orbs so we're going to be like yo **Russia** oh how about we get rid of our nukes CU even if you shot the nukes at us we would just orbit back onto you or we would just completely annihilate with our orbs I honestly wonder how many crazy orbs we got or maybe we have a gun that can just shoot orbs out Dutch sense okay okay so this is from the World Trade Center of March 27th through 31st 1988 copyright Thomas Bearden okay well we might get copyright strike chat it'll

(15:40) have been worth it if uh Thomas bearson's family is watching this and I just want you to know I believe in him uh we're doing this stream because I've independently figured out that this technology is potentially real and I want to hear from the experts who know about it and I think he was one of them I wish I would been able to meet him in real life before he passed away it's disappointing hello I'm Tom biron Association of distinguished American scientists United States of America I'd

(16:13) like to talk to you about some unknown Soviet super weapons weapons the Soviets have secretly developed deployed and tested around the world weapons that have escaped the recognition of Western scientists intelligence agencies and new news media these unusual Soviet directed energy weapons are so powerful that as Nikita kof stated in 1960 they could wipe out all life on Earth if unrestrictedly used the weapons I am referring to use electr gravitation and a here toor unknown type of electromagnetic wave the time reversed

(16:54) or phase conjugate wave these strange weapons also are based on elect gravitation they change electromagnetic force and energy into gravitational force and energy and vice versa electr gravitation was contained in James clerk Maxwell's original theory of electromagnetism but it was struck out of the theory by Oliver heavyside after Maxwell's death in this short briefing I want to tell you about electr gravitation which I call scalar electromagnetics the Union calls it energetics I'd like to show well I guess it helps if I add

(17:36) pauses well holy crap chat what did he just say weapons that could Wipe Out the entire planet and just listed it down I'll come back to this 238 does where's the graph stated in 1960 they could wipe out all life on Earth if unrestrictedly used the weapons I am referring to use electr gravitation unified field Theory electr gravitation time reversal and macroscopic phase conjugation there it is macroscopic Phase conjugation this is the first video I've ever seen mention it ever time reversal what the hell

(18:31) un I mean there it all is chat holy crap yeah did we just tell Putin that he's our [ ] is Russia just our [ ] I I feel like Russia and China just might be our [ ] honestly this was 1988 so we basically just bitched on them in the Cold War and now we've just been bullying Russia just bullying them and then they just are pushing back because they finally get pushed too far but they can't attack us directly they can only attack the proxies like Ukraine and it becomes then a political situation okay well we'll go into more

(19:10) of that later wow and a here toor unknown type of electromagnetic wave the time reversed or phase conjugate wave I want to hear it again these strange weapons also are based on Electro gravitation they change electromagnetic force and energy into gravitational force and energy energy and vice versa electr gravitation was contained in James clerk Maxwell's original theory of electromagnetism but it was struck out of the theory by Oliver heavyside after Maxwell's death in this short briefing I want to tell you about electr

(19:48) gravitation which I call scalar electromagnetics the Soviet Union calls it energetics I'd like to show you what electrogravity is how it works and how it's been weaponized by the Soviet Union the frightful new Soviet weapons are far more powerful than nuclear arms I will explain how these hidden weapons have been a trojan horse secretly driving the disarmament negotiations between the US and the Soviet Union 1988 chat I'm trying to make my thing different here so I can my face isn't so big on this

(20:30) this uh I I'll have to figure out how to crop it later I'm just going to make it smaller so we can see the full screen okay um 1988 what did he just say weapons that are far more powerful than nuclear weapons this is exactly what I've been saying copy of phase conjugation paper that from Lost Alamos that shows Alice and Wonderland thermal mermaid send that to me or post it on the Discord or something I will also explain the Trap being set in the present nuclear disarmament proposals and agreements

(21:04) that have so electrified the world the nations of the world are tired of protracted Cold War and the unending series of small Wars and deaths every free person yearns for True disarmament and true true peace yet we simply must not be lured to our destruction by a cleverly concealed Trojan Horse if true peace is to be obtained in the negotiation card game we must Force out into the hard light of day the cards that are actually being held by the parties to the negotiations that is precisely what I propose to do in this

(21:45) presentation I urge you to listen to the material presented and then make up your own mind we are at a decisive Crossroad in human history if we carefully am I the rein nation of Thomas bearding guys this is weird man weird notice how he says so when people are lying they have tell you a story they want you to hear he says I'm going to give you the information and then you come make up your own mind that's somebody who's being honest that's somebody that just wants you to judge for yourself through the Looking

(22:28) Glass whoa whoa yeah cuz the phase conjugation goes back the same direction whoa I'm going to look into that later take the correct road there is still hope for the survival of the

peoples of the earth if we thoughtlessly take the wrong road then the past two great world wars were Child's Play compared to the destruction that will inevitably come let us start now with the lost unified field theory of GL of James Clerk Maxwell we will present just a little technical material then get into the main presentation please bear with

(23:10) me Maxwell's original theory was expressed in Quan like mathematics in the Quan Theory when Vector operations sum or multiply to a zero resultant a scalar component May remain indeed the scalar remainder is a function of the vector component of the zero resultant system for example suppose we have a circuit or device which creates a cross product of two vectors say for example the electric fields of two single frequency electromagnetic waves further suppose we feed in two interacting identical waves so that the cross

(23:49) product of their e Fields results in conventional electromagnetics using Vector analysis the output of course is a zero result e field that is the two e Fields interacting in that fashion will not translate or push charged matter such as electrons now suppose that the magnetic fields of the two waves also are identical and also interact to produce a cross product again a zero resultant magnetic field results and so this system of magnetic vectors will not swirl charged matter such as electrons classically we have been taught that

(24:32) when charged matter is not pushed or translated away or swirled there is no electromagnetic field acting on it wow okay guys for anyone that that went over your head I'm going to explain it to you think of our universe think of the Matrix itself so think that we have a 3D space that we are in right now okay now imagine that I shoot an electromagnetic wave at you at the camera I'm going to have a electric field wave and I'm going to have a perpendicular magnetic field to that wave and I'm going to be able to

(25:13) use the right hand rule to determine the vector which is going to be coming directly at you guys now imagine you have the exact opposite you have an electric electr electromagnetic wave coming at me so the electric field is is bouncing at me here and then you have the magnetic field per perfect 90° perpendicular to it and now these two waves interact they're going to have some type of interference pattern happen onto them where if we can zero them out now at the point where they meets potentially you're going to have a scalar potential

(25:46) or a longitudinal wave essentially what they're saying is if you break through at this point you create a zero sum game in the universe itself now it can cause things to stop and it doesn't mean there's nothing there we can still potentially have some type of effect think of like how the planet is still moving all the time but you've gone out and you zeroed out the electromagnetic potential in a very specific point now what's going to happen is it going to stay still and the rest of the universe is going to keep

(26:17) moving not sure let's find out that is not necessarily true at all in fact the charged matter may be subjected to a squeeze compression or a stretch rif faction electromagnetically without translating or swirling it in the case of our two identical vectors in the physical world the stress of one vector pushing on another produces a squeeze or stretch this squeeze without

translation or swirl is gravitational in nature because dynamically it increases and decreases the local energy of the vacuum by adding its own

(27:01) energy it simply represents an oscillation of the local virtual particle flux of vacuum in our example we used this squeeze wave is captured by the scalar component of the quaternium so Maxwell's original quaternium Theory contained the ability to convert electromagnetic forces to electromagnetic squeezes or to gravitation after Maxwell's death a single scientist Oliver Heaviside finished Vector analysis he then singlehandedly translated Maxwell's Theory into his new vectors Heaviside simply discarded the bothersome scalar

(27:42) component of the quaternium to ease his calculations in so doing he unknowingly discarded electr gravitation wow wow that's the exact same thing I've been saying about the B field so that's the answer of how happened so heavy side couldn't figure out how the scalar the scalar component worked couldn't measure it decided can't be real I'm going to zero it out and the reality is that you have to set the B field Dell cross operator equals to A not to zero and if you do that now you figured out Electro

(28:15) gravitation we can manipulate gravity it's not a matter of pseudoscience or anything that's just literally how it happened from the history books and we've been teaching ourselves wrong for I don't know how long ago was Heavy side 80 years ago how long ago was that that was from 1950 100 over 100 years ago awesome he died in 1925 so yep over 100 years ago we've been teaching ourselves wrong great great yeah kind of It kind of screwed us over man now gravitation is simply enfolded and trapped electromagnetic energy

(29:07) rigorously it is electromagnetic squeeze it is like pressure in a gas electromagnetic energy on the other hand is simply the outfolded contents of gravitational energy it is like the bleed off of gas pressure through an opening in a pressurized container gravitational potential consists of the locked up or locked in electromagnetic force fields an electromagnetic force field is a single unlocked bleed off of standing squeeze or stress waves of gravitational potential gravitational waves are standing waves scalar electromagnetic

(29:51) wave systems with zero E and B field resultants a zero Vector wave pass passes through the electron shells of an atom into its nucleus there the electr gravitational wave is absorbed raising the potential of the nucleus to an excited state the excited nucleus then decays emitting a Time reversed scalar wave back through the electron shells thus electr gravitational waves are exchanged between the nuclei of atoms primarily this is a continual process between all nuclei of the universe these scalar waves represent significant

(30:33) oscillations of the local curvature of SpaceTime something that Einstein assumed could not be done on the laboratory bench indeed it can easily be done using the principles we have stated the Soviet Union discovered electr gravitation shortly after World War II and developed a secret Armada of powerful super weapons based upon it huh let us look at the history briefly of the secret Soviet scalar electromagnetic weapons large areas of the sea could be at the end of World War II the Soviet Union obtained the cream of the crop of

(31:09) Germany's radar scientists and infrared scientists that time the German scientific team led the world in the theory and Technology of radar absorbing materials Ram it's called and radar cross-section for example some leading Western radar experts believe that the German scientist had already advanced the theory of radar cross-section Beyond where Western scientists have arrived at today radar cross-section science as we all know is the heart of modern radar technology countermeasures and counter counter measures the theory of ram

(31:43) technology is precisely what is needed to develop and design check this out so what is a phase conjugate mirror notice the difference okay so if you are sending something at a normal mirror it's going to bounce this way way send light at it anything right the phase conjugate mirror where does it bounce it bounces directly back at the source no matter the angle now this is where um Optical phase conjugation comes into play because it's the same idea as when the light of the object bounces off of onto the plate the

(32:20) plate every aspect of the plate has all information about the object because the light hits here the light from down here still hits here this PO Point knows all of the aspects about the object this is how a hologram is produced so this is the time revers longitudinal wave because it's going to bounce off the phase conjugate mirror and it's going to go directly back at the source and what's that going to do it's going to cause exactly what I told you guys that that would happen here is you're going to have a situation where

(32:47) the waves are making love as Dave Rosy would say versus fighting one another phase conjugate mirrors for radar frequency bands a phase conjugate mirror is simply a nonlinear material that is capable of producing a Time reversed or TR wave in direct response to a received or absorbed ordinary wave the mirror may also be powerfully pumped with energy to produce a very large amplification of the emitted time reversed wave just after World War II the Soviets mounted a truly massive program to obtain and review all the

(33:28) scientific literature of the West this material was completely reexamined and digested in a deliberate search for a major new technological breakthrough area absolutely nothing similar to this has ever been done in the west by 1950 the Soviets had discovered phase conjugation in the time reversed wave in their radar programs using the German radar scientists the time reversed wave itself is a solution to the wave equation and hence the phenomenon is universal to all waves and frequency regions under appropriate nonlinear

(34:03) circumstances it has been done for example with sound waves it is not a matter of frequency but it can apply to any kind of wave at any frequency we stress the fact that the Soviets have always led the rest of the world wow this is crazy in many nonlinear aspects of science love is the answer from the beginning Love Is The Answer thus by the mid-50s the Soviets founded an intensive National development program on these radar time reversed wave weapons the Soviet Union has now had the equivalent of some seven

(34:38) or eight Manhattan projects back to back in the development stockpiling and deployment of TR wave weapon systems at least fifth generation Soviet TR weapons have been

developed and deployed and they have been hot tested to include actual destruction of free world missiles and aircraft this is a matter of actual destruction of missiles and aircraft did I just hear that correctly seems uh kind of big chat actual destruction of missiles and aircraft that's what Bob Greener is talking about they can annihilate any

(35:19) weapon it's a perfect defense mechanism nothing you can do against it it's hard for me to believe the Soviets had this since 1988 though but then again I guess I shouldn't be surprised of the greatest importance so all these wars the reason why they're proxy wars and nobody pushes at each other is because both sides have super weapons they could deploy the problem is the m you deploy the super weapon everyone finds out about the super weapon to the Free World and one which Western intelligence scientific

(35:44) and newsed communities have largely missed we particularly stress that the time revers wave phenomenon is a universal phenomenon of nature PC wave me means phase conjugate wave convergent wave Distortion correcting self-targeting real time holography so remember when jery alien scientist yesterday was talking about uh cloaking there it is right there real time holography being able to make a hologram somewhere that's that's essentially the same as cloaking just a little bit inverted in in terms of how you think of

(36:33) it distance independent anti-gravity neg entropy Newton's third law wow yeah neg entropy um yeah negative entropy is like tapping into the underlying framework of the universe where there's just nothing there just think of uh there's that there's like waves hitting me from every direction all over all the time from outside side from whatever and if you were to rip through that's so and all that's like entropy stuff getting more and more complex if you were to rip through the underline framework and there's just

(37:07) nothing there that's neg entropy it is not just a fluke and not just a nonlinear Optics phenomenon it is a general solution to the wave equation and as such applies to every kind of wave electromagnetic sound Magneto hydrodynamic mechanical and other radiating systems all exhibit the phenomenon under the appropriate nonlinear conditions hundreds of Western papers dealing with time reversed waves are now in the open scientific literature most of them dealing with nonlinear Optics however the principles are well established and known to apply

(37:47) to waves in general now A Time reversed wave has startlingly different weapon capabilities compared to a normal electromagnetic wave such a wave is stimulated in a nonlinear material by a strike or an emergence or an absorption of a regular positive time wave such a wave precisely retraces the path of the ordinary wave that stimulated it to be formed so it possesses what is in effect an invisible wire through space back to the original position of whatever emitted that stimulus wave further the time reversed wave

(38:34) really is time reversed it does not dissipate or spread its energy instead it continually converges upon its invisible backtracking path it does not diverge in Contra contradistinction to normal electromagnetic waves now this characteristic makes it ideal to use in firing slugs of electromagnetic energy what are called so he was saying this is these phase conjugate waves

bounce directly back at the Target so he's going to say that this is going to be good for radar right this is why it came out from radar is that radar is all

(39:12) about waves so they figured out how waves worked and then they figured out a way where I want the wave to bounce right back right so you've got the wave going at the Target you want to figure out where the target is I want the wave to come straight back and actually the way that they do stealth I read last night after I went offline is that they build build the craft in such a way where the waves will bounce off so that the waves don't bounce back at the at the receiver pretty wild right this is how they figured it out

(39:38) this is how they began to build phase conjugate waves and they underlock they unlocked the secrets of the universe this way because then they start to realize what does it even mean what does time mean and what does even a physical object even mean if the whole physical object is just made up of waves that are attracted to one another you can start to just do magic with it smash that like button everybody thank you Bernie crypto Alchemist in the chat here we go electromagnetic missiles against a distant Target even one that is

(40:08) thousands of miles away from the emitter using several simple schemes particularly pumped four-wave mixing the extremely large amplification of the time reversed wave can be cheaply and readily accomplished a startling weapons capability therefore emerges when when Amplified TR waves are generated in response to the received weak signals from a distant Target first if any signal at all can be received from that distant Target a return time revers signal of extreme power can be delivered directly to that Target wow almost all of the transmitted

(40:52) time reversed wave energy will arrive at and in that distant Target even through a highly nonlinear medium or under scattering conditions hardly any of the energy will be lost in route wow if the target is fast moving a lead correction signal can be calculated and added to steer the return path second real time holography what dude so it can be a nonlinear medium like flying through the air like what we see in the MH370 videos uh I'll have to show those after and then it's going to bounce right back what was that thing you just said right

(41:37) there yeah look at this oh yeah and they can correct for the for where it's going to go look at the Imagine This is a sphere and you're orbiting around the plane remember when they are spinning vertically around the plane that's cuz they're detecting the direction of travel they've already figured out the direction of travel they've mapped it and they're spinning perfectly vertically around the on the plane because they have to make the the zap appear at the exact moment where the plane's going to be at that exact

(42:04) time I can't believe we have this [REDACTED] figured out this is mindblowing is fast moving a lead correction signal can be lead correction signal can be calculated so they're spinning with purpose this is the purpose pumped Amplified phase conjugation mirror transmitter wow that's what the orbs are this is an orb this is an orb what does that say at the bottom steering are under scattering conditions any of the energy will be lost in route if the target is fast moving cor signal can be calculated and added to steer the return PA receiver

(42:48) and the the receiver in the computer did you see that real time holography can readily be accomplished using so it is using a computer that I I guessed it right it's AI or supercomputer that's monitoring or managing those managing the orbs time reversed waves and without first making Holograms in addition by using pumped four-wave mixing as much energy as one desires can be placed into the distant hologram including even negative energy which cancels an equal amount of positive energy powerful geometrical forms balls

(43:28) shapes hemispherical shells and so forth of electromagnetic energy can be created at a distance quite readily by interferometry or crossed beam techniques using time reversed waves since the TR wve carriers do not disperse with distance these interference energy forms can be assembled by Crossing TR wve beams at Great distances even at thousands of miles in theory the energy appearing in such a distantly created energy form is limited only by the amount one cares to put in at the Amplified transmitting in and by the

(44:09) state-of-the-art of the technology in developing the mirror thus the radar itself becomes now a powerful allaround weapon with a TR wave adjunct once the radar receives a weak return signal from a Target an extremely powerful time reversed wave pulse can be generated and all the energy in that pulse can be unerringly returned to the distant Target from which the return was received crossed beam Over the Horizon Radars such as the giant Soviet woodpecker transmitters are ideal for use as carriers of wires for distance

(44:54) time reversed wave in aeromet that's hard distance to do though but they could do it yeah anybody's using these weapons though that's going to be an act of War yeah the great part about this is this is non-fiction this is non-fiction chat yeah I wonder about the distance my guess is the distance is a limitation the reason why the distance is a limitation is because we need the orbs to be Converge on one another amplify us together with a TR wve adjunct to accomplish the same directed energy destruction of the distant Target

(45:51) emitting the signals received by the radar radio receiver transmitters may also employ simple TR wve adjuncts to provide a large number of communication Jammers and directed energy weapons capable of jamming Andor destroying enemy radio transmitters at appreciable distances the Soviets have intensely developed such time reversed wave weapons since the 1950s in January 1960 Kusha was referring to these weapons when he reported to the Soviet Pres presidium the forthcoming Advent of fantastic weapons then in advanced

(46:33) Soviet development 19 prior to kof's announcement the Soviets had begun radiating the US Embassy in Moscow with scalar electromagnetic waves and phase conjugate energy modulated upon weak microwave carrier beams later these beams were used to induce illnesses and blood changes in Embassy Personnel we will shortly discuss how the Soviets could induce disease at a this Havana syndrome booya oh I would bet any amount of money that that's what's going on with Havana syndrome it's scaler waves that we're shooting at people it's not

(47:09) sonic waves I mean it's similar idea it's a gravitational wave maybe a gaus wave a gaus gun you could think of it right just blasting you with scalar waves interference waves

crossmatching them I wonder if it requires two different guns at two different angles or if they can literally just shoot you with a weapon and I wonder what the distance is as well wow that's a bingo wow uh if you want to know how Havana Syndrome works hope you're listening tonight chat electromagnetically the microwave radiation continued intermittently in

(47:46) spite of the objections of several US presidents US scientific studies failed to comprehend what was being done the embassy radiation was and is a high level Soviet intelligence probe stimulate and effect the US ambassador a high level Target attention by the CIA NSA State Department Dia the US president and so forth is guaranteed puzzled they will turn to the US scientific Community for an explanation the scientific Community will try to explain the microwave radiation using the best of its knowledge by the US

(48:29) counteraction two ambassadors died and another one was sickened what my first question when I heard this was they might get killed from this maybe this is why we hate **Russia** High LEL Target us as a bastard man if I was Tucker Carlson I'd be a lot more scared now going to **Russia** they could just hit you with this while you're in your hotel room wow taken or not taken at the US Embassy site the Soviets knew with 100% certainty whether or not the US had discovered time reversed wave weapons electromagnetic Disease Control and so

(49:18) forth and they knew whether the US had developed defenses against such weapons since the beginning of course us counteractions or the like of them at the US Embassy have consistently revealed to the Soviets the true status of US knowledge of scalar electromagnetics the US shown has shown that it has no knowledge of and hence no defenses Against Time reversed wave technology and the electro gravitation that accompanies it Soviet TR wve radar weapons also provide a convenient mechanism for accomplishing nuclear weapon kill a

(49:55) Target stuck by a powerful TR wve pulse generates a Time reversed back pulse due to nonlinearities in the Target medium in the nonlinear medium of the exploding or fusing Target the two pulses which are 180 degrees out of phase with each other in time modulate and lock together as a scalar em we definit technology this scalar empulse zero electromagnetic force field resultants but it is a violent fluctuation of the local energy density of SpaceTime rigorously it is a local gravitational pulse Wave by definition further it is far more

(50:37) powerful than normal gravitational waves since the stress is in the time Dimension and when you stress the time Dimension or change the stress on the time Dimension you uh curve SpaceTime very much in general relativity this scalar empulse does not react with the orbital electron shells of an atom but passes directly into the nucleus and is absorbed there this raises the nucleus to an excited state increasing its potential or trapped energy if the nucleus cannot withstand this increase in potential energy it

(51:14) directly fishes if the nucleus withstands that potential it then immediately decays from the excited state by simply emitting a Time reversed electromagnetic wave now any radio active nucleus is already Teeter tottering toward nuclear Decay so to speak and it will instantly Decay radioactively when struck by a significant scalar potential pulse thus a TR wve radar weapon can

deliver a powerful TR pulse against a distant vehicle carrying a nuclear warhead and the resultant electr gravitational pulse penetrating the nuclear material of the

(51:51) Warhead will electr gravitationally explode it in a full order nuclear detonation therefore when using such weapons extreme care must be taken to avoid inadvertently pulsing one's own nearby nuclear weapons or nuclear material in attacking dist ground targets one must be careful not to detonate nearby nuclear weapons nuclear power plants or stored nuclear material even at some distance from the target otherwise large scale nuclear fallout will be experienced over a wide area from the resulting explosions an unacceptable

(52:31) Boomerang self-damage to the attacker himself may be incurred the more powerful the TR wave pulse employed the greater the safety separation between the struck Target and stored nuclear material must be to prevent the unacceptable Boomerang large scale nuclear fallout now because so now it's everything starting to make a lot more sense why does people know employ a nuke when you fire a nuke it's going to blow some going to blow it up right on you this also explains why we are trying to detect everything that we see out there

(53:05) from the ionosphere we're looking for other countries using these weapons not just to defend ourselves but just in case they don't accidentally blow up the whole planet right crazy of extensive Western nuclear deployment up to now the Soviet Union has been unable to heavily bring to bear its giant TR w weapons their extensive use would inevitably detonate many of the western nuclear weapons in place the resulting worldwide nuclear fallout would devastate All Nations including the Soviet Union and that is precisely what

(53:43) is driving the sudden and sweeping nuclear disarmament campaign by the Soviet Union it sees a golden opportunity to thin out Western nuclear deployment and free the restraints on using its giant continent bu in scalar electromagnetic weapons large TR wve interferometry weapons such as the Woodpecker signals and systems usually first produce very powerful scalar em standing wave beams by continuously transmitting into the carrier beam both a normal EM wave and its phase conjugate these two beams 180° out of phase in the

(54:21) time Dimension but not in the space Dimension are modulated or lock together to produce a standing Z em Vector resultant electr gravitational wave this produces space-time curvature mostly upon the time Dimension which is by far the most significant for curvature in general relativity yeah this makes me wonder about what you can do to somebody's body right um in terms of you you blast this at somebody and it's hitting them at the time Dimension it's like what is that doing to yourselves is that going to speed up

(54:58) your time that's what I keep thinking I keep thinking about royy Herber and time dilation is what they maybe what they're really doing is they're speeding up your time on certain cells but like doing it like a ton and you can imagine like your body is a big J uh Jenga puzzle and all of a sudden it's like Jenga Jenga and everything falls apart scary stuff Okay let's listen to some more of this interference of two of these standing scalar EM wave beams in the targeted area plus internal scanning

(55:33) within individual em components of the beams by other transmitted modulation signals allows electromagnetic effects of either electromagnetic energy or time reversed electromagnetic energy to be produced and controlled at very precise locations within the broad interference area such Giants standing scalar electromagnetic waves can be established in space in the atmosphere in the ocean or in the earth since these beams travel through the nuclei of the atoms as their medium each such huge scalar em standing wave beam represents in fact a gigantic

(56:16) electr gravitational standing wave and hence a giant oscillating stress potential in SpaceTime this standing wave represents a sort of gigantic capacitor or accumulator of infolded electromagnetic stress energy enormous Energy may be collected in this potential charged up over a period of time now short out of this giant capacitor by transmitter failure can result in a large flashover discharge of the electr gravitational energy into the local Earth at the stricken transmitter producing a massive electr gravitational ground wave that

(56:57) can strike nuclear facilities and be enormously destructive thus one must carefully protect the TR weapon system from in inadvertent discharge of large electr gravitational P pulses into the Earth at the site due to transmitter failure short outs and so forth otherwise one's own nuclear weapons or facilities may be exploded even at some distance by the electr gravitational pulse ground wave that is produced One Communications and electronics installations for example can be knocked out at even greater distance for example in the winter of

(57:36) 1957-58 one or more large Soviet trwa prototype weapons at Kish him near the urals suffered catastrophic transmitter failure discharging a powerful scalar electr gravitational pulse into the Earth this huge electr gravitational pulse struck the atomic waste stored nearby causing all the radioactive nuclei to immediately decay in other words the nearby Atomic waste exploded just as interrogated Personnel from the region reported is this real deadly radioa so the eurls is where that secret that secret Russian base is is

(58:16) this what they've been developing there I'm going to get killed by somebody for sure maybe if not the US it'll be killed by the Russians maybe 1957 there was a disaster contamination spread across a major region of the Soviet Union by Fallout and the area is strongly contaminated to this day after this accident the Soviets developed much more elaborate safety circuits and devices and implemented them into their time reversed wave weapons even so in April 1986 the explosive eruption of a re actor at Sher Noble was almost certainly

(58:59) caused by an accidental catastrophic failure of a large time reversed wave woodpecker transmitter about 30 kilm away the sudden failure of the east to west woodpecker transmitter was positiv detected in the field by engineer William Bice all safy s circuits at the site would have been instantly activated desperately and slowly draining off the huge standing wave potential built up by that weap look at that thing the Soviets would also have immediately shut down the

nearby reactors at Chernobyl as a precaution however in a shutdown reactor

(59:35) the radioactive uranium fuel rods are still physically present some hours later the transmitter safety devices finally failed and a much smaller though still significant Remnant electr gravitational pulse was discharged into the Earth spreading out in a ground wave the first radioactive material it encountered was the fuel rods in one of the hapless shutdown Sher Noble reactors the fuel rods received the electr gravitational pulse and violently erupted in a burst of radioactivity rupturing the plant had the full electrogravity pulse escaped

(1:00:15) that stricken transmitter all four reactors at Sher Noble would have violently exploded an extensive and deadly nuclear fallout would have rained down over a wide area of the Earth wow had the reactors not been shut down and the control rods inserted full in to dampen the radioactivity a far greater greater radioactive eruption probably a nuclear explosion of the struck reactor would have occurred wow he's saying in the middle of the 8.

(1:00:49) 8 magnitude earthquake that hit 6 weeks ago in Chile the biggest earthquake anywhere in the world in 50 years what we didn't not know at the time of that Quake was that in the middle of that giant Quake there was so let's take a look at that this actually happened this disaster happened Chernobyl could Chernobyl have really been caused by a scaler wave I didn't watch the show so I don't know much about the history of the Chernobyl disaster I just know what I've heard which it's usually going to be misinformation disaster was the worst

(1:01:25) nuclear incident uh by by radioactively released after the Chernobyl disaster is the only disaster classified as level six what what are they claiming happened was a sight of a major disaster an improperly stored underground tank of high level liquid nuclear waste exploded does nuclear waste just explode huh wow on September 29th 1957 Sunday 4:22 p.m.

(1:02:10) an explosion occurred with stainless steel containers located in a concrete Canyon 8.2 M 27 ft deep used to store high level nuclear waste the explosion completely destroyed one of the containers scary let's go back to our video have to look at this later was a team of American officials inside that country inside Chile on a top secret mission to save the world from nuclear disaster sounds melodramatic right it's actually not an exaggeration in the days before that earthquake hit a team of us officials were in Chile on a mission to

(1:02:51) secure 40 pounds of radioactive highly enriched uranium they were to obtain it secure it and transfer it safely to the United States all in secret this 40 lbs of Highly enriched uranium was being stored at two facilities now 40 pounds of this stuff is considered to be enough to destroy part of a major city if it were detonated which would not be the hardest thing in the world to do so you obviously can't just pick this stuff up throw it in a suitcase and hop on a plane back to the United States us and Chilean officials had to extract the

(1:03:23) uranium racks from these ionized pools they were stored in they then transferred them into specially designed casks the casks were lined with 8 in of lead and steel to keep the uranium safe in transit 60 tons of metal were used to secure just 40 lound of uranium package

and handle this stuff the wrong way and you can set off a spontaneous nuclear Chain Reaction Time Magazine reports it was only 12 hours after the team got the uranium into those casks and surrounded it with 1500 lb protective impact limiters just 12 hours after that the

(1:04:03) giant 8.8 impact AKA earthquake hit well packed for shipping the uranium what so hear me out we went to Chile because we needed to take 40 lbs of Highly unstable uranium we had to stack it in tons of lead and and other metals for some reason and then 12 hours after we pull it out the largest earthquake in history in the last 50 years hits this hits the location can we predict the earthquake it's pretty weird timing was safe in the Quake if there had been a spontaneous nuclear Chain Reaction you probably would have heard

(1:04:52) about it by now but the earthquake did render totally unusable the port that these scientists were going to use to ship out this secret nuclear cargo after a recon mission that involved the head of the Chilean nuclear agency personally driving himself to one uranium site to check on its safety the scientists worked through the night to find a new Escape Route they decided to use a port 50 mil to the north of the one they had initially planned q a dark ofn night Convoy to the Newport through an earthquake ravaged Countryside with no

(1:05:26) electricity in a desperate attempt to get this uranium out of the country safely again all while keeping it secret despite major aftershocks the uranium made it to the New Port safely but then more drama one of the cranes that was being used look at this one of the cranes being used to hoist this unstable highly radioactive material onto the American ship malfunctioned sent the container swinging flying out of control just yards above the deck ultimately they regained control and the uranium was loaded onto two specially outfitted

(1:06:03) double hold American ships they put it on two ships so they would have split the material so neither of the ships would be carrying enough highly enriched uranium to make a bomb the ships then embarked on a 2 and 1 half we Coast Guard escorted Journey to the United States including an ulcer inducing why would we be protecting this so heavily if it wasn't a risk why put so much lead around it if you're not afraid of it blowing up if it's just chemicals that can't be weaponized why would we have this level

(1:06:34) of secrecy and defense over it the only logical conclusion is that it can be and that there's a risk at play otherwise we wouldn't treat it like such a high risk trip through the Panama Canal their ultimate destination South Carolina where the uranium is painstakingly converted to safer non-weapons grade fuel with a atorium ending on telling the story of Chile's uranium in the earthquake today in Washington leaders of 47 countries gathered for the biggest Summit in the United States in more than six decades

(1:07:08) it's a two-day Gathering aimed at addressing the issue of global nuclear security and right at the beginning of day one of this Summit some results to be announced today Ukraine announced a landmark decision to get rid of all of its stockpile of Highly enriched uranium by the time of the next nuclear security Summit in 2012 Ukraine will eliminate its entire stockpile of Highly enriched uranium after press secretary Robert Gibbs made that announcement President

Obama and the Ukrainian president what Ukraine got rid of all of their

(1:07:48) uranium were they afraid that **Russia** was going to ignite it that's weird Okay Victor Yanukovich released a joint statement which reads quote president Yanukovich announced Ukraine's decision to get rid of all of its stocks of Highly enriched uranium while the United States will provide necessary Technical and financial assistance to support this effort sound familiar the United States will provide Technical and financial assistance to support this effort hopefully this do you guys remember when Rachel Maddow was

(1:08:22) apparently a legitimate journalist and actually did real Journal ISM it wasn't just a bunch of political [ ] it's like Trump broke this woman Trump just straight up broke this woman like she is this is uh 14 years later and now she's just a completely shrill Harpy it's all about political like [ ] fake narratives now this was actually a real news report minus the earthquakes in May 1960 a prototype TR wave radar weapon was used to down Gary POW highflying U2 aircraft over the Soviet Union POW reported a flash as if

(1:09:04) from an explosion near him but the flash persisted this is almost certainly the signature of a TR wave weapon in April 1963 the first large strategic Soviet traw weapons became operational on site yeah so guys for the people in the chat who say I don't really believe this narrative maybe maybe I think that he seems like an honest guy but even honest people can lie but the science is is checks out the science is hard the science is consistent with two videos that we've seen now with our own eyes that we've analyzed in levels super

(1:09:40) in-depth in every aspect of them and they appear to be authentic and he's saying that same science exists so I think that when you get to this point you start to wonder uh you know what can be real and what isn't real and what how much of everything out there is political maybe it's all not maybe there is some mundane explanations for some of it but maybe some of it is you know as deep and dark as what he's saying so I think we just have to keep open-minded to the stories we don't have to take the stories at

(1:10:06) face value but we should be cognizant of what the weapons and science is capable of for sure these weapons were used to electromagnetically deaden the electrical controls of the USS Thresher atomic submarine on April the 10th 1963 and they were also used to produce a huge underwater electromagnetic blast 100 miles north of Puerto Rico on April the 11th 1963 since scalar electromagnetics travels directly through the nuclei of materials the ocean is transparent to scalar EM beams Soviet Admiral Gorkov publicly stated on at least one occasion that we

(1:10:44) have made the oceans of the world transparent since the 1960s the Soviets have possessed a 100% effective defense against us and European strategic bombers and missiles just as they stated in the 1968 Soviet book military strategy the early systems deployed in the Soviet Union were midcourse and terminal phase systems the Soviets also relied upon additional TR wave weapon systems deployed as adjuncts to radar systems aboard research ships and cers to be able to attack us missiles and bombers in their launch and early

(1:11:19) midcourse phase huge light phenomena from the extensive testing of these ship mounted scalar electromagnetic Soviet weapons have been observed at sea for decades hundreds of incidents of Soviet tests of these TR wave weapon systems have been observed around the world and reported in the open literature as puzzling or anomalous like what what what are we looking at here that big bubble around a plane around at 747 well that's cool that's cool phenomenon these Soviet defensive TR wave weapon systems also easily accomplish as we said nuclear weapon K

(1:12:06) whoa whoa whoa cold explosion yeah Katherine T says the cold zap that she saw orange glow looked at about the size of an oil rig in a Halo formation further by their nature they have long provided an antidote to counter the stealth aircraft technology the thousands of deployed older Soviet Radars using TR wave adjuncts become totally new weapons having startling and unsuspected capabilities against missiles and aircraft for that reason the Soviets happily continued to operate and maintain a number of these older

(1:12:49) systems that by Western radar standards are seemingly obsolete by adding a TR wave adjunct however each of these Radars immediately becomes a microwave directed energy weapon of formidable power in the 1960s to turn our attention to other matters the Soviet scientist Blokhin and his researchers accomplished enormous experimentation and proved that cellular death and disease of any type whatsoever could be transmitted and induced electromagnetically it follows that this team would have gone on secretly to phase conjugate or time reverse guys

(1:13:27) don't tell the uh the 5G haters cuz it looked like he just said that 5G could be real and that we could induce viruses and people the death Photon signals to show that any cellular death or disease can be reversed or cured electromagnetically as well the latter work would have been done under the open and tight control of the Soviet KGB since All Phase conjugation or time reversed weapons are under that Agency for development deployment and employment guys Dave Rosi is confirmed reverse time I think we figured it out

(1:14:00) that's that's the logical explanation Dave Rosi is actually like 80 years old and he just figured out how to reverse time to pretend like he's 25 that's the only honestly it's the only logical explanation at this point now obviously the electromagnetic antidote work of Blokhin was not published because it provided a powerful counter biological warfare capability of great strategic importance to the Soviet Union thus in the late 1960s the Soviet Union became the only nation on Earth to achieve the capability of rapidly

(1:14:32) developing within one or two hours wow an electromagnetic antidote for any lethal new biological warfare viruses or bacteria of any kind whatsoever the Soviets also developed the capability for Mass treatment in this fashion of both the Civil population and its military forces Personnel how do you Mass treat people now independent verification of the Blokhin death photons effect has been accomplished in West Germany at the University of Marburg in Australia at the University of Sydney and in the United States Blokhin now works

(1:15:06) directly with a secret Soviet research organization in the outskirts of Moscow at this facility microwave directed energy weapons are feverishly developed the clear implication is that microwave weapons such as the giant woodpecker over the rise and radar systems are being modified to deliver cellular death and disease patterns against targeted distant populations even halfway around the earth now this kind of effect has been proven in the 1960s and early '70s a French inventor Antoine Priori built and tested several large electromagnetic

(1:15:44) devices that cured thousands of cases of terminal Cancers and leukemias in laboratory animals it also cured sleeping sickness he worked with members of the prestigious Academy of Sciences his work was funded by the French government and presented to the French academy by Robert Courrier head of the biology section Priori's work was suppressed in the mid 70s and lost when he died Priori used a plasma to accomplish multi-wave mixing and phase conjugation or time reversal his time reversed Curative signals used a

(1:16:17) powerful Rippling magnetic field as a carrier as a wire so to speak the magnetic field guaranteed penetration of every cell in the body even in the bone marrow and that was necessary to reach a blood disease such as leukemia the Rippling of the magnetic field guaranteed penetration of the cell's Atomic nuclei by nuclear magnetic resonance penetration of the actual nuclei of the atoms in the diseased cells is necessary since the master cellular control system discovered by Dr Fritz Albert Popp of West Germany

(1:16:50) operates through the cell's structured scalar em bio potential this potential is centered in the nuclei of the atoms comprising the cell note that electrical dedifferentiation and redifferentiation of cells by a minuscule current between Pico ERS and nanoamp wow has been beautifully proven by Dr Robert Becker and other researchers red cells of the Frog for example have been electrically reversed through all their development stages the cells first become round then develop a scalloped outline then they become amoeboid and move by means of

(1:17:24) pseud ODS their nuclei swell and their DNA becomes reactivated they so we can like actually reverse aging or what guys we I'm getting a little bit worried about cloning and reverse aging now maybe there is some Bohemian Grove stuff going on then rid themselves of all their hemoglobin and develop a full set of mitochondria and ribosomes in Becker's historic experiments the cells then turned into cartilage forming cells and finally into bone forming cells healing difficult bone fractures in short Becker

(1:18:01) demonstrated cell dedifferentiation followed by redifferentiation into an unrelated cell type all electrically initiated and controlled with laughably weak currents thus profound cellular changes are most certainly inducible and controllable electromagnetically by minuscule amounts of potentials and currents Priori's machine applied time reversed EM waves to accomplish reversal from cancerous cells back to normal cells Priori's work essentially proved that Kash's group would have been able to accomplish the same thing by phase

(1:18:35) conjugation also Kaif's death photons work was accomplished much much earlier than reported in the open literature it provided a basis to use in the microwave radiation of the US

Embassy in Moscow to engender blood changes and disease in the targeted Personnel two US ambassadors died from a leukemia disease and a third sickened in bleed from the ears and nose and eventually died of leukemia sign bleed from the ears and nose and then died from leukemia Jesus yeah if we can clone people where why is my Scaro clone not

(1:19:10) here yet where is it if blood changes and genetic effects were noted in Embassy personnel only minuscule signals would have been necessary to induce such detrimental biological changes the present woodpecker signals undoubtedly have the capability of producing similar conditions in distant targeted populations and much more whenever the Soviets wish to add the appropriate signals these weapons also have capable of killing large numbers of the targeted population whenever appropriate kashf death signals are placed upon them in

(1:19:50) the late 1960s another cautious Soviet intelligence probe was used papers appeared in the open Soviet literature dealing with time reversed wave waves in the field of nonlinear Optics only a few American Optical scientists seem to be interested in 1972 to focus more US attention on their subtle intelligence probe of US time reversed wave knowledge the Soviets sent two scientists to Lawrence Livermore laboratory to brief American scientists on optical phase conjugation now thereafter many US Optical scientists began to work in the

(1:20:25) quote New Field unquote immediately it was revealed to the Soviet Union that the US had ineffective knowledge of phase conjugation and that the US had no time reversed wave technology or weapons to this day Western theoretical work in Phase conjugation is still largely characterized by a simple overall math model obtained by simply writing down the necessary conjugate term in the wave equation there appears to be absolutely no US awareness of the physical electromagnetic mechanism in the atomic nucleus itself that causes the

(1:20:58) phase conjugation time reversal and there appears to be no theory of that as such its direct application to radar directed energy weapons appears to have largely been ignored in the west the West has focused on lasers and Optics in 1975 the Soviets attempted to obtain a treaty with the rest of the world outlawing the development of frightful new weapons of mass destruction even more frightful than the kind of man had ever imagined according to brief himself Groo introduced a draft Treaty into the 1975 session of the United Nations

(1:21:35) General Assembly no one in the west knew what the Soviets were referring to failing to obtain the treaty the Soviets in 1975-76 embarked on the greatest military buildup in history this buildup was nothing short of a full-fledged preparation to be ready to dominate the world the year 1985 was set as the time according to Leonid Brezhnev's 1972 statement at a secret Prague meeting of European Communist Party leaders the Soviets met this 1985 scheduled goal as we stated the Soviets can be immune to any type of viral biological

(1:22:11) warfare anytime they choose to be the use of lethal new viruses thus has become a highly favored low-risk method of Warfare for the Soviet Union and for now okay well I mean let's not think a Co stuff but man if it was a bioweapon here's your here's your ammo um I believe that we can cure cancer but doesn't this answer Kim.

(1:22:36) com question about why don't the aliens just give us cancer the cure for cancer because it's all the same thing it's all a matter of understanding Quantum mechanics if you get the cure for cancer and you can figure this out then you can also use it to create a doomsday weapon you can create a force field you can create infinite energy this is extremely powerful weapon No Other Nation on Earth the West has no such capability against viral Warfare and in fact is totally vulnerable to attack in this manner both

(1:23:04) Western troops and Western civil populations are totally defenseless against the threat of viral biological attack a BW strike from a small hostile Nation or even from a few radical terrorists or even an inadvertent contaminant spillage from one of the great many ill-controlled private genetic experiments can result in the introduction of a lethal highly infectious new virus that will decimate the West indeed a biological warfare viral attack may already have been Unleashed on the world in 1971 the US passed the National Cancer

(1:23:41) act and declared open Warfare on cancer Iron Curtain scientists were invited to participate and they did so with alacrity at the same time ironically penetration of Western recombinant DNA genetics research was one of the highest priorities of the Soviet KGB many KGB scientists and agents were infiltrated into our Labs under this program some cancer research Labs at Fort Detrick Maryland for example still to this day employ more Communists than American scientists in these cancer Labs animal viruses were repeatedly injected and

(1:24:18) reinjected into human cell cultures until New viral strains emerged that preferred human cells as hosts these adapted viruses could then be cultured and the effects or lack of effects of various chemicals and drugs against them could be ascertained this is all a necessary part of the legitimate war on cancer however these new viruses are exactly what one would wish to develop if one were seeking a biological warfare virus to which humans were not resistant and one which preferred humans as its host sometime during the early 1970s KGB

(1:24:55) agents who had infiltrated us Cancer Research Laboratories may have deliberately contaminated the World Health organization's small pox vaccine with one or more of the lethal new viruses freely available in the western cancer Laboratories available to them because they were working in those Laboratories massive small pox vaccination in Africa and other third world countries then resulted in the appearance and spread of the AIDS disease do you just say that the Soviets spread aids to everybody because they

(1:25:25) were using as a biological weapon uh whoa now if this thesis is true then AIDS constitutes the first Soviet biological warfare strike against the West in what can only be categorized as an opening round in a unique New World War II with the kashf techniques the Soviet KGB already has the effective electromagnetic antidote against AIDS and other lethal viruses anytime it wishes to employ it some Soviet citizens may die with age however to serve as a deception plan and conceal the true Soviet electromagnetic anti- biological

(1:26:05) warfare capability meanwhile the third world Nations and the West will be devastated by the killer disease now as if this were not enough today there is even a British firm which will

tailor make a virus by computerized gene splicing techniques and it will sell that virus to any purchaser for \$1,000 hosts are poly controlled \$10,000 for your own chat \$10,000 for your own virus uh remember this was 1988 so we're only 35 years more advanced than this 36 more years more advanced than this so that was back then you could have your

(1:26:41) own customade virus for 10 grand nice nice our uncontrolled persons and Laboratories are experimenting today with recom genetics all over the world much of the residue from these experiments is dumped into the biosphere to eventually produce innumerable recombinations and new viruses inevitably some of these new viruses will be lethal and even fast acting so many other lethal viruses are almost certain to follow AIDS whether from covert Warfare strikes fanatical terrorist groups or inadvertent private contamination undoubtedly some of these

(1:27:19) frightful new viruses are not going to be slow viruses or lenta viruses some will likely be highly infectious and quick acting in the manner of some influenzas some will be transmitted successfully by insect vectors such as the voracious new Asian tiger mosquito now spreading across the South my dude just predicted Co right now this was like 35 years before it happened East us now beginning in July 1976 powerful new Soviet over the rising Radars the infamous woodpeckers became operational extensive weather engineering over the

(1:27:56) US has been accomplished by these weapon systems now this has been separately documented by the present author by CB Baker editor of Youth Action News Andrew mcrai of Canada's planetary Association for clean energy and other researchers such as Andrea puharich in addition the woodpeckers possess the full range of trwa weapon capabilities including realtime holography capabilities and anti- stealth capabilities terrible anti-biological capabil VES are also possessed by these weapon systems and they are also highly effective as Global

(1:28:30) launch phase and midc phase defensive weapons for use against us missiles and bombers in the launch phase for example track the missile as it slowly Rising send a huge pulse of TR wave or time reversed wave energy scratch one missile in November 1985 the Soviets completed wet run weapon he just told us how we could wipe a missile out just shoot that at shoot that uh longitudinal wave at the missile the scaler wave at it and poof there it goes yeah this is a pretty wild stuff that we're dealing with here um but it

(1:29:05) does make you question how much of politics really is at the heart of every issue that we Face test against us missiles and aircraft and at least three of NASA NASA's shuttle launches employing the woodpeckers in the launch phase ABM and anti bomber mode now in the Target year 19 885 beginning in December actual destruction of selected us missiles and aircraft was accomplished targets destroyed by the Soviets included the arrow dc8 at Gander Air Force Base Newland on December the 12th 1985 This Is 2020 tonight remember this

(1:29:44) Gander New Finland 248 US soldiers killed in an air tragedy shattered families consoled by the president tragedy is nothing new to man kind but somehow it's always a surprise the official ruling an accident but was it or accident wow um crap I forgot what I was just going to say okay we'll keep going did terrorists cause the worst air disaster in military history that no

one survived then in a major 2020 investigation Lyn Sher reexamines the case what caused the crash one report says it was ice but yet there's no proof

(1:30:22) that it was ice it's just all Theory were Witnesses brushed off was evidence ignored the hole blown through the fuselage strongly suggests that an explosion took place on board the airplane while was still in flight and the theory that could Rock The Nation do you really believe that Iran Contra figures in that air crash I think there's a strong possibility and I think we need answers to these questions but tragedy at Gander what really happened targets destroyed by the Soviets included the shuttle Challenger

(1:30:56) launched on January 28th 1986 the Titan 34d rocket launched on April 18 he just say that the Soviets destroyed the Challenger 1986 a US Delta 178 rocket launched on May 3rd 1986 and the French Arn 2 rocket launched in late May 1986 in addition a Nike Oran research rocket misfired over the New Mexico desert on April the 25th 19 1986 this was the first failure of that rocket in 25 consecutive launches during the same period that is early 1986 a Spate of crashes of French military aircraft occurred over a four-month period

(1:31:36) causing French defense minister Andre jro to open a special investigation jro may have discussed the possibility of Soviet sabotage of that rocket with Washington two US nuclear submarines one of them the USS Atlanta in The Straits of gibraltar mysteriously ran ground perhaps due to unsuspected interference with their guidance and navigation systems in July 1986 a highly secret US Air Force aircraft possibly a stealth fighter crashed near Bakersfield California the crippled aircraft was seen in trouble and photographed by Andy

(1:32:10) Hoy the aircraft was not on fire when it came down and it did not explode in the air it gave the attributes of a scalar electromagnetic interference with its Control Systems another loss of a possible stealth fighter occurred in 1987 loss of these two secret aircraft may have been due to Soviet testing of time reversed weapon capabilities and anti- stealth capabilities of the Soviet woodpecker weapon system now hosts of other anomalous and mysterious incidents indicative of Soviet phase conjugate tra weapon utilization on a massive scale occurred

(1:32:47) in 1986 these are documented in my 1985 book fedy Lance and in my fourth coming book AIDS biological warfare however a severe limitation on the unrestricted use of time reversed wave weapons ex uh just in case the YouTube sensors are out there uh this is uh I don't support any medical information of any parties that are speaking on the video here um we love uh we love vaccines and we love uh medical information that's not misinformation this is for uh historical purposes yeah that's it exist if powerfully and unrestrainedly

(1:33:25) used they will cause nuclear warheads and nuclear material to explode as surface nuclear bursts in the dirtiest possible fashion the resulting massive radioactive fallout would probably wipe out all higher forms of life on Earth note that in 1960 Nikita Koff actually stated that these fantastic weapons could wipe out all life on Earth if unrestrainedly used as long as we possess an appreciable deployment and stockpile of nuclear weapons we are essentially man fused against substantial Soviet usage of these powerful weapons thus Mel gorbash needs

(1:34:00) to thin out the deployed and stored Western nuclear warheads to allow a more unrestrained field of play for his decisive TR wve weapons that is why at rovic he suddenly expressed full interest in President Reagan's zero option even expressing agreement with the principal of onside inspection to ensure dismantling of missiles and removal of warheads that is why the Soviets are so actively interested Ed in the withdrawal of nuclear weapons from Europe and negotiating a strategic nuclear reduction treaty using their

(1:34:31) scaler em Weaponry they can quickly and easily take Europe with impunity the moment the nuclear weapons are thinned out and Western dead man fusing is removed so we can Now understand what is driving the present steps in nuclear disarm and towards the kinds of nuclear treaties that are being negotiated we are referring in these weapons to a new kind of Blitz Creek Warfare War conducted by powerful beams and long range destruction engendered at the speed of light NATO can be defeated in two hours or less and the entire war

(1:35:07) mop-up in all would last perhaps 3 days of course powerful demonstrations of Soviet super weapons could be provided to show that attempted nuclear retaliation would simply be suicide the Woodpecker weapon systems alone could wipe out all major communication systems and Power Systems in the US induce wave I don't know guys the whole AT&T failure thing is starting to make more and more sense now regarding this I mean taking out all the communication systems seems like this would be a good use of this weapon we had people trying to sell us

(1:35:40) like that oh the blast from their Sun took out just AT&T's system like come on man in in just localized area just the United States n of induced death and disease and pre re announced locations induced waves of abject fear and panic in the populace or psychologically disrupt and disabled say the Washington DC area to include the people the government and the Pentagon if such a scenario were accompanied by proclaiming a Soviet equivalent to the Monro Doctrine except applying it to Europe offer of a ceasefire and an offer to

(1:36:15) allow us at Dunkirk to evacuate the beaten remnance of our forces the US and NATO would almost certainly be forced to accept Soviet terms for a ceasefire that left the US and Europe intact in fact the US Congress reacting with alacrity to accept this sudden and apparently miraculous Soviet leniency and avoid the destruction of the world would probably play a leading role in dictating acceptance of the surprisingly liberal Soviet terms an agreement with the Soviets to mutually withdraw many of the nuclear missiles from Europe has now

(1:36:48) been signed by the president of the United States its ratification by the Congress or by the Senate is imminent when the missiles are sufficiently thinned out the preceding scenario or some variant of it is very likely to occur I remain it's all just political [REDACTED] right this is actually better than any movie like this is I'm glad I'm not watching a movie right now because this is more dramatic than any movie like you can see the political minations happening behind the scenes like oh let's all get rid of our nuclear weapons

(1:37:16) and we'll score a bunch of points with the media yeah of course they do nuclear

weapons don't even matter though they're like a liability you've got your nuclear weapons they can shoot your scalar waves at them and blow your weapons up and blow up whatever location your weapons are at this is why you don't want your nuclear weapon bases near any civilian populations you need them out somewhere else because otherwise somebody hits you with their scalar weapon say good night boom that whole place is gone me however

(1:37:40) one fly in the Soviet ointment the US Strategic Defense Initiative or SDI presently Western scientists apply phase conjugation primarily to keep laser energy beams intact and on the target at Great distances they appear to be completely unaware of the electr gravitational aspects of phase conjugation for one thing they work at the wrong frequencies for gravitation that's low frequency an inventor colleague of mine has already rigorously proven the electr gravitational aspect at low frequencies on the laboratory bench the phase

(1:38:11) conjugate time reversed wave is composed of and Carries negative energy and negative time if the atomic nuclei of an object are continually forced to produce a great deal of this negative energy negative time they also produce anti-gravity this is because in negative time gravity is a repulsion not an attraction 500 watts of negative energy are sufficient to float one pound of steel in addition if the electromagnetic energy of a laser is changed into gravitational energy a theoretical gain of up to  $10^{42}$  times is achievable in

(1:38:49) Practical uh devices an energy gain of 10 to the 20th may readily be achieved applied to a modified laser in space this electr gravitational gain factor is of overwhelming significance in the US SDI us scientists presently Envision a high energy laser in orbit pumped perhaps by means of a nuclear explosion the pulse beam from this laser would have sufficient power to destroy a rising strategic threatening ICBM in the launch phase say at 10,000 Mi away wow that same laser were converted to a scalar electr magnetics laser wow one

(1:39:25) that turns much of its electromagnetic energy directly into electr gravitational energy it could blast and Destroy possibly a quarter of a large Nation such as the Soviet Union with a single shot sorry do what so not only can we wipe out one of their missiles within a second of it this explains the cber system right cber system is looking for missiles and we're going to shoot a laser from space at it and just blow it up immediately he just said he could just blow up like half of a entire country in one blast wow th if the US developed and

(1:40:02) tested the SDI spatial and launch hardware for the space-based high energy laser so that these systems were available for immediate launching the us could convert these lasers to scalar electromagnetics and still possess a very real strategic retaliation capability even if the Soviets should strike the US almost unrestrainedly with powerful TR wve weapons if the us then launched several of these modified space laser systems when attacked it could still get off a few shots at **Russia** and Destroy her before all the space lasers

(1:40:37) could be destroyed by Soviet counter weapon space lasers chat they were real space lasers uh yeah this is well beyond space nukes this is what they're really afraid of right so they're afraid of a weapon like this if the Soviets have a weapon like this whoever controls space space

is the new aerial uh dominance if you control space you control everything cuz the moment somebody shoots a nuke or weapon at you you just wipe it out with a laser from space remember those Green Lasers we were seeing that were coming

(1:41:08) from satellites there you go in that case those don't necessarily the Green Lasers don't necessarily have to be this type of laser this type of laser you're not going to see coming it's just going to wipe out your whole everything this is also consistent with the letter to Ashton Forbes and potentially if you're into the Hawaii fires Maui fires could explain that for sure assured destruction would still exist and the US be right back guys I'm going to go uh make sure I wear all blue clothes and paint my roof blue would

(1:41:39) still possess a full last ditch strategic retaliation capability against the powerful Soviet super weapons even after substantial nuclear disarmament jady gerasimov Soviet foreign minister spoke spokesman confirmed as much on the Peter Jennings ABC News show Los Angeles California on October the 13th 1986 the real concern with SDI he indicated is not with its present design at all instead the Soviet concern is the US would make a great technical breakthrough and deploy new devices in space as a modification to SDI

(1:42:16) presenting an unacceptable threat to the Soviet Union jasima was almost certainly referring to the potential for us adaptation of the SDI space based lasers to electr gravitational lasers capable of destroying the Soviet Union with the high energy laser weapons stay grounded in the Laboratories and the system Hardware is not developed and ready that strategic retaliation capability is lost for that reason gorisha is adamantly insisting that the SDI defense must not be developed and tested in space it must be confined to the laboratory if gof can

(1:42:48) prevent the development and testing of the space-based high energy laser and get the Western nuclear weapons thinned out he immediately holds the decisive winning hand the moment he holds it he will most certainly use it this is where we are now Vis A the Soviets this is the background necessary to understand the full context of the present jousting between the Soviet Union and the US and involving the rest of the world in the Washington Times of August 26 1986 Soviet Chief of Staff Seri akayev warned the United States that the Soviet Union

(1:43:22) could have an unpleasant surprise response if the US deploys its SDI in space he stated if the United States deploys a shield in space does this look does this graphic look like anything chat this looks almost exactly like the signals intelligence graphic from locked Martin looks almost exactly like it if you just add some missiles and super beam weapons then you've got your locked Martin signals intelligence thing right here the Soviet Union will have several options none of what Washington would wish the

(1:43:56) Soviet Union will very quickly find a response of which the United States has no inkling as yet the leaders and people of the Free World must be made aware of these terrible Soviet time reverse way weapons and their awesome capabilities the international public must also become aware of the real Soviet threat in time reversed wave weapons clandestine viral biological warfare and electromagnetic induced biological Warfare diseases and death strong

public support in the Free World is necessary for the hard decisions the Free World

(1:44:30) government leaders have to make to counter this hidden threat finally it is absolutely essential that all persons public private and governmental become aware that the West has already been attacked both with time reverse wave weapons and biological warfare strikes the West must quickly learn to defend itself in a totally new kind of War one that is quite different from any previously fought and one that is not fought on the battlefield nuclear disarmament and true peace in the world are dreams that strongly stir the hearts

(1:45:00) of all the peoples of the Free World however let us understand that these frightful new weapons far more potent than nuclear weapons have already been gingerly Unleashed in the world prompt nuclear disarmament will only lead to the wholesale unleashing of these electr gravitational weapons against the West we must not rush blindly after the gleaming carrot of nuclear disarmament when far deadlier clubs are already brandished against us let us be fully aware of the terrible danger we all face today never in all human history has the

(1:45:38) human species been so threatened the slightest miscalculation could split the Earth or explode the nuclear arsenals of the nations of the world let us develop defenses first then negotiate disarmament and peace that are real let the Soviet Union openly revealed the extent of its frightful electr gravitational weapons deployment and testing let the nations of the world start a true disarmament process by first outlawing these frightful doomsday weapons just as bref suggested 13 years ago let us insist on destroying these

(1:46:12) new super weapons first then let us get rid of all of the nukes for our children's sake and the existence of the world we must Focus the world's attention on the real disarmament problem we must rid the world of a threat far more terrible than the mind of man has heret imagined to quote brf in [Music] 1975 okay so real quick that's really interesting because now it makes me think about the motivations of the people trying to keep this stuff hidden they're trying to keep it hidden because they want disarmament they want to get

(1:46:48) rid of it they don't want us to even know about it technology is so scary that it can wipe out entire countries it can cause earthquakes it could cause nuclear weapons to blow up um so Al krier you need to understand person people would think that you need where's the energy going to come from he already explained that as well so there's two things you need to understand about our reality one is that there's an extra Dimension that we don't perceive an underlying framework to The Matrix or a construct that we live in

(1:47:22) the second one is the we have access to what we would refer to as unlimited free energy over Unity the capability to tap into the negative entropy of the underlying framework of the universe this is where the scalar physics comes into play and the secret here is something that is two factors one is all we need to do is we need to have a counter wave to the wave that we're putting in it's an exact counter wave and then we have the ability to amplify amplify it up this is where we might not even need high energy levels

(1:47:52) in order to produce use this effect and this is where also we have potentially unlimited energy to tap into as well the underlying framework of our reality the negative entropy of our reality negative energy and energy I think the Z refers to it and when you think about these aspects and you realize that that's the true nature of our reality and that the max will equation for the B field is simply set incorrectly from zero to a now the answers to all the questions out there are solved perfectly perfectly

(1:48:22) harmonious with Maxwell's equations electrical engineering and physics that's the scary part of all of this and if you can amplify your energy levels like salvator P's high frequency gravitational wave generator says you can amplify those energy levels to a point where you could destroy an asteroid or planetoid or a planet or you could destroy a country a country is just small potatoes just keep scaling it up scale it up think of it that way yeah at this point I'm very convinced that the letter is at least partially

(1:49:01) real despite constantly being told that we live in an age of also I want to point out people can't make up all of that without some basis in reality the way that he was doing it off the cuff like that uh you would have to think if he's disinformation or lying he would have had to practice that hundreds of times the thing about lying everybody is that you get caught you get caught in your lie you get caught in the tangled web you weave of lies because once the thread start to unravel everything comes apart that's the thing about lies you

(1:49:35) can't keep them up for very long periods of time that's why when governments are lying to us they say nothing because the less they say the less you're going to have to say you're going to have to pull on them this is the reason why I am as open as I am and I go on every podcast and I stream and I post all my thoughts out there filtered for people so that people see that there's no possible way I can be lying I can be wrong but I can't be lying so same with Thomas beard in there like

(1:50:02) he's not lying I I'm sure of it the question is is he wrong is he misinterpreting some of the cues based on the science so the Soviet Union did collapse because they lost to an even more powerful weapon it's called economics remember the uh the B the first Batman movie Batman Begins they learned a new weapon economics and economics matters as well your country falls apart this is how potentially we were behind the **Russians** and then their economy fell apart and what happened United States economy took

(1:50:33) off especially under Reagan in the 80s and maybe we pulled ahead from there maybe we're ahead of everybody right now I certainly believe that the United States government is ahead of all the other countries now **Russia** may not be that far behind because you have a super weapon like this it brings back the whole Cold War situation where anybody that uses this weapon it's going to be the end of the Earth it's just game over also explains why we have the cber system and why we're looking in infrared as well we're

(1:51:00) looking for these types of detections this is why we have our neutrino detector this is why we're checking the ionosphere all the time we're looking for them utilizing the weapons

and catching on right away and then countering with them this is why UFO disclosure is being censored as well because we are trying to prevent people from realizing this stuff is possible and letting more countries have the access to it hey everyone thank you very much for that donation appreciate you brother super nice Freedom of Information there are

(1:51:33) still occasions when governments Act without our knowledge often in the name of National Security such as tests on new weapon technology like planes tanks or even missiles our next mystery concerns a strange explosion in a remote area of the Australian Outback which led one man on a 2year search for the **truth** his search took him around the globe from Washington to Tokyo and [Music] Australia I can't believe this has been out there since like 88 in 1993 the Cal of the Australian Outback was shattered by an explosion which registered 3.7 on

(1:52:12) the RoR scale geologist Harry Mason had been working in the region for nearly 30 years he decided to investigate I began to research this but I had no idea where this was going to go I mean I was researching Fireball and explosion an earthquake which we thought was a metart impact this has taken me right around the world it's gone into a whole new universe of weapon systems and and skull duggery and Espionage and uh I'm afraid the data is tending more and more towards these horrific new weapons of war yeah and for the person in the chat

(1:52:49) this old television feels less brain Rotty yeah honestly television's gotten so terrible recently people used to at least do investigative journalism they don't even do that anymore it's just all propaganda now which unfortunately most people on the planet don't know exist and I think it's high time people did know they exist So what had happened earthquakes are non-existent in this part of the golden Fields it hasn't had any in Aboriginal memory or in seismic recorder memory since 1900 so

(1:53:23) got pretty excited about this this was going to be a fantastic thing to research I decided that what was necessary was to get out there in the field to hunt down any eyewitnesses and we're talking a very large area so that was not easy um but I finally got lucky and located a number of Aboriginal Witnesses who had um seen this whole thing from start to finish all right there one what I saw was a sort of a light coming from the West straight over the top of us there a whistling noise with it just a big bang and lit everything

(1:54:05) up most of them all thought it was the end of the world what's going on we had a b nice re enactment and that sort of shook we had eyewitness reports of a fireball flying through the sky flash of light and a massive Earth tremor now it seemed pretty reasonable that a very large chunk of rock had flown in from space and impacted on the ground and that this had caused the earthquake and that was the end of the story from combining all the evidence Harry pinpointed the location of the explosion to a remote sheep station where he found

(1:54:39) another witness one night I was laying in bed and next minute this thing started coming over from the south and it's with the Grand and made a bank and this leave the lot right up in the sky and stayed there for hours stayed there for hours now the Clincher really is kelman's evidence for when this thing ended um it turned off as if someone threw a light switch

one moment it was there the next moment it wasn't and you're starting to really wonder um this is one hell of a strange kind of meteorite if it was a meteorite at all

(1:55:14) um one way of solving this argument was to actually go out there and find an impact crater yeah BBC is notated there should have been a crater of the order of about 100 m in diameter and we should have had a significant blast damage area and we couldn't find it the area Harry was looking into was banan station this remote sheep station had belonged to the OM Shin Rio a Japanese religious cult held responsible for the terrorist nerve gas attack in the Tokyo subway in 1995 which killed 12 people and injured

(1:55:56) thousands that's dark banan station had been purchased by the Japanese Alm cult um then I heard how the Alm had attempted to purchase nuclear weapons from the **Russians** and were thought to have attempted to make their own well we started to put all this together and we didn't like what we were seeing in fact we seriously began to wonder if they hadn't detonated a small nuclear device somewhere on banan station there'd have to be a big but sufficient evidence to suggest someone better have a look at this quick

(1:56:27) because maybe that's what we're dealing with is that the US Senate there sort of a harsh silence at the other end I knew I'd hit something it was like oh Christ please send everything you've got right now the US Senate had been investigating the 's activities ever since the Tokyo subway attack what we know about the oh indicates that they could if they put their mind to it and their efforts to it could develop weapons of mass destruction the significance of the Tokyo gas attack was that this was no

(1:57:00) longer a hypothetical threat the omino was the first group that used chemical weapons on an innocent civilian population the genie was finally out of the bottle they killed people and they were trying to kill hundreds of thousands of people in October 95 we were contacted by an individual who brought to our attention the fact that there was a mysterious explosion that occurred at or near where the M had operated normally my reaction to an incident like this would have been deep skepticism but because the OM did things that a year or

(1:57:41) two before I would have thought was total fiction uh uh I had to take it seriously the Senate hired top seismologists to investigate Harry's report we were able to determine that it wasn't a nuclear weapons test based on the signature the characteristics of the seismic signal and the signature seemed to be more similar to that of an earthquake rather than that of an explosion the problem with that is we don't normally associate earthquakes with objects flying through the sky loud noises and bright flashes of light that

(1:58:12) light up the night after analyzing the satellite images well we haven't found any Smoking Gun there's no obvious crater there with a smoldering meteorite so if the eyewitness accounts are credible and it's not a meteorite this from the mid 90s and they had satellite imagery of the location the exact time when supposed a meteorite might have hit it but we're supposed to believe that they couldn't see an airplane they couldn't see an airplane that was flying Rogue for 8 hours in 2014 20 years later come on get out of

(1:58:42) here with this you can make SCA a laser laser scaler wave using Crystal fuse magnesium just like bismuth magnesium on alien scientist yeah I believe that died Dazzle I believe it impact and it's not an earthquake then what is it the OM were interested in some very strange and bizarre Weaponry some of which was science fiction uh but with the omm the difficulty was that science fiction and reality were very much mixed that made him so interesting and also so scary the senate had discovered that the OM were interested in the work of a

(1:59:21) scientific pioneer called Tesla Tesla Tesla you say okay all right no no no I'm I'm I'm with you I'm with you instant red you because as it happens I'm a bit of a Tesla BFF I have a lot of Tesla books and books about Tesla and I remember somewhere in there there was some data about creating earthquakes Tesla had developed a theory although not proven of uh making earthquake uh uh machines or weapons that would cause earthquakes through alternating waves and currents what he's saying is I can flick

(2:00:02) a switch and I can create an explosion anywhere on the other side of the planet which you can't defend against and that explosion is of the same order of magnitude as a nuclear blast could this have been an intentionally manufactured earthquake um I don't know of any way of remotely triggering earthquakes there is certainly no credible scientific or or geophysical mechanism for remotely generating earthquakes a scenario like that would still be science fiction word two years after he started his investigation Harry still feels he

(2:00:45) hasn't found the answer I'm quite prepared to be wrong um let's let's look at the various scenarios that may be involved here meteorite impact problem no crater earthquake fine but there's a problem how do we explain the moving Fireball and the huge explosion I'm the only person who's actually taken the trouble to go out to banju interview the witnesses and gather the evidence and I am convinced there something far more Sinister has happened out there and is happening in the Australian

(2:01:18) out these are the only traces left of the 's occupation of andan station their leaders are now on trial but in spite of this John Soco believes that the mysterious events in Australia might signal the nature of terrorism of the future the omin Rio itself is no longer a threat the Japanese authorities have effectively eliminated that threat by arresting hundreds of individuals seizing their assets and putting on trial all of their major uh uh leaders uh what still is a threat is an Mike group that could be anywhere could be in

(2:01:52) England it could be in Australia it could be in the United States and it may not be led by a semiblind Buddhist uh accupuncturist uh it could be anyone who could do it because now weapons of mass destruction can be made by an individual in their bathtub and can be used and so the motive of individuals and the uh uh the potential for their use is out there yeah so I think they're just kind of talking about directed energy weapons there and that kind of capability although it is kind of weird you would see something in the sky I feel like I

(2:02:34) wouldn't see something in the sky if that was the case but who knows 1977 Israel's secret weapon okay well let's not get anti-semitic here I don't want to get canceled tonight I'll

let you guys read that I'm looking for a video right now unusual rings on radar screen become subject of speculation okay what was

(2:03:38) that what the hell was that well that's weird that's year 2000 huh you see that up there weird I've got a lot of post guys so it's just going to show weird Rings here now well this is pretty cool um man Thomas beard made this and there's never got out or something pretty bizarre

(2:04:53) how come I don't hear anything that was Greg gutfield though us weapon test caused Haiti earthquake there's a lot of people saying the same thing though right pretty weird okay I'm looking for this video it' be nice if we had some sound here is that a cat between some bread it's messed up okay well I don't know if this is it cuz this kind of weird but okay I'm going to let it play for like another 30 seconds if nothing really happens I'm going to close out of this video that was interesting though

(2:05:50) chat really interesting [Music] okay quick cartoons I do too though what's wrong with that that's true uh bill doesn't it really hurt his anti you know he has a a big heavy anti- us Crusade and when he goes off the deep end like this it hurts it he must know that well his his he he controls the media so it's not just him saying that it is tablets wall after wall of clever headlines I can't repeat them because they're in Spanish they don't make any sense to me all talking about our earthquake machine and perhaps

(2:06:45) the control of the moon like look he'll say it and then the media will regurgitate it Greg and repetition repetition fin the people believe about our earthquake and then we sell them one I love the earthquake machine I saw on QVC last night half off uh Ron you have a comment yeah I Bill he just use restaurant Spanish I'd love to hear it in restaurant Spanish you know is that sort of Spanglish Mino I have no idea what you're talking about so I'm gonna ask P one last question about this uh restaurant

(2:07:17) Spanish I don't even get it all right uh p is it scary that this guy runs a country or I mean the the thing is we don't take him seriously right well we don't but what I think what's scary is that anybody else does I mean the United Nations lets him go on about smelling the sulfur from President Bush and blah blah blah you know it's it's disturbing that he is respected as a world leader yeah but byy electric cars I'm telling you we get 10% of our oil from Venezuela that's why we're not a little harder on

(2:07:45) the back he is your you know what it is why when I lived in the suburbs you always had a crazy neighbor generally harmless until he wandered over to your lawn with a rake without his pants on but you couldn't do anything about it if he did something about it people thought you were bad for you know either calling the police or whatever like Chavez is your crazy demented neighbor who shows up on holding a rake without his pants on absolutely he in charge of a country well shave shavez wears his red shirts all the time because he's Captain

(2:08:14) Obvious and wants to show us all that he's a communist my crazy neighbor wore the

red shirts because he wanted to hide the blood oh that was always very scary for us I bet it was from a dictator uh Chavez says us weapon caused hati Quake Greg you think Chavez is crazy and pattyanne you for some bizarre reason think that seismologists who speak of these so-called tectonic plates are telling you the truth even though I'm guessing you've never seen such a plate Kimberly appar you buy D Danny Glover's uh no no

(2:08:42) no Kimberly you think Chavez is a paranoid schizophrenic apparently none of you are familiar with the harp project uh that's the high frequency active oral auroral res Arch program that's run out of Alaska supposedly to study ways to improve satellite Communications but those of us in the know are aware that it's really being used for energy weapons weather control earthquake induction and even mind control Greg yes that's right mind control I agree with you Andy somebody pass somebody pass meds bill is

(2:09:11) wondering how he can sign up for this oral research project and and the thing is the actual Target was probably Cuba but these things aren't perfected yet oh okay now we learned bottom line is nuts and someone else is the bottom line is you're all sheep and you just believe that the government doesn't do things like this like cause earthquakes and and control your mind I love that ending chat that was great wow the go you're all sheep and you just don't believe that the government does things like this um yeah

(2:09:44) those women were idiots so wow Greg gutfield so when Greg gutfield was in my evidence review stream or uh space with uh kim.com I'm guessing he just thought it was all [redacted] huh God man mainstream media is so stupid if you're part of mainstream media I'm sorry but you're a [redacted] there's really no other way around it even news nation has no idea what we're dealing with here this is just so far above what everyone in mainstream media thinks so last two nights we've gone over Thomas Bearden we've explained how

(2:10:19) scalar physics Works we've explained why the equations are wrong in maxell's equations we've explained the very simple correction all you have to do is change one zero to an A and next thing you know you can create scalar physics we've explained what scalar physics is macroscopic Phase conjugation having a wave hit a uh a mirror and then get bounced directly back so that it counteracts the wave that came at it and now you can have a scalar potential and if you amplify that potential now you can create a directed

(2:10:50) energy weapon that can manipulate SpaceTime itself presumably if there are aliens out there they have figured this out and they've incorporated into their craft which is why we see the Magnesium bismuth zinc layer that would have potentially have to use some Advanced material processing to produce because as we saw from Jeremy uh Alien scientist's post today he's been trying to develop a composite and when he takes the magnesium and he takes the molten bismuth and pours it on there just rolls right off of it doesn't even

(2:11:23) stick so you'd have to somehow fuse it together potentially at the atomic layer this is a meta material pretty incredible anyway bar ramu yeah so for the haters as well like whether or not you believe in the science really doesn't matter doesn't matter uh it's like saying that you

think gravity is stupid and that people don't understand how gravity works well gravity is pretty obvious you know whether or not whatever you call this that's gravity you just experienced it scalar physics is

(2:12:00) essentially the same thing it's taking that same gravitational force and manipulating it being able to create our own gravity locally as opposed to what we experience on the Earth all the time uh so yeah I'm all in on this I'm all in on it I think that Bearden is knows his physics no question whether or not he's right about all the specific scenarios doesn't really matter whether or not Hugo Chavez was right about uh the earthquake being caused naturally or not doesn't really matter all that matters

(2:12:30) is what we can do and if we can manipulate SpaceTime which I see no reason why we shouldn't be able to from a logical perspective irregardless of the scal of physics thing and I know irregardless is not a word um so this is the part where if you're the kind of CNN brain sheep people and you don't realize what we've been doing you think we've been doing doing nothing for 60 years then of course you're going to think that everybody else is crazy and the response that everybody else is going to

(2:12:57) say to you is that you're the crazy one you're the one not thinking logically you're the one with no understanding of actual science and this is why eventually this is going to come out I don't know how long it's going to take but eventually at some point people will figure out that yes we can manipulate gravity uh we can create a wormhole we can do whatever we did to MH370 and uh yeah the people that are going to look dumb are going to be the ones that were sitting there like sheep the way

(2:13:27) it'll play out though is the same way the Iraq War played out where you had all these people were saying oh yeah of course sudam has weapons of mass destruction you're an idiot for not believing the media what they tell you and then after it turns out it was all [REDACTED] you can't find a single supporter anywhere same bullshit's going to happen here the moment the media tells the Sheep the Sheep are going to go oh I always knew that I was on top of it h what do you mean I said it couldn't be possible I just I didn't I didn't

(2:13:54) hear it from anybody reputable so that's the only reason why I wouldn't believe it yet like it's going to happen it always happens the same way okay I'm going to play you guys out tonight thank you for watching we're going to play you out with this video we've played it before uh I think it's a good time to play it again it is the objects for touch free in it's kind of long but we're going to play it anyway here we go guys you'll you'll recognize it if you've been around for a while if not you will

(2:14:25) enjoy it print video you can see the interference patterns created by the sound waves pure geometry a new device called Levy print uses sound waves to levitate and manipulate objects for touchfree building resonance frequencies everything vibrates have you ever like if we had a an electric razor we plugged it in turned it on set it on this table it's going to move around isn't it you ever seen that yeah that's the beginning of the concept because it's vibrating

everything vibrates at a frequency and if you know that

(2:14:59) frequency you can control things Lev print is a system that can levitate manipulate different objects to assemble complex PES this is a generator that has no moving Parts it's all based on Geometry of course these objects could be small spheres but also H droplets of glue things that we can levitate move and rotate sticks the levitation is created by sound waves that have a frequency approximately double the highest frequency that we humans can [Music] [Music] hear [Music] a

(2:16:23) [Music] he [Music] provide a new novel matter to energy and energy to matter propulsion device for water land air and space travel did you see Elon Musk wonder is he essentially sending a shot off the bow to people who he thinks are going after him which is that I have knowledge of something and a limitless energy device this may sound corny it does but love is the answer it is the [Music]

(2:17:50) answer [Music] hey [Music] [Music] he [Music]

(2:19:09) there are some ideas about having space like so so you can only move at the speed of light through through space but if you can make space itself move that that that's like that's Waring space um space is is capable of moving faster than the speed of light right uh like the universe in the Big Bang the universe expanded at much much more than the speed of light by a lot yeah um so um but the if this is possible the the amount of energy required to Wolf space is so gigantic it's B of provide a new novel

(2:19:55) matter to energy for

(01:59) 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and

(03:04) says now I am become death the destroyer of worlds welcome everybody tonight heh 370x hopefully everybody's doing well tonight um hello benator hello Amanda hello weona mystical Wonderland His Highness uh Lang I always forgot how to say name uh Joe how's it

going Tass Jack Trad and JL yeah and salty decimator re welcome okay so uh real quick uh this stream's going to be a little bit different we're going to play this video there's several videos that we're going to go through the next couple days related to Thomas Bearden

(03:54) and this is the first one turn on the volume where he talks about scalar physics and the idea of weather manipulation it's a really interesting one it's about an hour long we're going to dig into it uh I will commentate at certain points um but uh yeah I think that without further ado we're going to jump right on in and I'm going to end up full screening this as well uh so I will you're not going to see the chat for most of this until I switch over to The View as well so here we go oh so real quick Thomas Bearden is

(04:40) Lieutenant Colonel who uh was a scientist and engineer I believe and this video is from 1985 so scalar physics goes way back 40 years uh really interesting science very consistent with the stuff that we've been pushing out there I hope you guys enjoy this video there's a couple more that we'll look at the next few days here subject for this evening is Soviet weather engineering over North America which they have been doing since the beginning of 1966 1967 that was the first shot our attempt at influencing the

(05:21) weather directly over the United States they then lapsed into a lot of not influencing it for a period of years and in 1983 particularly really opened up the big guns after having energized the infamous woodpecker signals the so-called over the rising Radars and the communication ban in the mid 1970s real quick I'm I'm going to pull the chat over to the right so I can read you guys comments while we're watching so if you guys have any information related to this that you would like to share uh where's my video

(06:05) cam that you think is relevant feel free to post it in the chat I will bring it up as we're going through this and welcome the people who are just joining here as well if you've already seen this this is a video that was posted out there uh a few days ago but it's it's think it's been on the internet for a while I'm not sure exactly when it appeared and we're going to just play it in its entirety for the most part as you just saw from that introduction uh the basis for the video is the idea that the

(06:31) Soviets uh the **Russians** so to speak can uh manipulate weather through electromagnetic effects um I think that when we've been looking at stuff recently uh this would be like why we're potentially looking at the ionosphere one thing that was posted today that is relevant to this as well is this idea that uh we're this uh Eclipse that's coming up that supposedly like this eclipse is coming up I think NASA is sending some Jets out into or some Rockets into space or into atmosphere and supposedly they're going

(07:02) to be measuring like the effects of the eclipse pretty weird stuff guys okay here we go the first thing I'm going to have to tell you is that there are three kinds of electromagnetics and only one is being used today in the Western World the first kind is the kind we all study as electrical engineers and even US nuclear Engineers study a little bit of it and it's classical electromagnetics the foundations of that go back fact before the Civil War it's quite old and

there are serious flaws and many eras in

(07:35) it as is quite well known in a few circles the second kind first of all let me characterize the first kind of electromagnetics everything is due to the force fields the so-called electric field magnetic field if that reduces to zero in an area you don't have any more electromagnetics going on in there the potentials themselves are considered to be mathematical figments now I'm going to be giving you a little background I'm going real fast through it but you'll need this to understand what I'm talking about in the weather

(08:07) engineering and understand it so please bear with me during the first part we're going to have a little uh quick sledding the second kind of electromagnetics came from quantum mechanics and it's exactly opposed the primary and real things are the potentials and the force fields so-called are totally derived DED by differentiating operations so you see a flip-flop of 180° about how the two approaches regard electromagnetics further in quantum mechanics when the electric field and the magnetic field reduced to zero in an area you still may

(08:48) have the potentials and if these potentials which are the real things going on interfere with each other you can have real effects still produced in in charged part itical systems real physical systems as a matter of fact in 1959 a classic paper by Aronoff and bomb in physical review pointed this out very strongly and since then part of that has come to be called the bomb Aronoff effect or sometimes the Aronoff bomb effect it had been in physics 30 years at that point uh pointed out by Richard Fineman the Nobel Prize winner and ignored

(09:31) it has continued to be ignored and the nearly 30 years since 1959 when it was strongly pointed out by bomb and aof what we are saying ladies and gentlemen is if we can make this effect exist in the Big World they think it it exists only in the micro world we can get action at a distance that's no longer a dirty word and we can get action even when there's no ordinary electromagnetic going on and I'm going to show you how to do that and in the process I'm going to show you how to change the mass and inertia of an

(10:07) object affect its rate of flow through time guys holy smokes do you guys just hear what he just said aarin Hoff bomb effect Fineman mentioned that we can uh manipulate the potential there wait I'm gonna go back to that real quick guys just I I want to listen to this one more time it has continued to be ignored in the nearly 30 years since 1959 when it was strongly pointed out by bom and aronov what we are saying ladies and gentlemen is if we can make this effect exist in the Big World they think it it exists only in the micro

(10:49) world we can get action at a distance that's no longer a dirty word and we can get action even when there's no ordinary electromagnetics going on and I'm going show you how to do that I'm going to show you action at a distance and inertial mass reduction guys I mean that's a bingo you have to change the mass and inertia of an object affect its rate of flow through time affect the gravitational field and so forth affect the gravitational field and so forth so surprised we didn't look at Thomas Bearden earlier the science

(11:27) goes back at least several decades this point now um obviously it's been known out there the question is how far Advanced have we come with this information here we go now the Third Kind of electromagnetics is the mechanism by means of which you do those things in other words you reduce the ordinary electromagnetics to zero electric field and magnetic field deliberately you then you do this by making a zero system you oppose the vectors so that they sum to zero but they are still there in the substructure

(12:00) hey when we studied electromagnetics they forgot to tell us that a zero Vector was not nothing it can be a system of very active forces Each of which is time varying and yet the system will not be detectable by any ordinary instrument it turned out that the unorthodox scientific community in the United States had been using this for some years but not expressing it quite that succinctly for example the h okay so what he's saying here is that we can zero out the vector now why is this important because this speaks to

(12:35) Maxwell's equations the B field equation for Maxwell so the B field equation times the del operator SC Academia would tell you equals zero because it's unmeasurable this is what he's saying he's saying that it's not nothing when you do that if you change the B the B field equation times the del operator from 0 equals to A now you have the capability to do exactly what th Bearden is mentioning Thomas Bearden I believe was the real deal everything he's going to be saying in this video is

(13:04) consistent with the stuff that we have been investigating um this means that we can manipulate gravity in short so let's learn how to do it from him right now patters what we are saying now is that if we do this if we make deliberate zeros but we make them with vectors which are still there and active we have a new kind of electromagnetics a third kind and I have dubbed that scalar electromagnetics and I hope the name the reason for the name will become clear a little later I won't bother to read that thing

(13:43) we simply have a zero Vector envelope but it's the substructure that we have placed within a zero that is fantastic in terms of modern physics we have reached into the virtual world what happens before physical change occurs and we now can deliberately engineer it let me say that again in case it went by you with this simple mechanism with few coils and transistors and so forth by making deliberate zeros we can deliberately engineer the straight injure equation and we can deliberately affect the probabilities of

(14:24) quantum mechanics the hidden variable Theory now becomes directly engineerable and we can deliberately engineer quantum mechanics and schinger equations and the probabilities what does that sound like to you chat to me that sounds like the double slit experiment to me this sounds like rebuilding the wave function now as we listen to this uh you guys have been following along for a while keep in mind all the scientists and Engineers that we've been talking to think about the MH370 investigation the things that I've brought up related to

(14:59) the double slit experiment to uh the wave function rebuilding from the delayed Choice Quantum eraser experiment everything is starting to come together this is the reason why the

scientists and Engineers have wanted to talk to us is because I had s sat out there and said we need to understand quantum mechanics we need to understand e r equals epr the idea of what a wormhole really means bending gravity super conductivity and AI all the implications of what I have said what had been statistical before now becomes at least partly

(15:38) deterministic I'm going to jump now a whole bunch of years in 1921 at the instigation or recommendation of Albert Einstein a man by the name of Kusa succeeded published a paper where he had successfully United Electrical field and gravitational field in a common unified theory 1921 to do that he had add another physical Dimension and a very strange thing emerged chat he added another physical Dimension guys what have I been saying on every podcast adding another dimension space is not empty we can manipulate gravity all of this goes back

(16:18) to 1921 is when the first unification Theory could have potentially already been out there I think the unification theory has been solved multiple times this could be over a hundred years old absolutely incredible there's really only one field in nature if you're looking at that hyperspace it is the five-dimensional gravitational field and it intersects our world in two things one thing we call the electromagnetic field and the other thing we call the gravitational field in the general sense general relativity the

(16:55) ability to curve and warp and twist SpaceTime itself by the way the electromagnetics just turned out to be the fifth dimensional aspect of that so we added one more space Dimension which we do not see Klein a few years later explained what happened to that Dimension it's really rolled up around every little point in our space quite nice mathematically and it's real by the way but this the theory languished for many years until really about the early to mid 70s when the new symmetries in the Forefront of physics and particle

(17:34) physics began to see that with that type of geometry you could get in all these weird particles and you could get in all the forces you really could begin to approach a unified theory of all forces of nature and the physicist became very excited the modern Theory a variant of that theory kusine geometry has 11 Dimensions 10 space one time all but the three ordinary space dimensions we see are considered to be rolled up in little circles around every point but with that thing and super gravity you can get in

(18:10) all of the particles and everything we know in physics in a single unified theory and the physicist are excited that's the hottest thing in physics they just haven't discovered yet that it is directly engineerable in the simplest fashion you ever dreamed of I'm going to give you a very simple thing now to let you understand what I'm talking about this is schematic so don't think of the thing as being spatially separated between the two little circles on the on the plane the plane represents

(18:45) our Ordinary World the hand represents an extra Dimension so it's that fifth dimensional uh geometry that Kusa came up with in 1921 the hand itself represents that fifth dimensional gravitational field which intersects our world in two Fashions one electromagnetic shown by the

forefinger extended that intersection and the other by the thumb which is our gravitational field as we see it in the little intersections and both of the intersections by the way at the same point they are not spatially separated normally we don't make Vector

(19:23) zeros nobody ever trained us to do that in electromagnetics there is not a single Tech book either physics or electromagnetics in the United States of America or in the western world that dwells upon what you do when you deliberately make such Vector zeros I am almost willing to state that probably not a single Orthodox physicist has made such an experiment if they are it will be only one of two of them but notice what we do if we deliberately zero the electromagnetic intersection which is what we're doing

(20:04) when we make the zero but we control what goes into the zero we can put energy in there or we can take the energy out when we do that it's coming in and out of the thumb as gravitational energy directly as curvature of SpaceTime now what have we said we have said that rigorously with that simple mechanism I can provide the direct conversion of electromagnetic energy into gravitational field energy or vice versa now if you want to do any gravity gentlemen there it is and the unorthodox researchers have been doing anti-gravity

(20:45) a little bit in this country for a period of years like levitating 65 pounds like plywood which is not magnetic field so with a very simple thing and and look so right there he mentioned um Zero Point Energy as well so this is the idea that if you zero out the the vector potentials now you can put energy into it and take energy out of it and if there's no Vector potential for the electric and the magnetic fields then you are tapping into the gravitational potential that was huge I had just now figured that out so this is actually

(21:25) where for sure we are combining the vector we are using the scalar physics which is the uh Electro and magnetic potentials to manipulate gravity and this is where we're combining now with the zero point idea as well so there are two things exactly as I was saying is that in order for this to be possible we simply need an extra Dimension and we need to understand that space is not empty in general yeah and real quick uh I have I I actually Florence the Changi just messaged me so for dni yes I know Florence the French uh author she is uh

(21:59) very intelligent okay let's keep going looking at it through Modern Eyes and adding that single thing we can now use electromagnetics to make gravitational field energy in the general sense or vice versa we can warp engineer and twist SpaceTime at will as we wish in whatever pattern we wish and it's been in the the literature if you cared to notice since 1921 I won't dwell on this I will simply state that all that a mass is anyway a a particle of mass is in fact a trap scal of resonance I'm going to give you a

(22:46) quick once over about scal of resonance we'll go on take a normal resonance system with a wave moving back and forth in a cavity so that it's in phase and coherent suppose that there were two waves moving along together but the second wave the Electric magnetic field were 180 out and the first one that's a scaler resonance system your normal instrument won't even see it we can build Special detectors in have that will see it that's all the mass is but you

can make a current of that kind of resonance

(23:16) and you can pipe that current down a wire or you can add to that resonance in the system or you can take it so I want to play that again I don't I hope I don't know if he goes back to it but he mentioned resonance so this part right here now **I want you** guys to think back to the paper that I posted by Dave Rossi where he talked about oscillations and resonance that's required and uh having the the waves make love instead of making war and fighting the difference between an explosion and these Quantum effects that

(23:53) we see I'm just going to go back right here as well the resonant cavity as well do you guys know what what the resonant cavity reminds you of does anyone in the chat what does the resonant cavity remind you of don't worry I'm going to show you guys what does the resonant hello the resonant cavities doesn't this say these are your resonant cavities right here coupled resonant cavities coherent matter wave Beam by locked Martin that is a bingo folks that is a straight up Bingo this is a scalar wave

(24:35) gravitational wave patent essentially that we're looking at here in the background locki Martin those are locki Martin orbs locki Martin can manipulate gravity this is 10 microns across that they have created the capability to to uh manipulate gravity through scalar potential through scalar physics the world has no idea it's right there chat right there coupled resonant cavities cavity is resonant to either to either the wave individually wave and anti-wave uh superose and move along together back and

(25:14) forth but the second wave the Electric magnetic field were 180 out and the first one that's a scalar resonance system your normal instrument won't even see it we can build Special detectors in have that will see it that's all mass is but you can make a current of that kind of resonance and you can pipe that current down a wire or you can add to that resonance in the system or you can take it away what did I say I said you can pump the mass and inertia directly into an object and increase it or you can pump it out of there and

(25:49) if you pump all of it out of there it'll dematerialize on you and the statements I am making are based in part on experimental evidence in the laboratory private proprietary laboratory experimental evidence in the laboratory chat experimental evidence you know who else told us about experimental evidence in the laboratory Dave Rossy when we went on Tim pool this has been figured out this is in the Laboratories this is happening in locky Martin Laboratories probably also happening in north of Grumman all of

(26:22) them I mean it's the same Engineers that just go around and yes yatsi this is better than and bingo you guys are correct so that was that's huge guys here we go now the scalar wave that is the wave that has a zero resultant for the electric field and a zero resultant for the magnetic field but it's composed of components which are waving and and moving and communicating and everything else is the universal wave in the universe totally undiscovered as yet in Western science you can make it for 10 cents on the laboratory bench you can

(27:01) convert a radar very simply to be a Scala radar for example these waves come from and go to the nucleus they go right through the Faraday cage they do not interact with the electrons unless you have the most extreme nonlinear situation you've ever heard of they don't move electrons and you can go right through any Faraday cage you can go right through the Earth for example and you can go through the ocean with megahertz signals using these techniques as we sit here talking the Soviet Union is communicating

(27:33) worldwide uh as of 10 days ago they were communicating on well over 37 frequencies in their command and control systems for the large weapon systems they built for strategic weapons in this fashion I have a personal friend that can deliver on the Shelf the communication system prototype already built and tested that will prove that statement and I challenge anybody in the United States outside of him at the present time to measure that communication system these are nuclear waves they communicate between nuclei and if you put in that

(28:12) substructure the correct pattern you can go in and transmute elements in modern physics to make a proton a neutron or vice versa all you got to do is flip one quark and that is simply a pattern in the substructure a man was nominated for the Nobel Prize in 1977 for proving that biological systems transmute elements even though they only have volts and microvolts to use and I bet you didn't even know that so also what did he just drop there he also just dropped a connection to Bob Greener right there low energy nuclear

(28:46) reactions transmutation and Alchemy in terms of what Bob Greener's been looking at into cold fusion and the thunderstorm generator same exact idea that he just dropped uh real quick someone in the chat asked about um Dan Winter uh I think that Dan Winter certainly knows some some stuff uh absolutely a very intelligent person um but uh I tried to avoid some of the esoteric uh elements of stuff and this is what I've said guys and this is just my personal opinion on stuff I think you guys should listen to everybody who's

(29:14) out there but uh you know we should TR in my opinion we should not try to connect everything together uh because when we do that we lose a lot of people out there this is already enough for people to try to wrap their brains around I think the idea of scale of physics is enough the idea that we can manipulate gravity then we can work out uh how everything in the whole universe is connected together armstrong thank you very much uh armstrong thank you very much for the donation appreciate it critical hit love you here we go his name was Kon

(29:46) today is dead all the nuclei of the universe are in constant communication much of vacuum SpaceTime is made up of these Scala waves between the nuclei throughout the Universe another thing that came out of the general relativistic wave these are General relativistic waves special relativity does not apply we are always in a curved SpaceTime when we're using them uh part of the thing that came out of the theory is you are no longer confined to the speed of light at all if you're clever you can get almost any

(30:24) velocity you want to whether it's slower in speed of light or faster Tesla for example okay guys he just said that we every point in the universe is connected by scalar waves he just

said that we can go faster than the speed of light uh what more do you really need I mean there's absolute proof right there the videos uh and what we see is possible uh it's incredible mean it's the year 2024 right now and that this was almost 40 years ago and no one took this seriously that the the textbooks have been written

(30:55) in a way where people don't even know about it Johnny party I'm sorry you're depressed hopefully this science will cheer you up here we go also I think he he's really explained a unification Theory too of general relativity said that this uh does not worry about special relativity it's just general relativity who was using these kinds of waves shortly after 1900 and keeping it a deep dark secret Tesla reported speeds off 50 times the speed of light I have personally participated in an experiment which

(31:23) kicked out an electromagnetic wave of this type at eight times the speed of light if you'll check the **Russian** literature and I'll give you the references if you're interested the speed of light is variable anyway it's been known for 80 years by the astronomers that the speed of light in a hard vacuum on the surface of the Earth is a little faster than the speed of light in the deep space away from the charged particles so these are nuclear waves they are not electromagnetic waves that interact with the electron shells they

(31:54) electron they interact with the nuclei and with the internal components of the protein and the neutron okay my Martini is ready to go the speed of light is not a constant he just said the speed of light is a variable that he experimentally uh witnessed speeds uh uh eight times the speed of light so why is that important because we have the permittivity of free space itself so like Dave Rosy pointed out on Tim P if you were to shoot a laser through this V this glass here of my Martini you're going to see a

(32:32) refraction of the light because the permittivity is going to change same thing is true of free space free space is not empty remember so the reason why it appears though the speed of light is constant is because we are only witnessing it as it goes through space all the time around us we don't have anything else to compare it to we can't compare it to the speed of light through the ether for example this is very similar to the concept of time dilation time dilation it appears as though time moves fluidly and consistently and and

(33:02) linearly because we're all on the surface of the Earth but when we go into outer space we realize oh no time doesn't flow consistently similar idea to the idea of the speed of light this is honestly another yatsi moment so I'm just going to go ahead and say it yatsi let's keep going what I have the audacity to say to you is that we now have a tool that we do not have to talk about nuclear physics we can go in there and engineer the nucleus and transmutation is only one of the things that can be

(33:36) done transm El again the basis for this has been well established in the literature since 1921 with these waves you see most of our ideas of the macro world are given to us by the ordinary Photon interaction which is almost always in interaction with the electron shells this is a different order of reality we're really dealing now in hyperspaces at least 11 dimensions and

the world looks quite different indeed and physical reality in this kind of physics looks quite different indeed from the ideas we have in our head from classical

(34:15) electromagnetics and classical physics and the normal micro world just as quantum mechanics was a drastic change to classical mechanics this is an even further Dr Mac microscopically Mass appears fluid and changeable who is the person in the chat that just mentioned the idea that uh really mass and matter is oscillations it's waves everything is waves um so yeah if we can manipulate Mass if mass is fluid and changeable this is how you can have U macroscopic phase conjugation because if mass is just a wave now we can do the same thing

(34:52) that we would do to Optical phase conjugation essentially we can create a hologram but using actual mass solid state objects this is what salvator Pas was talking about when I asked him can we manipulate and make a solid state object achieve you know a superconductive state not just plasmas not just light can we achieve uh a coherent um coherence amongst the waveform very interesting change to Quantum Mechanics because it makes what had been statistical now deterministic and engineerable I'm an ER I don't want

(35:29) to play statistics I want to make models and I want to make the sucker work the great Cosmic engines of the universe do not operate with the residues of the differential operators making the force field that's the garbage that's thrown out the great Cosmic engines of the universe operate inside Vector zero systems that includes all the nuclei and the universe and everything inside them that modern physics has found out about okay this kind of wave can be modeled as a longitudinal wave I won't go into that whole treatment I'll just

(36:09) say that whereas you model the normal wave as a transverse wave you model this one as a longitudinal wave and indeed when you interfere this wave you break up the coherence of the substructure they now no longer sum to zero and guess what that gives you it gives you a non-zero Vector in the E field and the B field out there real energy now appears at a distance out there from a two transmitters or two wave projectors and yet what's in the middle is not energy flow in the normal sense that we transmit an ordinary

(36:40) electromagnetic wave it's really an artificial potential the closest thing we have to calling it is an electrostatic wave a more accurate description is it is a direct wave in the curvature of space time itself it's a general relativistic wave or a gravitational wave so if we have two projectors and they might be two modified radar antenna and we intersect them at a distance we can produce energy at a distance and that energy arises in the SpaceTime of that intersection Zone it doesn't matter if that's inside a mountain or inside a

(37:13) missile or inside an airplane inside can you imagine using three projectors three let's say orbs and having three orbs do the same exact effect to have the vector energy Zone be the plane itself this is why they're mapping the the plane this is why they're mapping the plane this diagram right here this zone right here is the area around the plane spherically why are they mapping the plane spherically this is why you're looking at it right there human body wow I have given you now the secret of how to build Tesla's

(37:44) vaed death rate to mow down people by the thousands which you can do with that device right there and you can modify ordinary Radars to do that it has another very nice feature in modern physics SpaceTime has a very high charge very high potential they call it a pseudo potential if I lower the potential of my projectors below zero in other words I make negative potentials and pretty strong negative what happens in the intersection zone is not the appearance of energy but The Disappearance of energy when I bend SpaceTime if I bend

(38:21) it in one fashion the local region looks like a source it looks like it's producing energy if I been it the other way it looks like a sink it looks like energy holy crap chat holy crap I get it I get what he's talking about what Dave was talking about with fighting they're bending the energy around they're bending space time around the the local area this is why it's an endothermic event they're bending around the endothermic event right there let's listen to that again holy crap I'm going to go back like 20

(38:56) seconds can't really go let's go back like there below zero in other words I make negative potentials I'm pretty so he's making negative Vector so negative potentials you're basically you are ripping through through the fabric of space and time strong negative you can suck the energy section zone is not the appearance of energy but The Disappearance of energy when I bend SpaceTime if I bend it in one fashion the local region looks like a source it looks like it's producing energy if I

(39:26) bend it the other way it looks like a sink it looks like energy is disappearing this is real this is general relativity now conservation of energy law and special relativity has gone out the window as is well known in physics in a local gen General relativistic system you do not have to conserve energy at all don't cross the what really happens is I either put the energy in here and get it out there or I take it out from there and I get it back here and I better dump it or I'll burn out my projectors well it's you make a

(39:54) dump and you simply transform it in the other mode and switch it over to the dump that's the way the Soviets do it Nature has been doing this all the time in fault zones and stresses in the rocks and all the interference of the scalar potentials that are made there create fields at the distance glowing lights this is a picture of earthquake lights from the US Geological Service there are 1200 locations in the United States alone where you can see glowing balls of energy electromagnetic energy controlled energy at a distance

(40:27) on any decent weather night if you care to go out there and look and take pictures it's easy to investigate the so-called Earth stress lights and with this modality by using one additional Thing by using three-dimensional interferometry and using forier expansions multiple frequencies you can make such control balls of electromagnetic energy at a distance just like that like the snap of a finger wow wow we can make balls of energy just like that the snap of the finger we we made the orbs we made those orbs guys we

(41:08) made those orbs I'm th% sure this is our technology we figured this out I don't know if we've how we figured it out maybe we had help but uh sorry I have to switch the video real

quick oh crap I don't know where we were in that last video I forgot I was going to delete the other one these balls of energy that they appear right that's that's what he's talking about we can create a ball of energy it's ball lightning just like he mentioned just like Bob Greener mentioned is that we can use scalar

(41:33) physics it appears this one appears out of the water over here maybe it really did come from a submarine who knows we're looking at it right here look at it mapping the plane getting ready to create the negative energy potential right there around the plane it's mapping it right there it needs we need to know exactly how big it is it is using AI or some kind of computer system that's what it's doing right here mapping the plane no one could have come up with this no one could have faked this video

(41:58) there's nobody smart enough on the planet it would only people could have made this is the government just based on the science alone this science isn't even really publicly known I didn't go back in time unless maybe I do in the future and make this video what if I made these videos in the future that'd be weird um okay maybe I can't rule out that I made the videos let me go back to that sorry guys I have to think uh have been doing this all the time we measure brain waves we measure the residue

(42:34) electric field and magnetic field that's going on what's really going in the brain is all the little ion fields that make electric fields and make magnetic fields that sum to zero the structure of that is the real activity of the human brain I think without dwelling on it that you can see the two cerebral hemispheres make a scalar in an accelerometer and if those patterns are correct you can project or create energy at a distance like inside a metal object and you can get metal bending that way now the kind of metal bending I'm talking about is not the

(43:04) amazing Randy bending something on his belt buckle when you're not looking at him I'm talking about what Jack does when he takes a control sample and another sample and a little old lady in tennis shoes who just happens to be a four-star general's wife bends that thing which is thick as your little finger and the highest test steel known to Aerospace industry bends that thing in an angle and it turns blue sorry to pause it here but an alien scientist said you can make them by just crossing two lasers I'm going to pull

(43:35) this up over here by crossing two lasers the Fourier series is used for the talking plasma balls so they can transmit sound through the lasers and Jeremy did you dude I don't know if you looked earlier when he talks about the resonant cavities dude the this coherent matter wave beam 100% this is this is the money this is the money I'm sorry I'm swearing on YouTube but honestly I just don't even care at this point I don't care about monetization holy crap guys wow I mean how can the videos be fake if everything matches up

(44:06) the science matches up we've got secret scalar physics it's not even a secret it's been known since 1921 unification theories have been out there since 1921 come on man what the hell takes both samples the control sample and that sample back to the laboratory sections and looks at them under the electron microscope and the one that is the controlled sample has the

normal grain structure the one that is the one that's Bent by the human being for real not fakery has no grain structure the grain

(44:39) structure has been destroyed it looks like the surface of the Moon has been subjected to intense Point Heating throughout the grain structure I have just given you the physical mechanism and the physics by which the body is able to do that it is real it is not a fake Jack Hal I believe so that image that he just showed right there I'm going to go back 10 seconds so this now makes me wonder if I start wondering about the esoteric when I look at this I think I saw Tubac Cabra in the chat a second ago two hemispheres of the brain

(45:10) creating an intometal you know this makes me wonder about the idea of Are We creating our own reality with our brains it makes me wonder about the idea of even esoteric Concepts like psychic powers and remote viewing and things like that where you know are we manifesting our three dimensional world are we tapping in to the underlying framework of the construct that we live in to paint our reality with our minds themselves uh very wild thoughts out here and I'm trying not to push too much in the esoteric aspect but this

(45:41) certainly opens the door yeah Jeremy the question here is how do we reproduce this in the lab how do we reproduce this with uh commercially available equipment that doesn't cost millions of dollars locked Martin has the the equipment in the labs that they can produce this type of stuff and these types of effects I it makes me wonder if there's even a situation where we just need to be able to produce the Baseline like can we just prove that the speed of light is not constant if we can just prove the speed

(46:08) of light's not constant that's also honestly enough this is just this is wild I have just given you the physical mechanism and the physics by which the body is able to do that it is real it is not a fake Jack Hal I believe does he not work for your company excellent fellow excellent scientist I won't dwell on what all else the biological system can do with that let us suffice to say that we can derive rigorously in terms of physics not metaphysics guys look at this list pyro or psychokinesis PR precognition postcognition

(46:52) Clairvoyance telepathy I don't even know what firewalking is but that sounds a pretty sweet superpower and then metal bending this is like Erie Geller man maybe we owe Erie Geller an apology all of the mechanisms for apparent psychology well if you were weaponizing that for a big weapon if you hit this thing explosively where your projectors and you fire two pulses so the pulses meet an interesting thing occurs if you fire it in the high potential mode you get an electromagnetic explosion at a distance if you fire in the low

(47:26) potential mode you get a cold explosion at a distance the sudden withdrawal of energy in the intersection Zone well we need to mark that one down right there uh low potential you get a sudden suction of energy absorption of energy at a distance uh does that sound like anything uh that is relevant sounds exactly like our videos chat uh I can't switch over to the videos right now because I have this one up both types of weapons widely deployed by the Soviet Union and tested uh the recent some years back so-called booms off the east coast

(48:04) some of those were seen as flashes estimated to be about 100 uh tons of TNT equivalent were actually the orientation and alignment of such housers from the Soviet Union they have had such housers since April 1963 specifically the first operation test was April the 11th 1963 100 Mil north of Puerto Rico the most dramatic uh expression of the cold explosion in recent times occurred on April the 9th 1984 and the papers fortunately won't let this one go off the coast of Japan about 150 or 200 mil well really 200 miles from

(48:53) downtown Tokyo out near the Kos a sudden gigantic explosive eruption occurred above the water a cloud so to speak very dense Rose rapidly to 60,000 ft and 150 mile diameter this is the other clip that I posted guys uh remember I don't know if you guys remember several weeks ago maybe a month or two ago I posted about this where the pilots witnessed this event happened in the cold event and they said they saw a Halo type of event he's talking about the I didn't realize that's the situation he's

(49:25) talking about the J flight this might be an actual situation where this type of Technology not the exact technology with the orbs but similar technology was used on another plane wow what did he say Jal 35 in 1984 or 36 we're we're going to find that 5 747s out there one of which was piloted by a former B-52 pilot who thought he' just seen the most massive nuclear explosion you ever saw it had the mushroom shape uh prepared evasive action turned off course put on oxygen Mass prepared and braced for a shock wave which never

(50:03) came there was no flash this was the cold explosion a laser physicist friend of mine that I'm working with in California in the laboratory where we're using only mwatts at best and we're using distances about that far has done a little cold explosion over dish of water and you get the mushroom cloud exactly like that Rising guys the weird part about this this is what uh Katherine T saw Katherine T says she saw a dome like almost looked like a oil rig on the horizon an orange one which would have been consistent with the gas spreading

(50:48) out after the plane disappeared man that's weird wow that thing was called Everything Under the Sun bubbling gas you know uh plumes all sorts of things it was a cold explosion the ocean there is 21,000 ft deep it's too deep for submarines indicates it was a man-made phenomenon but it didn't end there Dr Daniel Walker and colleagues who have access to sophisticated underwater acoustic equipment and seismic equipment did a complete study on that thing it's published in the journal science recently

(51:28) a matter acoustic equipment this was 1985 guys This is 40 years ago they had acoustic Advanced acoustic equipment back then that could detect seismic activity what do you think we have in 2014 when the plane disappeared there's no way they don't know what exactly what happened to this plane they've been lying about it they've been covering up scaler physics a fact after his study he successfully ruled out any kind of ordinary known natural phenomenon so we're left with a conclusion that he

(52:00) and his colleagues made it's either a man-made phenomenon or an as yet unknown natural phenomenon we shouldn't have too many natural phenomenon unknown real quick and

we'll come right back to this guys I want to address what Jeremy just said in the chat I think it's important because I've been wondering about it myself so he said I still think they could have opened up an invisibility cloak around the plane these three spheres might be how to set up the plat plasma Fields if they had laser induced plasma bubble

(52:29) around the plane they could cause whatever's inside to disappear I've been wondering about this myself especially as I've been digging into the advanced science and looking at stuff like Optical phase conjugation um the thing is the difference between a cloaking field and teleportation when you have access to gravitational manipulation is almost just a matter of terminology at that point this is why I find the Philadelphia Experiment so interesting because they're trying to cloak the plane and hi or cloak the ship

(53:02) and hide the ship and instead they teleport it I think it's almost just a matter of semantics uh so that's why weirdly when people say oh they had some Advanced cloaking technology that they were using it's really just a matter of like I think that yes that's consistent with what we're seeing in these videos the plane is just going somewhere else but there's also a time dilation effect which basically makes it teleportation this is why it's not a a breakdown of all of the matter and a rebuilding of

(53:31) the matter it's a matter of a warp uh bubble around the plane which yes in theory it does cloak the plane absolutely the only reason why I would I don't really call it cloaking is because like I said we see the smoke Trail stop and that's why if it was like more of traditional cloaking like an invisibility cloak around the plane you should still see the smoke coming out of the back of it but I think you could still argue you know from a logical perspective that what we're looking at here is some type of cloaking effect

(53:58) effect that's happening so also I just want to say hi to uh Alien scientists and uh crypto Alchemist and the new people have been jumping in the chat as well he also said I think cloaking is much easier to pull off than teleportation yeah I agree I agree I'm keeping my mind open in terms of exactly what type of effect they're doing to this plane uh but they definitely use some crazy advanced anti-gravitational technology that we don't really understand that seems to be based on scalar physics on the plane No Doubt

(54:26) whatever you want to call it or whatever doesn't matter to me I I don't care and they definitely covered that up no question holy crap guys that explode for 150 miles particularly when it's happened several times before in the open literature that is a rigorous paper published in the journal science uh science very recently unfortunately the journal saw fit to turned down my colleague and my explanation of what was going on and a complete date list of incidents and history and types of Soviet weapons to back it

(55:03) up here's just one more incident to show you that these types of sudden mushroom rises from the ocean or near the ocean above the ocean in gigantic size have occurred repeatedly with other suspicious incidents that particular earthquake is highly suspect can you not see that if I dump energy with very powerful radiators and continue to dump energy energy

on both sides of a fault Zone it doesn't matter where the extra energy comes from with a piezoelectric effect I'm transforming that into mechanical stress and if I do that long

(55:37) enough and build up enough energy that plate is going to slip and you'll get a natural earthquake natural looking earthquake manmade that's how wow guys this is getting weird he just explained how we can make an earthquake happen you take the fault lines right so we got your your plates that are touching together right like this and we build up the P of electric energy on either side and you can force them to rumble to interact to cause an earthquake uh along the fault lines absolutely we should be able to do this

(56:09) now that I think about it it seems trivial but here's the weirdest part about the reason why I'm bringing it up remember the letter to Ashton Forbes what were the two videos that came out after that I think they were actually connected to what they were trying to send me I think that letter might be real the one right after was about the glitter conspiracy people looked into the glitter conspiracy and they found out the government was buying up the glitter and the glitter was being used for some secret purpose potentially

(56:38) related to cloaking and then the next letter was the one about Chan Thomas and what was Chan Thomas doing he was using electrical engineering to predict earthquakes I actually think this stuff might be real holy crap you make earthquakes well if you do it in the cold explosion you're going to have to dump a lot of that energy when it's 150 Mi across that is one whale of a lot of energy that you suddenly extract it and here it comes it's headed for you it'll simply melt your projectors unless you

(57:14) dump it somewhere so you switch the projector into the transmit mode and you catch it and hold it in the storage Bank temporarily and then you fire it off somewhere where it won't do any harm like Ben it Island here is an exhaust that is 150 Mi long seen by our weather satellites from a site that repeatedly exhibits these almost 100 now that we've seen this particular exhaust is about one a little over one degree above the horizontal now volcanoes don't do that they don't look like that let's see the

(57:44) next slide from the same island we see double Puffs indicating the in aerometer transmitters we see M multiple Puffs within them sometimes and in fact the satellites have even from time to time caught the actual burst showing that it's an explosive beginning of the exhaust guys this is why we're using infrared to scan the world you ever wonder why we're using infrared to uh scan the world with our satellites while we're using infrared with our drones because infrared can pick this kind of stuff up that's why we have a

(58:18) multi-spectral camera you always wonder one thing I wondered when I first saw the Fleeer videos the Navy F Fleeer videos was why are we not looking optically wouldn't it make sense to look in optically the answer is no no we want to look in infrared because we're going to see more Spectrum now this is why because we've known about scalar physics we've known about the capability not just from us but from our adversaries as well and we want to be able to pick that up anywhere now there's no doubt in my

(58:47) mind at this point that the cers system is in video no question it's video it can pick up a missile launch the missile launch stuff is just a cover that's what the the normies the public thinks out there is oh it's going to pick up a missile launch out there and follow the missile right away Putin's talking about hypersonics this is well beyond just shooting a missile in the sky and having to shoot over to us guys we're talking about causing earthquakes and natural disasters we're talking about having

(59:17) energy be uh sucking energy out of a system and then taking that energy building it up and then shooting it out this is like X-Men this is like uh really just crazy advanced stuff and very consistent with what Bob greenier was talking about as well with this idea of taking a faucet if you guys watch hard truths podcast number two and letting it build up and it builds up and as it builds up over time you essentially have infinite energy that you can build up into your system crazy these are weather satellites us

(59:49) weather satellites they are not classified unfortunately they're from way out there we need some low-level satellite for photography which I simply do not have would be interesting to look at it if I had it here's one where the explosive burst was caught just erupting from the item these things here Blaze away sometimes for hours and hours and days at a time with those kinds of massive exhausts of heat and energy I'll show you where they're pulling out the yeah and real quick to what Anthony just

(1:00:18) said multispectral I'm betting that that includes UV and terahertz as well so I think those cameras are much more advanced than just simple IR cameras and this is why we're seeing the smoke come out of the back of the plane I think that the corridor crew and the lore Lodge do have one uh point which is that a commercial infrared camera does not pick up smoke uh it it just essentially can see through smoke but these are not basic infrared cameras these are multispectral cameras and the whole point is they're trying to pick up

(1:00:47) energetic events and neg entropy events like we see in the videos so this is something that is well beyond anything that's available in the public um and if we were to see the specifications of those cameras I guarantee we are going to see the smoke coming out of the plane in those cameras in what they're doing with it uh that's about the plumes just to show you that way back there from those exhaust plumes off that Island we had some airplanes flew through it they're mostly ice particles from the expansion

(1:01:19) and so forth as you would expect when you've dumped a phenomenon actually you entrain a lot of the cold air you get circulations you get all kinds of effect effect there so you do get a lot of ice formed a little mud and this kind of thing there is a second candidate right now courtesy of some effort by Tom Harold and some kind folks um up at the SAT the satellite imagery outfit uh this one shows and I can't Ben begin to pronounce that name can you say that for me off the slide no Z novaya Zima which is an

(1:01:58) island north of the Soviet Union up in the Arctic Circle there not too far really as a geographical distance goes from Bennett Island and here again on the extreme left you see

another exhaust and you see the gigantic weather circulation that so much additional energy being poured in the area causes you see the swirl all the way around the thing stripping uh Vapor energy and vapor water and so forth from the snow and ice and everything else okay well in the mid 70s we got a shock suddenly the communication systems

(1:02:35) throughout the world and the communications band that is from 5 to 30 MHz were widely being interrupted by extremely powerful signals coming from the Soviet Union to my knowledge we have not yet located the transmitters you guys just hear what he just said remember when uh AT&T and them went out uh a few weeks ago and people trying to say oh it was a sun choral mass ejection from the sun no it wasn't sorry to uh be the bear of bad news more than likely that was either a hack or that was a manipulation of scalar

(1:03:09) physics that was being used to attack us I also think we have to be 100% clear about okay the boat incident that happened recently with the bridge um that absolutely could have been a hack now I'm not saying it was could have been an accident but absolutely could have been a hack I think that we have to look at the lens of the world through political uh aspirations and uh Espionage for sure especially now going forward they had many resemblances to what we call an over the rising radar so we promptly lab labeled them an over theising radar the

(1:03:46) so-called woodpecker signals name from the chirp signal that sounds like a woodpecker's beak hitting a flat block you can hear them out there most every night chattering away still interfering in fact they now sell the ham radio operators filters so that it operates through that filter in that region but what they actually did shortly before the death of bref they started adjusting across guys the other thing I'm thinking of this is the Russian harp now I'm really wondering about Antarctica I think I'm

(1:04:15) going to talk to Chad and Sherry and get back on the investigate Earth podcast next week and talk about Antarctica we've probably got some crazy crap going on in down in Antarctica and I think the location is not a coincidence either it makes sense if you look at the Earth's magnetic field um the magnetic field would be the weakest potentially the North and South Pole so maybe anarctica has a a specific strategic purpose for being that location the United States a great interference pattern from multiple

(1:04:42) transmitters of the Woodpecker Radars now I'm not interested except for biological effects which can be damaging in the conventional e b f signals on that radar but we don't have anybody who's measuring the scalar component the substructure in the zero they don't even have the instruments to do it if they wish such instruments provided I have a friend who do it for Price not me he will he built the instruments and and designed them but what they're doing here is the substructure interference which is

(1:05:23) important because that's where all the real energy is you can put as as much energy as you wish into that substructure and the normal instrument will not even see it it won't even detect It Anyway where the interference was if you'll check the Woodpecker signals you'll see that's a type of interference pattern they set up an interference pattern over the us and it left

signals signatures when you adjust these things and you adjust with little slips you pop out energy you get rumbles and Booms and

(1:05:51) air Quakes and all this and those things happened from Florida North Alabama Virginia all up through the Carolinas up through mid England up through the middle of the country Texas all over West Coast everywhere these mysterious cracks and rumbles and Booms and pops and snaps everywhere while they were adjusting the grid well they got it adjusted by shortly after the end of the year that is in early 1983 they got this thing adjusted and they started pouring it on us so that spring early spring you had extremely severe flooding because what

(1:06:24) they did you simply determine by your timing and interferometry and 4A transforms which one of the grid cells you want to activate and they're much finer than this by the way over Huntsville Alabama a friend and I saw this grid from Horizon to Horizon in even ploud field rows north to south and from Horizon to Horizon in even ploud roads from east to west and that is not natural does not happen anyway what they did is you if you take energy out of one cell that produces a low Zone a low pressure Zone if you add

(1:07:03) energy produces a high pressure Zone I think you can see if I scan my radar rotate it the beam either electromagnetically or rotate the antenna gently and move those highs and lows alone I can direct and capture and control the jet streams and that's exactly what they did the jet streams had a classic bin dipping way down south abnormally far and then roaring up the Adera chain and so we had all kinds of good weather following that pattern and the deviation of the jet streams even the journal science has published an

(1:07:36) article from a study that shows in the last decade the variation in the weather over North America has been greater than can be statistically expected except once in 1200 years that summer we got a drought if you recall we lost half the corn crop in the United States in one Summer from the extreme drought when you form one of the patterns you get a signature in the clouds you see a little droplet of water is formed around a dust particle a little droplet of ice that's cold enough and it makes a little transistor or a

(1:08:11) little diode in the middle and that thing forms its own little e field and these things line up and what you get is you get a ring almost a complete ring about 2/3 of a ring of clouds like geometrically drawn around the peak where the energy is is being manipulated and you get radial lines thin radial lines running directly away 10 or 15 miles sort of like the old Rising Sun symbol in World War II we saw these all over the United States here's one taking a block and a half from my home by the time I could

(1:08:45) run in and get my camera it had passed just over the mountain but you can see those are Cloud streamers those are not light rays these are not crepuscular waves at all these are Cloud Rays these are radials giant radials I then went ahead and chased that thing over the mountain to get a little better shot of it they had cut the energy so the middle ring filled up but the Rays were still apparent in the next slide although I'm now shooting at an extreme distance uh through a telescopic lens but you can see if the lights were

(1:09:18) a little dimmer you could see the crosshatch interference pattern in the streamers also so we have both the streamers and we have the crosshatch interference pattern existing in the clouds that's over Huntsville Alabama here's one that a correspondent sent in and again we have dim light the clouds are actually more prominent than that from California they were seeing them all over the United States these very prominent very significant patterns everywhere I went on radio uh KABC in Los Angeles calling everybody's

(1:09:52) attention to this two or three times delivered papers at a couple of symposia and we saw a change we saw the dog on thing start getting active most of the time at night there's another pattern sometimes they use two patterns close together when that happens the internal Rings go out and the Rays become much thicker and they become absolutely boat tailed toward the center now when they cut the power the center fills up immediately with clouds I have been unfortunate and although I have seen classic ones of

(1:10:26) this I have not yet got a decent picture I will show you what I have which is not a good photograph and the photographs then therefore should not be accepted as proof until I get better photographs which I will do sooner or later again multiple Witnesses over Huntsville Alabama good friend of mine and I saw this very early in the morning this system motoring along absolutely classic I was very hard pressed that day on my normal job and did not take off from work and go home and get my camera I have regretted it ever since deeply I

(1:10:59) didn't realize how rare the phenomenon was going to be to be able to get one that perfect but it was absolutely Flawless and it looked just like that right over huntville Alabama moving along at oh 20 to 30 m hour a second one came over later that day there's the dates and the time uh in their weather control if you recall they gave us anomalous winter the very cold December snap of 1983 which broke all the records everywhere many of them since records had been kept on the cold and that was deliberately engineered they left

(1:11:37) signatures before they did it with these kinds of things all over the us we saw the same day a remnants of a second Twin giant radial system that motored along across Huntsville Alabama now here is one they've cut the power but the system persists for a while it'll possess for several hours but it'll fill in it will lose its classic shape but you know even the field in picture is better than no picture but I don't have a lens which will take the entire Sky I need a fishee which I'm going to get as soon as I can

(1:12:08) afford it but what I want to show you is this is on the I believe the Northeast here and I'm want to focus your attention here over to the right you will see the lines of the clouds going there they go all over the sky back to the other radial on the other side complete sorry I was muted there um Jeremy I wanted to ask you do you think that the what he just showed with the the trails in the sky right here do you think this can explain contrails in terms of what people see in the sky uh it makes me wonder because I don't

(1:12:57) think that what we see can be explained solely based on uh like plan seating the sky it makes me think that electromagnetic effects are more um Can can explain this in a much better

way than like just oh we're shooting planes or we're seing the sky with chemicals and stuff that are out there uh Jeremy as well because you guys can't see the chat if you're watching right now uh mentioned that Eric Hecker uh the person that went on Shan Ryan and blew the whistle on Antarctica uh first came onto one of

(1:13:30) alien scientist Jeremy Reese's live streams and called into his show said he was blown away if you guys haven't been following alien scientist definitely check him out um in the comments I was pointing out that I think that 90% or more of the UFO Community is full of crap um it's not that I think that they are lying I just think that they don't understand the implications of all of this if you are absorbing this information like I am absorbing this information right now uh then you can realize like the huge implications of

(1:13:59) this this means that what the public sees is just a small fraction of the global Espionage and covert actions that are happening all the time in the whole world Imagine manipulating the weather manipulating the weather it's almost April and it's there's like a foot of snow outside where I'm at right now um you could see why **Russia** would want to manipulate this especially given their climate you could see why any country would want to manipulate it in fact I would imagine that they would come into

(1:14:28) some kind of stalemate where they say hey chill out on manipulating my weather chill out on the earthquakes Etc uh pretty wild stuff I mean the implications this are huge and then when you add in the element of a non-human intelligence potentially visiting us this is we're talking about like magic and wondering whether or not our government really is controlled by a higher power that we have no visibility to whatsoever incredible stuff let's keep going want to focus your attention here over to the right you will see the

(1:15:00) lines of the clouds going there they go all over the sky back to the other radial on the other side completely over your head is this giant radial connected up to two points even though it's filling in now because the power has been cut in this Photograph we're just a little bit back around from where we were to the left to show that the same Cloud streaks and radials are going over on the left and they go completely across we about 15 miles to the next point the next radial intersection where they link up so real quick no wonder we

(1:15:33) are scanning the ionosphere all the time because we're we're scanning the ionosphere because we want to see if our enemies are using scalar physics against us we want to see if they are manipulating grav gravity if they are manipulating the weather if they are manipulating earthquakes we want to try to be able to detect it instantly because this becomes National Defense at this point everything seems to boil onto National Security and National Defense now we'll show that other linkage down on the other end as a separate

(1:16:03) shot and that's really as you can see it does go on down there and link up it's just beyond the tree line where it links it's faded on that end pretty good but we had a whole two radial system a poor picture here I admit but having seen much better ones than this when I did not have a camera or access to one I can only tell you that in the future future I will show you a

decent photograph if they keep this thing up over Huntsville Alabama long enough he keeps mentioning Huntsville Alabama guys you look up Huntsville

(1:16:35) Alabama that's where a NASA Marshall Space laboratory is I don't think that's a coincidence it's it's always Huntsville Alabama and Los Alamos and this is where uh and I think Jeremy's kind of pulled back a little bit on his position on Bob Lazar but I think Bob Lazar is being truthful about his opinion whether or not he's been fed some disinformation I think is a different question but I think he really did work at Los Alamos and I think that those are the two locations um NASA Marshall in Huntsville

(1:17:07) Alabama and Los Alamos if they're putting the stuff together to build orbs or do whatever they got to do those are the places where I'm first checking out and if Tom Harold and other assorted Good stal Fellows help may keep watch for them when I'm working inside and not out looking at Sky well you wonder what happened to you on February the 1st let me tell you what happened to you on February the 1st on December the 8th they started this little goodie out in California they were having these little rumbles and cracks

(1:17:39) and pops and snaps off the coast there from Cal from Los Angeles they had it for about a week off and on I was there on the radio show delivering an address on free energy went on another show to try to explain what these things was and I predicted based on this that they had finished a adjusting the grid and there would be a violent or drastic change in the weather within 48 hours I went on the radio and I made that statement and the radio announcer said you sound like a whacko and cut me off that's some of the mild

(1:18:08) things I've been caused it does not matter I operate on the thing that if the experiments keep working and they contradict the theory the true scientific method says You must change the theory not insist that the experiment is false if it continues to be replicated so what happened was they then when they got it adjusted a high wind came up very suddenly totally unexpected blew down all the trees on the boulevards they had wrecks and everything I was there during this process and it was within 48 hours from

(1:18:42) that prediction violent sort of wind storms winds got very high in the Los Angeles area and all the orange trees were laying over flat everywhere through the boulevards it went on down in Texas spawn tornadoes and roared up the Adera chain and then they bent the jet stream in the most anomalous fashion they bent that sucker right down the west coast of the United States all the way down to the bottom and turned it and went across the bottom skimming across just above the bottom of imagine you can manipulate electromagnetic potentials

(1:19:20) and you can create a gravitation or not a gravitation but an electromagnetic bubble so so you imagine like there's a bubble right here where I'm I'm scrolling the mouse through you can see how you can manipulate the jet stream right is if you made a bubble right here in the middle of the United States you can manipulate jet stream and by this you can manipulate the weather it's not a matter of saying okay I'm going to make it rain right here but it's more of a

matter and although you probably can

(1:19:43) at this point if with the right quantum computers and precision possibly pull that off but it's more of a matter of just changing it right changing the direction of travel of the jet stream in general certainly seems within the realm of possibility given the science that we've been looking at here tonight Texas and then roaring up the ader chain I've never seen that fashion before but they set about doing that in December 1984 they kept playing with the jet stream they did all kinds of nice experiments they split the thing into

(1:20:14) two they made it form into wise and looked like they were just checking out to see what all they could do but with this fashion here what you do is when you turn you entrain circulation from way out over the Pacific as shown by the purple arrows you pull moisture all the way from out in the Pacific and suck it up right across the United States and if you do the the neat little trick with the coal stuff you get enough coal stuff bent down from Canada and the Arctic here guess what you're going to get with

(1:20:45) all that moisture you're going to get snow and ice and February the first they let us have it and that's our Infamous ice storm right here in Huntsville Alabama all this was going on just before that having gone several days without power myself uh I am very sympathetic to the fact that I don't like that and I hope you didn't either but that was given to you courtesy of the hammer and sickle boys okay there are a couple other little in just for a little goodies you may or may not have seen the paper on

(1:21:22) the Associated Press release but I'll guys I love he calls him hammer and sickle boys I love Thomas beardson I wish I could have met this guy Thomas beard and sorry um I just love everything about this guy give you the mechanism and everybody else will tell you I'm totally crazy and I'll say to you then you explain it or ask them to love it and listen to their jaw fly open and find out they have no explanation at all because this explanation isn't in the textbook the Navy was having a chaff drop off the coast from San Diego a very

(1:21:54) Str and sudden and unexpected wind again arose you know when we form these lows wind rushes in so we got another one and here came a signature a sudden strange unexpected wind caught the entire chaff Cloud they were about 150 Mi off the coast there and blew the thing in towards San Diego now this is the standard microwire cha actually with a dielectric with a coating on it there's a certain way it's structured for some kinds of chaff that we have shown in the laboratory will reflect a scal wave I won't go into that that's proprietary to

(1:22:26) my friend imagine every little piece of chaff up there if the bandwidth if a scaler signal in that frequency in its bandwidth that it's cut for is there it will reflect it that's what we're saying and from any two of those things randomly wiggling and jiggling around you're going to have random intersections and interferences from the reflected scaler beams and in that little random interference Zone you're going to get a sudden flash a sudden Sparkle it won't be visual but a sudden production of ordinary electromagnetic

(1:22:58) energy and so imagine a Zone around the cha cloud with little twinkles if you could see ordinary electromagnetic energy if you if you could see them as visual things twinkling and twinkling away and these represents little instantaneous kindling of energy points when they move through the system area they appear in the SpaceTime farity cages and your Emi shielding we all use in military equipment have absolutely Zero Effect on them they knocked out over 60 thou power to over 60,000 homes in San Diego and you had the strange thing of the part of

(1:23:34) the city uh very angry at the Navy and claiming the Navy had done this and the Navy set out an investigation in and got the foggiest notion what happened I just told you what happened and gave you did he just mention glitter uh we're going to go back to that for a second 4653 I'm going to go back J AK Philly fans saying something about Glitter here then you explain it or ask them to I want to listen to that one more time and listen to their jaw fly open and find out they have no explanation at all because this

(1:24:06) explanation isn't in the textbook the Navy was having a chaff drop chaff equals glitter chaff equals glitter is what people are saying in the chat pretty wild yeah the glitter thing in the glitter conspiracy to me seems very relevant we're doing something with glitter that I don't fully understand Bearden is deceased and yes uh Dave Rosy did meet him I know that for a fact um yeah he passed away a few years ago I wish I would have met this guy I kind of feel like The Reincarnation of him to some degree I'm not nearly as

(1:24:43) smart as him but wow go a very strange and sudden and unexpected wind again arose you know when we form these lows wind rushes in so we got another one and here came a signature a sudden strange unexpected wind caught the entire chaff Cloud they were about 150 Mi off the coast there and blew the thing in towards San Diego now this is the standard microwire chaff actually with a dielectric with a coating on it there's a certain way it's structured for some kinds of chaff that we have shown in the laboratory will reflect a scalar wave I

(1:25:17) won't go into that that's holy crap did you guys just hear that they can manipulate glitter to create a dielectric wave for scalar potentials wait what how are they using it so imagine like glitter is like a little magnet a tiny little magnet someone walk me through how they're using this I don't I don't understand the application of it but it seems very relevant here proprietary to my friend imagine every little piece of chaff up there if the bandwidth if a scalar signal in that frequency in its

(1:26:01) bandwidth that it's cut for is there it will reflect it wow if it's cut for a specific frequency or bandwidth it will reflect it no wonder we're buying up glitter holy that the glitter thing is a serious serious thing serious conspiracy holy holy crap the glitter thing is real huh the Chan Thomas and the glitter thing were not a joke whoever sent me the letter knew about all this ahead of time they knew about this ahead of time there's the only that's the only way this really Narrows down the number of

(1:26:44) possibilities in terms of who could have sent me the letter there's it wasn't a coincidence that they sent me the glitter conspiracy and they sent me the chant thas thing they

wanted me to figure this out they they wanted me to figure this out they wanted us to know the **truth** holy crap that's what we're saying so imagine imagine for a second I'll visualize it for you that you take a Mount of glitter and you throw it in the sky and it rains down you're raining down glitter this is going to reflect

(1:27:16) waves that are trying to bounce off of it this is essentially this basic mechanism that he's talking about here yeah and to Jeremy is saying this video is super old this is from 1985 this video is from 1985 holy crap and from any two of those things randomly wiggling and jiggling around you're going to have random intersections and interferences from the reflected scalar beams and in that little random interference Zone you're going to get a sudden flash a sudden Sparkle it won't be visual but a sudden

(1:27:49) production of ordinary electromagnetic energy and so imagine a Zone around the chaff cloud with little twinkles if you could see ordinary electromagnetic energy if you if you could see them as visual things twinkling and twinkling away and these represents little instantaneous kindling of energy points when they move through the system area they appear in the SpaceTime farity cages and your Emi shielding we all use in military equipment have absolutely zero effect on them they knocked out over 60 thou power to over 60,000 homes in San San Diego

(1:28:25) and you had the strange thing of the part of the city uh very angry at the Navy and claiming the Navy had done this and the Navy set out an investigation in and got the foggiest notion what happened I just told you what happened and gave you the mechanism that isn't all that happens I hope you realize that I am stating so the chaff Cloud can be used as like a jamming so you can drop the chaff Cloud to interfere with the electromagnet and scalar potential waves that they are trying to manipulate the weather or

(1:29:00) whatever else you can think of it as like a countermeasure for the effects of uh the Espionage that might be curring at the highest levels to manipulate the weather as well as to create earthquakes you drop the chaff down and it's now going to bounce all the the waves all over the place scatter them in every direction now it can also create if you would think of it as like a a dead zone around the area where you dro the chaff pretty wild chaff is glitter turned into radar such as enemy migs missile locking on

(1:29:33) radar frequency the enemy aircraft gets a missile lock on you you release a chaff exactly exact same concept right is that you're getting to say okay you've got a lock you've sent your beam your your uh wave at the object and well I'm going to have scatter it I'm going to confuse it so that it doesn't know where it's going to go the the heat the heat seeking missile uh will chase the chaff instead absolutely that in my opinion Soviet Union has been waging a certain kind of undeclared war on the United States for

(1:30:06) a period of over two decades and that several hundred people have already died in that war American citizens illegally all of you recall the mysterious airliner The Airliner that fell mysteriously rather for six miles and about uh couple of minutes what happened well he's

motoring along up there coming in towards Los Angeles he's out of San Francisco there he hits a sudden little pocket of turbulence ringing the bells some interference going on where the energy doesn't zero anymore and you get an

(1:30:40) energy one fashion or the other or ripples turbulence all of a sudden one engine flames out just past that well one of the things that'll kindle this stuff into being is a plasma or a flame the fierce flame in a jet engine you know the plasma that it forms so to speak the ions you can get the same effect in the ions a Geer tube for example will detect a Geer counter will detect these it doesn't detect nuclear radiation detects its own ionization this will give you additional ionization or kill ionization and the tube will

(1:31:15) detect that so one engine flamed out and then all the other fell all the others failed and this thing fell the pilot struggled with the airplane began to regain control as he got much lower down around 15,000 ft meanwhile the landing gear came down the door falling off damaged the tail he finally got control of the thing down around 11,000 ft some control the engines began to restart and at about 9,000 ft he got her under control again and managed to fly that thing into San Francisco the nearest airport land it

(1:31:47) left a signature now they're going to say the pilot did that I'm going to tell you what happened in my opinion understand what actually happened was as I described it from the scaler stuff that was up there it happened to be at the right frequency when he it was a high interference zone well up there he was flying at 41,000 ft he was way up there when he passed out of the interference zone the stuff started dying back out it charges mass just like a capacitor it has a discharged time constant we've

(1:32:17) proven that when it discharged the effect the plane was then a normal type of flame exhaust and so the thing could start again now it left a signature the instruments on the airplane disagreed with one another because the electromagnetic response of an instrument or the components of an instrument to scaler is not in the specifications for that component in the future we will be able eventually to buy a components where that the second order effects the scaler effects are controlled and we'll buy them to those specs also right now you

(1:32:52) can't do that so some of the he just named dropped second order effects as well so what else is a second order effect is a hologram where a hologram is the potential where you're create a 3D object out of a 2D picture using lasers using light Etc second order effects is extremely important here in terms of what we're talking about I'm also now extremely skeptical of if Air France 447 uh was not a victim of this kind of technology the official story behind air France air uh 447 was that the pilots forgot which way

(1:33:29) up was how here's another explanation they got hit by some kind of scaler wave and the plane got crashed how do you know the difference the instruments will respond one way and some will respond the other way the flight instruments told the pilot and crew one thing and the flight recorder told an entirely different story the flight crew instruments reported that the autopilot was gone out of you know had had quit and it was up to the pilot to fly the airplane so

the pilot was taking proper emergency procedures for that kind of an emergency

(1:34:08) engine flame out autopilot gone he was trying to do the job the flight recorder recorded that the engines never died out or at least most of them didn't and that the autopilot never died out now I submit to you that when your engines flame out in a jet it's about like running into almost a break wall suddenly a very soft spongy wall or like having a big blowout on your car there's not much way a seasoned pilot can fail to notice engine flame out particularly all four engines so we can take the Pilot's word

(1:34:41) for that it's the instruments which lied because they had an response to the scaler stuff that disagreed with each other one responded one way one the other that will never appear in the official investigation now that is not the only airplane having such difficulties one of the European nations which I shall not name has repeated difficulties with their airplanes flying off the West Coast that is not in the newspaper and that has not been announced but it is a fact and I'm prepared to back it up if I

(1:35:12) have to so one thing guys is the way that Thomas Bearden is talking in this video is not the way that somebody who's making up information talks he's speaking off the cuff he's speaking directly from his knowledge base in his head the only basis here is that he's either been fed misinformation or what he's saying here is true to what he knows to be real or not there's certainly some aspects of this which are his opinion which he said several times in here as well where he's seen an event

(1:35:44) happen he may not have inside information but he's giving his opinion on what could have caused it for the most part everything that I've been listening to from Thomas beard in here on this particular video seems to ring true this guy is not a liar you can tell right off the bat that he is not making this up um so that really is why I find this so compelling in addition to the fact that it matches up with everything we've been saying so far I did see the comment about uh Jack sarfati I will mention that here at the

(1:36:12) end um I am planning on interviewing Jack sarfati on Sunday so he will be on the hard TRS podcast at any rate we have had multiple cases not quite so dramatic and continuing cases of the same phen phenomenon on a less drastic scale and it continues to this day okay what I've gone through here for the last period is a presentation to you on a scheme by means of which you can control the weather around the world perhaps you can't control it absolutely but you can certainly drastically influence it drastically

(1:36:51) influence it right you can do a lot of other things I hope you see I hope you notice that we can knock out missiles airplane anything Electronics including the electromagnetic responses of the human being in Afghanistan when the high helicopters come in and fire gas now gas kills people but even with nerve gas they kick a while takes a few seconds at least to die and the body goes into violent responses very violent if you've ever SE seen an animal die from nerve gas many of the people that are killed die with nerve gas some are given must

(1:37:31) hit with mustard and so forth they die with those symptoms but there is another symptom which also is exhibited I have this one correspondence from people who've been there on the scene some of the people simply cut off wherever they are their nervous system never fires another input anywhere in their body no reflex action no nothing no kicking no fighting no foot no fury instantaneous death and that is a scalar signature fortunate instantaneous death okay anybody who doesn't think Havana syndrome can be possible uh just go

(1:38:09) ahead and watch this video because at this point what we've figured out here from or what we've discovered I guess from scalar physics is that you can just shut off all the electromagnetic signatures of the human body that's just going to shut you down like a shutting down a robot hitting the off switch good night do you know why this is so compelling to me the reason why this is so compelling is because that kind of explains death sometimes you've seen people just kill over collapse turn off Etc is it's

(1:38:43) the electromagnetic or the electric synapses just boom stop they stop firing this is extremely scary definitely brings in the concept of Psych psychotronic weapons being possible Etc I used to say one nation I will now say two Nations which are non-hostile to the United States also have these weapons I shall not name those Nations publicly and have had them for an extended period of time at least since shortly after [Music] 1969 right now the only thing that stops the Soviet Union from feeling free to move with this kind of Weaponry which I

(1:39:29) think you can begin to see the implications against tanks anything else electronically controlled on the battlefield as the other two Nations not the United States so for a period of time one of my purposes has been to warn the system a new kind of electromagnetics and more extended electromagnetics already exist in the textbooks and been there since 1921 with this kind of electromagnetics we can achieve types of engineering we have only dreamed of in the past and this time it's not us that got the atomic bomb first it's the other guy

(1:40:05) thank you for your attention wow holy crap man holy crap PO box 14 72 Huntsville Alabama 35807 well this is insane I'm going to leave this up because apparently it goes for like another eight minutes where it talks about this but I I want to interact with the chat for a minute here as well while we do this uh probably top 10 craziest videos I've ever seen and I've seen some crazy stuff out there um absolutely feels like there's an aura of authenticity okay okay Jesus uh feels like there's an Ora

(1:40:53) authenticity uh related to this Lulu is very upset right there I think I rolled the chair over her tail right there um what is it saying here guys I have at least one or two more videos related to this by the way what is this worked in USSR escaped to Brazil did secret experiments large sea area could be suddenly Frozen May 1985 killer tornadoes devastated parts of Ontario Ohio and Pennsylvania over 90 people were killed and extensive damage occurred maybe this is why we hate **Russia** so much this is actually right

(1:41:54) here we're looking at the uh what he was just talking about that bubble strong swirls occurred just before the tornadoes of May 31st 1985 developed definitely feels like we should

be able to predict the weather given this information about the jet streams does make me wonder about polls flipping but we would we' be able to figure it out if so I hate that they put these hyphens in there what a crazy video Everybody MK Ultra sub project 68 or 168 scaler em wa wait what was that limitations of the ordinary general

(1:42:44) relativity Theory scaler em represents a new view of general relativity electromagnets and physical reality oh I agree for sure I agree for sure I think we're our I think we're the ultimate baddies guys the ultimate Pro a fundamental problem also exists oh okay oh went too fast it is the axm for the zero vector vector analysis discard zero summations of the systems and active vectors this is pretty much just our reputation uh of what we've already been watching here for the last hour related to these

(1:43:34) videos way did the energy go it produces stress energy of the vacuum that's what salvator Pas told us to the external Observer energy always applies to a single force moving through a distance against a resistance it doesn't apply to a system of dynamic forces that the sum always to a zero Vector what was that goes a little bit too fast here to a zero Vector resultant for that case a new term should be used scalar physics in scalar em the infolded energy locked in locked inside a zero Vector system as a stress

(1:44:22) energy of the vacuum is called and energy huh this is very similar to what I've learned from Dave Rossi very very similar in fact this now I'm wondering if this isn't where he learned it from in scaler em a new term is added to the laws of conservation of energy any one way is that say eating gating gating process from an energy to energy yields free energy since the an energy is automatically replenished by the universe so I think the idea there is that the underlying framework of reality The Ether or whatever you want

(1:45:05) to call it the construct The Matrix has infinite negative energy it then becomes the law of conservation of an energy total equivalence of an energy energy and mass is conserved so this then would be a con this would be a modification of the laws of thermodynamics in terms of conservation of energy is that we add an additional uh variable and energy and if you add the additional en the variable of an energy now you can tap into the underlying framework of the construct and you can borrow that energy from it which is essentially an infinite energy

(1:45:49) Supply Source this is how you can get free energy and I just came up with that right now if I'm looking at this yeah Fusion is free energy as well as alien scientists pointed out but what happened to all this ordinary general relativity note our statements about ogr I think that's ordinary general relativity will be referenced to an excellent text Meisner no that's different Meisner Meisner Thorn wheeler I'm assume that's John Wheeler uh gravitation wh Freeman and Co San Francisco 1973 ordinary general relativity man

(1:46:45) this is killing me how fast this goes right here ordinary General relativity assumes the a problem of the nonzero stress energy of the vacuum so basically adding an an energy fixes that problem in ogr precise definition of gravitational field is not given in ogr charge conservation and Maxwell's laws are upheld by uh artifices and assumption in ogr the vacuum is modulated

as per as a perfect fluid excluded our sheer stress anistropic anisotropic anisotropic pressure and viscosity this restricts the stress energy

(1:47:36) tensor Jack uh sarfati was talking about the stress energy tensor yesterday as well and so it's salvator Pas ogr is restricted to a special case conservation of laws is assumed Applied Auto all local frames are just assumed to be Loren frames so this is like the Lorent uh frame frame dragging effect this is way too fast conservation of all physicist of all physics are strongly discouraged from considering that excuse me general relativity can be easily engineered in a local electromagnetic system isotropic means all going in the

(1:48:20) same direction thank you very much appreciate that Dynamic zero Vector systems are not considered in ogr classical electromagnetics aiori a zero Vector em system polarizes the vacuum deterministically polarizing the vacuum state is another thing that Dave Rossy mentioned several times a a zero Vector system produces a controlled and ordered stress energy tensor of a vacuum that can be produced can that can produce macroscopic effects locally huh talking about the videos now a zero Vector system accumulator inertial work has no energy except

(1:49:10) vacuum stress energy can yield energy of its components ah anistropic means non uniformity good to know MTH has a tons tons of energy if we could find a way to release the tra Fields  $E$  equals  $mc^2$  yeah that makes sense in ogr vacuum polarization produces a nonzero stress energy tensor unobservable except by its gravitational effects I don't know what does mtw 411 mean scaler electromagnetics easily produces a nonzero stress energy tensor of the vacuum that is macroscopically observable seems pretty big scaler em thus violates both

(1:50:03) Newtonian gravity and severe constraints of uh original general relativity in original general relativity Newtonian gravity is used to argue that the nonzero stress energy tensor of the vacuum is unobservable huh so we've messed up the laws of physics to detect rhythmic rhythmic variations in the nonzero stress and intensity of the vacuum here's a scalar wave detector so this is just an electric system farad cage pickup coil resonant tuning circuit tuning capacitor preamp can't read some of the words tuning something shielded

(1:50:55) cable and I can't tell what that says so it's definitely just an electric system though if you're interested in this check out electrical engineering detector is designed by John bery uh ogr shutters uh away from fixing the geometry and letting the four cons uh conservation laws be violated okay this is going to be very relevant I'm going to show you guys a post here after this about violating the laws of conservation in scalar electromagnet uh electromagnetic uh such as artificial adherence to the conservation of laws is

(1:51:37) not assumed scalar em is a means of direct conservation of electromagnetic energy to gravitational energy and vice versa so we can manipulate gravity what does that say in scaler em all conservation laws can be locally violated and of 10 with ease and oh often with ease okay so we can violate the laws of conservation of momentum Einstein's formula for gravitational radiation is not a consequence of the general theory of relativity interesting this is a source right

here I think in general relativity there are no

(1:52:33) energy momentum conservation laws for a system uh consisting of matter and the gravitation of AI gravitational field okay makes sense this is hard to read we're almost done here comment okay IE in a local generalistic system conservation laws do not apply Soviets have weaponized and unrestricted oops the Soviets have weaponized the unrestricted in local general relativity for over 30 years this was back in 1985 so that would push it back to 1955 so wow we've really just been hiding the science the whole whole world

(1:53:23) has been hiding in science scalar electromagnetics allows the direct engineering of SpaceTime and hence physical relativity or reality itself we would have never figured this out without the the MH370 videos how crazy is that chat so without the MH370 videos we potentially at least I would never potentially figure this out I would have been a CNN brain for life I would have thought this was fake um but we have videos showing this we have videos showing this happen right here they were recording it on two cameras they never thought it

(1:54:08) would get **leaked** to the public they never thought anyone would leak this footage uh we can see Dynamic Parallax and these clouds these are real clouds these are not rendered this is not after effects that we're looking at here in this video um this is why we see these ball lightning orbs here which are consistent with scalar physics what Thomas beard Bearden just mentioned he said that we can produce these balls of lightning balls of plasma if you will this is why when I looked at these and I figured out that what we're looking at

(1:54:37) here is a field around the object that's how this is not a solid field a solid object we're looking at a ball of energy here at this point no one could have ever even come up with this there's no there's no VFX artist that could even have thought of this they would had no idea how to even create this probably the strongest evidence for why what we're looking at here is real is based on the physics that we just looked at uh they were recording this because they wanted to collect information about

(1:55:06) it now that I think about it probably to give back to the engineers and scientists several people that know about this would never be able to talk about it they've probably seen other stuff like this that's just as crazy honestly the reason why they're showing us the slmos here I even wonder if this is not from the original footage is cuz they want us to see that this is actually legit 100% real this color variant that we see this rainbow palette might only this might be completely classified this rainbow pallet we see

(1:55:39) here like this this multi-spectral video it's very possible that the public is intentionally never seen this type of video because they don't want the public to have any frame of reference for what the milit is capable of in terms of uh surveillance capabilities that's why they showed us the black and white they intentionally showed us the black and white in 2017 Fleeer footage because they don't want us to know about what their capabilities are I I think 100% this is our technology this is not aliens at all

(1:56:13) that's the reason why the Jeremy Corbels of the world say it's because they care care about alien technology they don't care about our technology we're exposing MH 370x is exposing our technology this is what we have the capability to do there's no aliens in these videos that's why Corbell hates it CU there's no aliens the dude loves aliens he wants everything to be aliens and maybe there are aliens out there I don't know I don't care honestly what I care about is this is our technology and the way

(1:56:47) they're able to convince the world is because nobody looks at this and thinks that we can pull this off but we can we can pull this off and here they're doing the exact same thing they're manipulating with scalar physics and gravitational potential the neg entropy of the vacuum state so guys if somebody faked this they would have had to have been they would have to know about Thomas Bearden and they would have had to look at his physics from 1985 and they would have had to incorporate this into the videos

(1:57:18) because what we see here is exactly what he just talked about uh these are not fake videos this is what we did to the plane um whether or not this is a cloaking or Annihilation or a teleportation event really doesn't matter to me uh all I've ever cared about is that we tell the **truth** about what the United States government did to this plane with our super Advanced scalar physics technology there it is right there in Super slowmo uh if you're making a fake video how many fake videos have you guys seen where they show super slow-mo of

(1:57:48) the videos and show all the details in super slow-mo the reason why you wouldn't do that is because you don't want people to see that you made a mistake somewhere there's no mistakes in any of these videos that's just what we did to the plane simple as that now the last thing I want to show tonight before we log off for the evening uh I want to show Twitter real quick so one thing I want to show you guys on Twitter is my buddy Dave Rossy uh Zed podcast is what I think he goes by the hell uh what's his

(1:58:35) thing guys what's this thing um podcast Zed is that what it is there he is okay guys look at what he has pinned to his profile a very special thank you to expanding real for pointing this out to me yet again here we go and yes the second law of Thermodynamics is violated while maintaining conservation of momentum and energy I've always wondered when I look at this image of on his pin profile from April 2023 before I ever met him months before I ever met him why he was showing us this he wants to show

(1:59:12) us that scal of physics is real this is why he showed us why his profile much like the difference is is that this happening in the middle of a rotating magnetic Vortex because of that the power that is taken in is dispersed in the vortex like a hurricane or throws all over the place but it stays in the show us we create over Unity we create a system that much like a rary it is happening in the middle of a rotating magnetic Vortex and because of that the power that is taken in is dispersed in the vortex like a oh I apologize so like I

(2:00:17) sorry I muted that I apologize but this is why it's violating the conservation it's it's violating the laws of thermodynamics so it's it's tapping into the underlying framework and

construct of the universe to borrow energy from it just like Thomas Bearden was talking about in the scalar physics this is why Dave has this pin to his profile I've been wondering this whole time why does he have this pin to his profile this is why he's just telling the whole world the whole world has no

(2:00:48) idea the whole world is looking at it in this video it's out there in the public it's on Tik Tok it's out there on Twitter and no one has any idea this stuff's real because most of the public is full of idiots that nobody thinks for themselves nobody does any scientific research for themselves and they just believe whatever they've been told to be real this only has 26,000 views only has 26,000 views he has it pinned to his profile since April of 2023 cuz people care more about random political drama

(2:01:22) that than they care about science and real science that might be possible wow what a revolutionary eye opening night we had here guys so thank you guys for jumping on this stream tonight uh I am going to close it out here since we've been going for two hours there are at least one maybe two more videos of Thomas Bearden that we are going to jump into tomorrow night and this weekend and then I am going to interview I have scheduled to interview Jack sarfati on Sunday I think I'm planning on doing it live there is a possibility I will

(2:02:02) pre-record it I'm not 100% sure I do want to build it up a little bit there could be some fireworks um somebody mentioned as well what do you think about Jack sarfati talking last night I'm not sure how much of what he says is true I think that he knows the physics for sure the physics of what Jack SFA has been saying is is dead on but the difference between Thomas be is Thomas beard is an engineer Jack sarfa is a physicist we have to kind of reconcile these Jack sarfati is looking at it from the theoretical physics perspective and the

(2:02:34) engineers are looking at it from this is what we can create how do we explain it perspective yeah am I on the Spectrum guys I don't even know what autistic even means I don't give a A what autistic means if it means somebody that's figured out by history and research uh what the nature of our universe is then sure call me arti uh artistic call me artistic uh guys what I'm no artist you call me an artist I don't think what is think that's ghetto I know I know if you guys don't know what that's from look up

(2:03:10) the sukiana and Bobby alof interview um probably one of the funniest things I've ever seen in my life so guys I'm artistic I'm artistic out here uh yeah autism is basically just one of those things they invented to make people feel special um I I don't I don't believe in any of that crap I think you control your own uh your own reality you control what other people think about you and if you victimize yourself in a way to convince yourself that you're a victim and that your special needs or

(2:03:41) whatever then you're doing yourself a disservice so okay guys I'm going to drop off yeah I'm not a musician I make music do you mean M magician no I'm not a musician I don't think I know anyway guys I appreciate it uh thank you guys very much for jumping on this tonight I will try to set a follow-up tomorrow where we do another video on Thomas Bearden

now that we know the framework uh we can begin to understand some of the more advanced concepts I will also uh most likely tomorrow be clipping I

(2:04:18) took some notes Here clipping some of the segments from that and posted it on my Twitter if you guys want thank you special thank you to uh Jeremy Reese alien scientist uh Bernie uh crypto Alchemist who was in the chat uh big thank you for all of m370x all the followers who've been following and supporting this whole time uh we learned a lot more today we can understand and explain the videos better than we could yesterday so every day that we improve our knowledge is a day where we've gotten smarter a day where we've gotten

(2:04:47) closer to the **truth** and one day we will expose that entire **truth** to the world world thank you everybody peace

MH370 - A Letter to Joe **Rogan** - YouTube

(04:29) e e malan 370 contact 120m [Music] n breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music]

(05:59) I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds good evening chat how are we doing out there everybody hell yeah we are back we are back with MH370 we are going to address the evidence the haters the UFO Community everybody it's time to do this you guys know why if you're in here right now you guys know what's good uh Joe **Rogan** uh

(07:02) posted the videos on the podcast he did that came out today now the reason why I thought it was interesting is that yesterday was supposed to be the day where I was supposed to be on Joe **Rogan** March 25th was the date that we had set before he backed out of it and instead he had Kurt meter on uh who he's a comedian I think he did a pretty good job in general honestly he even defended the authenticity of the videos a little bit to us are for us although he did call me autistic we're going to take a look at

(07:33) that we're going to look at those clips uh let me make this full screen we're going to take a look at those clips and we are going to show the videos I'm going to go through the best

evidence I'm going to address the **debunks** uh we're going to get it all out there in the open because I'm just tired of the [ ] uh I'm not offended I'm I'm just disappointed at this point so this is the letter video letter to Joe **Rogan** uh if he's out there uh or his people watch this I hope that they do because I

(08:02) want them to know a few things first thing I want people to know is that I have not been doing this for attention or for fame or for money or for anything like that I don't give a crap about any of that stuff at all the only thing I care about is the **truth** and the **truth** is the United States government took MH370 that's what happened that's the reason why they never found the plane even though they searched for 3 years in a supposed area where they claimed they had satellite pings that proved that the

(08:34) plane crashed there this is the reason why they developed a fake story about a pilot suicide that makes no sense whatsoever because something big had to be covered up yes conspiracies are possible these videos Prove It beyond the shadow of a doubt the thing about these videos that we're going to go over tonight that's so big compared to other videos what you're going to see in this clip is Joe **Rogan** mentions there's a lot of [ ] out there yes there is there's never been a video where I said

(09:02) wow that's incredible I need to go prove that's real to the world this is a real incident where a plane disappeared from thin air that does not happen in 2014 planes don't just disappear they just don't go untracked that's not a thing that's possible the reason why these videos are the most compelling videos in the world is it it's not just lights flashing around or it's not just a UFO it actually has a real world event Incorporated with it that you can be dug into that you can look into the evidence

(09:33) and you'll find just like we found through MH370 X the evidence corroborates the videos being real that's the strongest aspect of them you think I want to believe that we can zap a plane out of existence or to somewhere else no I don't want to have to believe that that's incredible that has huge implications to our reality but here's the the next craziest part It lines up with everything that's being told about ufy it lines up with what Kurt and Joe **Rogan** were talking about right after the MH370 clip why would the

(10:09) government lie about this maybe they're covering up the whole aliens thing is maybe just a distraction from the idea that we have this technology Jeremy Corbell was told by commander fraver of the Nimitz Tic Tac incident that the CIA tried to convince fraver that locked Martin was the owners of that technology that's the independent cor that's the independent conclusion that I've come to looking at the MH370 videos that's locked Martin technology Cia didn't have to tell me that we figured

(10:47) that out what if it really is Cia Tech what if it really is locked Martin technology and our technology think of the implications of that what if we actually can teleport a plane what if we can actually do that think about what that means for our reality all around us it means that conclusively there's an extra Dimension it means that we can absolutely manipulate Gravity the

same exact way that Joe Rogan and Elon Musk talked about it warping SpaceTime around an object it's consistent with the laws of

(11:19) physics it's the thing about the science and the science is real too is that we don't need new science we don't have to come up with new theories the current laws of physics and science are already consistent with these videos being real so guys before we get going I want to thank everybody who's been in the chat I want to thank all the MH370 X investigators the people that followed along all this time so I'm just going to read out some names going through the chat here real quick uh everybody who's in here I appreciate you

(11:52) even if you're a hater I appreciate you William thank you very much man cat possum PJ Mike Jess Aaron Alex Billy Brew yaser Joe jml show goat uh if I miss you I apologize I'm just going to try to go real quick Joe Moss drams station Jason's great to see you Sandy awesome to see you Zach appreciate you uh hasatu thank you DeVos glad you're here s23 Ellie always glad to see you Ellie Arley cast Castillo thank you very much for being here UK Yousef uh as s23 Andy Trump forever appreciate you guys Amanda my favorite

(12:39) follower uh ice rain J appreciate you too uh Andy just in case I didn't get you K stack uh sir Herold uh H alienne uh S Walker James Pig James if you're out there appreciate you too uh Alex uh Mr H slug Anthony Jones I think I got everybody weona appreciate you as well okay guys oh and uh braa Brian so thank you everybody who's been out here oh and I see you Gerald thanks for being in there guys okay let's get straight down to it I don't want to waste too much time on this tonight I want to dig

(13:19) through it uh this is going to be a fun stream we're going to go through the videos we're going to go through the evidence we're going to get people up to speed if you're a new follower and you don't know what's going on we've been investig uh we've been investigating MH 370 for 7 months or so I stopped investigation March 8th haven't really dug into anything new since then I continue to do podcasts because I've been invited to a lot and I was invited to a lot even before that there's a few

(13:42) more coming up as well that are pretty large it's going to be awesome uh special shout out to Matt Kim uh his was one of the biggest ones that really helped Elevate us Zack Payne I just did on Saturday has like 70,000 plus views or something like that on that podcast H the reason why these podcasts get so many views is because the information is extremely compelling because people resonate with the truth and when people lie it doesn't seem to resonate with people so yes these videos are going to be hard for people to believe tonight uh

(14:12) we're going to go through the debunks as well for people uh I'm going to I have a bunch of Clips lined up that we will go through and we'll talk about them and at the end of the day if you don't want to believe these videos are real you want to believe that video game effects or whatever absolutely you know what go back to your normal job ignore this entirely and in fact your mental well-being might be a little bit better for it cuz the truth of these videos just like what's happened to me and

(14:34) probably a lot of these people in the chat is the moment you realize these videos are real it's going to change your whole perception on everything everything's going to change and there's no going back to sleep once you've woken up to this the idea that we can actually pull off major conspiracies we be in the United States government and that we can lie the whole world using the media and that we have technology that is Magic straight up magic like we're talking Harry Potter stuff here invisible cloaks

(15:05) teleporting stuff around uh we might even have medical healing capabilities that we don't even know about you know this is this blew my mind when I dug into it people may say that I'm obsessed not really what I am is I am uh uh I I think I found my purpose I found something that matters because as the person I was podcasting uh Donnie today Donnie spell finder uh spell breaker sorry and I talked about is that this technology will change our planet just a fraction of this technology will change our planet it will help out millions of

(15:43) people in the United States free energy alone will make it so that we don't have to have people starving it'll make it so we don't have to have people that are homeless will it bring down centralized government and destroy the economy as it is right now yes and hopefully we'll rebuild it back better because that's what we really need okay first of all cheers you guys know me Martini man and yes I already stuffed the blue cheese olives um only blue cheese olives guys only blue cheese olives and yes

(16:20) this technology is way better than Harry Potter okay so I want to start with the clip let's get into full screen here um so how did this all play out today well I was sitting there today I was looking through my DMs which thankfully I'm not showing right now I have a bad habit of doing that and uh it was actually Hermes credit to Hermes big poo if he's out there he said hey you need to watch Joe Rogan clip at two hours and 27 minutes and what do I see um but I see the video here of J of Kurt Meer with

(16:58) Joe Rogan and they're talking about the MH370 videos wow I mean that alone is Big okay like the the videos are out there and they're in the Zeitgeist now real quick before I get into this one more thing I want to say I'm going to switch it back is that I've already accomplished my goal I've done enough to get the information out there I've pushed the conversation of UFOs and advanced technology in a in a direction that I don't think anybody has ever pushed it before I have shown people that we

(17:29) potentially can actually have this technology and it may not look like what we imagine it to look like flying saucers or whatever that it can be orbs and that it's way way darker and way more powerful than what we would have imagined the idea that we can annihilate something that we could teleport something that we could create energy densities that amplify to such a degree where we can make a plane 777 disappear that means that if we amplify that further we might be able to destroy an entire planet this is hugely sign

(17:59) significant this is not anything that any of these other UFO disclosure people out there or whatever have been talking about um and that's what I think also makes it compelling is that I

think anybody who's looked into the UFO stuff like I have for several years now have thought it's not going to be what we expect and oh boy is it not what we expect so here we go let's listen to this clip everybody um rude uh Kurt that's rude anyway carry on announce of how they looked at it okay chat yeah very disappointing very

(18:38) disappointing uh but you know what not unexpected now why is it not unexpected oh where's my video camera why is it not unexpected because this is a lot to believe this is a lot to take in for anybody even for Joe Rogan somebody who is open to the idea that's out there so let's go ahead and address Joe Rogan's arguments and points here and I'm going to read through what I mentioned here as well just so that we can really drive this home okay let's look at uh the debunkers give me one second okay videos okay first and

(19:12) foremost um where is it VFX frame match okay here we go okay zoom in okay first of all this is the one frame overlaid that that Joe Rogan presumably saw the corridor crew post I don't think he knows the history of this this is not from the corridor crew this is not from Danny Jones this is not from the lore Lodge this is from Mick West this goes back to August 19th 2023 where a one-day old Reddit account claimed to have found an asset that matched this is the frame that supposedly matches overlaid over the

(19:55) video back and forth you can clearly see these are not the same you can tell that the middle is not even close to the same people make the argument that well they just modified it all what they do how' they modify the middle part of it this is not even the same shape in the middle and why would they do that nobody modifies the VFX asset I have multiple examples of actual movies and video games using this asset and none of them have modified it The Killing Time video game did not modify it Attack on Titan

(20:32) used this in one of their promotional materials they did not modify it the movie Starship troopers use this in as for an explosion of an asteroid they did not modify it either because that's not how stock effects work you don't modify them the whole point of a stock effect is to use it as it is so that you don't have to come up with your own effect so this shouldn't be very controversial cuz you're looking at it right here and you've been looking at it for the last 30 seconds but just in case

(21:04) and I want to show you how dishonest Mick West and these other serial debunkers are they're just completely dishonest people and I don't know if they're just delusional because they think that nothing can be real except for what they believe in or that their government or CNN wouldn't lie to them or whatever it is I don't really care what their purpose is I just care about the truth the truth is this is not in our video so to add on to it here is the whole effect overlaid over our video and

(21:34) you can see very clearly this is not in our video you can see the one frame that is similar right here and then after that nothing is even remotely closed this one right here I mean look at all the zap effect and stuff that you see here that could never match our videos it's just not possible you can just tell right away not even similar so you're telling me someone erased all this

stuff and changed it all around to get it to look like something that had no frame of reference for this is how VFX actually

(22:03) works cuz I've talked to actual experts you don't change the stuff around you put it in there from the way that it's set up and you need a reference for something that you were trying to make something look like the reason why the debunkers were able to get it to look the same is because they're looking at it side by side and then they're matching it up and they're trying to get it to match but when you watch this you can tell that it doesn't match and this is the one that actually has the extra frames built into

(22:32) it that wasn't updated until after 2015 I believe when you look at something side by side of course after time you could finally get something to match but you've now manipulated to a degree where you could have just created from scratch now more importantly when we look at our videos when we look at our slow motion zap this zap what we see here is consistent with science the orbs converging in or what's amplifying the energy they're creating an azth around the plane a bubble around the plane this thing is gone in a

(23:05) fraction of a second there's only three or four frames of this zap and this is in slowmo when you watch it in full time the thing has gone in a fraction of a second so yes I understand it's hard to believe but again as a statement of fact these are this asset is not in our videos now um here's the Taylor set off blast waves just a prove to Joe and everybody else that is not some one in a million coincidence that you can have environment what do you call blast wave that matches look at all these examples very

(23:43) similar around the edges and this is from level 39 shout out to him for figuring this out we he finds at least three different edges that you can get to match Sim all dispersion effects look at that nearly a perfect match that is being used P MH370 videos so to Joe's point they found edges that are same well yes cly and even before they found this they argued that was they argued that it was a supernova there's been even before this Deb came out there were multiple Arguments for what they were claiming it was and then

(24:25) they went with this one and this is the one that was used completely censor the discussion on entirely look at that does this mean the Mig researchers faked their all the way around of course not in 2018 research sorry I didn't realize the sound was going there and then there's one more here as well another blast wave effect same thing and you're going to see here as well that this one is also a match they're all a match sorry I didn't mute that video earlier I'll go back and show it one

(24:57) more time okay dogs upset okay so here we go we can see here now exact match first one chill this one's also a match all three are matches okay so there being some type of similarities in the blast wave means nothing this does not prove it okay now to add on to that as well we had a \$150,000 Bounty out there kim.

(25:30) com you've heard of him threw up \$100,000 uh we had the uh investigate Earth podcast

threw in another 20,000 a wealthy donor who's been a supporter who I actually have a test text message from right now has thrown in uh \$20,000 now this this is no longer out there no longer valid and I threw in an extra 5,000 this adds up to \$150,000 from real people who have the real money and nobody came forward with any evidence that they had created these videos no one even though we had gotten I've gotten hundreds of millions of

(26:10) views in the last few months nobody came forward not for \$150,000 not for fame not to **debunk** the videos not just to do the right thing so if these videos are fake if this is some kind of hoaxer situation where is that hoaxer why do they not seem to exist okay now let's go through some of the other **debunks** I want to address all the **debunks** first now I don't have the cloud image that is out there at the moment but I want to address that next because these are the two most prominent **debunks** that are out there the the zap

(26:43) which apparently is still getting enough Headway for people to believe it to be real uh a cloud image uh was found on December 10th I want to say somewhere around there and it was found by a Six-Day old **Reddit** account the Six-Day old **Reddit** account claim that they found this Cloud image in 20 minutes of searching on a textures.

(27:06) com website they claim that they did this because guess what I upset them because I dunked on their idiot uh Heroes the corridor crew remember those morons that sat on the couch and spliced in cartoons in their videos guys that are complete idiots that have Jordi lege looking glasses well somebody got upset by that and they went ahead and they supposedly found an exact picture that had the clouds in our satellite video in it uh and and not all of them but most of them I there's no still to this day no explanation for why not all of the

(27:41) clouds have been found maybe they rendered a few of the extra missing clouds not really sure this person did not want to come forward and be the person that **debunked** the videos so instead what happened was anons Anonymous people like that person that Six-Day old **Reddit** account sent an email to the supposed photographer of the picture found who the photographer of the picture was somehow and sent an anonymous email on a burner email account to them this has been admitted to and I have on tape from the photographer and the photographer got an

(28:12) email the account was just thought you should know at proton or something like that told the photographer where they should they can find the images because the photographer couldn't even find their own images on the website and in their **debunk** video that they ended up making they couldn't even find their own images on the website but somehow an anonymous Six-Day old **Reddit** account found them on there in 20 minutes in a sea of pictures where I don't know you tell me how exactly they were able to ID

(28:38) that the clouds were in there especially because some of them had to be stretched out inverted rotated I tried to look and I couldn't even find matching cloud pictures when I was look at them side by side so we looked the images up uh the the photographer made a **debunk** video within 1 hour of receiving the anonymous emails 1 hour decides oh I'm going to go ahead and

drop everything I'm doing and make a **debunk** video about this without knowing anything about the videos also spoiler I talked to the photographer and

(29:09) I one of the only questions I asked him was do you know who the corridor crew are oh yeah I've been following them for 15 years it's amazing that everybody involved is linked to the corridor crew and everybody involved is also a VFX expert incredible people found clips of the photographer where the photographer admitted that they d in photo manipulation as well as another clip of them literally editing clouds into a background of a picture within 30 seconds incredible the images in question when we looked into them only go back to 2016

(29:44) on the way back machine postdating the videos which appeared in 2014 the images with the clouds in question did not reverse image Google reverse image search back to the website at all other images in there did but those did not in fact if you even looked at it even now you're going to find that they'll go back to **Reddit** where the clouds pictures were posted but they won't go back to the website so the photographer in question told us well maybe these have been hacked or maybe that pirates took them

(30:17) from the old uh website that this migrated from in 2014 so you know what we did we searched for those Torance from the old website CG textures.com you know what we found nothing the pictures don't exist on multiple torrent that is incredible you know why it's really incredible because I've had multiple **scammers** one committed a felony fraud against me posting fake pictures fake raw file password protected scheme with a whole backstory went back and forth with me over 200 emails and stole \$3,000 from me willing to commit felony

(30:54) fraud with fake metadata in the files indicating that they would are falsely from 2014 this is how far people are willing to go to lie about these videos and that doesn't even include the government in addition to that we found that multiple higher quality images can be made from existing cloud images and one under one minute using AI tools right now the assets that we looked up on the the textures.

(31:23) com website were modified and updated December 6 2023 if anyone body knows databases updates on database rows on elements are not common even when you do a upgrade they will not update the individual elements on a database row I know because I work with databases my whole life so it's pretty damn suspicious uh the photographer in question was offered \$10,000 by kim.

(31:48) com he said he would take it while I was in the video with him that I have recorded and then the next day pretended like it never happened and then when he was confronted when I posted the video clip claimed okay yeah now I'll take it I never I never said I wouldn't I never said I wouldn't sign all you had to do is sign an affidavit saying there was nothing wrong with the pictures oh and the photographer also knows the textures.

(32:09) com owner personally incredible lots of coincidences going on with this lastly oh actually not even lastly there's more so then people started analyzing the pictures and found uh

technical discrepancies which I'm not going to go into all the technical discrepancies because I don't understand a lot of it to be honest with you but what I will say is somebody found a flicker image of Mount Fuji from the picture that has the exact angle and Shadows on the Mount Fuji that we see in the supposed textures.com uh Cloud

(32:42) picture exactly now this picture was supposedly taken from an airplane so was there other people taking pictures from airplanes at the exact same location at the exact same uh angle to create the same exact Shadows on Mount Fuji uh or was it possible that that image was manipulated from an existing image to add the clouds into it in order to supposedly **debunk** our videos I leave that for you guys to decide um but the most important thing why none of this matters is that days before this Cloud image ever showed up we already proved

(33:15) that the the there was a hole in the clouds showing that the cloud is being distorted by the actual uh orb as it goes through it I'm trying to see if I have that anywhere handy I may have to look that up later but not just that but the clouds evolve I'm not talking move but actually evolve when you watch them so I'll go ahead and try to show that here right now full screen now if we go to the satellite highest quality maximize this if I go to say like this Frame here and I just go back and forth you can see

(33:54) the clouds evolving you can see them moving around some of this is possibly uh compression but other of it is actually where the clouds are the lightest even though it's only 2 or 3 seconds you can see how the clouds evolve and let's see if I go to this area let's take which area here which one this one's probably the best let me see because this is the longest yeah so when I move this around you can clearly see the clouds moving around you can actually see in the background on in the water as well where

(34:23) some of the little white dots will actually completely disappear some of the best spots is right about here where my mouse is you can actually see this spot completely evolve and change around okay this type of evolving is not something that you could have from a 2d Cloud effect but in addition to that our 2D Cloud picture in addition to that we and this is before the cloud image even showed up we had synced up the clouds uh so we inverted this drone video here this has been inverted uh because the drone's on the other side so

(34:53) you have to flip it around to get it to match and then lined up the actually have to line up this is just exactly having the videos in synchronization here and you can see the first Cloud right here this Cloud right here that we see in the background matches up with this Cloud potentially back here which indicates that the Drone is just off the screen in the north right here at about this angle and then we're seeing that cloud right there and then we can see the second Cloud right here which is going to be this Cloud you see right

(35:20) next to it so you can pretty much actually triangulate the exact location of the Drone from this and this type of thing means that this would have had to use a full 3d rendered environment because you need to make the 3D rendered environment to have the clouds be three-dimensional there is Parallax in the Drone video meaning you can see three

dimensionality they even zoom in at the early part where you can actually see the clouds have Dynamic Parallax in them uh this is not something you can do with Adobe After Effects this requires a

(35:49) full 3d rendered environment using software such as CAD or another 3D software not just that there's more the zap in the videos as well well um let me see accurate illumination where's the illumination sorry guys I've got a lot of videos okay and if you guys have questions go ahead and let me know while I'm looking this uh zap illumination up okay well what I guess I'll do is I'll just go show the other one I can't find my short here thank you guys once again for being here stereoscopic

(36:43) effect okay I just I'll just show this one again okay so in this one here as well um and maybe I'll do a full analysis just for you guys but let's go ahead and show the zap so when you see this zap happen here you can see that uh if you look closely when I change between those frames you'll be able to see the edges of the clouds light up now not just that people have gone and done you know used software to take a look at this and they found that the clouds accurately illuminate in all directions and three

(37:15) dimensions here this cannot be done in OB Adobe After Effects this requires Again full 3d rener environment where you create accurate lighting based on the location of the plane here so again if you see me Zoom back back and forth between this you can see the accurate illumination you can see how it increases right here around the clouds as well this is all accurate illumination so these are the types of details that [Music] uh that you can really not add I mean fake videos don't have these levels of details so let me see I'm trying to see

(37:50) if I can find the picture of it so I can prove it to you guys real quick here it is found it quickly okay so this is from the 3D side by side uh version of the video which is the original Regis side and non verion so this is the one where they've adjusted the lighting so you can see that the lighting is accurately Illuminating the clouds in the background and in the foreground and on the edges This Cloud down here which is like barely not seen is getting almost no light so this level of accurate lighting cannot be done in

(38:22) Adobe After Effects guys so uh there you go this is absolutely proof that we are not looking at 2D Cloud picture this requires a full 3d rendered environment okay fun times okay let's go ahead and look let's go through the letter real quick and then we're going to go through the videos at the end okay and I haven't even gotten into the science aspects of this yet so the science uh also checks out I have made friends with people like Salvador Pas who if Joe Rogan's listening I would recommend you take a look look at the

(38:58) salvator Pius patents high frequency gravitational wave generator take a look at uh inertial Mass reduction for a trans medium craft take a look at uh piso electric induced super conductivity high temperature super conductivity and that's going to be a good segue in here to this first part Joe Rogan says that he sent the videos to Jeremy corbel who said it was [ ] Jeremy Corbell said it was [ ] Jeremy Corbell doesn't even know what super conductivity is he

called him super capacitors he doesn't

(39:35) even know why super conductivity is relevant to the discussion if he did he probably would have figured out disclosure years ago so I'm going to go ahead and show you why it's important this is why it's important what is that that's a floating Rock does that remind you guys of anything it reminds me of a UFO hovering now that's not enough let's go look at this other one just cuz people think this has been **debunked** which by the way it's been rebunk recently as well and it was the American physical

(40:11) Society had a big conference where they presented a ton of evidence for why this is real room temperature super conductivity from a material this rock is floating suspended in thin air with a magnet to the side of it not even above it this is called flux pinning this is called the Meier effect when he Jiggles the magnet the rock moves along with it because it's flux pinned because the magnetic fields are both warping around the material the rock as well as parts of it are going through it now this speaks to the penetration

(40:43) the London penetration depth in terms of how far the magnetic fields can penetrate through the object through the rock here they throw all hoop around it show you there's nothing no hookery going on super conductivity is important because super conductivity is zero resistance in a superconductor zero resistance they throw a screw on it just to show you here that this is not a trick that this is really a magnet now if you have zero resistance now this is where you have Cooper pairs forming Cooper pairs are in my mind equivalent

(41:17) similar to Bose Einstein condensates where now the electrons are beginning to act like a wave where they're not hitting anything they're just flowing this is like quantum mechanics where objects can just pass through other stuff you know just seemingly cheat so to speak now this is the part where superconductivity can induce these types of behaviors that we're seeing if we can get the electrons to break free from their original position even in like an airplane or any object we can begin

(41:51) to form a matter wave now who has a patent for a matter wave let's go ahead and look up coherent matterwave beam oh let's just check this out uh hold on coherent matter wave beam oh look at this systems and methods for generating coherent matter wave beams Lockheed Martin Corporation 2011 incredible and when we look at it it's got resonant cavities here you know how small this is 10 microns 10 microns across this is almost as small as a covid virus just to give you an idea of how small this is imagine how advanced

(42:41) this technology is relative to what we know out there today the way this is being hidden is because you combine various components and patents that are out there next thing you know you got a little orb that can float around and defy gravity that's the reality of how this stuff is hidden you want to know how it's hidden is that they H they figure this type of stuff out but it leaks out there because it's got to leak out there uh unless they classify every patent but they don't care because it doesn't

(43:09) matter the individual components you find it matters combining them together that's what makes the difference that's what makes the magic happen even when we look at the salvator pious patents you need to combine them together next thing you know you've got a UFO okay so uh respectfully to Jeremy Corbell and the rest of the UFO community that are out there you guys don't know what the hell you're talking about you guys have no idea what the hell you're talking about you guys care about aliens and uh

(43:42) trying to figure out weird sightings of stuff that doesn't even move fast like Joe Rogan says I like the stuff that moves fast when you've got a jellyfish alien that's moving around like a balloon what exactly you got there nothing and when you say oh I've got another video of it entering the water and shooting off in the outer space well show us that video show us the video of it going into the water and shooting off in the outer space that's what I want to see I don't want to see a video of it

(44:09) just floating around I'm showing you guys videos of orbs that are Defying Gravity they're Defying Gravity and teleporting a plane somewhere show me something like that really break it down for me if somebody else shows me two videos of military assets in perfect synchronization with one another from two different perspectives I'm going to take that seriously very seriously look at the lines in front of these orbs look at these lines in front of the orbs did somebody make this up they're creating their own gravity well in their

(44:43) own path there is nothing like this anywhere on Earth nobody's ever seen any videos like this before ever no frame of reference for any of this stuff Bob Greener didn't go back in time and invent these videos and Bob Greener is the first person in toid fractal tral moments who looked at these videos and looked at our zap let me pull it up um here we go who looked at this and said that the orbs the heat signatures that you see in these orbs here when you see these this is consistent with uh a topological

(45:26) monopole the idea of a magnetic monopole the first paper that was published in Academia in in our uh public science was by Al Alto University AAL you guys can look it up talks about topological monopoles and that is after the videos came out Bob Greener I would argue is probably the premier expert on this type of stuff he's an actual engineer he works in low energy nuclear reactions experimentally not theoretically um and he has shown that potentially cold fusion can exist from the thunderstorm generator weirdly

(46:01) enough this is another one where Jo Joe Rogan talked to this guy Malcolm Bendle and never posted the video because he thought it was a scam well I got news flash for you I have on pretty good authority that it's not and it's being tested and that it will potentially Change the World by showing us that overunity is possible through cold fusion uh and that essentially we can have coefficient of performance greater than one and Alchemy can be produced we went did a video on it the other day what we see here you can see the orbs

(46:31) Orient actually I'm going to save this for a little bit later and and go back into this but when these orbs converge here they are amplifying the energy this is how they're achieving

energy densities that are ripping through the fabric of our reality to the extra Dimension and the reason why this is cold is because we're seeing what is referred to as neg entropy negative entropy negative energy and if you can create that then you can create a wormhole that's what we're looking at is the fundamental equivalent of a wormhole

(46:57) this is what they really look like apparently it's not like science fiction it's just like this you rip through the fabric of space and time itself and this is now how you can have this object go from a deterministic point in time to a probabilistic one in this Frame you can actually still see the tail of the engine sticking out of it or the tail of the plane sticking out of it in the last frame you can actually see gravitational lensing you can see gravitational lensing in the final frame uh so anyway we'll come back to that in

(47:29) a second here I don't understand why Ashton is not a scientist um that's a good question I don't know why I'm not a scientist either I love science but I like business and economics more it's the um that's really where my forte is the science of common sense as I call it okay now I don't want to dunk on the corridor crew more than I already have well you know what I kind of do actually so the corridor crew are absolute [REDACTED] morons they're some of the dumbest people on the face of the earth

(48:05) I don't think anybody should be listening to anything they say they're not experts I'm not even sure they're actually VFX experts at this point I'm pretty sure they just Farm it out to other people and the people that you see in those videos are just the front men for it they're the people that they go on the screen and try to appeal to uh little kids who watch their YouTube videos so that they can make a bunch of money they're the literal definition of grifters the very definition of it they

(48:30) make videos for money uh to fool people they've actually put out fake UFO videos in the past as well to trick the internet on top of that uh they went out of their way to defame me in their video as well and as I've said before it no matter when it happens anytime in the future when these videos become authenticated I'm going to send the families after the corridor crew I'm going to send them after Mick West I'm going to send them after Jonas Doo and all these people that made these fake

(48:57) debunk that came out really hard against me in the videos cuz those are the people the family should be suing they should be taking every penny from them for covering this information up um and going out of their way to do so when they had no reason to get involved whatsoever it's one thing to debunk random lights in the sky that are harmless 239 people disappeared on this plane the plane was never found not one body not one piece of luggage if you are covering this up you are a terrible human being and you should rethink your

(49:29) life decisions I promise you I don't care how long it takes you will have what is coming to you get to you I promise you that so not only that the corridor crew didn't come up at a single original thing this idiot Nico sitting there looking like a [REDACTED] when I was in the Danny Jones podcast was just literally reading off the metabunk website not only that he couldn't even face

me in real time or on a stream or anything he had to make a video about it his video is 15 minutes long it only took me 8

(50:01) minutes to Bunk every single point that he made every single one he thought it was daytime in the videos he didn't even know we weren't looking at contrails because the clouds are cumulus clouds in the background this is not a smart individual this is not somebody who ever reviewed the evidence whatsoever I might not be an expert on Advanced science or VFX but I'm an expert on the mh37 zero videos nobody knows more about them than I do nobody on this planet that's the reality of it that's not to be egotistical that's just

(50:34) the **truth** so when other people go out there and ask me oh haven't you seen this or that I've seen literally everything I've seen every single **debunk** attempt that's out there I've reviewed these videos in more depth than anybody ever has I would even put my knowledge of MH370 and the investigation up there with anybody anyone any of the independent group any Aviator any engineer uh any any author any of them any of them that's how confident I am in the strength of the evidence that I've made publicly

(51:04) available in my all pertinent evidence version three which you guys can find I'm reading off of it right now real quick I want to address some of the other **debunks** that are out there before we go on with this there are no discrepancies in a single frame on either video so if somebody made these videos they didn't make a single mistake anywhere that anyone could find even though we've had probably thousands of people pouring over them frame by frame you need a full story to explain how these videos are fake who faked them

(51:38) your fake needs to start with reeside andan being the hoaxer because if reeside andan is not the hoxer then why did reeside and nonp put in the description received March 12th 2014 4 days after the plane went missing that's consistent with these videos being **leaked** to the internet that's not consistent with somebody hoaxing the videos that's not enough time not even close to enough time not to mention that most of the data in the videos what isn't even available at that time there's no way they could have known

(52:06) anything about it they were still searching in the South **China** Sea on March 12th 2014 the coordinates in this videos indicate the nicobar islands the real location of the plane the real location where the plane supposedly turned into the South Indian Ocean there's actually coordinates in there that prove that location is the location that we see in these videos that is honestly that's enough of a Smoking Gun that the videos are real all on its own you know why cuz the publicly available data the raw Telemetry Data before we

(52:39) saw uh before we had the raw Telemetry data all they had was a chart just a graph and the graph just had some up and down lines and not even the experts could make any sense of it they had no idea what it meant or where the plane went Mike exner of the independent group told me directly I have him on record said that he didn't even know that the pings were real until June of 2014 the satellite video was published May 19th 2014 9 days before the raw Telemetry data was even made available to the public did the hoaxer just guess the

(53:13) real location of the plane where Katherine T actually saw the plane I've got 19 real Witnesses who saw this plane consistent with a fire event not consistent with it flying in the South Indian Ocean consistent with the fire event so the other **debunks** people say the clouds don't move they do move you're only looking at each frame of reference for a few seconds in the satellite video and we're looking at it potentially if they are from satellite it's from 1100 km away to 40,000 km away if it was taken by a geostationary

(53:50) satellite one of these one that's in the cber system 40,000 km away the further away you are the less it looks like something's moving that's why when we look out at Jupiter we don't really see any movement everything looks like it's standing still when you look up at your clouds that are only a few miles away outside your house or wherever you live it doesn't look like the clouds are moving either you're only looking in this videos at each particular segment for less than five seconds and even then

(54:16) when I just showing you now and you go back and forth you can see the clouds evolving because the very like less dense clouds you can even then you can still see them evolving so the clouds do move again is a statement of fact the smoke flows naturally there's been this argument there was jittery smoke Trails or something there isn't actually the fact that the camera shakes what we'll look at here in a second is consistent with the videos being real it increases accurately when they zoom in just like if I were to zoom

(54:46) in with my phone here and zoom in far away it's going to and just because of my mou my hand moving a little bit it's going to shake same exact thing happens with the Drone the Drone experiences accurate turbulence as it goes underneath the the trail of the the wake of the plane so people have argued well it's not enough or it's too much or whatever turbulence these drones are very stable to very large craft uh you see accurate shake when it goes through just like you would expect for a plane being an altitude at

(55:20) roughly 5,000 7,000 uh feet um I don't think there's really any other ones that I have to address but some people say it doesn't look right uh which isn't really an argument um people will say that I think I saw one silly one where somebody tried to compare two frames and say that they um the plane was moving at like 1,200 miles hour we actually have analysis of the speed of the plane it's moving at between 150 and 250 M hour consistent with maxing out of 777 while in turn doing an emergency

(55:53) maneuver while descending which is corroborated by a witness witness and a Chinese only Mayday call there's also somebody that claimed the two frames were the same so go ahead and address that **debunk** I actually have a clip up for that uh ready to go oh also I want to point this out about the Pyromania VFX as well going back to the Pyromania VFX this is a real picture from the upload of the Pyromania VFX in January of 20123 this is where supposedly these **debunkers** have been getting the assets from do you notice anything weird about

(56:28) these pictures first of all none of them have been edited in any way consistent with what people say that the uh MH370 videos are from and these are some major video games that's

Diablo right here this is Command and Conquer these are all using assets from this package none of them have been edited they don't change the color of them the size they don't reshape them hey look in this one they actually took the MH370 zap and they put it into this asset this is not from the Pyromania asset this blue line here is

(57:00) from the MH370 video somebody fabricated this set of pictures and put the MH370 zap in it same with down here this is the MH370 zap down here this one on the right is the Pyromania somebody actually added this to the images to make it appear as though the MH370 zaps are from this package and they're not wild somebody literally Fabric and this is from January 2023 7 months before I even got in involved in this case someone was already fabricating fake evidence against the case this alone should rule out anybody

(57:37) who's trying to reference the Pyromania VFX this shows malicious intent that's basically the equivalent of somebody taking a picture of Joe Rogan and making trying to make him look sicker than he really was it's dishonest it's comes from a bad faith look spot pretty crazy huh um okay so yeah and the one where there was supposedly somebody claimed that there was two frames that were the same so we looked at those two frames and we used some analysis to get the frames to Overlay over one another exactly sorry

(58:15) I'm trying to find it where is it okay so we took the two frames uh and again again they fabricated another fake debunk so what they did if the two frames in question were the same this would be a white picture this is like a you it's like a subtraction from one picture to the other if this picture was white the two frames would be the same you can clearly see that they are not the same you can see the reticle is not in the same place you can see the that the uh Distortion in the background from it being nighttime and night vision is

(58:48) not the same in fact they used a bunch of filters to try to blend it to try to get them to match as best they could which is why you see this more whiteness around the plane here as well and even when they manipulated it they still couldn't get it to even come close to matching so uh this one was pushed by somebody named estimate of the situation he's a fraud he sells comic books about UFOs and conventions um nobody should listen to anything he has to say I tried to bring this up to him many times and

(59:14) even after I've pointed this out to him shown him this picture he refuses to accept the reality that he's wrong and that he lied about it just the truth so I wish people could be honest because it's just it gets annoying to have to address all these various weird debunks that people imagine they're there that aren't real um but that's what apparently it takes when you want to push the truth out there okay so I think I've addressed the the most of the debunks that are out there um and again

(59:40) it just goes to show how dishonest some people have been regarding these videos if these videos were fake uh I'll go through the evidence for what it required to fake these videos guys uh we would have found the plane that's the number one thing we would have found the plane nobody's faking these videos and then us not finding a plane that's pretty damn

coincidental somebody faked these videos and oh by the way we never found a plane and we've got two videos showing a plane getting Zapped out of

(1:00:07) SpaceTime so I'll pull this over here so you guys can see that I'm not lying about this I've got all the evidence here I've got my flight path explainers Linked In the evidence you guys can find this in the reply to my pin tweet it's all there um nothing is being hidden from anybody it's all in the public you can figure it out yourself uh so uh before I do that real quick I want to address the debris oh we found some debris okay so the official search found no debris they had 80

(1:00:34) planes in boats they found nothing the uh what we the tiny amounts of debris that was found is actually consistent with a fire teleportation event they even found a b777 fire suppression device that had to be empty because it washed up in the malds it has a serial number on it they didn't even look into it uh the debris washed up 3,000 mil away in Africa the debris is actually not even consistent with being able to to go that far in the period of time it would have taken for them to find it there the Barnacles on the fla Ron are also not

(1:01:12) potentially consistent with the angle that it would have to be outside the water the way the debris floats is by wind pushing on it the wind pushes on it and that's how the wind causes the debris to float in order for the debris to get to the location Africa needed to get it had to depending on Thee the debris that it is had to drift 5 to 10 miles in a in a straight direction for like 500 straight days it's completely insane and illogical the first debris model that they put in completely failed and the debris would have showed up in

(1:01:40) the Middle East so they ended up throwing another one no one can explain how a piece of engine cing that has Rolls-Royce written on it consistent with the Rolls-Royce engines from MH370 like basically like a piece of paper essentially like the edge of the outer C of the the engine they can't figure out how it washed up in South Africa 3,000 mil away it should have washed up in Australia yet nothing washes up in Australia at some point people just need to come to terms with the fact that this debris that was found

(1:02:11) did not come from a plane that crashed in the South Indian Ocean I think it does come from MH370 just didn't go in the water anywhere near Australia in fact there's a place that' be much more logical and much closer it's called Diego Garcia military base it's about halfway between where the location where they claim the plane crashed and and Africa and the reunion Islands in fact if you look at the debris drift analysis it's right along the path gets you right there uh but in case you don't think the

(1:02:41) debris comes from it some people don't the flapper on actually was not matched by unique serial number the unique serial plate was missing you can Google this you can see it for yourself Joe Rogan Jamie Vernon whoever else is looking at this for Jo Rogan's team just go ahead and Google it you know what in fact I'll Google it right now while you're watching 70 flapper on serial plate missing ID plate delays confirmation of MH370 that sounds interesting why isn't the media report on that huh oh there should be a a Serial plate

(1:03:22) that clearly is bolted into the part and it's just mysteriously missing why is it missing the effect of seawater on the adhesive bonds that bonds it to the structure the seawater made a plate that is clearly screwed in wash off well that's very convenient so what did they use to match it instead oh they used a partial uh partial part number to match the flaperon well it turns out there's other planes that were actually uh at least one other plane by ga tesis uh an exact replica of the plane bought by MH bought

(1:04:00) from Malaysian Airlines that was sold and scrapped in October of 2013 no one knows where that plane is so if you need some alternate debris that has exact match to MH370 it's out there okay now I'm not going to go through everything guys because this is not the evidence review but I did do an Evidence review stream where you guys can check it out for yourself if you want uh I'm going to go ahead and go through the evidence I'm going to go through two pieces here guys this is what I want Joe Rogan to know

(1:04:30) okay these are the requirements to fake these videos get ready unclaimed \$150,000 Bounty between 4 and 72 days to create the videos depending on if Regis side a non is the hoaxer if regicide and non is the hoaxer then you have May 19th at the best if regicide and nonan is not the hoaxer and has no reason to lie in description then you have 4 days to make the videos before the information is even available before the world even has any idea where the plane is there is no reference to copy any of this from there

(1:05:02) is not a person with balls on them and moving around with CGI that you can mimic this from there's no uh there's no videos out there that this was like a copy from this isn't a completely original work this is why you can't modify something and make it look like something else because there's no reference you don't have the benefit of looking at two things side by side there this is what the debunkers the people that think the Pyromania VFX they just changed everything around what randomly

(1:05:32) oh no they compared oh yeah what do they compare it to nothing there's nothing to compare it to realistic volumetric clouds accurately animate the cameras including the shake on the cameras as it zooms in how the clouds form at low altitudes the cumulus clouds consistent with the weather that was there at the time how to actually light the volumetric clouds which again requires a full three 3D rendered environment you cannot accurately light the volumetric clouds like this using Adobe After Effects you need a full 3d

(1:06:03) rendered environment exact replica of 3 MH370 if you go look at my profile this is an exact overlay of the plane with the Drone video thermal that is an exact match uh what the radius of the boing Triple 7 looks like um wall in descent at a certain altitude where the plane would have been at the exact time before it was even the public Telemetry data was even known um accurate coordinate shifts that are relative to to the location that are accurate to six decimal places we graphed it out and this is how we were

(1:06:46) able to figure out that it has to be in the nicobar islands and the plane has to be going to the South and to the east in the video how to animate those coordinate shifts you would

need a whole separate Pro program just to make the coordinate shifts to make them accurate cuz they're accurate and you can like look at them and see that it's really accurate coordinate shifts that we see in the video we show you this here in a minute um you have to be aware of the fire scenario the fire scenario Malaysian Airlines lied about the

(1:07:14) batteries on the plane until March 20th 2014 over a week after the plane went missing two weeks actually why were they lying about 487 pounds of lithium ion batteries in the cargo they claim there was no dangerous car cargo I would argue 487 pounds of lithium batteries is very dangerous somehow you had to be aware of this CU again if we go back and look at this image this heat signature is right where the AC exhaust ports are underneath the the landing gear this is consistent with this being smoke being flushed out of the plane and we're

(1:07:43) seeing the heat from the hot smoke that's that's permeating throughout the plane through the air conditioning system and me flushed out here okay again the accurate camera shake that increases when we zoom in knowledge of military classified systems that are completely unknown to the public uh you'd have to know that the military is using a Citrix environment I'll go over that in a minute with the videos the frame rate difference uh captured between the satellite footage in the background and the mouse that we see in

(1:08:16) the foreground of the satellite video the type of mouse which we see a different type of acceleration when the perspective changes compared to when the mouse moves so they would have to use something like I'm using here with this middle Mouse thing you'd have to know what satellites are in operation the first video is a 3D Parallax video from Regis side and non so this is one that I haven't shown very much recently but this is a 3D Parallax video the counter argument that **debunkers** have used is that YouTube

(1:08:46) could supposedly do this but they depreciated the capabilities back in 2015 so apparently for a very short window of time YouTube can convert a video to 3D uh and that's what they claim that this is but it's completely indistinguishable from a real 3D video in fact we've proven this video is 3D because we went ahead and converted it to 3D here it is that's both of those videos set up side by side using a 3D combination software that combines them together you can actually put glass red and blue glasses on and you can watch

(1:09:17) this in 3D just like you were watching a Marvel movie so somebody either converted this ride did not either converted this or this is the format of the video that they were received on the internet there's no way for us to know but if it is 3D we've got a pair of satellites right above the locations take a look at the time at the top of the screen 1833 UTC 1835 UTC 1840 UTC NR 34 USA 229 with its sister satellite right next to it is staring down at the coordinates at the right time to be able to take the 3D

(1:09:55) stereoscopic imagery that we just looked at this is your second Smoking Gun we have a low earth orbit satellite in the right location why is the video they say people say when they look at this why does it look like uh that the satellite's not moving why does it look stationary well we know that we're not looking at a moving satellite because the coordinates don't move in real

time when we look at these coordinates down here in the bottom left they only move when the perspective moves if the satellite was moving

(1:10:26) then the coordinates would be moving all the time because it's accurate to six decimal places meaning even a small movement of the satellite would move the coordinates this shows that what we're looking at here is a computer generated image pulling data from the satellites which is consistent with what cbers is this is cbers this is locki Martin once again scanning the whole world with their geostationary satellites they're midar orbit satellites that you see here and low earth orbit satellites which are not

(1:10:55) pictured like USA 229 they have a stare and they have a scanner this information has never been made publicly available or at least not widespread publicly available until we looked into it you can see the stare and you can see their scanner you can see the huge ranges these things are scanning combined they're scanning the whole world every 10 seconds these are capable of picking up a missile launch within a fraction of a second which should let you know that following a plane is basically simple for these

(1:11:26) types of objects or this type of system this type of system is going to have a 3D video playback potentially I say potentially because we don't know if it's necessarily 3D but if this video is accurate than it is that can pull back video playback of pretty much anywhere on the planet at anytime and that's what this video is because when we look here uh and I'll switch to the high high quality version of this that's not 3D we see the mouse come in we can see the smoke Trails coming out of the back of the plane we

(1:11:55) can see the cumulus clouds here you see the mouse come in uh which is at a 24 frames per second in the background is 6 frames per second indicating that this is a Citrix session logged into a database so this tells us the military uses Citrix for their spy satellite database which makes sense everybody uses Citrix bottom left if you look at the bottom left down here you can see nrl22 the only **debunk** for mainstream media claims that this video says NR 33 you can tell it's not 33 cuz you can see 93 which is the coordinates right here

(1:12:28) this says 8.8 and then next to it says 9.3 over here these are the coordinates of the nicobar islands nrl22 was launched in space in 2006 the **debunk** from Newsweek claims that it was launched that NRL 33 was launched in 2014 after the video was made well it's not NRL 33 it's nrl22 also nrl22 is also called USA 184 this is the first launch of the cers system the very system that we're looking at here so that seems like quite a coincidence to put into your fake video how did they did must have done a lot of

(1:13:01) research to figure this all out we can see our orbs begin to circle the plane here in a 120° sinayal pattern this has been graphed out it's a perfect wave function when people tried to fake this they couldn't even fake the movement of the orbs because it's too accurate to real life in science they're clearly doing mapping the plane or performing some kind of uh purposeful event here on the plane this is the mouse that you see down here again the Mouse changes color whether or not it's over the background

(1:13:28) or over the clouds it either becomes transparent or it goes blue the orbs change their orientation here and begin to Circle in a ring formation the moment the orbs get to this location they actually begin to slow down you can see them slow down a little bit right there and then boom the plane Gets Zapped and phased out and even though the plane gets phased out it's not like the background is still perfectly accurate uh there's no change whatsoever and again this zap look at the zap accurately illuminated the

(1:13:55) clouds here accurate illumination everywhere down here in the bottom right there's basically no illumination but right next to the plane you see a huge amount of Illumination and you can even see the reflection of the zap on the clouds over here on the left as well accurate Illumination in three dimensions on these clouds okay um then the plane's gone I don't think I missed any details on this but I'll come back if I need to now let's take a look at the second one here now the Drone video right away we can tell

(1:14:25) where the out a drone I mean this is you couldn't ask for more than this this is an mq1 C gry Eagle we looked at the mq9 reaper but only the m1c greaty eagle has there's actually a specific load out right under the wing where you can set up weapons or cameras you can find the pictures of the mq1 C gry Eagle on Google where you can see the actual drone uh with these types of aerial surveillance cameras on them the mq9 seem to have the Gorgon stair which is ones where they look down at cities and they can take full maps and see people

(1:14:56) working out in the middle of the streets uh this one is an aerial surveillance package so this is going to be more consistent with our mq1 C gr ego but we reserve the right to say that it could potentially be an mq9 they both have basically the exact same body layout this is not the camera underneath the the nose of the Drone it's going to be one under the wing this is potentially the camera the housing of the camera when you look at these cameras there's like a a layer right above the camera so it looks like it's the wing but it's not

(1:15:25) necessar the wing here now right away when it starts to go underneath the Wake here you can actually see the smoke begin to build up here as well this is also going to be accurate because once you see the smoke building up you're going to see it more dense like this as well so this is all again more small details somebody we have to fake now watch when the camera Zooms in here the person is manually tracking This Plane they zoom in you can actually see The Parallax on the clouds as it zooms in Dynamic Parallax here

(1:15:54) Dynamic Parallax on a fake hoax video somebody spent a lot of time to fake this if they did these uh it's easy to get base parts of the videos uh to copy them somebody can copy the monol Lisa uh but to get all these small details the way that they're set up is extremely difficult both videos are in perfect synchronization from two different perspectives opposite perspectives in fact the Drone the orbs are moving in counterclockwise rotation in both of them now we can see the heat signatures of the orbs as well we can already begin to see

(1:16:29) the geodesic in front of them geodesic is them creating their own gravity Wells it's basically like spreading out or creating space and that's why you see it as a cold line in front of

the orbs you can already begin to see the heat signature and you can see them spinning as well the Heat Signature spinning uh where we can see that uh magnetic monopole Bob Green you argued that they are actually potentially absorbing energy from the uh the area around them as well and that they are uh self- sustaining now what we're looking at

(1:16:58) here is not a metal ball this is going to be a plasma sphere around the object so this is the part where when I look at the UFO community in general this is the part where I think that they're just completely off base when we look at something like this this can explain why you would see balls of light this is ball lightning potentially that we're looking at here we're not necessarily looking at um some type of uh traditional Flying Saucer here and that's also why we see them warp a little bit where they get flatter or not

(1:17:25) as flat cuz you're looking really at a ball of energy and then we can tell that somebody is manually tracking the plane there's actually a little bit of a delay which is why the person's having a hard time keeping the plane in focus and uh that's why the shake increases as well when the orb goes through the smoke Trail of the plane they actually get distorted I have a different video where I can show that uh let me see if I have it up here sorry I'm looking at it oh here it is okay so this one you can actually see

(1:18:00) right here the orbs are being distorted when it goes through the the back of the plane as well so these are details that nobody would ever fake in their video just way way too detailed look at that accurately distorted when it goes through the background I mean right there this this Distortion here like this far too intricate this is either you know Marvel Studios producing this or this is uh just a real video right now we know that they know something's going to happen here because they're zooming in and out right before this zap

(1:18:34) happens so this is an operation that they are planned out definitely the Drone is actually very close to the plane as well which would only be doing that during an operation and then we see the orbs converge they're amplifying the energy required to break the swinger limit boom break through the fabric of reality spoiler alert we have an extra Dimension that we don't perceive everything in space and time is connected despite the distance this is how you can have faster than light communication faster than light travel

(1:19:00) um nobody thought that we could pull off anything like this this is actually the original footage of the video as well where it begins to show the orbs and the non-radiating barrier around them so this is now whoever wanted this out they wanted people to really look at this if you're making a fake hoax video the last thing you're going to do is you're going to try to highlight how great your job was and and risk the chance and somebody would find a small detail and inaccuracy this is this is them showing us this

(1:19:26) video is real and what you're seeing here is real and daring us to try to **debunk** anything we see and spoiler alert nobody's **debunked** anything about these orbs ever in fact this video the only thing anyone's ever even tried to **debunk** about this video is the zap that we see right here and then they show it to us in super slowmo twice to show us how real this is if

somebody had added a Pyromania VFX and modified it all around the last thing they're going to do is show it twice in super slow mode they

(1:19:53) want to trick you they don't want show it to you in slowmo and dare you to try to **debunk** it they're doing this cuz it's real they're showing us this cuz they want us to see how the science works we can see the orbs reorient so the same time in the other video where the orbs slow down in this video you can see the orbs reorient right here and they come out of that and then they are in a specific orientation and then they converge in the plane so right about here you're going to see them reorient

(1:20:21) right there they're reorienting that's why you don't see the heat s then the heat s appears you can tell the orbs now have a new orientation Converge on the plane and poof now in this Frame right here you can even see the the orbs flatten the azth is being formed we're seeing gravitational lensing happening because the electromagnetic field that's being generated here is uh rapidly increasing in power exponentially or energy and we can also see the plane blur acceleration has already begun we

(1:20:52) can see the plane get slightly smaller than the frame before and then we see the plane disappear in the frame right after it's so fast that we can actually still see the tail of the plane and the from the previous frame the plane is actually pulled backwards here now if this plane is flying East and it's getting pulled backwards then the most likely location where this plane is showing up is somewhere over here to the west and we went ahead and we looked and it turns out would you guess it the b77 fire

(1:21:24) suppression device washes up over here near the malds 20 Islanders on a small island over here that don't see jumbo Jets see the red and white stripe of Malaysian Airlines and in fact one of them mentioned seeing steam or fumes coming out of the back of the plane and they saw it flying where South to Diego Garcia guys the videos are real I don't know what else I got to do to tell you or convince you um I don't even really care so the next thing I want to talk about real quick here we've been already

(1:21:56) going for an hour and a half we've been cooking thank you all the people that are here watching uh welcome to the real story of MH370 what really happened to this plane uh in fact what I'm going to go ahead and do real quick is I'm going to play while I have a drink I'm going to play my flight plth explainer for you guys so that you guys can get the story of what happened very quickly you can visualize what happened with this plane now that I've shown you the videos shown you you the strongest

(1:22:26) evidence for them being real all the intricate details if you want to know the science check out my hard **truths** podcast I don't want to be a podcaster I don't want to be famous the only reason why I talk to these people is because they're telling the **truth** and the information and the science that they've been sharing is consistent with what we see in these videos I don't think any of this would be possible unless it was real how many times have people had fake videos and had a bunch of scientists

(1:22:50) want to come out there and talk to them and go yeah this is how this all works never how many times do Jeremy Cor Bell ever had a scientist come up to him and go hey I want to him talk about the science Rel with your video with your jellyfish UFO and tell you how that works never never um so let me find my flight path [Music] explainer might have to do this from my YouTube channel I'm okay I'm going to do it for my YouTube channel chat like I have so many videos that it's actually become unwieldy to try to

(1:23:35) figure out where I have all my stuff hidden so if you guys go to my channel here it is you can see us live right now letter Joe **Rogan** 300 people watching um here's my harre podcast if you guys go to podcast here you can listen to all of them there's more that put putting out as well looks like I needed to shave in this particular one um okay if you guys really care the most important ones to listen to are going to be number one with Salvador pz number two with Bob Greener number three with Dave Rossy and number four with Dave

(1:24:08) Rossy and Salvador pz now the other ones are great too royy Herbert's awesome Chad from investigate Earth is awesome Mark Soo was awesome as well the reason why these are the best salvator Pi has three patents why is salor pasas talking to me some random nobody when he's got UFO patents that are out there patents can change the world cuz he knows he's seeing stuff consistent with what's in these videos that's the only conclusion Bob Greener low energy nuclear reactions Alchemy cold fusion um especially at the end we talk

(1:24:37) about the implications of these videos Dave Rossy oh sorry I'm I'm not showing you guys number three Dave Rossy he is a DOD contractor and engineer he is actually somebody that works on theoretically works on stuff like special access programs he is on the record saying that he thinks these videos are real and that he's seen effects like this in the laboratory he said it on Tim pool so you want to go watch Tim pool and you want to hear him say that go for it and then I had Salvador pz and Dave Rossi at the

(1:25:09) same time both and we actually talk vividly or openly about the videos in this podcast number four very worthwhile to check out now how do I go to my channel okay now videos flight path explainer that's here it is okay Okay let's listen to this chat this is Ashton forbs here to bring you the mh3 I try to make it as simple as possible for everybody out there hello everybody this is Ashton Forbes here to bring you the MH 370x flight path explainer the plane takes off at 1642 UTC from qual lur headed to Beijing at

(1:25:50) 1719 UTC the pilot says good night Malaysian Airlines flight 370 around 1721 UTC a lithium ion battery fire explosion occurs and is scen by Mike McKay on an oil rig 300 Mi away he sees fire for 5 to 10 seconds nine Witnesses along the coast hear loud noises at the same time the plane goes dark in the case of a fire the first response is to pull the main buses and restore the circuits one by one until you've isolated the bad one if they pulled the buses the plane would go silent the plane heads towards panang

(1:26:22) lwi International Airport the pilot knew the train was friendlier towards Lanka which was also closer than qu andur at 1730 UTC there's a communication with another pilot who

hears the voice of one of the pilots of MH370 at the same time eight fishermen on a boat 10 miles off the coast see the plane flying unusually low consistent with a depressurization emergency event attempting to provide oxygen for the passengers the Malaysian Minister of Defense claims the plane was not identified but admits they knew it was a

(1:26:50) non-hostile civilian airliner the plane flies over Lanka at 1752 UTC when the co-pilot cell phone pings a cell tower the plane doesn't land either due to the fire or because they have communicated to Rondevu point the plane continues to the nicobar islands until around 1840 UTC when a witness KT sees a glowing orange plane with dark smoke coming out of it this is consistent with the crew battling the lithium battery fire with Hon fire suppression devices releasing bromine a hallogen gas soon after the videos

(1:27:23) begin they show smoke coming out of the back of the plane consistent with the fire the plane is descending in the videos consistent with an intercepted Chinese only reported communication that claims the plane was attempting an emergency landing and disintegrating the plane's altitude is low in the videos as proven by the cumulus clouds that only form between 1,000 and 5,000 ft also consistent with the witness of sighting and then I let it play out right here with no sound I do want to correct it's not Lanka it's just p

(1:27:56) everything else is accurate and there you go so that is our fight path explainer now if we go back I have one other explainer I think as well which I'll go ahead and play just so that we uh oh yeah and so here is the cloud here's the video of the cloud being displaced I want to show this as well um so a lot of analysis was done by different people that show the first orb actually displaces the cloud when it comes through right here right there here we go don't worry it'll show you again so if you look closely you'll be

(1:28:33) able to see that this orb displaces the cloud right before it gets there you can see a little hole begin to show up it's very slight but it is there and this basically also it happens right before it gets there consistent with these lines showing up uh in front of the the plane or the orbs and so again this is another detail it's going to rule out some 2D Cloud picture being used so they show it side by side here okay me see here oh yeah okay and then this part two is also really important you can see the

(1:29:15) cloud movements here as well so they throw they draw some lines to make it easier for you to see and again this is only a few seconds here as well you can already see the cloud shifting right here then I think oh yeah then there's some random weird object down there now I think they actually show in the second video and I got permission by the way to show this oh yeah and then you can see the clouds be displaced as well before and after the zap there's a slight change here as well so again these are all details that

(1:29:50) we actually showed right before the cloud **debunk** uh uh came out and then all of a sudden this Cloud **debunk** comes out now I think this one also has the analysis that shows the clouds moving y so there's the cloud movements again Cloud movements you can see the cloud movements very clearly it's not a lot but there's a little bit and it's there for sure then I think is

this not the one that they show anyway that's that's enough Cloud movement stuff guys hey JK Philly fan hey red panda and everybody else has

(1:30:36) been jumping in okay so sorry are there any other questions that I can address uh while I've got everyone here okay if not then I think what I want to do is I want to discuss let me see what else I got here let me just look through make sure I'm not missing anything oh yeah so the Cloud's matching up in in both images as well right this is another really important one I think I already spoke actually I already spoke to that one we're good on that one I think I've addressed everything at this

(1:31:13) point great okay um what I want to do now then uh before I close this stream down is I want to address what I want out of this and what I've been trying to do with this so like I said before I don't care about being famous I don't care about being somebody uh I haven't been trying I haven't been selling anything I think a lot of people go on podcast because they want to sell their book or whatever else there's a lot of people in this UFO community that are doing that as well and that's not something I've ever been

(1:31:48) trying to do uh the only reason why I made that podcast was to talk to those scientists and engineers and I've got more on the way as well CLE some I've already recorded I'm just a very busy person I have a normal job I've been in healthcare it my whole life 18 years I've been a normal working class guy working my way up slaving away not somebody that's in upper management or anything like that um and I just want the **truth** is that I saw these videos and I knew there was more going on here and

(1:32:16) it's not like I knew right away every all this stuff it took months of research to look through this to dig through every piece of evidence that's ever been out there regarding MH370 I've made connections and I've spoken to every single independent group expert that's out there I've spoken to Florence to Changi multiple times many times in fact I'm hoping to have her on my podcast at some point in the future uh because she is somebody who while she doesn't necessarily believe that we can

(1:32:39) teleport an object knows that the United States government's implicated in the plane disappearance of this plane there's a reason why the White House was calling Malaysia to set a narrative every single day after the plane disappeared there's a reason why the nephew of the the pilot was told that his uncle was collateral damage that's consistent with an Espionage event that's consistent with us taking the plane there's a reason why the French father uh Gilain Watros was told he lost his wife and kids in the plane he was

(1:33:11) told the Americans had two awax radar planes in the area and that they know exactly what happened to the plane guys all you have to do sometimes is listen and you can get the **truth** I just want the **truth** for the families these people people were lied to they were gaslit they were told some bull crap if you go back and look at any of it you will find this and see it for yourself no I'm not telling anyone to believe what I'm saying uh because everything I'm saying is verifiable and whether or not you believe me whether or

(1:33:38) not I go on Joe Rogan or not it doesn't matter it really makes no difference because I know we're never going to find that plane and I know that the United States government has it and has technology that is essentially magic to us which means that eventually that technology will come out technology that's required to teleport an airplane is not an invention it's a discovery it's a discovery of unification theory of the forces a theory of everything if you will this unification Theory will

(1:34:06) allow us to have Quantum effects on a macro scale level listen to my hard TRS podcast with Roy de Herbert theoretical physicist he has a theory called time D or dilation Theory which that time is a fluid Symmetry and that uh things that happen on a small scale can happen on the large scales uh behavior is a matter of the properties of an object regardless of size so if you can get an object to act like a Quantum object now you can have the effects of a Quantum object look at the delayed Choice double uh delayed

(1:34:40) Choice Quantum eraser double slit experiment variant you will see from this that not only does the wave function break down in the double slit experiment which is now that we have an object that is a probabilistic point in space and time which becomes a deterministic one but you can rebuild the wave function if you can rebuild the wave function you're basically telling the Universe I don't know where this went this is very similar to the idea on a macro scale of teleportation is the plane over here or is the plane over

(1:35:09) here we can cheat the universe you only need to understand two things two things for these videos to be real you need to understand that there's an extra Dimension that we do not perceive in our reality an underlying framework or construct to our reality that we do not understand if you understand that then you understand how every point in space and time is actually connected behind the scenes uh you can also understand how time is an illusion and that time is not linear despite the fact that we perceive it

(1:35:37) that way the only other thing that you need to know and understand is that space is not empty space is not empty there is an underlying framework to it if we tap into it we can tap into NE entropy negative entropy negative energy however you want to think of it the opposite of what we experience out here and with these types of effects we can create teleportation we can have uh force fields uh Jack sarfati was talking about white hole force fields on Jeremy Reese alien scientist podcast it's essentially the same concept we can

(1:36:12) have cloaking devices we can have portable Fusion generators in a bubble look at those bubbles of those balls in fact we might be looking at it in those balls of energy portable Fusion ball lightning there Alchemy going on inside there just like the sun um and then we can also have overunity free energy devices a device that you can open up to the fabric of SpaceTime and borrow energy from the latent vacuum and that you can produce more energy out than you're getting in think of it like utilizing the magnetic field of the earth and using

(1:36:51) that to surf on or to create some form of propulsion essentially you're getting free energy out of it you just need to develop the right system that can tap into it um and then of

course the reason why this is all covered up this is the the the point for the UFO community that the UFO Community needs to understand more than anybody else this is a weapon this is a doomsday weapon this can be turned into a directed energy weapon but it can be turned into something much much worse than that this can be turned into into a

(1:37:24) device where if you can amplify energy enough to break the swinger limit then you're talking about energy levels being exponentially increased and if you can increase your levels exponentially why do you stop right here you can just you can create energy levels that are so powerful that you can destroy an entire planet and when you can amplify energy like this it becomes very dangerous this is an Ultimate Weapon this is a super weapon this makes nukes look like little child's toys nukes are not the scariest

(1:37:53) thing in the black anymore the weapon that we see in the MH370 videosos is the scariest weapon on the planet whoever controls that controls the entire planet this brings into a question the nature of the UFO phenomenon in general are there really even aliens out there or is it really just us and we've developed this Narrative of aliens in order to keep this idea secret I'm not sure I'm really not sure or maybe we dug up some alien crafts that have been that crashed here a million years ago and we found

(1:38:23) them buried in the earth and then we figured out how they worked over the last 80 years until we figured out the discovery of the unification Theory the science behind this has been suppressed in the west if you want to know how the science Works look to the papers in the East **Russia** Korea **China** the reason why Ik99 is coming out of Korea and **China** is because it's not been suppressed there like we have it suppressed here we've probably figured it out a long time ago the the amount that we are Advanced

(1:38:56) secretly is potentially hundred or hundreds of years more advanced than we are publicly this begs the question of what is the real impact of disclosure it's potentially far more than even a psychological impact it's an impact of our entire economy it will wipe out entire Industries overnight the whole middle east economy will become obsolete all fossil fuels become obsolete uh it will change everything and the psychological impact can also not be ignored the people that think that they've been told everything about

(1:39:32) this world for their entire lives my entire life people like my parents were over 70 years old how are they going to react to the idea that everything they've been told their entire lives is a lie and that their government is willing to lie about anything they're willing to have fake experts go on CNN and tell them that phones can ring while they're submerged underwater for 4 days and believe it and believe it that is going to break people's minds it already has look at how many people have tried to **scam** and come up with fake

(1:40:06) **debunk**s and convince the world and Joe **Rogan** and all these other people this stuff's fake I've had people talk to every single podcaster that I that has had me on and try to convince them to not have me on because in their minds I must be a **scam**mer otherwise their World Is A Lie just think about that psychological damage on a broader scale I'm just a random guy if it

turns out that people find out their entire governments and everything that they've been doing is manipulated and their whole lives have

(1:40:35) been manipulated people are going to freak out 100% but really the important part is that this stuff is a weapon and then that begins to explain why it's been covered up regardless if it comes from Aliens or if we figure it out ourselves I don't really know and I don't really give a [REDACTED] at the end of the day all I want to do is help people because when you look at that technology to me what I see is hope for a brighter future I see purpose for people out there that want to know what the meaning of their life is meaning of

(1:41:06) your life is to make the world a better place for other people for us to live in a place where we don't have to have half the problems that we have out there today does it mean that is everything's going to be perfect absolutely not no but it means that we don't have to have people that are out there homeless and people that are going hungry which to me seems like the basic requirements of civilization yes it will take away power from the elites that's probably the reason why it's being suppressed if you

(1:41:31) just get down to Brass tax now the last thing I think I'll say here is that this information uh how is it suppressed extremely easily extremely easily there's not a huge number of people that know in fact I've been talking to people in my DMs even recently that are they themselves are very well uh knowledgeable and in the know and they've done incredible stuff for the government and not even they know about it unless you're one of the engineers and scientists that's in these special access programs putting your

(1:42:02) phone in a faad cage going into the lab signing the NDA when you go in and out you have no idea Congress has no idea the people in Congress think that we're looking at alien technology because they don't even realize how advanced we really are now maybe it is alien technology but it's not definitely alien technology it absolutely could be our technology we have not been doing nothing since the eight since the 1940s we developed the SR71 Blackbird 1964 that was 60 years ago that a plane that could take an image while going at

(1:42:35) supersonic speeds to be able to read the words off of a book so what have we been doing for the last 60 years so this is the stuff that I want to keep in mind is that it's kept secret for multiple reasons uh how it's kept secret is because people have no incentive to come out look at the backlash that I've faced talking about this stuff and this is in 2024 where we've gotten to the point where we've got phones that can take highdefinition Cinema quality videos and I can have a stream like this in 4K HD in real time

(1:43:11) and yet people still can't even begin to comprehend the idea of macroscopic phase conjugation warp speed warp drive hyperspace no one can even comprehend these Concepts even in now's day and age so why would an engineer somebody who's being paid hundreds of thousands of dollars why would they come out why would they risk their neck why would they even try to convince people and educate people it's not worth their time I've spent a huge amount of time probably thousands of hours reviewing

(1:43:43) evidence bringing evidence to the world talking to you all on these streams other people don't want to do that it's not worth it in fact they might get killed if they do they can be threatened with their families and some of them they get off on the idea that they know and other people don't know they're happy to lie to the public or not even go and talk to the public it turns out that you don't even really need to sell disinformation to people because people themselves are inherently distrustful even Jeremy Corbell a guy

(1:44:12) who by all accounts has connections and has found videos and weird videos and pushed them out even he can't comprehend these videos to be real even though they are that should tell you guys a lot about how good we are at telling reality from fiction even people whose whole jobs it is to be disclosure Advocates and promote videos can't even tell when they're looking at real military videos even when there's a drone in one of them even when there's coordinates of the real location of a real event that

(1:44:42) happened I mean this is more evidence than Jeremy Corbell has ever put out for any video that he's ever published in his whole life him or or George Knap combined this is more evidence than anything anything Ross Cart has ever done in his whole life by far and I don't mean this is to put those people down I just want to put it in perspective for the people who are watching and who are listening talking about going and finding some buried craft or something like that that's not journalism that's

(1:45:11) just stories it's not even something that's verifiable the stuff that I'm presenting is verifiable evidence verifiable science I dare people dare you to go pull up to Maxwell equation and look at the B field uh B field equation  $\nabla \times \mathbf{B} = \mu_0 \mathbf{j}$  the del cross operator equals  $\mathbf{j}$  set it equal to a find out what happens when you do you can manipulate gravity it's that simple that's how easy it is to lie to academics does anybody question it nobody questions it except for the people that know there's something more

(1:45:48) going on with respect to the science so this is the part where I would ask to the UFO Community I've given you disclosure on a silver platter whether or not you accept it is no difference to me whatsoever because those videos are never going away and over time as the science comes out no matter how long it takes those videos will only become more and more authentic and one day when it turns out that we can absolutely teleport a coke bottle over into the other room over there then you'll know beyond any shadow of a doubt

(1:46:23) that those videos are what really happened to the plane and we're never going to find those black boxes we're never going to find that plane because they would tell the **truth** of what happened they would tell that that plane didn't go five six hours into the South Indian Ocean that's why we're never going to find that even if they dumped the plane somewhere out there afterwards they would have to fabricate the entire black box and they'd have to make it consistent with this whole story that

(1:46:45) they've tried to sell people and they would have to try to make it consistent with these fake pings that amounts to 10 rows on an XL Spreadsheet so the reason guys why at the end of

the day I don't even care about going on Joe Rogan that's the truth so this is a message to Joe Rogan here is that I love you Joe I think you're the best podcaster in the world I think you have some of the best conversations if I came on your show you know what I'd get super high with you even on the show because a

(1:47:14) I am confident enough that I can speak to the evidence even while I'm super baked even while I've had a couple drinks that's how well I know the evidence and the information back in front and I think it would be a lot of fun and I would risk my job and everything else with it just to do it cuz you know what life's just worth living that's the point of life in general even with all this stuff even with they being extra Dimension even with there being a construct uh life is still worth living

(1:47:39) at the end of the day I don't even really care about going on your show that's the truth of it cuz when you're somebody who knows something this true about the world and you know it's going to check out in the long run then you have the ultimate level of confidence right uh and so that's the thing about it is that I don't want to be a pariah uh I don't want people going out there saying oh this is the crazy guy that thinks the planes can get zapped or whatever I want the world to figure it

(1:48:05) out for themselves and when the world figures it out for themselves then you can come talk to me and ask me how I knew ask me how I figured it out uh and I'd be happy to tell you I'm an open book I have nothing to hide whatsoever and that's how I've been going through this whole investigation the entire time so once again uh I appreciate Joe Rogan I appreciate all the podcasters who have me on and all the ones that plan on having me on in the future um the evidence will get out there uh the truth

(1:48:34) will be told one day the families I hope will live long enough to hear the truth from the government that's been hiding this from them because I do think that this is the largest verifiable conspiracy of all time there's other conspiracies that might be true that you could argue or bigger or what have you but this is one where not only did we take a plane that had 239 people on board innocent people where we vilified the pilot but this is also one where uh we have anti-gravity and technology that is essentially magic that people would

(1:49:02) never believe to be true without two videos in perfect sync like this there is one other piece of evidence that I forgot to go through that I'm going to go through right now which is I found the leaker I found the guy that leaked these videos if these videos were fake then you tell me why Edward C Linn went to prison because I went ahead and looked into this guy and Edward C Lyn was assigned the vpu2 Wizards spy plane Squadron special secret squ spy plane Squadron in February of 2014 and the Espionage investigation

(1:49:36) into him began April 2nd 2014 when you look at those videos you can tell that the person who leaked these videos is going to be an operator there's somebody who would have had an emotional reaction and leaked them out to the internet where Regis side andan got them within 4 days they removed the HUD data they cropped out the Drone from the satellite

video they were trying to minimize damage to us intelligence they were probably a patriot and that's what Edward C Linn is as well uh he might have thought that he

(1:50:03) was looking at UFOs maybe he didn't even know about the locky Martin technology this technology is extremely compartmentalized he flew in the locky Martin ep3 Aries 2 spy plane which has realtime tactical Sig and full motion video intelligence he also flew in the Poseidon p8 as well the case against him had C named Rogue Archer he had experience in signals intelligence which is how all these assets the Drone the satellite the spy plane all communicate with one another uh we found evidence that he might have been reassigned March 25th

(1:50:36) 2014 the defense argued that the classified information in question was available on the internet and has never been made publicly available we don't or publicly known we don't know it's not even known exactly what the information was that he **leaked** but it's out there on the internet somewhere they tried to get him life in prison the first time since the end of the Cold War that an active duty member has been charged with Espionage but you know what it turned out there was no evidence he exchange any

(1:51:02) information with anyone from **China** why is that interesting because this was an operation an Espionage operation against **China** for the free scale semiconductor employees who were defecting the **China** so if somebody saw these videos leak out they would think 100% this is a Chinese spy who is leaking these videos to **China** to tell them what happened to the plane but it's not he probably **leaked** them to his Taiwanese counterparts who are actually our allies against **China** and they got them out to the internet and

(1:51:32) that's how we got to see the videos so in the end they had to admit that there was no evidence that he was spying for **China** at all and he got caught with flight manifests in his flight suit that include search and rescue code names so I foed the FBI and NCIS about everything related to this guy's case they both rejected it entirely the NCIS rejected the Foy in total under an Obama error exemption to be kept secret in the interest of National Defense or foreign policy that's pretty weird especially

(1:52:01) because it's not a spy case they abused him they didn't let him talk to the media they kept him in pre-trial detainment even though the evidence to keep him in pre-trial detainment that he was such a huge risk was mundane emails they wouldn't show anything they redacted everything about the the case and that's not what they do generally for Espionage cases they tell us generally what they were leaking in fact in fact there was one recently where espion a guy was uh pled guilty to espionage where he was actually being

(1:52:29) paid money to give information to **China** and he only got two years Edward cin was facing life in prison and after they convinced him of taking a plead deal he got 9year sentence for just disseminating classified information that is a huge sentence he ended up spending six years in prison three years shaved off because he worked with the NCIS and basically admitted that what he did was wrong and that he should serve as a warning to anybody else who would

do anything like what he did they made an example out of him Edward cin is a

(1:53:02) hero he's a hero of disclosure he's more of a hero of disclosure than anybody any of the other UFO celebrity disclosure people that are out there because not only did he disclose videos to the world but he explained to the world he took a hit he actually went out there and made the sacrifice that's what being a hero is about it's about taking a sacrifice it's about taking the hit that's out there I not a hero in fact I would argue I'm more of a monster than I am a hero I'm somebody that will get the

(1:53:30) truth out there no matter what no matter who stands in my way I'm going to make sure that the truth gets out there I'm going to use every single skill set that I've learned over my 41 years on this planet to make sure that the truth gets known and the only way that I can be stopped is by putting me six feet underground that's the only way uh eventually MH370 What happened to the plane in these videos will be known to the public I don't care who stands in my way or what it takes and if that means going through

(1:54:00) the science and proving that we can teleport an object then that's what it's going to be I don't really care so Edward cinn if you're out there just know that we appreciate you and I think that the next president of the United States should pardon this man because of if he were to get a pardon then he might be able to speak about the videos under his plea deal even though he got a year and a half ago he could never speak about them and um yeah it's an incredible case guys the MH370 case is in my opinion the greatest

(1:54:34) conspiracy ever and one of the greatest Mysteries Ever and yeah I think it'll change everything so thanks everybody for coming out here tonight and listening to me rant on for a couple hours yeah this anybody else as well if you're watching this after the fact thank you for checking it out I think that hopefully I did everything Justice here in the videos and the case you guys can find on my pin tweet here uh the story of the Espionage event as I've laid it out there this is my best understanding of what happened to

(1:55:09) the plane given the body of evidence uh given the letter The Whistleblower letter to Ash and Forbes that some of it I find compelling uh it explains in my mind everything we see about the videos the way they're filmed who filmed them why they filmed them Etc um it explains the motive behind why we would do it it explains the power dynamics that play as well which are the highest levels of uh Espionage between various countries and then uh explains where the plane was and then it even explains Edward sein in

(1:55:42) here and how at the end of the day the people that we have to fear the most are ourselves and our government uh this technology could be the reason why the firmy Paradox exists it could be that we will obliterate ourselves with this technology uh I've questioned whether or not it's appropriate to even disclose this technology many times every single day uh but like I just told you guys I'm not the hero I'm the monster I'm the one who's going to make sure this stuff gets out there it's not my fault US

(1:56:09) Government shouldn't have been filming this they shouldn't have done this if they didn't want this information to get out there it's their fault at the end of the day um and then here's the all evidence Link in the top of the reply here so if you want to look go through the evidence I've got a hyperlink right here I'll go ahead and copy this hyperlink and throw this in the chat just so if anybody's watching I don't know if that link will work I think it should you can take a

(1:56:33) look at it there that's actually the real- time updated one this one is also pretty up to date pretty accurate I've even put all the hyperlinks for the various videos to my YouTube channel if you want to take a look at them so thanks guys appreciate yall hanging out here tonight this was pretty sweet um I'm still technically retired but I still am happy to talk to podcasters who want to know about my thoughts about anything if you want sure people seem to enjoy talking to me um I did talk to Adrien ditman the

(1:57:07) other night last night actually we had a really good conversation um you know he's the guy that sounds exactly like Elon Musk although I don't really like to say that just because he's his own person as well uh but I think that once you've looked into these videos and once you've realized the implic of these videos being real you will have a whole new perspective on life it will change your perspective on everything and that's important because this is how we're going to make a better civilization this

(1:57:31) is how we're going to make a better future for ourselves this is how we'll become an Interstellar species uh this is how we can help other people on a mass scale and this is how from the UFO Community perspective we can see what this phenomenon is really about it's a lot more than about clapping alien cheeks and it's a lot more about than about surfing on on uh hovering crafts gets a lot darker than that everybody okay guys I think I'm oh uh so am I now back out of retirement no we're

(1:58:03) still in retirement the only reason why I made this video tonight is because of the Joe Rogan clip I think that when you have somebody as huge as Joe Rogan who gets millions of views um talk about your videos your case they're not my videos the world's videos then I think it deserves a response and so ultimately this this stream was for him because again I love Joe Rogan and I want Joe Rogan has a platform where he can make a difference and even if it's not talking to me I want Joe Rogan to go out there

(1:58:35) and talk to other people he talks about UFO stuff all the time in fact there's several more clips that I'm probably going to post that were later on where I think that they they kind of dig into the the same questions about would this stuff be covered up what does it mean to be covered up how deep would the cover up potentially go those are the kinds of questions and stuff that I think people need to be having and I think the question that he should be asking is would you still want disclosure if disclosure meant the end of the world if

(1:59:01) it meant doomsday weapons that could destroy the planet that's the real question that people should be getting asked it's that's a question that I think will get people to think

about the issue the right way it's a lot more than socioeconomic impact so last thing I'll say is that no I am not suicidal I would never harm myself in any way shape or form I never will on this planet Earth if anything were to happen to me you should take it as something to be suspicious you should look into it as a conspiracy you should

(1:59:30) look into it as me being silenced because I'm never going to do that the reason why I have gone on all these podcasts is because I wanted to uh increase my profile to the degree where it would be very weird if I were to disappear because I do think that this is the nature of this is so huge that uh they absolutely would silence people in any way shape or form now I think been pretty clear uh that you know I would have been quiet if they had come to me early on and paid me like I don't know \$10 million or something like that I

(1:59:59) probably would have been quiet everybody's corruptible or if they had given me my scarjo clone I probably would have let it go they probably could have convinced me to say that the Pyromania VFX is a perfect match and that would have made this go away 100% I mean some of you would have been upset but they it would have gone away but now because it's gone this far and they haven't done it now I need uh \$10 million and the scar Joe clone the price has gone up everybody now you got to clone me a Scarlet

(2:00:24) Johansson and I need \$10 million and that \$10 million is just to help out my family and the people in my life that deserve it and deserve to live a better life now of course none of this will ever happen but I think it's fun to dream so uh thank you guys MH370 tonight we will talk again tomorrow uh and uh I know I've delayed the scaler physics stuff for a couple days but tomorrow we will talk about scaler physics tomorrow night we'll go over the Thomas beardson stuff or Bearden um and His science and the

(2:00:58) videos that have been circulating in the last few days because the scaler physics will corroborate pretty much everything that we've been talking about here tonight from the Scientifics perspective best we can do is a scar Joo doll yeah oh yeah no taxes ever yeah I probably should have gone with that one that's a really good one damn I hate doing my taxes okay guys I app appreciate you MH 370x I want to give a big shout out to everybody who's been in the Discord in fact I'll go ahead and share another

(2:01:29) link to the Discord we'll do first 25 people um that want to join tonight we'll we'll do a bit more than we normally do here uh it's only going to last for one day so you have to see this by this time tomorrow and if so you can check out this Discord link if you want to join the Discord link live then you need to uh make sure you verify this means you have to go to the verif channel right after you join you have to pass through the steps to verify then you have to wait like 10 minutes and then it will let you post that's the way

(2:01:59) that it works and uh you have to be respectful in our Discord we don't we don't deal with trolls or any of that crap in our Discord if you want to do that this isn't the right Discord for you this is a community of people that they enjoy High science they enjoy talking about some of the esoteric aspects that are out there um and just people that are nice and general and friendly

and I think we have one of the best discords and communities out there and that's why I want to thank thank you guys all for being along and supporting

(2:02:24) and following along um let's Elevate our discourse and our conversations let's always try to be better than the person we were yesterday uh because the human condition is a matter of learning day over day um and even though I was pretty harsh on a lot of people during this stream in general I think that we should um not hold any grudges and try to educate one another um and that's the only way I think civilization will our Humanity uh will reach the level that it should reach where we can become like

(2:02:54) Star Trek so thank you guys have a great night and we will talk tomorrow peace

Delayed Choice Quantum Eraser Experiment - YouTube

<https://www.youtube.com/watch?v=aX2sQmrZyLE>

Transcript:

(00:29) e e hey everybody how's it going tonight TGIF for those who are watching live this is Friday night appreciate you guys all being here uh for those who are watching the stream later on well happy whatever day it is for you guys Saturday

(01:34) possibly appreciate you guys all being here uh I want to thank the people who jumped in the chat early on you guys are quick Sandy Arwin my channel skinny Bob PJ Mike Aaron John hold uh appreciate you guys see a lot of familiar faces in the chat here tonight cheers to you all hey bad Sama hey Amanda nice to see you guys okay um yeah we're going to shoot the breeze for like 5 minutes while people jump in and join um you guys know I don't really do long buildups to my stream usually we just get right into it um so I want to give

(02:14) people a few minutes to jump in before we get into the content so I don't have to repeat everything uh as a quick agenda what we're going to be talking about here tonight is the delayed Choice Quantum eraser experiment you guys are going to love this tonight this is really really huge huge um we are slowly figuring out how to teleport an object and the experiment that we're going to be looking at here tonight is going to blow some people's minds it's going to question our nature of reality this is stuff that's been I'd

(02:47) say it's probably about 5 years old now this experiment dates back to I think the late 1990s but people only recently have been kind of talking about it uh more mainstream so uh so buckle up guys it's going to be fun so the for people who don't know what the delayed Choice Quantum eraser experiment is it's a variation on the double slit experiment where people try to understand the nature of the double slit experiment right so double slit experiment we shoot

try to shoot individual photons through one of two

(03:24) slits which are right next to each other and then we notice that there's a wave pattern that forms even though we thought we only shot a single Photon so how is that well it must be a wave that's happening right and which slit is it going through it seems like it's interfering with itself which would mean is approaching the slits as a wave right but then we try to observe and say okay well which slit is it going through we try to interact with it while it's in this Quantum State and what happens it starts acting like a particle

(03:56) it starts acting like an individual thing that's being shot through one of the two right so people looked at that and they were like hm how is it doing that can we figure out how it's working maybe we can try to trick the system and that's the experiment that we're going to be looking at here tonight is we're going to be looking at one of these ones one of these experiments that they later made a variation of the double slit experiment where they tried to trick the system and what we're going to find out

(04:24) is that there's some there's some magic going on some black magic there's some witchcraft a foot right is it my right hand or my left hand guys we got to have some witchcraft a foot here tonight guys so I've been studying the quantum the delayed Choice Quantum eraser experiment here for the last few days I'm actually going to try to do it without a YouTube video tonight and then we'll probably go back and we'll watch a few clips from one of these YouTube videos just so you guys know I'm not

(04:53) making stuff up everybody's talking about me on dark journalist tonight really if you have a clip or a link to that I'd like to check that out maybe we'll look at that here in a little bit after this as well it's funny why would people be talking about me now I thought it's kind of the whole point of retiring was to so that people would stop talking about me it seemed to have kind of an opposite effect um interesting dark journalist I don't even know you know it was weird now before we

(05:25) get into this guys it was a little weird that dark journalists never had me on I mean I thought we are pretty aligned with our approaches right this idea that there's hyper advanced technology out there that the government's hiding you know also hello James hello His Highness hello CB hello Sandy I don't know if I said hello to you before Hey Joe Moss um and yeah I'm hoping that I have some exciting stuff to announce related to the podcast tomorrow I'm going to spend all day editing the two podcasts

(05:57) that I've already got recorded so that I can get those pushed out there uh okay let's let's switch over here is this I don't even know which is dark journalist YouTube channel let's check this out guys before we jump into it so if you're watching the recording apologies wait why is it so hard like do people just have bad search engine optimization how come if I search for dark journalist I just don't even find them on YouTube like like dude doesn't even show up wait is did he get featured on

(06:38) something he get featured on Vice news maybe someone in the Discord can link it to me guys it's all good talk that's awesome yeah I do want to talk to uh John Warner uh the fourth at some point as well I think that he's somebody we've got a lot a lot in common with is it not weird guys that I can't find dark journalists oh alien scientist is live too everybody's live oh wow so is Skyfire there he is oh he's live right there 2,000 people are watching 2,000 people I'll pull this over to the other side

(07:38) guys that's crazy okay guys you guys can tell me what's going on with that I'm going to dig into the let's dig into this experiment we got going on here tonight um so I don't think it's going to take as long okay here's the deal guys yeah he keeps a Dapper he really does with the hair too I don't know how he pulls this off chat I don't know he pulls this off I'm I'm thinking about doing a new look as well I don't know if I'm going to go for the cufflinks that he's got going on

(08:15) here he always wears the same outfit which is it's a it's a decent move right um oh yeah people are talking about me huh interesting but I think I'm I may be rocking uh tonight we're keeping it casual but I may try to go to like a white shirt with a with a blazer with a jacket haven't decided okay back to the topic at hand folks what you came here for double slit experiment so first thing I'm going to do I'm going to do a little bit of a visualization of the double slit experiment this is going to be ugly bear

(08:53) with me guys I don't have a lot of artistic talent okay okay so double slit EXP experiment we are we've got our Photon shooting machine okay Photon shooting machine is going to shoot little Photon guys out okay little photons we'll use orange for little Photon guys shooting little Photon guys out okay now we've got our double slit Arrangement here okay so we've got this double slit Arrangement it's got two slits in it and we're shooting our photons at these slits okay and then we've got our detector back here okay so

(09:37) photons are getting shot through here and what we would expect if we're shooting these individual Photon little guys out here right is we would expect that there would be two lines let me Mark the lines in red we would expect two lines like this right so it match the two lines cuz you got to figure out which one is it going through right but that's not what happens right what happens instead why are my lines not disappearing oh man not like this we'll leave it like this instead what happens is we get an interference

(10:18) pattern so when we look at it we get this interference pattern as if the waves were coming through okay this is the double slit experiment so we get this interference pattern and then we say well that's weird how can a single Photon come through and create an interference pattern must be coming through as a wave so then we say okay well you know what I'm going to set up a detector and so now we say okay let's create a little detector guy we'll make the blue guy the detector guy so we say you know what I want to look I'm going

(10:52) set up a little lookie guy here okay it's going to be this purple thing and this purple thing is going to try to look and figure out which of these two slits is going through and what happens

when we do that oh boy okay that's really erasing it huh instead we just get the double slit again instead the wave function breaks down that's what we call it doesn't mean that's what's actually happen we don't really understand what's happening when we try people try to but we ultimately do not and then the wave

(11:26) functions break down now if these slits are I think it's uh wider then you don't necessarily get the double slit pattern instead what happens is you get a fuzzy pattern okay you just get like a circle a fuzzy Circle here that's like let's imagine this is filled in okay you get something like this fuzzy like this okay you don't get a wave pattern though still right so there's two acceptable options for this either two slits or this fuzzy pattern both of them the same so physicists are smart

(12:02) they looked at this and they went huh that doesn't make any sense how is this happening let's conduct another experiment they came up with the delayed Choice Quantum eraser experiment okay the delayed Choice Quantum delayed Choice Quantum eraser experiment takes us to the next level and this is where your is going to get blown guys and I'll probably try to pull some other diagrams up or watch the video here but I'm going to explain it to you first so same setup over here right we've got our Photon

(12:41) shooter guy here laser beam whatever you want to call it shooting the photons at the double slit plate this first plate here is a double slit plate this plate is bbo barium something oxide this is basically the thing that is our detector now anything that's interacting with the wave function causes it to collapse so this is causing the wave function to collapse and now not only is it doing that but it's splitting the photon in two so you may say okay what does it mean when it's splitting the photon in two so we have

(13:14) two slits here we have one right here where my mouse is then we have one down here the second one so what's happening is one photon is going this way or the the split photons and they're entangled you can see the green here represents them so either it's going to follow this path right here and hit this detector right here or it's going to follow this path uh this lower path here right and hit the detector here at the same time a entangled Photon particle is going to split where the colors match so if this

(13:45) if it hits the left slit then it's going to go up this way and it will also go down this way okay and then it's going to hit this second detector so these two detectors here and then we have these extra detectors so the idea is if it goes through the left slit It's going here and it's going down here if it goes through the right slit then it's going to go through this one and hit this detector here and then it's going to go through and hit this detector here now because it already hits our

(14:16) detect our our our Watcher that we have right up here the wave function is already broken down so what happens here is that we get the single non-wave function you can think of it as the two slits if you want maybe I'll bring paint back up actually bring our MS paint back up guys so when it hits this top one up here where's my things they there okay shapes we're going

to get a pattern we have this pattern here and then what it's going to look like uh oops okay damn it a little circle action and then it's going to look like

(15:10) this okay that's not okay well it's going to look like a pattern like that but that's equivalent to our our double our slits okay so it's the same thing that we saw before but it's not going to have the interference pattern now uh make sure I say this correctly the other thing that's important here is the length of the line here before it gets to where our detector is looking at it here is shorter here than it is over here so what's going to happen is first of all ignore these other two detectors

(15:41) for a second and ignore this splitter what's going to happen is as it comes through here it's going to go to this detector here and what's going to happen we're going to get the same exact pattern that we get in detector one and if it goes through the right slit we're going to get the same pattern in detector 3 that we get in detector one because we have entanglement happening so whatever happens here is also going to happen here which means that both of these should always get the non broken or the always broken down

(16:13) wave function just a single Circle or or two slits if you want to think of it right no wave function now what this experiment does is it rebuilds the wave function how does it do that great question so we can see our photons here now what they do is they add a prism here two prisms now when it comes through when the entangled particle comes through this way through the left slit there's no path for it to get to detector 3 it has to get over here to detector 2 so in detector 2 the wave function is always broken down every

(16:54) single time there's no other path for it to go to it can never get to detector 3 however when you add two prisms now what this does is it means that if it comes through the top path it hits this prism now it can either go straight forward to detector 2 or it can go to detector five or it can go down here to detector 4 now the bottom one so the red so detector 2 only has one input right the only way it can get to detector 2 is if it went through the left slit the only way you can get to detector three is it goes through the

(17:35) right slit this way that's the only way that's possible and this is where it gets even weirder everybody get ready for this uh did we have ads pop okay now detector four and five have two different ways either of the two paths down here can get to detector four detector five right because of these two prisms so this prism means I can get get to detector 2 but this top path can also get to detector 4 and it can also get to detector 5 same with the bottom path it can get to only the bottom path can get

(18:10) to detector 3 the top path cannot the Orange Path here cannot get to detector 3 but it can get to detector 5 and get to detector 4 so if we look at the output of detector 5 let's like erase imagine like we're erasing all the rest of these and we just look at detector 5 which path which slit did the photon go through we wouldn't know there's no way to know right we only can tell uh we can't tell which one it went through it could have gone through this one or it could have gone through this

(18:42) one well the universe also knows and so when we look at the interference pattern on detector 4 and detector 5 we see a wave function how can we see a wave function how is that possible the wave function already broke down over here this this one right here when we look at it the wave function is broken down but it gets weirder if you look at the entangled photons for the ones that hit detector 4 and detector 5 and they're corresponding entangled pair the pair also forms a wave function here as well so this is going to get even more

(19:23) bizarre if you take the combination of what you find in detector 4 this wave function right here and add it to what you find in detector 5 and overlay them on top of each other it creates a full non-wave function pattern just a full circle again so you can notice how like the what's here is missing from over here and what's here is missing from up here that's because if you combine them together you get the full circle pattern the weirdest part is this when this entangled Photon hits detector number one up here this Green

(20:00) Dot when it hits detector number one it's still over here in in the bottom path it still hasn't even hit the crystal yet if it hasn't hit the crystal yet it shouldn't know where to go but because it's entangled it's already acting like it knows which detector it's going to go to isn't that crazy so for example imagine Let's uh pull this up I'm going to copy this real quick put this in paint okay so imagine that our Photon here can I do a free draw so our Photon hits the detector on

(20:45) the right path okay so it's on the right path so it's either going to detector three or it's going to detector four detector five and we don't know now imagine that the location that it hits is right here okay let's just say right there somewhere that's not really great but like right here okay this is the location it hits when it hits detector one that's the same location that's going to hit in detector one so this is pretty bizarre if it hits the same location that's it's going to

(21:18) hit here how did it know where it was going to go it didn't hit detector 5 yet so this is basically figuring out information from the future the photon is is down here when it's already hit detector one and on detector one it hits this location that we see in the top right here but that means it must in the future hit detector 5 because detector 4 that would be over here somewhere for detector 4 which it cannot hit this is the definition of retrocausality so what we have going on here is we're getting information from

(21:55) the future before the photon even hits the pyramid here hits the prism it already knows which one it's going through how can it possibly know that chat how could it possibly know that this is the part where I start to wonder about the Mandela effect in retrocausality right now we'll go to the YouTube video so you guys can hear it firsthand as well but I wanted to try to explain it to you guys first off and now the only difference between these two detectors over here is that these two detectors don't

(22:29) have two input paths meaning if it got to detector 2 it always went through the left slit and if went if it got to detector 3 it always went through the right slit and because we know that information we never get an interference pattern here when we look at detector 2 and detector

3 there's no interference pattern it's just a full circle so I'll do the uh see let's close this so that means if we look at these I don't know why it doesn't fill it in kind of annoying so if we were to look at

(23:03) similar interference pattern on these it's just going to look like a full and this would be colored in circle here as opposed to the interference pattern we see here these will always look like this just because there's only one path inward really weird chat really weird and then again these two detectors here even before it gets to the prism it already knows which path in the future it's going to go down now the question here is this uh is can we change the past this does not appear to be able to

(23:35) change the past but it does tell us information about the future pretty bizarre right so it is kind of like seeing the future a little bit okay okay guys and hey everybody as well oh I'm sorry you got **scam**med in the chat I know what that feels like feels bad okay guys do you want to see let's let's take a look at the experiment in the video now now that I've given you guys the rundown of how it plays out we're going to just go straight to this part oh there's no sound follow what's going on the actual

(24:36) experimental setup is a little bit different of entangled photons with half the energy each of Crystal which is referred to Simply okay so uh what's the bbo crystal called putting up a screen to see an okay so here's your double slit guys and he's going to put the bbo crystal behind it and that's going to be our thing that's going to be our detector that's what's going to break down the wave function for every single Photon that goes through it interference pattern we put a special Optical device called a

(25:02) barium borate Crystal barium borate Crystal which is referred to Simply as a BB Crystal it splits a single Photon into a pair of entangled photons with half the energy each of the original and this is done for every Photon coming from either the left or right slip so we're splitting those photons but notice it hits detector one before it gets down here to this Crystal this is very important because this is the part where we determine that we are basically sending information to the future I guess would be the way to think of it right now

(25:35) there's a critical important point to note here which distinguishes this from the standard double slit experiment the process of creating entangled photons effectively results in a measurement in other words the wave function of the photon so what he's saying here is what I just mentioned is the moment that you entangle them with this bbo this is breaking down the wave function so what's happening here is by the fact that we made two different possible paths to detector 4 and detector 5 we rebuilt the wave function so this

(26:07) experiment literally is rebuilding the wave function with within detector 4 and detector 5 and splitting it in half right half of it goes down here half of it goes up here we don't know which one it's going to go to it could go to detector four it could go to detector 5 but it creates the wave P the uh interference wave pattern that we see um when when we look at the regular double slit experiment so what have we done here we took a deterministic situation where it's

either going through the left to right and we now

(26:38) have converted it to a probabilistic location it's either in detector 5 or detector 4 we can't tell which one it's going to Chrisley wants me to play the game out Wilds interesting we may have to check that out after so that it is now a particle and since the path from the top slit to detector 1 is slightly different than the path from detector 2 the Which Way information of the photon is known this means that the pattern that will show up at detector 1 will always be a spread out pattern not an interference pattern

(27:19) note that I said it will always show up this way and never as an interference pattern it doesn't matter what happens at any of the other detectors so why is it illust is changing depending on what happens at the other detectors this is the center of the confusion and to understand this okay so here's the part where people are confused about it okay was that what happens in detector 1 is accumulation of all the possible combinations from detector 2 3 4 and 5 so when you look at detector 1 if you just take all the times where you shoot

(27:54) the photons through you're just going to get the circle right but if you were to only look at the Times where it got to detector 5 and detector 4 and and exclude all the other results then detector 1 is going to show you the same wave pattern because whatever happens to detector 5 is also happening in detector 1 equivalently because it's entangled pairs so this is the part where retrocausality can't be figured out but the reality is this does not the explanation he tries to put here does not actually **debunk** retrocausality it

(28:25) has not been **debunked** um it is still technically Poss possible based on what we're seeing here there is no uh classical interpretation that makes sense of this experiment you first have to understand what happens to the entangled pairs of the photons in the rest of the apparatus so if we follow the entangled pairs from the top slit we see that it hits a set of beam Splitters which can randomly direct the photon to either detector 2 detector 4 or detector 5 if the photon goes to detector 2 it will show a spread out pattern because

(28:56) its path information is known since the photon could only have come from the top slit similarly the entangled pair yeah so like I just mentioned um if it goes to detector 2 it had to have gone through the top slit or the left slit however you want to look at it right because there's no other path there so whatever you're going to see in the in the pattern here is going to be a circle so you're going to get a full circle option here you're going to get the circle option in detector one goes to detector three same thing had to have

(29:26) gone through the right slit Circle Circle if you look at detector five or detector four that's where you can get your wave function because of the crystals which now make it so that we can't tell so really this this is basically acting like a wave getting to the double slit now it's acting like a particle it's going to acting like a particle until it gets to our our Splitters here and now it's going to act like a wave again only if it goes to detector 5 or detector 4 through the random uh switch

(29:59) if it goes to detector 3 and detector 2 it's acting like a particle again so we're literally changing the way the particle is acting just by adding in this random splitter after we've already converted it to a particle now it's again going to be acting like a wave wild from the bottom slit hits a set of beam Splitters which randomly directs the photon to either detector 3 detector 4 or detector 5 if the photon goes to detector 3 it will also show a spread out pattern because its path information is known it could

(30:33) so see this is what I was talking about is that the path information is known so it's out it's never going to show you a wave pattern here or interference pattern and that's going to match detector one only have come from the bottom slit what makes things interesting is what happens to the photons that don't end up at 2 or three but end up a detector four or five these photons are fed into a set of optical instruments that effectively merge the beam from the right and left slit into a single recombined beam so when he says

(31:05) that they merge it into a single recombined beam what he's saying is that the combination of detector four and five will create still the circle pattern but individually detector four and five will be split into two different wave functions one half of each is one half of the full circle pretty weird this is the Eraser part of the experiment it's called look at that so you can actually see the opposite effects here right and so the Eraser here is because it's erasing the particle function now reverting it back

(31:37) to the wave function rebuilding the wave function right and we'll talk about the implications of this in a second sir because the photon's path or Which Way information in those two cases is erased hence the pattern yeah so the the path has been erased now we don't know which path it went down right if it makes it to detector two we know it went to the left path if it makes to detector three we know it went to the right path but if it started and went through the the right path here we couldn't tell based

(32:03) on looking at detector four or five if it went through the left path or the right path that information is now erased essentially we have no way of knowing for sure which one it went through because we have two two crystals here someone just think about how crazy this is right this is like we just set some crystals that randomize it and now the universe is reacting to how we set this experiment up if you were to just take these crystals away we would have perfect information out which path it went through but because we added

(32:31) crystals after we already broke down the wave function it rebuilt the wave function it's like the universe is saying well it can now be back in the super position again it could have gone through the left one or the right one again weirds that you will see at four and five are always going to be interference patterns this is similar to the pattern made in the double slit experiment without a measuring device the two interference patterns from four and five look somewhat now this is the crazy part again right is that if you

(32:59) look at these two patterns here the peaks of one wave is The Valleys of the other right they fit together like perfectly like puzzle pieces right like this now you might ask where does the

confusion of retrocausality the photons end up there okay but showing a different pattern a spread out pattern if the photons end up at D2 or D3 so this implies that what happens at D2 D3 D4 or D5 influences what happens at D1 but yeah so what he just said there whatever happens down here is influencing what happens in D1 right so

(33:39) if the photon hits detector 5 then it's only going to hit one of these slit locations that you see that's output for detector 5 which means that whatever it hit in detector one is going to match that that means if you were to compare the output detector 5 for all the photons that made detector 5 you're going to have the same pattern in detect DET detector one which is where you see that wave pattern here again right now he tries to deunk it here but he explains it incorrectly since the which goes to show that this is a very

(34:06) complicated concept so for the people in the chat are saying I need to watch it again go ahead you can see the stream here I will go ahead and put it in the chat as well so that you guys can watch it on your own if you want to after this because it does it may take several times to understand like I said I've had to look through this for the last like several days in order to really wrap my brain around how weird it is but this does leave the door open for what we referred to as retrocausality the idea that you can get information from the

(34:32) future to the past to the present however you want to think of it path to D1 is shorter than the path to any of the other detectors the photons reach D1 before they reach D2 D3 D4 D5 so the implication is that the pattern of D1 which would be in the past is being affected by what happens in the future at D2 D3 D4 or D5 so boom so the key part here right this path till it gets to the crystal so is longer than the path before it gets to detector one so remember the speed of light is constant at least through the vacuum of space

(35:12) time as we know it so while the detector while the photon gets here and gets to our detector number one it hasn't yet even gotten to the crystal so it hasn't even made a choice on which of these detectors it's going to go to yet it hasn't even made the choice yet and yet because we can glean information about where it lands in detector one we can figure out if it got to detector 5 or detector 4 because they're exact opposite wave patterns right this is mind-blowing this is mind-blowing so

(35:42) again if it hits this part where it's green right here in detector 5 uh then we knew or if it hits this part here where in detector 5 on detector one like in the same location we already know before it even gets to this Crystal that it's going to end up going to detector five this is this is C in the future this is literally C in the future so let me represent this I'm going to keep this up here one more time because I want people to realize how mind-blowing this actually is guys so let's screenshot

(36:21) this so if we have this pattern so this is the pattern that means it went to detector 5 right this pattern right here now if we look at detector one right and we see on detector one that the point that the photon hits is in one of these strips here like this right here if it hits right there in detector one so we look at detector one we see the red dot goes right there and it's in the exact

location here then what this means is by default it couldn't have got to detector 4 but not only could it not have got to detector four because

(36:56) detector 4 that's a black spot right here right uh so it we know for sure it couldn't have got detector 4 if it if on detector one it comes through and it hits that spot we know it can't be detector 4 because detector 4 is black uh black in that location like this so why is that crazy that's crazy because the photon hasn't even got to the crystal yet the photon is still over here somewhere because this path is short shorter than this path so we're gleaning information from the future we

(37:33) know for sure it couldn't have gone to detector 4 but we haven't even got through the random prism yet right so why is this important because now this is bringing up the idea that time is not linear that we can manipulate time and that also we can hold things in super position where we can figure out where they're going to be in the future based on detecting something right now this is very similar concept I mean this is the concept of quantum entanglement quantum teleportation right and now all we need

(38:02) to do is do this at the macro scale level and now you can have an airplane that seems like it's in one location But ultimately could be in a different location in a superposition location we can take the same concept and not exact same experiment but the same concept and now an object can be over here or it can be over here and if we look and measure over here detector one we know that the object's actually going to be showing up or the the entangled object is going to be showing up over here in let's say detector 5

(38:33) right you could almost argue this is a form of cloaking right because now we don't know where an object is visually if we were to see it this brings into question the whole nature of our reality people have naturally been led to think that the interference pattern of the Eraser will change the result on the original D1 screen this is wrong if we were to turn on the experiment and show the content of all five screens that is the screen from D1 the two screen showing photons from the individual slits D2 or and D3 and the

(39:07) two screens D4 and D5 each showing half of the recombined beam then we would see that the patterns look something like this so these patterns are pretty interesting right so when we look at the detector 2 we can tell that it went through the the left slit because this is offset to the left if we look at detector 3 we can tell it went to the right slit because the color is focused towards the right a little bit right if we look at detector 4 we can tell because it's got the wave pattern but the wave pattern is slightly uh I mean

(39:39) it's just it's a little bit it's the opposite the inversion of detector 5es wave pattern if you add them all up then you get detector one which makes sense right because every single Photon hitting detector one regardless of which one of these four options it falls through so it makes sense if you add up 2 3 four and five you're going to get the exact same thing for detector 1 that's not the crazy part though the crazy part is that we can glean information about which detector on the bottom it hits just by looking at where

(40:12) it hits in detector one it like I said if it in detector if in detection one hits a location that's dark let's say in detector 5 we know that in the future that P that photon is not going to make it to detector 5 we shouldn't be able to know that because it hasn't yet hit the randomizer that's mindblowing that the quantum ariser has no effect on the original screen a D1 what's really happening is that the changing patterns are due to the scientists who are conducting this experiment selecting

(40:45) subsets of the photons in D1 to show the same pattern as that of each of the other detectors how is this done recall the first thing that happens after the double slit is the creation of entangled photons this means that there is a connection between the particles hitting the screen at D1 and the particles going down to the other detectors where we either measure them coming from separate slits causing no interference or as the recombined beam where we see an interference pattern since the path information of all the photons hitting

(41:17) D1 is known it is possible to single out or manually identify all individual photons ending up at any of the other detectors so he basically just said what I just said right there which is that if you look at detector one where it lands up we know the patterns on detector 2 3 and four so we can infer based on wherever it lands in D1 which of these detectors is going to end up hitting now we can't be 100% sure because there's still possibility there's some overlap between like detector 2 3 and four but

(41:48) detector four and five have no overlap so that actually lets us rule out at least one option in terms of where it definitely did not go which is enough cuz that's already bizarre right this is supposed to be a randomizer but somehow we're able to tell the future we're able to glean certain information like and when I say certain I mean with certainty with 100% Precision whether or not the the photon is going to end up in detector four or five you can already begin to understand that just with this

(42:15) this doesn't seem like a lot even if we can just rule out detector 4 rule out detector 5 uh when we look at detector one this is still passing information from the future to the Past right or to the present this is still you can imagine a scenario where you could use this to uh communicate right um you could use this to glean information I mean and this is just again just light photons but if you were to apply this different ways then this is where we could begin to create stuff like magic in other words using

(42:51) entanglement we can recover which entangled partner photons from any of the other four detectors hit the screen D1 so for example if we manually sort out the entangled partner photons of the photons hitting D4 or D5 we can see the same exact interference pattern hidden within the spread out pattern of D1 but we see this only because we have now chosen a subsample from all the photons at D1 which of course is going to be interfering because they are entangled partners of the corresponding photons in D4 and D5 the same thing applies to D2

(43:28) and D3 so in the presentations that you see including the one I originally made the interference pattern you see at D1 is nothing but a hand selected subset of the actual original

spread out pattern yeah so he's saying that you know some people try to mistake this uh explanation um because you have to you have to separate out two things is if you look at all the photons that that hit D1 then it's just going to look like a big blob right but if you peel out the ones and say okay these are the ones that hit D4 these ones hit D5 then

(44:04) that's going to give you the pattern that matches like D4 right that's what they've done here so they've taken out all the other ones the ones that didn't hit D4 and then they've removed those from D1 um because again they're entangled so if they're entangled they're going to hit the same exact locations which is weird enough honestly D1 corresponding to photons that ended up at D4 or D5 in fact if you combine the interference patterns at D4 and D5 you get a spread out pattern with

(44:32) no interference there you go so what the quantum eraser is doing is creating two subsamples of the full non-interference picture which individually show interference but no interference when combined so you see that right there this is exactly what I was mentioning chat how the the interference where it's dark here is where it's light here and vice versa and if you were to map it in a in a graph you're going to see that over overlay they become one Bell pattern one bell curve if you were to combine them right yeah this is

(45:03) essentially this is like the beginning of understanding how instantaneous communication is possible right now here's The Clincher and this is what really makes me wonder about the idea of retrocausality right is it's not so much can we change the past but it is kind of can we change the past is that can we get information from the future to the present I'm not sure that we can really change the past what's already happened but we might be able to tell what's going to be able to happen in the future

(45:30) we might be able to see the future with this type of information and this is a property of the universe right like what we're dealing with here is we're just shooting light photons and then we're realizing the universe already knows what's going to happen and if that's possible then is it possible to be Clairvoyant is it possible to get a message from the future why not I mean we're watching it happen if you combine all the patterns from D2 D3 D4 and D5 you get person precisely the same

(45:58) pattern that you have at D1 this should make sense because every entangled pair that ends up at D1 has a corresponding pair that ends up at one of the other four detectors so really you're not changing the past what you're really doing is in the future you are choosing a subsample of the data you made in the past so I hope you find so this is a pretty sweet one right guys um now let's read this one comment this top comment has hundreds of up votes right there's still some mystery in that selecting a subset of the particles in

(46:34) D1 that went to either D4 or D5 recovers an interference pattern but selecting the D2 or D3 particles does not that is the delayed choice that particles will eventually end up in D4 or D5 but having not yet hit the recombiner still nevertheless make an interference pattern at D1 this is what I was just mentioning so this is the part where if I go back to the screenshot here when

we see the interference pattern developing at D1 from the D5 or D4 the photon hasn't even hit them yet the photon hasn't even hit the

(47:13) randomizer yet and yet we're already seeing the interference pattern developing here this should not be possible the future has not yet been determined but somehow detector one already knows what the future is this is the wild stuff guys and if we can start to see the future now you can start to imagine a scenario where an object can be teleported and again I this is why I don't like the term teleportation because it's almost like an optical illusion being played out on our minds in real time it's like a video

(47:44) game that hasn't rendered the uh environment yet or it's rendering the future already it already knows what's going to happen this brings them the question whether or not are we even have free will or if everything is predetermined if this detector if detector 1 already knows that the photon's going to hit detector 5 before it even hits this Crystal then is the future do we even have free will right and yes we're still only talking about single photons but why not why can't it be something larger

(48:18) right so now let's look at let's look at the MH370 videos we haven't looked at these in a while now when we watch this video Let's imagine now that we're not doing photons anymore let's imagine that instead we want to rebuild a wave function but we're going to rebuild it with gravity we're going to bend this object out of SpaceTime itself so that the universe doesn't even know where it is anymore right same idea that we did down here imagine the same experiment but now we have an airplane

(48:58) and our airplane is now we're going to entangle it we're going to entangle it right here with four orbs three of those orbs are going to follow the plane to detector one okay the last orb is going to go through our randomizer our randomizer process and what's going to happen is that is going to now rebuild the wave function so that the universe doesn't know if it's going to be at detector 5 or detector 4 anymore but we know because we can see the future we can determine it by looking at it with detector one which

(49:28) with our three orbs that we're going to have now what we're going to do is we're going to have our three orbs enclosed on our plane we're going to read the location we're going to look at our pattern here and that's going to tell us that it has to have gone to detector 5 and what's that going to do the universe is going to react poof now the plane's at detector 5 that's what we're going to do that's what's happening in these videos now it's happening a different scale where

(49:54) what's happening now is that we're bending gravity entirely around the plane to the point now where the plane is no longer connected to SpaceTime it's now in The Ether the foot The Fifth Dimension whatever you want to call it right and now the universe has to render it somewhere else so now what's going to happen is it's going to instantaneously render it in a different location it's going to create what we would think of as a wormhole all these things are the same concept the Wormhole concept is not

(50:21) a physical Wormhole that you're going through it's a connection between two points in SpaceTime that we cannot literally perceive because we don't have the ability to see that extra Dimension we don't see the underlying Matrix but it's there and so when we see the plane Get Zapped out that's why it looks like a two-dimensional object that's why it looks like a flat flat like B bulge that just disappears the plane because we cannot perceive the extra Dimension so this is the problem when you try to look

(50:48) at like a Fifth Dimension object in threedimensional space or a fourth dimensional object however you want to think of it in threedimensional space we can't perceive it like that so that's why we're not going to see it like a worm opening up it's not going to be like Dune when it opens up the plane's going to be gone because it's going through a shortcut that we don't see in The Matrix anymore so right here we see the orbs slow down reorient and then they're going to converge and they're

(51:12) going to create an energy level that's so strong that's going to rip through the fabric of SpaceTime it's going to rebuild the wave function of the plane where now the waves position is the planes position is no longer known and we're going to measure it and then that's going to tell us exactly where it is and that's going to move it to a different location instantaneously well not instantaneously but faster than the speed of light so yeah instantaneously and now poof it's just gone right I mean it's funny

(51:39) because you can [Music] see I mean we see the clouds right the plane is over the clouds and then the plane is just gone and the clouds are still there perfect right just mindblowing it looks like it's just being deleted straight out of SpaceTime just gone the Cloud's still perfect in the background even when it's overlaid and then even afterwards but you can still see the clouds evolve like when I go fast forward like this you can see the clouds moving around right you can see the less dense clouds get

(52:13) thicker and not as thick even though even though it's only like a 3 second period you can see the clouds dancing Wild now in the thermal video Same Same deal right this is why these videos are incredible and this is why engineers and scientists want to talk to me because I'm sitting here and I didn't even I didn't even understand the double the Eraser the delayed Choice eraser I I had seen it before admittedly I had seen it before but I never understood it at the level which I understand it now right which

(52:51) is uh you know now that I'm looking at it again I'm going the delayed choice of ER is definitely linked to the phenomenon that we see here in the in the plane it's different that we're seeing a gravitational effect but that's because we're doing this to a solid state object right as opposed to a photon with a photon we can just manipulate light and then we can manipulate the crystals in which they go through the light when we deal with a solid state object we need to bend space time around the object gravity gravity

(53:23) manipulation um but it's not really it's gravity manipulation is not the right word for it because what we're dealing with here is we're just kind of like deleting it from SpaceTime itself

and when you reduce the mass of the object to zero or you delete it from SpaceTime um now gravity won't affect it anymore right and yeah there's probably some compression artifacts on there but we're not that's not all compression we're literally really seeing the clouds evolve and move around and in some

(54:00) places you can see it much clearer than others I've looked through it uh one stream I did a few weeks ago I looked through a lot of different spots where like you can see whole things appear or not appear but there's definitely like some compression artifacts happening in general yeah now this one just wow man with the heat signatures just wow and it's crazy cuz when you watch it in full speed it's so fast I mean this is like what 24 frames per second so this is happening in like four frames so this is happening in a tenth

(54:33) of a second the plane's gone in one tenth of a second the plane is just completely gone this is much slower than or much faster than even 1 second and why is that relevant because if you're talking about **debunks** of a VFX the VFX of the Pyromania is like 4 seconds long or like 2 to 4 seconds long this is happening in .

(54:57) 1 seconds in real time so it's not even on the same time scale as the stock effect right yeah as crazy as this looks as CRA it just it seems insane right as insane as it is scientifically accurate that's the part that is absolutely wild when we watch this we're I we're I think we're literally looking at a wormhole right here we're looking at a real Wormhole not what you see in Star Trek or whatever but what it would really look like what it really takes to induce it it's not just shooting beams at

(55:35) something you actually have to have the objects converge the magnetic monopoles of the objects converge and amplify the energy everything you see here has very specific purpose wild completely wild the wildest part is that it explains why we never found a plane right explains why we never found a plane ever right now I want to talk briefly about the implications of all this okay so I've been watching the three body problem okay and I think that the big idea that we need to be thinking about here is how far Advanced is this technology like

(56:25) this technology when we look at it when I first looked at it I thought it was thousands of years more advanced than we are which may not seem like a long time but when you look at human history and how far we've advanced in just the last 50 years it's incredible we've gone from no computers in the last 50 years at least on the commercial Market to AI now and we've got a m micro processor microchip or whatever that's got 28 billion transistors on it that's going to be able to render AI stuff that

(56:59) Nvidia is putting out right this is why semiconductor stocks are just through the roof right so then the question is this this is my question to you all chat is not only do we have the capability where we can manipulate the present with the future what does this mean for reality itself and if there is technology that's out there that is thousands of years more advanced than us how long would it take us to reverse engineer it to figure it out if think of it this way when we look at this experiment we learn about it

(57:39) right now knowing that we let's just say that we know this is real for right now we don't need a thousand years to figure it out it's not a situation where you need time to figure it out you need to have your brain adjust to what's happening right and when you see the answers we watch happen we can figure it out very quickly like we figured it out let's say we figured out in the last 6 months right we've basically adoped our knowledge of science from looking at these videos as if advanced a thousand years in just

(58:13) six months think about that that's incredible what this means is what we're looking at here is a discovery it's something that it's we're not being held back because we need more time to figure it out we need to actually just understand the nature of the universe and once we understand the nature of the universe there's an extra Dimension everything we looked at makes sense then the same reason why we're able to send information from the future back to the past through detector one and detector 5

(58:40) in this experiment right here is because there's an extra Dimension time itself is just an illusion right there should be no possible way that detector one can already know which detector the entangled photons going to go through before it even hits the randomizer but it does it does know already when the photon hits detector 1 it already knows which of these detectors in the future it's going to go through before it even hits the randomizer should be impossible the only way this makes sense is if the nature of

(59:12) our reality is different than what we expect it to be right the only way this is possible is if we really do live in a holographic principle some type of Matrix situation where it's a video game rendering the answers and it already knows what they are right right have you guys ever played a video game where it feels like the game is cheating right because the game is reacting to what you're doing instantaneously that's kind of like this where if it was a human you would have human reaction time 3 seconds usually is

(59:43) what they say it is that's how long it takes you to see something and to react with it not only is the universe here reacting in real time it's reacting in the future so the universe itself sees the future and is reacting to it retroactively retrocausality so if the universe sees the future and is reacting to it that means that time is not as we perceive it time is not this linear thing where it's stepwise moving forward time is already laid out and the universe is looking ahead to figure out what it needs to do

(1:00:18) right now to me that's incredible chat to me that's absolutely incredible what do you guys think and thank and hello for the new people that have jumped in the chat what are your guys thoughts on a lot of this is this over everybody's head see what we got here looking glass Tech any other things that I should be looking into related to this yeah Portal and Portal 2 is those are really fun games uh I definitely played Portal 2 where you can open up portals shoot stuff through watch it go through figure out the uh

(1:01:02) figure out the puzzles oh let's watch I think there's a trailer for this um Outer Wilds Chrisley told us not to spoil it for ourselves but we're going to spoil it if this game is as cool as

she says I'll probably check it out okay this is a guy cooking well that's weird uh what's going on here who can tell what we're even looking at [Music] here we're just watching the trailer no big deal I already feel like a profet chrisly don't worry about it that's probably me being arrogant so

(1:02:07) [Music] arrogant so it looks like you're in some kind of spaceship and then you land on a plane or planet or [Music] something [Music] well this is trippy already chat outer Wilds explore a handcraft solar it's a little bit [Music] loud [Music] yeah I mean it seems pretty cool music's pretty neat I like the uh I like the visuals for sure yeah it looks like raft or like uh what's the

(1:03:12) water one that uh what's that water one called guys where they're just like in the ocean you swim around I don't remember what it's called I used to watch streamers before uh I started doing all this this interesting yeah is it procedurally generated 2008 at 18 I mean this was six years ago good question is it procedurally generated chrisly no crafting it's just a huge Quantum puzzle not bad yeah I imagine uh let's look at it's procedurally generated 100% handcrafted randomize is the world

(1:04:00) randomized oh ha Out Auto logs me in nothing random about it interesting everything is deliberate okay so it's more like portal where it's like Puzzles you have to figure out um okay Dark Forest concept this game is not approved by the Flat Earth Council yeah um okay let's let's talk real quick about the uh Dark Forest and then I think I will probably close out early there I haven't really done long streams but I'll probably try to do some longer ones this weekend uh I did do alien addict guys if you guys didn't check out

(1:04:44) alien addict you guys can go back and watch that today we talk a little bit about this so the Dark Forest concept is the concept where the forest is dangerous right if the forest is dangerous there's Predators everywhere and if there's Predators everywhere then you don't want to get caught uh making noise because if you make any noise the Predators are going to come find you right and that's the same kind of concept that we might be experiencing here now the reason why I don't like it is that the Earth is going to stick out

(1:05:17) like a sore thumb right we have a blue planet and a blue planet is filled with life techn signatures um ological processes happening with 6 billion human beings and basically an infinite number of creatures on the planet almost um but the idea that we shouldn't be sending signals out because if we send signals out then someone could hear us and if a predator hears us then they're going to come find us that's the Darth Dark Forest hypothesis right is that everybody wants to be quiet it's not that you you don't want to send

(1:05:53) messages out you want to do the opposite you want to hide all your your messages so that nobody can hear you right now the other thing is that wait that's in the game too too scary we guys we scared chrisly away um guy I already lost my train of thought yeah so we got to be careful about what messages we send out instead we should probably be doing the opposite we should probably be hiding our messages because we want to be as quiet as possible now the other thing though is that the universe is really big so it

(1:06:26) could take if we can't travel faster than the speed of light if people haven't figured out if uh be have not figured out what we've just figured out there which is the double slit experiments retrocausality delayed Choice Quantum eraser it any species that has not figured that out is not going to be able to move very fast they're never going to be able to get to us everything is too far away but if you can figure out how to cheat the system to break through the fabric of reality then speed relative speed is no longer

(1:06:59) an issue now we just have to look and point and say that's where I want to go right and potentially create some type of quantum effect now the question there is if we go back to the experiment is do we need to have orbs set up at detector 5 and at detector 1 in order to make this work if you need orbs in both locations now you still can't just go infinitely far you have to send your orb out to the the moon right cuz you need one orb in the moon and you need three orbs over here on the planet Earth and then we can teleport

(1:07:35) instantaneously there right we need to have the entangled pairs that's what's required for this so this may not be an infinite travel system right and now this brings up the question of like do you need something like Stargates Right Where I Need A Stargate on Mars and one here and then we can we have them entangled and now if you go through the one here you end up there just like the show Stargate right but this doesn't mean that we can get to Alpha sari because we don't have a Stargate in Alpha

(1:08:06) centuri so this may not me like the one thing I like to say is that even though this technology could be thousands of years more advanced it isn't just it isn't doesn't turn you into a God right there's still limitations to the technology even that and this is the crazy part this is how it kind of brings it back together with the idea of so let's say this technology is a thousand years more advanced the idea that we have figured out Quantum and macro and now we can teleport a macrosized object

(1:08:36) the same way that we can manipulate photons because now we figured out how to how to scale it up now what is a species that's a million years more Advan what is technology that's a million years more advanced I think the answer there is now you take Ai and you start to figure out how we can send an object to the Andromeda galaxy we can have an entangled pair in the Andromeda galaxy or perhaps we can find an existing entangled pair and maybe now we realize we don't need an orb that we can manipulate at

(1:09:11) the quantum level somehow where now we can just teleport anywhere we want anywhere in the universe right this is the difference between where we're at right now let's say we're dumb dumb monkey boys where we have no capability to teleport right and then the Thousand Years in advance is you figured out quantum mechanics uh unification Theory and now we can teleport objects between two locations where we have objects already preset up at them some floaty orbs let's say and then a million years more advanced is

(1:09:41) the idea that we understand the nature of every atom in the entire universe and which ones are already entangled to which other ones and we can manipulate the ones that are

already entangled seemingly infinitely far away thousands of light years away and now we can use those and teleport ourselves from one end to the other without having sent our orb already over there right this is how we should be thinking in terms of understanding how we can really Advance as a species right and what's going to allow us to do that quantum

(1:10:15) computers quantum computers are going to be the thing that help us do that quantum computers are going to be able to increase their their power exponentially they're going to be able to map all of this stuff that we need to be able to mapped down to the cellular Atomic level because quantum computers like we saw one with only 56 cubits or 57 cubits has nine quadrillion possibilities nine quadrillion right and that seems like a lot until now you have to map every single atom in the body right and then you're like okay well nine quadrillion

(1:10:45) sounded like a lot but now I need even more than that right and then we start to get in numbers that are basically infinite and this is where the part where we now can take our quantum unification technology that we start to develop and start to turn into stuff that's just beyond magic basically beyond our comprehension right now incredible stuff guys and so yeah so Ron Hey welcome buddy says what if you can find a particle that's entangled with another particle in the area you want to go and then you can somehow create entanglement

(1:11:15) between more particles in both regions and make your own portal exactly Ron exactly right that's the technology that's like even beyond what we're talking about we're simply talking about moving an object from point A to point B that's still on this Earth that's step one then beyond that it's okay let's take our second object our entangle object and let's let's entangle them and let's send one up to the moon and then let's teleport an object from here to the Moon that's step two step three is

(1:11:49) we look for existing entangled particles that might be 100,000 light years separated and then we can combine them somehow or entangle them with more particles and more and more particles until the point where we can create a portal that a physical human can walk through or we can push an object through and we can basically create a Stargate right pretty wild but you can see how as that gets more and more complex we need more and more advanced technology to be able to pull it off that's our future in my opinion that's what's going to happen

(1:12:25) right right and at some point we might be in a world where we literally have Stargates set up between planets with which are just entangled uh pairs right or many entangled pairs we can combine the entangled pairs Etc pretty interesting stuff um and and His Highness says by the way the same type of for orbs I think he just means orbs in general can create crop circles I I do think that there's something to do with the wave nature of the high frequency gravitational generator that can produce crop circles potentially in the patterns

(1:13:04) that they see instantaneously you shoot the beam down there you have your pattern set up and boom it creates the pattern in the in the crops instantly you need an enormous amount of energy the good news is we also have infinite energy available to us as well so yeah

that's the crazy part is that some of the mechanisms to pull it off don't require that much energy um I think that Jackar Fatti is one of the people that would argue that we don't need as much energy as we imagine but when we look at the videos when we

(1:13:34) talked to Bob Greener This is the part when we look at this part here is that what's Happening Here is an amplification of energy and when we're amplifying the energy we're not creating a linear growth sorry I don't have it up we're not create a linear growth we're creating an exponential growth of energy whenever you create exponentials of anything this is where you start to hit the magic point right and that's what's happening here as well when the orbs are converging they're amplifying the energy

(1:14:05) in an exponential Manner and this is why Salvador Páez in the high frequency gravitational wave generator mentions that you can create energy density so high that you can annihilate an asteroid this is the part where it's basically magic here right now and this is why I say think about it like taking two magnets right and jamming the magnets together what happens it gets more and more difficult the closer the magnets get together right until it gets very very difficult to jam them together now imagine you have extremely powerful

(1:14:40) magnets and you're trying to jam them together now you realize if you were to curve that if you to look at a curve of the forces you're going to get a linear exponential or logarithmic growth curve same thing I'm sure that's what's Happening Here I mean and the funny part is I can understand it without fully being able to explain it despite the fact that I have no uh formal engineering um you know Bachelors or PhD or anything related to that but that's definitely like Chrisley said you need a

(1:15:09) huge amount of energy the good news is they're Crea this is just four three tiny orbs right in the cosmic scheme of the Earth the size of these orbs is pretty small now related to the plane the field on these orbs is pretty big it's like about 30t wide in diameter this a pretty Big Field but in the cosmic scheme of our whole planet this is Tiny imagine if you scale this up right and then you create exponential growth of your energy reaction here this is where you get to Doomsday weapons this is where we can create a black hole

(1:15:42) this is where we might be able to create a big bang pretty incredible um yeah I believe the exponential function reaches a singularity where our current knowledge of physics breaks down exactly and the point where that physics knowledge breaks down the singularity is when we rip through the fabric of SpaceTime and then we we get access to the underlining framework the negative entropy of the background state of The Ether of the Matrix if you want to call it like that if you think of the Matrix of the ether as like just nothingness

(1:16:16) right then this is where it's going to uh what's the right term for it um I guess negative entropy is the way to think of it negative entropy where you're going back to the the foundational State the blank canvas right uh yes I've I've watched the entire three body problem I'm not going to spoil it for anybody else so uh you guys can go ahead and check it out I'm probably going to start watching the Chinese version tonight because I like some of the concepts

a lot of the concepts in the show are very

(1:16:44) similar to stuff that I either talked about tonight or that we've talked about in the past as well yeah and energy is infinite in the universe but it's not even a matter of harnessing it it's more of a matter of how do we amplify the energy that we can use from it just like we see here because once you begin to amplify stuff with an exponential growth you very quickly hit the point even if even if energy densities seem very high once you start to exponentially grow your energy you hit those you hit those levels very

(1:17:16) quickly right that's what's happening here in these videos we're hitting that energy density we need very quickly right but yes we can still harness basically an infinite amount of energy even just manipulating our own magnetto sphere from the earth should be possible Right hey Cody I haven't seen you around thank you man and and Ron geve thank you for jumping in Jonathan I see you as well yeah if I do have a superpower I would say my intuition has become very on point now at the same time I'm just

(1:17:53) as I can be **scam**med am just like anybody else as well I think that one thing that you learn about people guys is that some people are better or worse at telling when someone's lying but nobody's perfect at it there they've done a lot of experiments where on average people cannot tell if somebody's telling the **truth** or telling a lie it's 50/50 but some people are better or worse at it and you can think of that as intuition if you want um and I would say I've gotten better at it it might be a nature

(1:18:24) of being a poker player gamer science nerd whatever probably a lot of these things put together you know but I'm not perfect either at it but what I can tell is that I've gotten a weirdly accurate perception when it comes to those videos and the science on those videos and it's because I looked into stuff like the double slit experiment super conductivity all of those things I mean it's a very weird intersection of all this stuff all coming together at the right time which makes me wonder about

(1:18:53) you know was this all for a reason is there really no is this was this always faded to happen this way it's very bizarre very bizarre yeah it's very unreal to me as well chat if it's unreal to you guys then imagine how unreal it is to me uh as being somebody who is you know on the other side of the screen just a few months ago and now I'm sitting here and trying to understand like what is the next step what do we do here about this right how do we figure this out and and what and do we even want to reveal this

(1:19:22) like you know if this is the big question question here is what we just talked about here today has such a huge huge implications on our reality on our future on whether or not on not just our future but if there are other civilizations out there this is a discovery that all of them are going to figure out and the question is do they destroy themselves or some of the black holes that we see out there are the other civilizations that found out about this technology and wiped themselves out and created black holes it kind of goes

(1:19:55) back to remember when everybody was afraid that the CERN or large hadron collider people were afraid that that was going to wipe out the planet okay well maybe not but maybe this will right there is applications of it that theoretically could create a black hole it's not going to happen at tiny scales where you shoot one Photon together or you know blast them together but if you have huge giant superharmonic conductive orbs and you amplify their energies together then maybe you can wipe out an entire planet right scary

(1:20:30) stuff really scary stuff okay any other last questions here for tonight guys let me see uh there's one more video I want to show you guys real quick that I just remembered that I think I have in my bookmarks see yeah here it is okay so this is one video I want to show you guys so **I want you** guys to look at this video and **I want you** to understand just looking at this video that free energy is absolutely possible I want anyone to give me any alternative explanation for how free energy is not possible when you

(1:21:12) look at this what are we looking at here we're looking at a circuit right you've got your positive and your minus plugged in right here we basically just have uh a drill or whatever here some type of circular mechanism a motor if you want to think of it like that and we've got two magnets here now what we're going to do with these magnets and we have these other like uh magnets on this side as well right so that we can create a magnetic field here and we're going to find the resonance here where the magnet

(1:21:41) it's going to spin and it's going to perpetually spin once we get it to the right exact right resonance and the exact right distance this thing is going to spin perpetually so really what we're doing here is we're looking for that resonance right once you hit the sweet spot with the resonance boom look how fast is spinning is accelerating right this I mean to me this proves free energy is real right because it's not free we're borrowing it and now you can use this to power anything you want to power scale it up

(1:22:22) right why why have just two magnets why have it just have one motor right scale it up to me this seems like this is i that's it what else you see someone give me an explanation here where this doesn't produce free energy I'd love to hear it pretty wild I Chris thinks I'm one of the chrisy thinks I'm one of the developers of the game no I mean maybe maybe I create the game in the future and then I sent the information to the Past who knows guys yeah I'm going to go ahead and post the Brad Vorhees thing in the future thing

(1:23:07) we're turning Chrisley into a Believer guys she's going to be a believer here pretty soon the crazy part is this isn't a this isn't a religious thing this is just oh I had my DMs open well whatever um this is not a religious thing this is just straight up uh science straight up science chat let me see there any DMs I I care about no we are going to set up a space with Jake where we're going to go over the salvator Pas patents but I was just so busy this week so we're going to go over that um and then people just send me

(1:23:52) about a million posts nothing important no personal information in there um yeah that was just magnets anything else guys yeah Oo Point there's a lot of actual videos on YouTube

about zero point but a lot some of them are frauds for sure it's hard to tell which ones are the real ones but it seems like you can just look at that experiment with the magnets and you can tell that there's obviously a way to manipulate magnetic fields to get a motor to spin essentially perpetually right and this is the same as the dread Co experiment I

(1:24:22) would be I'm 100% sure the dread Co experiment which is um a perpetual motion machine that like nobody knows the answer to or whatever I'm sure it's using magnets 100% sure hey castri thank you very much yeah appreciate it yeah castri if you didn't check out the beginning of the stream uh definitely check out the quantum eraser experiment I mean this is mind-blowing like we there is definitely an extra Dimension to our universe there's no other explanation like how else else can the future how else can the the universe

(1:24:59) already know what's going to happen in the future before a particle already gets to a randomizer right it already knows the outcome before it's even touched the randomizer I mean that that begs the question of whether or not we even have free will right so Quantum uh quantum mechanics is quantum mechanics is the magic general relativity is what we see on large scales that we can perceive and understand and when we bring them together that's where you start to get stuff that is going to that's our future that's our

(1:25:29) technological future we don't know everything there is to know right now because we haven't even figured out unification of quantum and macro and once we figure that out we can have Quantum effects happening at the macroscopic scale that's where we're going to start to be able to do magical stuff guys should be fun so yeah as you guys saw from my DMs there I am planning to to set up a space with Jake Chanley I think talking about the Salvador Pas patents is extremely important um because uh you know if we

(1:26:02) look at the high frequency gravitational wave generator he talks about exactly all the stuff like I can see why now in retrospect right he wanted to talk to me I mean I'm sitting here talking about sitting here talking about his patents and I don't even know how they work this was I didn't even know how they worked chat I didn't even know how it worked I'm sitting here talking about his patents and he's and I messaged him he's like oh yeah we probably need to talk I mean you literally are mentioning my

(1:26:30) patents and how they work right I mean I'm just going to read the abstract for this a high frequency gravitational wave generator including a gas filled shell with an outer shell surface microwave emitters sound generators and acoustic vibration resonant gas filled cavities the outer shell surface is electrically charged and vibrated by magnet by microwave emitters to generate an electromagnetic field the acoustic vibration resonant gas filled cavities each have a cavity surface that can be electrically charged and vibrated by

(1:27:01) acoustic energy from The Sound generators such an electromagnetic field is generated the two acoustic vibration resonant gas fi cavities are able to counter spin relative to each other to provide stability and propagating gravitational field fluctuations are generated when the sound the second electromagnetic field propagates through the first electromagnetic field now

why is this also Weir guys this is very similar to the uh Vortex the the thunderstorm generator The Vortex and the thund he even mentions here to

(1:27:35) counter rotating right uh counter spin relative to each other that's counter rotation so this is now to the point where you might even have cold fusion happening here right and this is where Bob Greener if you look at this would say okay well you know here's your monopole and it's probably going to be little offset but now you're going to have you're going to get your field like with your orbs here happening and you're going to have the the what do they call it okan vasara or whatever is what you're going to be

(1:28:07) generating here now the difference is from the from the atomic or the um Quantum level we need something that can produce a gravitational warping effect because we need to rebuild the wave function at the macroscopic level and the way we do that is we manipulate SpaceTime and how do we manipulate SpaceTime gravity manipulation right electromagnetic waves pretty incredible okay guys where are we at here I think I'm going to stop for tonight yeah hour and a half this was a good stream I appreciate it sorry I've

(1:28:42) only been doing shorter streams I will probably try to do some longer ones I'm going to get the Brad Vorhees I'm going to edit that up just a little bit I'm going to pull some clips from it as well post them on my Twitter tomorrow and uh and I'm going to get the uh Martin Gibson uh unification Theory conversation edited as well that's going to take a little bit longer um so both of those will be coming out in the next few days uh Ron geve asked real quick about the the tokom MAAC oh I wasn't even was

(1:29:09) I not showing this I wasn't even showing this the tokom MAAC is uh it's a it's a toroid tokomak is what they use to produce fusion power uh that's the uh the department of energy has mentioned it that's the giant Fusion generating plant uh it's pretty good will you get to see Lulu she's down here sleeping so yeah I guess I can show you her real quick before I go to sleep before I turn this off um but yeah the Tok MAAC I was talking to I gotta see when the if that podcast was going to drop should have

(1:29:39) dropped already with Bob Greener and Paul shatkin where they actually asked about the Tok MAAC interestingly enough neither of them thought the tokom MAAC would work they thought it was never going to produce overunity um but I think it's already been proven to work so so not really sure kind of interesting anyway guys I'm going to go ahead and uh get some sleep I haven't had any weird dreams recently which I think is good I was having some weird dreams chat for like weeks and weeks and weeks like every

(1:30:10) night I was having weird vivid dreams but thankfully nothing too wild okay I'll give you guys a Moment of Zen I'll show you Lulu and then we'll shut down the stream thanks everybody for watching tonight go ahead and check out um the uh Skyfire News stream maybe dark journalist if you guys can find any clips from dark journalists where they're talking about me uh go ahead and clip those for me and uh ping them at me on Twitter or DM them to me and I'll post them on my uh twitch uh Twitter

(1:30:44) Channel okay guys here you go Lulu Good Girl Lulu very good girl Lulu Lulu Lulu okay guys you doesn't like you chat this is kind of a pain that was for you Chrisley that was for you have a good night everybody peace live long and prosper yes I can do this thing I can do that one and I can do that

(1:31:48) one later guys

Thunderstorm Generator Update!! - YouTube

[https://www.youtube.com/watch?v=IP1N9HILg\\_c](https://www.youtube.com/watch?v=IP1N9HILg_c)

Transcript:

(00:29) for e [Music] [Applause] [Music] e

(02:07) okay well I had no no no sound guys okay we're back so sorry about that welcome everybody to the chat I'll repeat all that um I just said hello let's go ahead and just first say hello to everybody uh Arwin Yousef itchy LJ West PJ Jack trading William nice to see you Joe His Highness um Sirius Pamela Paul PJ Mike good to have all you guys here um yeah so it's been a bunch of few days that uh we haven't had any streams feels like it's been a little while uh appreciate you guys all being here

(02:47) hanging out tonight um we are I'm not going to do a bunch of recap tonight I may do a different live stream where we do a recap later on um been really busy uh between work and uh all the various things I've got um two podcasts that I want to try to put together one of them you can catch on my live stream the other one I haven't published yet um but I want to do a little bit of edits and and push it out there as an official hard **truth** podcast the one with Brad Vorhees you guys can check out uh regarding future humans is what I'm

(03:19) going to frame it as at least although it's more than that of course um let's see but as a couple quick updates before we dig into it today we're going to talk about we're going to watch these videos related to some new updates on the thunderstorm generator and we're going to comment live on some of those and uh yeah we'll have a short stream I say that every time we'll see how it goes um and then uh what was I going to say crap oh yeah I so I did uh unblock uh just now um Steve Cambria uh the **truth**

(03:54) Seeker just in case he wants to set something up I might I might set it up I'm not really afraid to talk to anybody I think it might be kind of a we might get a lot of viewers if we do like a stream with uh you know a co- stream I probably will set it up as a co- stream situation um you know it's kind of like uh what's his name Mike Tyson versus uh that one influencer kid I already forgot his name cheers chat yeah did you oh yeah hey Anthony welcome everybody buddy glad

to see you guys here yeah but AKA Neo and uh yeah I

(04:37) think that would be a fun stream uh funny part is I'm not like my opinions aren't that far off from some of these guys right like I guess you could say I'm the bad boy of uh ufology cuz like I I think there's something going on but I think that a lot of these people are full of crap and then some of them as well are just like it's just a big game to them right so I prefer the science stuff I want to talk more about the science stuff in general and that's why we're going to talk about the thunderstorm

(05:05) generator right if you guys want the UFO news you can watch Skyfire news you can go to Twitter if you want to hear what the debunkers have to say you can watch Cambria Neo whatever his name is and these other guys um and if you want to watch the believer people you can watch weaponized and any other millions of podcasts that are out there right I might go over some of that stuff in general but not that interested in it you guys know what I like I like teleporting things so uh let's get straight to the topic at hand

(05:36) thunderstorm generator thunderstorm generator is a device that is uh I don't know if it's patented but it's certainly produced by Malcolm bendal he's been in the malds uh for seven years uh working on his device and based on a paper by Bob Green year it produces overunity the paper was published in uh nature Journal of nature Bob Greener is a co-author on it um and one of the lines in it says cop greater than 1.

(06:09) 05 cop is coefficient or performance that means you're getting more energy out than you're putting into it now it doesn't necessarily mean you're getting energy out as electricity but there's more energy in the form of heat uh that is being put out so this is not really the Holy Grail but it's it's something that seems pretty special out there so bunch of people uh have recommended alchem science to me which we've looked at their stuff before uh he's definitely a big fan of Bob Greener and Malcolm Bendle so check out alchem science we're

(06:42) going to be watching his video today and we're going to be commenting uh probably every 30 seconds or so so we don't get copyright strided but who knows if we do we do doesn't really matter not really trying to do this for money um one thing I will say though before we start is is I am uh of course I'm still late with this which is the uh Mentor pilot situation uh if you guys want to see the notes that I've taken already on it um this is the work that I've done so far already so you can see this isn't going

(07:18) to be a little joke thing like I've got a bunch of stuff ready to go um but as just a a spoiler like the technical analysis of the mentor pilot stuff is fine um there's nothing wrong with the technical analysis it's just the the investigation and evidence analysis of this particular video is just high it's lacking I mean it's really all there is to it and there's a few times where he speculates in in uh not a dishonest way but in a um uh just not really like Fair way to the to the weight of the evidence

(07:56) especially when he talks about this second communication a lot of people ping me about

this second communication out there and uh there's nothing there's nothing special about it there's nothing nefarious about it communication is that guy sounds totally normal it's not even the last communication um and he reads like way way too much into it uh which is is kind of weird but it's obviously in his mind he's already got it set that he thinks this is some kind of like pilot suicide narrative right so I'll be digging into

(08:26) all that I'm going to try to make a video about it uh that's less than 10 minutes that goes over all the claims um weirdly just I I'll get you guys give you guys a little sneak peek he falsely claims at around 10:40 into this video that there's no dangerous goods on board and then he immediately says and he doesn't even say the right amount he says there's like 2,000 pounds of lithium ion batteries which I think we found that there's 487 lbs imagine thinking that dangerous lithium ion

(08:58) batteries in the cargo of your plane is not dangerous right this honestly makes me question his credibility in its entirety if you are a pilot and you don't think that having lithium ion batteries in your hold is uh unsafe then I question whether or not you're really a pilot there is a literal there's a reason why you can't have them in your uh carry-on luggage there's a reason why when you go mail a letter they ask you if there's any lithium ion batteries in your letter and it's because they're not

(09:30) safe and having 500 lbs of them stacked on top of each other is extremely unsafe so it's very weird how he glosses over it you guys can listen to it yourself it's at about 10:40 um the Malaysian Airlines CEO even lies about it so I'll be digging some of that um and it's weird how he ignores all he just ignores like literally everything about the the witnesses he ignores all the witnesses he ignores all the witnesses in the Mal Dives the fire suppression device that was found he ignores the fact that the flight path

(10:08) is consistent with an emergency event he ignores the fact that they're flying to panang like a bunch of weird stuff right so it's not that these people who and and there's another one the green do one as well which I probably won't go into the green do one but uh the issue isn't that the they're not like like doing good investigation or I guess that is the issue they're not doing good investigation work that's really what it blows down to right they're trying to make content for money

(10:37) and then the other thing too is that this person's got 1.3 million views on this in the last three days 1.3 million views they're making tens of thousands of dollars off of this video tens of thousands and they're also they're also having uh um endorsements or whatever uh what is it it called um commercials or whatever in the middle of their videos like he has a ler like several minute long commercial in the middle of his video here as well where he just like basically like plugs some product so he's got literally brand

(11:15) deals and he's got like a you know go to this thing and put Code Pilot in to get 60% off stuff right like this is literal gifting like this is actually the definition of gifting this is the definition of profiting off the tragedy right it's the definition of it so it's weird I don't see a lot of

people ripping on this guy for profiting off the tragedy with a fake story which is what he's doing in this video right he's promoting a completely fake story of the plane crashing into the ocean where we

(11:43) never found it and he even goes into the whisper data but you don't see anybody going this guy's a ghoul for profing up the tragedy which tells you something very strong which is that it's not that people are upset about talking about the case it's that they're upset that the reality of the MH370 videos completely shatters their brain right completely shatters their worldview that's what's got them upset nobody's mad that anyone's hurting the families nobody's really mad about that right if they were

(12:14) they'd be all over this guy right because he's making tens of thousands of dollars from this video Alan right and I'm GNA go ahead and just ban this guy from my chat okay you're gone you had your chance is weirdo guy um so just to be clear here like this is what profiting off of the tragedy is I've made nothing off of this right that's the exact opposite of it I probably should be made money off of it so just goes ahead and tell you that anybody who is arguing about profing off the tragedy or trying

(12:52) to throw that at me they are 100% full of [REDACTED] that is a completely bad faith argument 100% anybody who's making those kind of arguments is a bad person you are a bad person if you're pretending like I am profiting off of a tragedy you are simply a bad human being and I hope that you get better in this life 100% And if I see comments like this like this idiot y y fools who's just a complete [REDACTED] guys's a complete utter loser don't act like this guys do not act like this guy acts be a better human

(13:26) being right he's never getting unblocked um so he can go cry on the other channels or whatever he wants okay now let's dig into the fun stuff now that we've dealt with that I think you guys know at this point that I'm not somebody who you're going to be able to troll and what have you I'm not your uh you know YouTuber on Twitch or whatever crap like that you are going to get smacked down like a little child if you act like a child so do not act like a child in this stream okay enough of

(13:58) that okay so we're digging into this video here and it starts off with oh I got to fix the sound it starts off with Bob Greener yeah Sky News grifted too A lot of these people are grifting right and they're just selling fake stories um which don't have the thing is they don't have any evidence to support them right when it comes to the other these other mh37 zero videos even the the YouTubers like the weird YouTubers that like try to **debunk** us the irony is they're the ones grifting off of it right they're the ones making

(14:33) the money off of it not me I don't get any money from anybody else's podcast stuff anything like that I never sold any books or even advertised anything okay here we go boom this is absolutely incredible Welcome to our chemical science I'm Jordan and uh I've got some really sck from my small smile that um and by the fact that I'm releasing this video straight afterwards that they're not they pointing results um I'm just going to play a couple of clips of Bob though

explaining what he

(15:05) was going to be looking for and what it would mean if he would find what he was looking for uh in his previous videos before he got the results back um basically I I I the role of the mfmp was to help people if you don't know what mfmp is is the multi uh Malcolm oh God dang it what is it uh Martin fleschman Memorial project mfmp so Martin fleshman was a scientist that's what um the Martin flesh Memorial project is in honor of and in memory of uh Bob is a super cool guy super chill guy he's an engineer experimental one

(15:46) who's in the labs right not a guy that is uh just making up stuff making up stories you know he knows all the scientists and he uh to give you guys the background on this real quick as well actually let's listen a little bit and then I'll give you guys the background because I have to pause every so often um and sometimes you're going to try and help people that don't have something you know we we tried to help people in the past that actually we found out they didn't have anything this is what I'm

(16:14) saying about the thunderstorm generator is it every time I make a prediction it seems to actually physically have that and and it's based on historical understanding and and also our own research and and so it's not not a very hard guess to make and it seems to have it so like let's see what happens the samples are in this this container here and they will be shipped off uh to the beam line I wonder if this is from the paper they say it's going to take five to six weeks uh to have the results back I mean either a

(16:47) higher abundance of 13 carbon 14 carbon or 15 nitrogen they would be Earth shattering results um uh you know they just be Earth shattering results uh so let's see what happens um and there's there's a lot more material to look for if this is um pointing in a positive direction then I'm going to scrape some of the sulfur deposits off and see if there's an abundance of sulfa 34 if the okay so um I was on I don't know if he if he's posted the Foxhole interview but I was on with Bob and um Paul

(17:27) shatkin who is an author and he was on the Paul shatkin was on the Thomas Thompson Brown uh documentary with Jesse Michaels he was the guy that Jesse was talking to for the most of it so we did a three-way interview with them uh on uh George Howard's uh YouTube and he uh Jo or Bob told us the story of the Malcolm Bendle situation is that he ran across Malcolm Bendle because he was given information and said you you guys should meet up with him and he met up with him and he he started to research the thunderstorm

(18:05) generator with no expectations and was like whoa this is like consistent with the stuff that I've been working on and why is that pretty crazy is that that's the same way where apparently he found out about me I think it was ber ey actually berie Bernie berie from uh the alien scientist um was actually he claimed at least he was the one who told Bob about the video videos in my work and then he started looking at them so it's kind of interesting you see all these different ways where people are coming together

(18:35) right so let's keep going there is that implies production of oxygen 17 which is similar to what is supposedly happening in um Binger and hang's cavitator and then we have a a combined understanding um you know based on the operation of ball lightning which is in sync with the ball lightning explosions that we've seen in vager experiments of Hank uran and the ball lightning uh uh crenelated ion spheres that we've seen in other cavitation systems like the ultra experiment and in electrical discharge

(19:07) systems and and and plasma uh carbon in the Supernova and NOA reactors you know everything's lining up with the observation of physical ball lightning Spectra and how it decays and you know the fact that nitrogen is going down at the end there and there's still silicon and nitrogen two nitrogens is silicon and it's like okay all right so probably it is like like this okay so I'm just going to give a quick breakdown of what he's saying as opposed to listening to it here is that there's a

(19:35) certain crossover on this with uh transmutation uh and um and Alchemy right which is conversion of elements into different elements and so with respect to the thunderstorm generator what he's saying here is if the results come back and we have these certain elements that we are expecting then it's going to mean that it's working and it's producing what we're doing and thank you guys for the awesome comments in the chat one thing as well oh hey Gerald uh one thing that I'm going to try to do here in the next

(20:08) couple days is I'm going to try to produce uh a new template thing here whatever overlay that we have so that we don't have to have the chat in here like this I don't have to do full screen it'll look a little bit better I'm going to be producing better thumbnails I'm going to redo all the thumbnails um and I'm going to rename my podcast as well the podcast is I mean not really it's going to be pretty much the same but it's going to be Ashton forbes's hard TRS podcast um and the reason for that

(20:37) is there's already like 10 different hard TRS podcasts so it's harder to find but my name is very unique I found out so uh we're going to use my name instead and that's for search engine optimization purposes um so yeah oh okay let's uh and yeah um I we'll do it right now as well uh thank you Sirius said uh spoke to Diamond and found me that's awesome uh Bernie I don't know if you heard but I I told them that's crypto Alchemist in the chat I told them that Bernie was supposedly the one who connected me with

(21:08) Bob which crazy small world how this all works appreciate it guys I've only been on for 20 minutes guys and we're we're reviewing the thunderstorm generator and these additional results so the question here is can this really produce over Unity what we're expecting from the thunderstorm generator is over Unity okay so which is more energy output than was being put in if that's happening this is that's why Bob's talking to me Earth shattering right if we can produce cold fusion the power of a sun in the palm of

(21:39) our hand without even fusion power right then that would be incredible and interestingly enough when I was on the interview with George Howard in the Foxhole with Paul

shatkin and Bob Greener I asked them about toroids and Paul shatkin will went well you mean like Tom uh Tomac or whatever which is the the doe Department of energy Fusion thing that they've been promoting the the Tomac toroid and he said I don't think it's going to happen from that and I was kind of surprised and Bob said I don't think so either

(22:13) it's not what I expected and so I think Bob is expecting that something like this will be the way for it to happen yeah we just we evoked Bernie and um a lot of mysteries are going to be solved but a lot of opportunities are going to happen but when you've got the US Air Force and the US Navy absolutely obsessed with cavitation and making sure no one's researching it and and if they do research it that they're discredited and if you got people that are looking at ball lightning like John Hutcherson

(22:41) and and and making sure that they you know they're discredited in some way like but you're still doing the research uh you know I think that's what that's what it is I love his eye movements here okay let's watch some of this the unity and nuclear transmutation systems I mean just in my view the process is definitely there it's the same process that occurs in nature and we've seen it in several other overunity and nuclear transmutation systems with exact overunity and nuclear transmutation right bottoming baboom

(23:15) right so when we have fishing we have atoms coming together uh nuclear uh nuclear reactions I think we was when we split the atom right exactly the same product produced by different authors in different periods of time something that we can replicate at will if it is if we find nitrogen 15 that implies that uh um there is Neutron synthesis uh however that's occurring right there is a proton it's taking an electron in it's making a neutron if we find an abundance of carbon 13 again it's producing a neutron right and this

(23:56) implies that you can get stepwise production all the way up to let's say carbon 14 because that is two neutrons going into carbon and what does carbon 14 do it decays right it decays back oh there's Malcolm yeah so guys he's he's basically talking about how we can produce new elements from fusion power and maybe we have it here at high temperatures they call it cold fusion but doesn't it's a bit of a misnomer kind of like how anti-gravity is a bit of a misnomer it doesn't require cold

(24:27) temperatures to not nitrogen 14 okay but that normally takes what is it 6,700 plus orus 30 years but I've argued that within this intense magnetic flux system that will happen very very quickly right so you'll get the nitrogen synthesized that way but here's the thing this beam line that I sent the sample to they said uh so what what is the sample from I said it's from an internal combustion engine and they said well why do you want to look for nitrogen why do you want to look for carbon 14 cuz of course

(25:02) it's all fossil fuel it shouldn't have any carbon 14 in there right shouldn't have any and I said it's because of the special way this may be working I want to see if there's any carbon 14 so it whilst it might be remediating a lot of the carbon 14 instantaneously we do know that Lena has been proven to produce tritium right and that's because tritium is the first uh uh radioactive

isotope that is uh um how should we put this it's uh what isn't it so pretty much the same thing we just

(25:41) mentioned right so we'll go through this a little bit quicker um because I also don't want to just replay the whole video here but so what he's saying here right is that it's going to produce if we find carbon 14 this is something we wouldn't expect this is going to explain that we have the processes going on that we would expect here for uh low energy nuclear reactions which will theoretically change everything so let's click let's skip ahead to the summary okay so did Bob find anything

(26:13) that he mentioned he was looking forward here uh anything with potentially World shifting implications yeah of course he did yeah he found it I was a little bit worried that I was worried if whether or not the answer was going to be yes or no I mean I assumed it was cuz big news is in you know you check here but not 100% sure but also I know this stuff is real so I guess I kind of did have a spoiler alert but some I was I was still scared anyway right here are the results drum roll why I'm only hearing from the left

(26:47) side the radiocarbon age of this material is 3,165 years I don't know what that means but but this looks good 30, 165 years now think about that for a minute what does that mean well that means it has got carbon 14 in there that also means do you say it does have carbon 14 in there if the cavitator is making carbon 14 then it means the way carbon 14 made is incorrect If it's incorrect then Carbon 14 dating is wrong wow that would be huge thanks William if that's true that's pretty I don't not any biological

(27:38) material like pure biodiesel or some gas from a um tip gas for instance because that wouldn't even register as being anything other than a a few week so here is the certificate from the lab the analysis was done by vilus radiocarbon accelerator Mass spectrometry Laboratory sent for so this says March 14th so this was actually just 5 days ago if you guys are watching this live it's 5 days ago otherwise it was a little bit older than that material sample food crust Mr Bob Green your Quantum heat date sample of

(28:14) receiving February 1st analysis date March 14 so it took like six weeks for this to get done I used a single stage accelerator Mass spectrometer SS MS USA is presumably where it happened um samples were pre-treated with standard a acid base acid protocol okay physical sciences and technology in Lithuania uh it's a specialized laup highly focused on this very small range of masses so it's highly accurate uh the sample was taken from the thunderstorm generator unit uh submitted by Bob himself received back

(28:56) these results uh on the 14th of March March a couple of days ago before this video and he labeled the samples here as food crust um or they did and and this is just due to the fact that the guys in the lab had no idea why he was testing a sample from a combustion engine for carbon 14 I believe this is the case Bob talks about it in the video but you can see uh the equipment and Method analysis here on Sate and then down further here are the results on the analysis on the inside of the outside sphere sample from

(29:27) the thunderstorm generator and the carbon was dated to be 3,165 years old and this means uh we do indeed have carbon 14 like Bob was looking for so this is very very very positive let's go Bob this is let's go Bob what a boom this is absolutely incredible but hold your horses hold your horses I'm thinking to myself I'm thinking to myself no no no no no no not like this Bob don't you bring my high down right now Bob I've got a natural high going right now don't you dare sir don't you dare okay so what

(30:10) does the chat say chat says Carbon 14 dating is broken there shouldn't be any carbon 14 14 in that sample carbon 14 is absolute uh stuff about Pyramids of Giza carbon 14 must be being made by low energy nuclear reaction if it's in there ooh that's very spicy it's been well known that Carbon 14 dating is inaccurate to millions of years past 12,000 years ago because of the last micronova event I don't know what it means ashon have you ever considered growing a beard guys can somebody um take one of those I don't know Instagram

(30:46) filters or whatever and see what I look like with a beard or is there like a an app I can download or something I want to figure out what I would look like with a beard like cuz have you guys seen the before and after of Dave without a beard and before and after the beard it's like a completely different human being that would maybe add like 20 years to my look honestly anyway uh so let's see what else we have to say oh the solar Arc discharge causes similar disruptions to carbon 14 Krypton dating uh Krypton is that like Kryptonite

(31:18) Superman's weakness seems the least affected and the most accurate guys I don't do the yatsi very often anymore but I think this might be the moment let's don't let us down don't let us not I'm not doing any goatees or Soul patches I'm not Lando out here wait a minute if you know that the uh halflife is 5,730 years plus or minus 30 years and as you can see here the um the date uh it's been given is about 3,165 years that sounds a about a bit like five times five half lives have

(32:03) occurred so I'm thinking to myself could it be could it be that um they um used biodiesel or a diesel biodiesel mix here's me thinking that the and I've said it before that the generator um uh in Australia was using diesel I've said it on my streams you can go back to my streams I was under the impression that that generator was diesel so I don't know what he's saying here but I'm going to go ahead and just play this because I missed playing it when I wanted to hold on wait for it

(32:41) wait for it carbon 14 this is my favorite meme now guys easily my favorite meme I might just leave it up on the side just in case we get another Booyah moment and so I thought i' better go and look and see what kinds of biofuels mix they they do in Australia and it turns out you can go and look at yeah hey JL hey Jade hey Langley hey uh Lobster yeah if you can't hear correctly it's cuz the Audio I think is messed up like it's only coming out the left side of my headphones this on wik but apparently

(33:31) this is from The Source Wikipedia and I'll read specifically from Wikipedia it says the names of the uh diesels in um Australia indicate the percentage of biodiesel the fuel contains

with B5 containing 5% biodiesel well that wouldn't fly biodiesel Blends most commonly B5 and B20 are becoming increasingly available at service stations in all Australia once we get to the next big thing here I'll uh I'll give you guys a quick rehash States up to 5% biodiesel can be included in any diesel sold in

(34:08) Australia without additional labeling so here's me thinking if you got 20% biodiesel in fossil fuel that would give us a radiocarbon dating of about what we see so yesterday afternoon I phoned up uh Malcolm Bendle and I asked him I said um malcol um what uh where were you getting your Diesel from that you ran in that generator and he said we weren't using any diesel at all what are you talking about I said sorry I thought it was a diesel generator he says no it runs on natural gas ah it runs on natural gas really he

(34:50) said yes why I said well um and I hadn't told in the the radiocarbon date I said um it turns out that this has gone through about five Half Lives it would have C you know it's like it's um biological material that's gone through five half lives so um ah right well then um what we are looking at here in this here is potentially a real thing hello yeah bingo Chick-fil-A sauce over Unity cold fusion it's real chat it's 100% real it's all real okay if you just joined us we are looking at the newest

(35:51) updates from uh Bob Greener tested the Thor the Sun thunderstorm generator The Vortex tube where if you look at the image I'll pull the image up for you guys chat this is the thumbnail for a reason this is the main mechanism that happens in the thunderstorm generator Bob looked at it he thought that we were seeing cold fusion happen the way we would determine whether or not that's what's happening is that we would look for the presence of carbon 14 if they find carbon 14 in the samples then it means there is some type of

(36:32) alchemy that's happening and potential overunity as well just from this process where you have these double tubes right like if this is real you guys are going to see this on uh Joe Rogan right so when you guys watch this on Joe Rogan like several months from now or maybe a year from now just remember this stream you guys were here before everybody else you heard it before everybody else when you're sitting there and people are talking about on Twitter and social media this can't be real this is this

(37:06) has got to be fake nope you guys heard the science you've already watched the YouTube videos you've already seen it okay so this is what Bob Green is talking about so he was worried for a second he thought well if it's running on diesel then maybe it's due to the fossil fuel that was used that was giving us a false result right and then he found out no he called up Malcolm Bendle and it turned out that he was using natural gas he wasn't even using diesel so that means boom it's producing carbon 14 it's

(37:39) producing elements that it shouldn't be able to produce right yeah and to Bernie says in the chat crypto Alchemist you're finally getting on to what I've been working on for the last 10 years and it's 100% real yeah I'm this has been the craziest part for me as somebody who loves science digging into this is finding out that the science is right out there and one of the things

that I asked uh George I asked George about because George was telling me the story of all this stuff a couple weeks ago a few

(38:14) weeks ago and I said how recently is all this stuff like did this happen years ago he's no no he's like no this just happened like back in August I'm like whoa like this is as fresh as the MH370 investigation right but these people have been studying this for years and we are getting in on in the cutting on the The Cutting Edge of all of this stuff right and this is what's so fun and crazy about it right and this is why early on I was like guys we are on The Cutting Edge of this science that's the

(38:41) **truth** that is the absolute **truth** like we jumped into this at the perfect time where we are figuring it out before the public does and back in the day it used to be that social media was the place where you could get the **truth** before the public did did now I'm talking like 10 years ago or more and then it flipped and now social media is just as censor as everywhere else every **debunker** and idiot is all over social media just trying to and everybody just trying to conform to everybody else's beliefs right and so now we have to go back to

(39:15) the old school investigations the stuff that we're doing right here right now which is looking at the science talking to the scientists themselves like the people that we've been talking to Salvador Pas Bob Green Dave Rossy and all the other guys these guys some of these guys could be famous in the future right who knows maybe we could be famous in the future if the MH370 videos end up being real which I think we know they are but I don't know if the world will ever figure it out so that's why this is so big that's why

(39:45) it's so amazing that's why I'm glad you guys are all here with us on this adventure this is also why I don't really um Harbor or really uh allow the trolls to bring us down cuz the reality is um this stuff's going to end up being real and it doesn't matter how many people believe in it or don't believe in it it's not a matter of belief science has never been a matter of belief science has been testing observable reality now here is the actual chart so you have uh the ox calibration Source

(40:16) I've got this girl the chick flager on the other screen just over and over I I can't focus I literally can't focus I have to close it up here atmospheric data from it's all calibrated they've got a probability 68.3% probability of it being 32775 years H and it has a 95.

(40:53) 4% probability of being 33,105 plus or minus 188 years that is the date of this material so Bob Greener is like dude it doesn't even matter like any of these dates basically prove it to be correct like it would have to say like a hundred years or something or like a 10,000 years for it to like have any question right hey tupacabra welcome man I hope you guys had a good stream on skyfighter news I was watching early on with vetted uh that pretty awesome and yeah science is a matter of fact it's a matter of uh uh you know experimentation and this is why

(41:30) I love people like Bob Greener uh Dave Rossy and Salat Pi because they're Engineers they're people that are in the lab and they see it themselves right every we thought tupacabra

was black this whole time guys yeah turns out he's just a mixed race kind of a let down but you know still still fine he's got the voice my man has the voice for podcasting for sure okay so this um has totally profound implications uh it is a stunning finding all right so we have another incredible finding uh just what should be expected

(42:11) from something like this uh and it's an enormous step forward so what does it mean uh more analysis more tests sure uh but at this point we can see the thunderstorm generator it works uh it's producing a result uh it's becoming more certain by the day we're looking at stepwise transmutation of the elements yeah I mean so this is huge stepwise transmutation is presumably like uh following like what would be the logical step for the next element to be produced and then you taking that to the next

(42:44) element further right and just real quick I want to throw some love to the chat and everybody who's here because I think that very few of us some of you guys who are the hardcores you guys know who you are the scientist Bernie um Gerald Etc the people that been looking at this forever you guys be looking into it now anyway right for people like me and probably a lot of other people in the chat we would never be doing this if it wasn't for the MH370 X investigation right without that investigation that that's changed my

(43:15) life I think uh Sandy was saying something in Discord I want to read real quick as well um she said Ashton you're not the same guy I met back back in August so proud of your development I feel like I've learned at your master class I've also developed my own worldview once you get comfortable you can open your eyes right this is what's been so incredible about this this group is that we are all learning it together we're looking at stuff that we probably would never understand or look at without all of us

(43:48) being together and digging into this stuff and it's uh you know going to set us apart from everybody else right I think that not has it changed our lives has given us some of us purpose and this is what I wanted out of m370x which was for people to find a common purpose where we can rally around the science we can reverse engineer the science that we see in the videos we can Enlighten ourselves we can help Humanity now it's not going to be a thing we do tomorrow right but it's the kind of thing where

(44:20) we learn the science and then in the future as this comes out we can educate other people we can take advantage ourselves right we can invest in the right things we can help set policies whatever whatever little corner of the world that we are in charge of we can help make a little bit better right so this has been great I just wanted to thank you guys for sure for being here I know I look like a scruffy Half Baked Australian Yoko but I called this right six months ago when I published this guy cracks me I hope I get to meet him

(44:50) what's his real name I don't know this dude's real name um I hope I get to re re uh meet alchem science at the um Cosmic Summit I am really looking forward to going to the cosmic Summit apparently Robert shock is also going to be there um at the cosmic Summit who is a archaeologist I believe uh Chad and Sherry know him personally so I'm going to meet a lot of

people in person that uh I definitely look up to it's going to be pretty sweet my first video covering the thunderstorm generator before I'd even seen the thing

(45:25) with my own eyes just what mil was saying made sense uh and I'll call it again now with even more certainty the science behind the thunderstorm generator is going to change the world snap he's saying it chat he's saying it he's saying the same stuff that I just said right it's going to change the world it really is the question I'm going to ask Malcolm Bendle is what are the other applications of this science like he was either either chose or was chosen to go down this path it becoming

(45:57) an engine right but there's other applications for this science for sure plasmoids is not just limited to this Malcolm bendle's invention is going to solve a number of global issues and be rolled out in a massive way and Bob graer will go down in history as the man who proved it did what it set on the box and showed us that ball lining is a real and empirically observable phenomena that be can be synthetically reproduced in a number of ways so Bob's work with Dr bin jne hang is incredibly important

(46:25) to consider here too the peer- revieww paper published in nature that they recently co-authored together with their colleagues bought bubble cavitation and ball lining into the mainstream academic sphere and it's really laid the groundwork for everything Bob is now finding in thunderstorm generator and all does he have a teleprompter how is he doing this I need like a teleprompter or something I got to figure out how he's pulling it off you guys I never would have thought about all this stuff except for when you start to become a

(46:52) podcaster and try to make videos you're like how do these people pull this off even the lights and everything right somebody tricks to everything um so yes he just mentioned the paper guys so if you haven't read the paper you can look through my post history or just search it for Bob Greener and you can find the paper in nature where Bob Greener showed that there was uh overunity so how's this going to change the world the answer is we're talking about cold fusion we're talking about the power of

(47:20) a sun here right now of course right now we're at the very beginning stages of it where we are proving it empirically uh through engineering that the thunderstorm generator in its current application what it does is it is a engine that produces no exhaust and not not only does it produce no exhaust no uh pollution but it also increases the fuel efficiency so the this still uses right now combustion engines but it makes them more efficient it produces excess oxygen and it produces no byproducts because what it does is it pumps the CO2 back

(48:03) into the machine and that's where you see this effect here I'll pull it up again um on the thunderstorm generator so when you look at this the hot exhaust gas this is the CO2 getting pumped back into the outer chamber and then the inner chamber has cold water coming through it and what this does is it causes a um two different spin effects to occur right of charged particles the anticlockwise and the clockwise and then from this effect this is creating a some type of cold fusion nuclear reaction is occurring and this

(48:40) is what Bob is testing and what they found when they if you we watched some of the other videos in the past is that this is actually like it can create like completely destroy the pipes especially if they're not produced to the very specific ratios which is a 234 ratio I think is what they need um which means there has to be the exact distance between this in order for this to not like basically rip apart and and get just melted uh or annihilated for a lack of a better word and so what he's talking about here is that this comes

(49:12) down to something called ball lightning plasmoids uh whatever you want to call them for the most part but yeah Vortex power essentially and don't worry guys when the time comes I'll have some companies for you guys to look into um what I would say is there are some famous people that are investing in cold fusion and this is going to be one uh aspect or one possible way where cold fusion can be produced two uh it's all of this correlating data combined that's really pushed this over the line and it's

(49:40) showed us Beyond a doubt that ball lining is occurring in these systems all of these different inventions and experiments uh they're just beginning to form one solid and cohesive Foundation to understand the phenomena but we're finding the same results um in these different systems and windings there plasmoids there this is the future of technology so I'll play another short clip of Bob just talking about what's coming next andree of archaeology paleontology and real quick uh Bobby shock would have been a great name tuac

(50:12) cabro but I like tupacabra a lot too blue alien is pretty where it's at honestly okay here we go um uh and and so much that has been you know we're not going to be the the the the Talk of the Town in a positive way with this finding and if it's corroborated by experiments in the Supernova Reactor with fresh charcoal um there's got to be some serious questions asked about whether um uh you know that carbon dating can be relied upon for for actually dating things um so then so what he just said

(50:54) right there is really big right um he said can carbon dating really be accurate for dating certain things because how would we know that we're not seeing these types of reactions um naturally occurring right if these types of reactions cold fusion reaction can produce carbon 14 it brings into question any carbon dating related to carbon 14 at all right because these guys came back and said hey what you found was 35 30,000 years old and Bob's laughing cuz he's like no it's not we I literally just produced this like this

(51:27) we created this from scratch right and that's the rub here so pretty interesting stuff also uh yeah quick plug to Cosmic Summit uh if you are in our Discord I'm I'm probably I've been told I'm going to get some uh online passes uh for some of the members I don't know how many I'm going to get uh I will probably be doing those out first to some of the administrators who've helped out a lot uh I do want to get a few extras for other people I may do some giveaways on my streams for those

(51:56) um inperson passes are very expensive just like they are for any um you know convention or whatever you would go to including like the contact in the desert I think there's

several hundred dollar for those if you have that disposable income and are interested absolutely suggest you go and do that um but otherwise you know you can check out a lot of the stuff online I'll be taking videos as well while I'm there I'm going to bring my camera setup I might even do some live stream from there as well if

(52:24) the internet's good enough uh we'll see how it plays out but I plan on doing some content for you guys uh from the uh from the event the the the moving on from this I spoken to Malcolm it's very very important that we can gather more material from the rest of that 24in sphere and look for these 13 to 12 carbon ratios which will show the intermediary that we're hypothesis hypothesizing gets us to carbon 14 and also the 15 uh nitrogen over 14 nit nitrogen uh which would show if nitrogen is in the system it is synthesizing the

(53:02) heavier isotope through the addition of a um a neutron and then the other set of tests that we have an opportunity to do is to look at the ratio of oxygen 18 over Oxygen 16 and of course if you looked at the work of shishkin and there's another video that I'm going to um finish translating which is Sergey Godin he's referring to work that was done at Dubner the nuclear Research Center North of this is not public work um but they were specifically using specific frequencies to excite water into a into it and I will talk about

(53:36) this when I so basically saying here that there are other elements as well that will just help to prove um what's going on including I think one of the Isotopes of nitrogen um so let's skip ahead a little bit here carbon 12 and neon 22 so it this is what's happening now is lifting all boats right now we have a very uh clear mechanism of Magneto hydrodynamics that is leading to the stepwise and bulk transmutation of material and with that what I can say is what is going to happen uh if I can do the stream tomorrow you absolutely do

(54:18) not want to miss it do not miss the stream tomorrow why am I saying that I'm saying that because the data that I have found on the outside of the inside of bingen hang's uh uh what is it um dhx uh 2 here and putting that in comb combination with the data that I've already been sharing of VCS 5rt this will absolutely nail this to the wall I think even a so the beauty of what he's saying here is that there are multiple people are doing experiments right and everybody's experiments are kind of

(55:00) overlapping when he says bringing everybody up it's kind of the same thing we are trying to do with the community uh I was talking to tupacabra and red panda koala a little bit about this right is that what we need to do is we need to bring uh we need to bring each other up you know we need to lift each other up on social media uh Bob and these guys are exceptionally good at the science right the part they need help with is the promotion getting it out to the normal people people a lot of people look at uh this type of stuff and it

(55:29) just goes right over their head right this is what I feel like I'm pretty good at doing which is listening to what they're saying and I'm not like I'm no science expert or anything right that like that right but when I when they explain the stuff I can understand it on a common level right we're talking about alchemy we're talking about over Unity we're talking about cold fusion

and these are the things that are going to end up changing the world right now Bob's he's digging down 50 layers deep

(55:55) into it understands the science of it um Etc 5-year-old could look at the data that I hope to share with you tomorrow and they will know that this is how it works and I'm hopefully going to edit what I captured yesterday on which I'm going to base my talk tomorrow um but it is it is Earth shatteringly stunning and it is a real finding and it makes extremely clear how these Magneto hydrodynamic structures are both structured on each stage of formation and what they can do in terms of synthesizing new matter yeah

(56:37) also Bob is rocking those red glasses out Bravo sir Bravo when I see Bob I'm probably going to hug him guys I'm probably just going in straight for the hug honestly I don't think we're I don't think we're at the handshake level I think we're just had straight up hug level at this point which is kind of weird cuz I've never met him in person but yeah you know it's just uh love talking to him also he's in a famous uh Studio here uh this is where he recorded on the the Foxhole

(57:04) as well guys does anyone know if he did the stream that he was just talking about here and hey Sandy welcome uh I don't know if he did the stream because this was two days ago yeah so we might have to go after this and check out his YouTube channel and see um this got decent amount of views you know for small Channel like this 4,000 views pretty decent so that's it for now uh absolutely incredible result uh and I just wanted to do a quick video to announce it straight away as I've been waiting this

(57:35) out and building up to it a bit in my previous videos so thank you to Bob for getting it done and moving this thing along and hugely good job alchem scientist uh or alchem science great job man uh did anyone tell me what his name was I don't want to be super awkward um doesn't say anywhere feels like he should say his name at the beginning of his streams uh Bob Greener oh he is he is GNA be at the cosmic Summit Johanna James Randall Carlson I mean look at this lineup guys I can't wait to meet these people I can't wait

(58:14) to have martinis with these people and get a little bit too drunk and just start gushing over them like a little fan girl I'm going to just be I'm yeah it's going to be uh it's going to be funny it's going to be fun and funny all at the same time it's going to be great yeah the military industrial complex has been hiding this for uh probably 70 years it's crazy to think about that but it seems like they have so is this the one where he was doing it 100 magnification and yeah so the

(58:50) problem with So and I've told Bob this like this is like hardcore science stream right like three hours of Deep deep science like this is I can't even keep up with this right but I understand the implications of what he's talking about you know he's looking at the very microscopic scales and looking for very specific patterns looking for what the cause and effect is any type of transmutation all those things that we just spoke about oh yeah it's going to be uh it's going to be wild chat it's going to be

(59:21) wild uh so Cosmic Summit uh wait let's go back to that actually no I think we'll probably just end there let me see yeah I think we'll wind down here so Cosmic Summit going to be sick uh can't wait to go there like I said I'm going to be doing some I don't know if I'm going to do a stream from the cosmic Summit I certainly would like to but if not I am going to be taking video I'm going to bring my video camera I'll bring my laptop we'll I'll figure out how to make it work um and like I said

(59:56) before I'm going to try to upgrade some of my production quality here so hard TRS I going to uh do some slight edits to the Brad Vorhees one and then I'm gonna two I'm gonna get tup pabra and Heather birdie to help me out with uh some of the some of my uh production quality content maybe they can show me how to use canva correctly and I'm going to change my hard TRS podcast to Ashton forbes's hard truths with XYZ whoever the guest is I'm going to get Brad Vorhees on there uh he'll be the hard

(1:00:30) TRS number nine and then I'll also publish uh Martin Gibson unification theory of quantum gravity uh with my discussion with him uh do a little bit of editing on that so A couple more podcasts are coming out and then I have a few other people that I've been talking to getting lined up for some additional podcasts which I'm not going to announce ahead of time but there's some names you guys will recognize uh I think they'll be very good conversations and I'm really looking forward to them

(1:00:58) guys so uh anything else that we want to ask in the chat I'm not seeing anything so I think I'm going to call it early there for tonight guys uh tomorrow I am going to be working again all day I've been working really hard this week on my normal job so that's why I haven't had time for a lot of other stuff um but I am going to try to get out like I was showing you guys at the beginning of the stream my not really refuting I'm not really trying to take an adversarial stance against some some of these other

(1:01:26) people that are putting out their MH370 stuff uh but I do want to show how a lot of these YouTubers that are out there are um not really doing a deep investigation right so I am planning on uh doing a a video that'll probably be under 10 minutes if I can make it under 10 minutes um which goes over the the mentour pilot video and what they missed what they left out uh where they weren't like 100% accurate on and and that will I will also potentially do the same thing for the Ross kohart one so if Ross

(1:02:00) kohart is out there buddy do a good job man if you don't do a good job you're going to make me make a video and I don't want to make a video that goes through all the evidence that you missed so uh go out there and do the MH370 situation Justice you don't have to give me credit whatever but you should probably at least mention the videos um but if not at least go through the fire scenario if you are investigating MH370 and you are not not looking into the fire scenario you are not doing the case

(1:02:29) Justice simple as that anyway MH 370x crew thank you very much for watching our short stream tonight hope you enjoyed the thunderstorm generator uh feel free to watch some

other videos and research thunderstorm generator because it is going to be coming up in the game I imagine there'll be many more Amazing results coming up uh between now and this summer so be on the lookout I will throw one uh Discord invite into the chat for the first 10 people that want to join you can join the Discord um the only reason why I limit it is because

(1:03:01) otherwise we get trolls and you can follow along with us you can chat along with us have a good time whatever very lowkey uh chill Discord thanks guys have a good night appreciate you'all peace

MH370 Discussion with Sonic Gravity (Brad Voorhees) - YouTube

Transcript:

(00:00) and I and once we found out about that and they were only like told about on March 20th the Malaysian Airlines CEO was lying about the fact there was no dangerous cargo on board the plane which is really important right plane goes missing one of the first questions is was what was the cargo on board right could it have blown up or something and then March 20th said oh yeah there was 500 pounds of it I think it took like a year for them to find out that it had missed two security screenings the batteries were put together that day

(00:28) like literally right before they go on the plane which all to me seemed extremely suspicious but the real kicker in terms of why the battery fire scenario in my mind is 100% accurate is the witnesses 19 witnesses that corroborate this event um and actually I worked backwards from it is once we figured out the location which was the nicobar islands of the videos that's when I started looking back at the witnesses and realized Katherine T was right there in the nicobar islands on a boat with her husband and one crew

(00:57) member I believe where they were going from uh uh India to Phuket Thailand and she was at the location where the plane supposedly turns into the South Indian Ocean and she has a well documented sighting of seeing the plane with no navigation lights glowing orange and flying low descending with smoke coming out of the back of it and I looked at that and we kept wondering like why is the plane glowing Orange right is this some kind of UFO thing causing it right but none of it made any sense because the plane's never out running these orbs

(01:29) in the videos like like the orbs are going so fast there's just no chance so yeah it wasn't until I saw a comment between some people where they said I've got this weird theory that maybe the fire extinguishing gas is releasing bromine which is a halogen gas and I started asking people looking into and sure enough Allon 1301 has bromine in it and if you there's a certain chemical reaction I don't know if it's like you have to pour water on it or what where

bromine can get released and if

(01:58) bromine's getting released for like an hour for more than an hour it's going to have this glow orange gas permeating throughout the whole plane where it explains why she would see this kind of hazy Halo type effect around the plane that you said only extended about 5% out of the plane so very close and tight to the plane it wasn't that she was seeing fire she was seeing the gas you know coming out of the plane and then the pitch black people go well how could you see in the pitch black actually when

(02:25) it's pitch black you can even see even better because stuff stands out even more when you are like you know in the country and you can see the stars and everything right you don't have as much light pollution so um then I worked backwards and I was like okay holy crap she saw the plane and this is consistent with a fire event I looked at all the other Witnesses Mike McCay literally sees the plane on fire uh for about five to 10 seconds just as the batteries go off and it makes sense because the uh fire extinguishing devices automatically

(02:55) kick in like the there the first ones that go off and the cargo bay are automatic and then after that there's like a low flow rate that will continually pour the hon into the cargo bay but when you're doing that the reaction sucks oxygen out of the cargo that's how the fire extinguishing devices work so if you're sucking oxygen out of the plane you need to add oxygen so what you would do is depressurize the plane and you would descend so that there's enough oxygen for oxygen to get in for people to be able to breathe

(03:24) because those oxygen masks and if you've been watching the Boeing Fiasco that's been going on um one of the whistleblowers I think was also saying the one I think who ended up quote unquote killing himself um was saying that a lot of the oxygen Mass like 25% of them like don't even work like there's just like I would never trust the oxygen mask on the plan just Placebo yeah basically like that's what I've heard which that would not would not surprise me but yeah or like maybe there's just laughing gas in it so you

(03:52) just chill out before you die you know yeah I think that if your bag does not inflate and they tell you not to worry I'm worrying right but or it's like do you see the hole in the side of that plane it's just like dude you know wear your seat belt the whole time I'm not seat Bel or the other plane recently where it like descended like 500 feet within like a second because the engine just went out in the middle of the middle of the flight that was like last week and then a bunch of people got hurt like 50 people got hurt

(04:20) someone was like seriously injured because they you know went up to the ceiling and then crash back down where your seat belt boys and girls wear your seat belt um but yeah so Mike McKay sees the plane on fire a few seconds he gets discredited he loses his job he has his life ruined um eight there's nine Witnesses along the coast on different towns they hear loud noises consistent with they thought it was like some kind of engine malfunction explosion something like that it was probably just the batteries exploding and then um 10

(04:49) minutes later when the plane turns around there's eight fishermen on a boat 10 miles off the coast of Thailand and Malaysia that also see the plane flying unusually low right and this is all going to be consistent with the fire event where they're you know they're flying low to give the passengers enough oxygen and that's inconsistent with the um some of the reports out there about the plane flying higher up also I found out that when the plane's flying lower it actually goes faster as well um which

(05:16) is interesting because we need to cover a lot of ground really quickly especially to get to the location and the coordinates that we have in the video um and so it goes back to panang which if you're flying back to panang um that's the closest airport you could go to to land a 777 safely with a long enough Runway the other airport you would consider going to is qual lumur um but it's the middle of the night and there's the mountains are there's actually some mountains around that area I looked up it looks like they go up to

(05:42) about 7,000 feet which is a little bit dangerous I mean you're if you're trying to fly under 10,000 feet for oxygen and above 7,000 feet like yeah that seems like you got a nice little Gap there but in the middle of the night where you can see nothing it's yeah you're threading the needle right it's a little bit scary so you want to go to the airport that has the best uh you know Al like altitude or best landscape where you have the least amount of uh possibility of crashing into a mountain right so

(06:07) this it could have been a judgment call but you could also argue that if this is really an Espionage event which I'm at this point I think I'm conclusively going with then that plane could even have been remote controlled it could have been remote controlled from the time where it turns around it could be remote controlled right before the zap in the videos somewhere in like the Straits of Mala um there's like a log on attempt on the satcom that happens at 1825 UTC which is one of those planes like out in the Andaman sea there near

(06:33) the nicobar islands um and that could be consistent with one of these awax one of these American like radar jamming planes like taking control of the aircraft at that point you know maybe preparing it for the zap event that's going to happen um that part we can't really know we can only speculate right but you know some people have done some pretty good analysis on you know Captain Dan Hanley field McConnell others as well think of speculated this uh uninterruptible autopilot that the Boeing planes got put

(07:05) on them after 911 because they wanted ways to like you know prevent another 911 from happening if people were to hijack the plane but I think some of the strongest evence is the Malaysian Minister of Defense right if this is a hijacking a pilot suicide or any other hostile event then Malaysia would have sent Jets up and people say well they were just idiots no they were not just idiots right that doesn't that doesn't really add up right they didn't J and they admitted that the plane was not hostile they how did they know the plane

(07:34) wasn't hostile only way is you have communication with the plane and then they people well why was there no why didn't they release any you know recordings of that well the answer

is pretty clear because it's a cover up right so they only tell you the communications up until 1719 UTC right before the plane goes dark they're not going to tell you about any of the ones that would expose them right yeah I think I think what you're saying what like what you've laid out in terms of the case for the battery

(08:06) fire makes I think it's plausible right you can't I don't think you can deny that it's not plausible but there's one thing that is just a little bit different um there's one thing that gives me a little bit different of a take and something that just kind of caused me to raise an eyebrow and that is that you know it's kind of like when people talk about 911 right and some people think there was like you know explosives the buildings were wired to blow and all that kind of thing and apart from like how how long it

(08:38) would take to like actually drill that if you look and see like what it really takes to do a control demolition um the months and years and hundreds of people and stuff yep the uh the idea that like a plane would hit and we've got this crazy demolition thing going on at the same time to me it's just too much like like together and and I would have in fact I did think that the whole battery fire thing was right until I saw your video because your video is like all of a sudden the thing's just going and then

(09:14) it's just gone it's like absolutely gone and what made me think that it was real for sure not only when you when you disclosed when you discovered and you disclosed that Captain Lynn is that his name guy who released it um Lieutenant Commander Lynn the the the leaker yeah n years in got court Marshal went to jail over it like that was with a plea deal nine years with a plea deal can you imagine yeah oh yeah he's like hey you guys they convinced him he's done something wrong right which he he

(09:45) probably admits to after they realize like this might be our technology and then he's thinking he's going to get a slap on the wrist for green when you know um cooperating with the NCIS and the FBI and then they're like okay we're still putting you in prison for nine years and okay we'll shave years a plea deal your sentence cap is in it so is it yeah so he knew that the it it was probably like a a sentence cap of nine years you'd have to look at the record of trial because I'm I'm a retired Jag

(10:12) you'd have to look at the record trial and see what the judge if it was a judge sentence or if it was a panel sentence but anyway he so he would do his pleading he would he do his Providence inquiry he' be found guilty by his own pleading and then that you go into a sentencing phase and everybody would put on the government would put on evidence for why he should be put away forever and then he would put on evidence for why he shouldn't be you know you know dented that hard and then the sentencing

(10:38) Authority whether it was the judge or the panel the jury we call I don't think there was a jury I think it was probably just the judge probably just a judge well then the judge gives you this G you know comes back with a sentence and then he opens the plea agreement and he and he looks and if it you know if it you know if it uh you I mean then he's kind of bound by the plea

agreement so got it um he actually argued we looked at the appeals and they had people testify as to what why what he did was so damaging

(11:04) and he actually argued that his sentence was overly harsh compared to people that had similar uh charges which definitely I mean for a charge of willful DET or dissemination of classified information six nine years whatever is that's way more dud actually I I don't think I i' I told I mean I've talked a little bit about this I think in my podcast but I actually uh read remember Manning who was Chelsea man well now Chelsea right but at the time yeah in 2010 in the field theater confinement facility in

(11:36) Kuwait where I was actually there like bringing stuff home I was deployed there and they like they like faxed me the charges and they're like dude you need to read him these charges like right now like we're running into like a a speedy trial issue and I was like all right man give them to me and so I like they they gave him to me I was at the ASG and I walk up to the field theater of confinement facility and Manning's in there I'm in the jail cell with him and he like snaps to attention he like and I

(12:02) was like Hey settle down man I got to read you these charges I need you to soak this in and and I read him it was probably like I don't know 15 different specifications of everything from you know treason to aiding the enemy and all that stuff and that was for the Wikileaks dump of all that classified information that he did when he was at the 10th mountain and uh and so then I read him his charges and I was like you know I I put him with I put him with his stuff and then I went down to the dining facility to get some Chia and the guy on

(12:31) Fox News was reading me back the charges that I just got done reading Manning that's funny yeah so yeah I looked up at I looked at Manning's stuff like I when I looked I you know was trying to find Edward C Lyn I was looking for anyone I didn't even know what I was looking for right I was like a needle on a hay stack and I just thought that I realized early on that the person would have to be it would have to be public record that they can't hide in unless it's a um martial law situation which we not under martial

(12:58) law and I'm like okay so the person has to be out there and it was really really difficult um you know I looked up all the bigname people then I went to Wikipedia where they have lists uh based on if it's like Marines or army or whatever of all the people that have been charged with either like Espionage or will for retention of classified information and I didn't even find anybody on that list and then I was going to give up and this took like about two weeks to do all this then finally I'm like okay I'm going to start

(13:25) searching on time range Google searches right and I just started searching like like 2014 to 2016 and like twoyear gaps and that's where all of a sudden all the Edward C Lin articles came up there's actually no articles after he was sentenced and he was been released there's been nothing after that like after 2016 2017 there's nothing on the internet about him just total media blackout just complete blackout and there was a bunch of Articles at the time but the one were right away I was like what it was like the Strange Case

(13:53) of Lieutenant Commander Edward C Linn and I'm reading it and they're like yeah they tried to get him with Espionage but but there was no evidence he exchange anything from anyone from China and these quotes about this wasn't really a spy case and I'm like well this is getting weird and then when I started seeing signals intelligence all over every single article I'm like oh boy this is the guy like that's when I was just honed in because it's like I had been sitting there talking about Sig and

(14:17) like that's how all these assets are communicating from doing my research into it I I knew nothing about it before then and now it's like crazy how much information I know about our surveillance apparatus that are out there and how the drones and the Spy planes and satellites communicate to one another and then you look into like who he was what his job was like he was actually assigned to the vpu2 this the Wizards this like secret spy plane program that he has like Above Top Secret compartmentalized access

(14:44) information about black budget projects um and that's what I'm like okay this is this guy's already starting to fill the profile compared to like you know the Snowden and the Mannings and stuff like that which were you know much more high-profile cases um but then when I saw I think what I knew for sure was when I saw that the defense argued that the classified information was available on the internet that's when I'm like okay this this is the guy like 100% And we then find out that like he was

(15:10) assigned February 2014 to the vpu2 uh which is right before the plane disappears right and then we've got a literal quote from his lawyer saying that the investigation into him began April 2nd 2014 and the reason why that was so important is that like this was more than I could have ever expected because I in my mind my profile said he recorded that uh that satellite video or whatever on uh a citric session he was logged into probably on his own personal computer and he recorded that with a screen capture right and they were going

(15:41) to catch him because the moment they see that video in the public sphere or maybe they have other ways of surveilling it yeah there's people who can get to it exactly and they're going to figure out right away you know from the fact that it was recorded on quick time they're going to know to use an apple to do it or you know they're going to find out right away and so when I was thinking like when they would start investigating would I thought he would get caught within weeks right and sure enough it's

(16:03) like four weeks later is supposedly when the investigation into him began um so to me that was like dead on you know um in addition to some other weird stuff too like having flight manifest from code names that include search and rescue operations it's like dude that was MH370 like he's definitely definitely tied to the plane going missing and the fact that they ran a sting operation on him the sting operation was really weird um because they did it in 2015 uh in uh August of 2015 which is like over a year

(16:36) later and it's because they had no hard evidence right like they they like okay he leaked these videos but you know they want to get him for Espionage right they were trying to prove

that he was trying to share information and give Secrets away but in the end I think he was just a good guy that saw the craziest [redacted] ever bite on the sting he's like they couldn't get him they got they not really they claimed that he it's it's kind of it's hard to tell like they think they claimed that he told this

(17:05) they basically Honeypot him right and try to get the the FBI woman that I presumably sleeps with him to you know tell her hidden information and maybe she said he said something about ma370 we don't really know but um they couldn't get him for the Espionage stuff in in in the end right and my theory is this is that um and I don't know I don't know if you've read my recent piece probably not cuz I just dropped it earlier today but the question of like what you're saying in terms of it being

(17:34) kind of too complicated the answer there is actually that's something that vexed me for a while too with the whole fire and then reacting within an hour it's not enough time I mean but when that thing just goes poof I'm just like okay wait a minute like if if it was a prosaic explanation if I never saw that video where the thing just like vanishes like and I'll tell you what I think that is I'll tell you in just a minute we'll talk about the anti-gravity I was working on last week and and and what I

(18:01) think it is but if it wouldn't have poofed right and if it would have it was some prosaic explanation the only thing I would think it had to be the fire thing but I'm going to tell you at least what I think could be an alternative explanation for the glow and then and then I'll tell you what I think happens when you see essentially that just that negative energy like gulp where yep and so real quick I want to say though that um so the thing is I've moved away from this rescue motive which uh and now it's this Espionage

(18:36) motive where this would have been planned out what weeks in advance right this is too complicated uh of a scenario to just figure out in the drop of a hat like you say okay if the really comes down to was the fire accidental or was it deliberate and in my mind it makes more sense for it to be deliberate because this brings back you need a fire to have them like I don't not necessarily but if you want to force a diversion of the plane to a different location where you are going to set that trap then yeah right because the other

(19:07) thing is where you gonna do you're gonna do it over the South China Sea but South China Sea is really close to China right so the whole point is you're going to do it at a specific location I think okay um and so that's the idea of that you know do you need to have a fire probably not necessarily but if the whole plan is you're trying to send somebody a message then this sends a pretty strong message right and this is what Joseph P frell was was saying a week after the plane with missing which I only heard this

(19:31) recording like two nights ago and I'm sitting there listening to it I'm going this dude nailed it he's like United States Rumor Has they have a super weapon they might have teleported the plane and then he's talking about how this would be to send a message to somebody and I'm sitting there going whoa this is what I've like independently just been talking

about for like the last six months seven months feels good doesn't it doesn't it feel good when it's weird for sure yeah

(19:55) when you make you make this call or a prediction or something like that and then down the road six months a year later it's like the puzzle pieces are falling in place and you're like you know I mean like nobody gives you any credit like nobody high fives you or whatever but at least you have that sort of that gratification of like I [REDACTED] told you guys no definitely right and then when you hear Ser like that where like he didn't even he would never even have seen the videos right so he's figuring this all out just from

(20:21) deduction and knowing how you know the Deep state if you want to call it that the cover Elite how they operate and he knows that there's Advanced like technology out there and you know he was able to piece it all together the only thing he didn't figure out is you know why would they just put a bomb on the plane if they want to make the plane disappear but the answer is they're not trying to blow the plane up that because yes you would just you have the fire can take care of that right just let the

(20:42) plane crash in the ocean it's game over it was a matter of getting the intellectual property like those people were likely tied to developing that exact technology or some component of it you know I think to your point something we talked about before we went live is that it's just not a matter of like one piece of technology here there it's like how you put it all together right and the the piece of putting it together is like kind of the the hard part right because there's challenges that go along

(21:07) with that as well and putting together is when it becomes super classified when you know one piece or another piece of the science or what have you you know that's the part where you you that's fine to be out there and that's what's out there in our public Z guys it's when you bring it all together that's when the government's like okay we got to knock on your door you're uh getting a little too close right yeah so so I was working on anti-gravity like a couple weeks ago I went to Falcon space labs

(21:32) and we started you know about that and so when when I in May 2021 when the Navy said UFOs are real I thought UFOs I thought they were all fake I thought it was all comic books and you know uh fantasy and science fiction and whatever I just yeah it's never occurred to me I was like ah Tim foil hats you know yeah but then when the Navy said no they're real it's legit I was done I was totally I was like okay there's no question in my mind the Navy said they're real okay I believe them and so then for me as an engineer you

(22:07) know how does it happen right I don't there's no question in my mind do Are UFOs legit the only question is is how do they move like they move and so it was really I just reverse engineered right I was like okay they move instantaneous velocity and and and force equals mass times acceleration right it's like what like Newton's Second Law or something like that so and if you take something and it just instantly accelerates like a bullet right I mean you think about when you're in your car and you hit the gas and you

(22:38) like get kind of pushed back into the seat or whatever well you're just crawling man but something taken off like like instantaneous velocity and I think there's a Dr kth Who who's actually done like calculations on some of the radar data and the forces that it would induce but essentially it's guaranteed even if it was a drone or what have you if that thing isn't massless it crushes itself like a pancake under its own inertia because mathematically something taken off like a rocket from zero to a rocket is

(23:12) exactly the same Force as it would experience if it was going like a rocket and instantaneously stopped like hit a hit a brick wall because we have to have inertial mass reduction right I mean that's the only way you must be massless or you're dead or the or the thing just crushes itself like there's no you know how like things burn up on reentry or whatever it's like a zillion times worse than that right so so it has to be massless and so the next question is like what gives matter mass and I had

(23:41) all these videos queued up and everything if and I can share them with you later um or I'll put them in like a description or something like that but it's all PBS SpaceTime videos that talk about exactly what we need I loveb SP I love it I know dude I love it so that's how I got into this man just a quick side not you watch PBS SpaceTime when they go to like hypernova supporters you will see Bradley Vorhees for last years yeah every month I give him like 100 bucks 200 bucks or something wow that's

(24:06) awesome yeah yeah that's why I figured out about a lot of this stuff and I got even down into this Rabbit Hole like I started looking at double slit experiment and then I started looking at like macroscopic Quantum decoherence and those types of stuff and now that's led to where you know we we're looking at like you said about reverse engineering it like the same is true for me watching the MH370 videos where I'm going holy [REDACTED] this is actually real and if so then we can figure it out right it seems

(24:31) impossible like UFOs speeding off at you know super speed but um if it is real then we can figure out how it works I think Thomas conon Brown had that same reaction you did maybe 60 80 years ago where he saw it he was told you know by insiders and in the military that now these UFOs are real and he's going okay crap I got to figure out how they work now right that's exactly what went through my head and so so then I was like okay what gives matter Mass the consensus view is that the higs field is what gives matter Mass it's kind of like

(25:01) honey like moving through honey and people say oh the higs Ban's not heavy enough to give matter it's not the weight of the higs bosan think of it like a rubber band like the weight of a rubber band is nothing compared to the force that it can induce when it stretches and so that's weird I just talked to a guy about that just like it's my podcast with um Martin Gibson I think it's gonna go live tomorrow but he took a um Chinese finger trap and he explained how like when you pull it apart then you can have this this uh

(25:28) kind of kind of uh opposite Force I don't know if it's opposite but you have like force kind of tension yeah tension kind of pulling it in anyway keep going sorry about that yeah no no go

ahead what what do you say oh well I'll have to play tomorrow but yeah I mean it goes a little bit over my head but yeah so it's the idea though that it kind of goes back to this whole idea of what the universe is in terms of being like a gauge lattice and that how um you know you can have yeah I think it kind of

(25:54) goes back to the holographic principle although I asked him directly and he didn't um didn't give me a direct answer on that front but um what's the word uh where like you know stuff's kind of permea not permeating through space but uh like I forget the name of it but the the idea though that you have like something kind of uh flowing through space itself uh that could potentially be causing some type of interaction U coextensive yeah yeah so keep yeah so so the higs field gives matter mass and so and we

(26:28) know the Hig field I was watching a Leonard suskin lecture like 12 12 years old or so and it was uh and he said that the higs field is the an Infinite Source in syn it's a condensate for weak hypercharge and the only particle that carries weak hypercharge is the left-handed chyo electron the positron and so the higs field gives matter Mass the positron is stuck to the higs field and that's the reason and if you watch PBS SpaceTime you'll see I will give you the link you'll love it but the reason that the electron isn't moving

(27:01) like a photon is because it's trading a weak hypercharge back and forth with the higs field on infinitely small time scales and that's why it's so much slower but the left-handed electron is stuck to the higs field and if the leftand if the hick field is pulling on the left-handed electron then Newton's thirdd law tells us that the left-hand electron is pushing on the hick field too and so and we know that gravity and the Hig field is the only field that is nonzero in the vacuum right the vacuum

(27:31) expectation value of hi field is 246 gig electron volts so only field that in a total vacuum has a nonzero energy and so my hypothesis is is that the higs field that gives matter mass that the left-hand electron is stuck to the higs fields vacuumation value I don't believe it is 246 galron volts I think it's negative - 246 galron volts which makes the higs field the gravity field and it makes the left-handed electron essentially our our handle for grabbing onto it and so if you take a faraday disc a faraday disc is was invented by

(28:10) Michael Faraday like 200 years ago and it's a copper disc and he spun it and he put a magnet on the side of it and what it did was it shoved electrons to the middle of the disc and it made the the middle of the disc minus and the edge of the disc plus which is like the plus and minus sides of a battery and if you connect that plus and minus side of the of the Faraday disc you create it creates a a circuit creates a voltage and the beautiful thing about a faraday disc is that the magnetic field that is created by that voltage it blows through

(28:47) the surface of the disc and then it comes back around and it comes back underneath the disc so it creates this nice you know kind of beautiful like toroid of magnetic field and then I got some research from um so that so we create a magnetic field like that and then I got some research from 2009 there was uh Dr Lawrence EES from University of notingham and he said

that if you if you pass a magnetic field perpendicular through graphine graphine that graphine that hexagonal lattice teases out the left-handed electrons and it catches them in that

(29:25) magnetic field like a bug Catcher And they just sit there in cyclotron orbits so imagine a faraday disc which is circular which is probably why lots of UFOs are Circ or saucer shaped and when you think of like a like a Tic Tac you've got a bunch of saucer You' got a bunch of wheels and kind of two on the other side so you create this big long magnetic field that kind of goes through the whole thing you know it passes up and then you know it gets closed off by another magnet so you have this envelope

(29:52) right anyway bottom line is is that you fill that you charge up that magnetic field and if you pass it through a bunch of graphine it teases out these left-handed electrons that are hanging onto the higs field catches them in that field and if the higs field is negative right now like when you okay so and here so we gotta let's put that to the side now now let's talk about like microwave and food okay so yeah if you if you take a microwave and you put your food in a microwave and you hit cook right it

(30:22) bombards it with microwaves and the microwaves bounce off your food and make your food molecules jiggle and it's the jiggle that is the energy that you're putting into your food that's heat like that's what the energy when you heat your food up when you put energy in your food with a with a microwave oven it's the microwaves bouncing off your food that Jiggles those molecules and those jiggling molecules that's the energy you put into your food to heat it so what we do is and what I was what I built at

(30:49) Falcon space Labs was a faraday disc that would spin you know past this magnetic field through a bunch of layers of graphine and other you know oh by the way you know the magn Bismuth magnesium zinc that you've heard that spacecraft or whatever or UFOs drip it off and made out of guess what that's all hexagonal lattice too bismuth magnesium zinc are all just like graphine they're all hexagonal lates and so which makes sense right you think that any of that's related to superconductivity because I

(31:18) think graphine has been one of the things they say that can produce like room temperature superconductivity under the right uh conditions that may be true but like so when I figured this out I was essentially focused on only the things I needed to like connect okay how do I essentially kill the higs field and so so what I came up with was create a magnetic field pass it through graphing catch all these left-handed electrons that are holding on to the higs field and if I'm right that the higs field is negative and then if I take essentially

(31:52) take a signal generator pass it through a car stereo amp to jack up the wattage and then shove all this this um harmonic electric signal through the disc to essentially microwave all of those left-handed electrons the same way that you microwave your food right so if I catch all those left-handed electrons that are holding on to the higs field and then I turn my signal generator on and shake the [REDACTED] out of all those Electro electrons right and if I can jiggle 246 gig electron volts into the higs field if it's negative - 246 if I

(32:27) can jiggle posit 246 in there I can cancel it drop it to zero and then the Hig Field's at the ground state and then the Hig field can't give the matter in that field any Mass right because if the higs field energy level is zero I think it's negative - 246 so if I can catch all these left-handed electrons and then Shake 246 gig electron volts into them then the the field value goes to zero and then everything in that field has to be massless that is the theory behind anti-gravity and have you seen salvator

(33:00) P's patents yes yeah because I think that especially talk to that guy I wish somebody would put me in the same room with that guy because he calls it hyper cavitation and I don't think it's hyper cavitation but I think it's the harmonic signal that he's thinking is shaking but it's not I don't think it's I think it's a different mode I think it's a different mechanism but I think he's I think he's seen it I think he's actually seen it he's seen it let's be let's be on

(33:27) he hasn't told me but when you write a like I saw him on I saw him on toe with Kurt man and the guy was slipping out I'm like dude I can tell that's a guy who's trying not to tell everybody that he's seen it but he's seen you know what I mean no when I talked to him twice on my own podcast that was exactly what I concluded as well which you I don't want to get him in trouble or anything like that he didn't tell me that he's seen it but yes when you make those pads not something you just come up with like

(33:52) you've seen it right yeah yeah I'm I'm dying to talk man if you could put me in touch with that guy I'd love to have a conv unfortunately now I think he's been uh I don't think I'll put him get in trouble here but he hasn't been let's say given permission to talk to anybody else since I mean I think he spoke to Kurt he spoke to me he was on Jeremy Reese's show uh he did Project Unity and I think there might be one more but that was like pretty much it and then he got told which to me even adds more

(34:20) credibility and weight to the claims right if he's out there spewing disinfo or something like that they wouldn't silence him you know well he doesn't even need to tell me anything I want to tell him what I'm working on and he can just sit there and because he's a guy who's works for the Navy and part of the reason that I applied to that Arrow job I don't know you see it Ross Kart's like hey if anybody wants this job I apply to it I'll tell you that's funny but anyway

(34:49) like like he's a guy who's working with people and we talked about like well so anyway so um so anyway so you create that magnetic field you feel full left-hand electrons and you shake them but you know when when I I built my motor or I built my device or whatever and I I started doing it then the coils in my motor started to melt and it just like completely started to break down and so I didn't really didn't really get to do any great measurements or anything like that so I'm kind of back to the

(35:18) drawing board and this is what we talked about that you hinted to is that that knowing the theory and understanding how it works if I'm right right is is a completely different skill set from actually building it you know what I mean and so like that's what I'm focused on or that's what I was focused on was building it and I'll build another one but I did apply to that Arrow job

because if I can direct the contracts then I can say hey northr Grumman hey uh you know Lockheed Martin **I want you** to

(35:49) build me this show me this this is I can Speck it out and say hey build this for me but um but so but the the crazy thing is if it works like I think it does and if if the if the field is full of these left hand electrons and you shake it bring the H to the ground state then you have what I call a masshole right you have the universe knows from Quantum fluctuations knows that there's no ma it feels like there's no Mass there so it's it's it's working overtime to shove Mass into the mass right because nature abhor a vacuum and

(36:24) so if that's true then you have a situation where you have a massless craft surrounded by gravity surrounded by or essentially this masslessness where the universe is pushing equally on all sides trying to get mass in there now so the way UFO propulsion works right say you have directional microwave emitters inside your craft and if you take a close look at those orbs that are going around in your mh37 video you'll see this wherever you want to go if you want to drive your UFO somewhere yeah yeah you just fire from inside now imagine

(37:08) instead of just a solid disc imagine a hoop okay imagine a hoop this way and a hoop this way so the inside there's no field on the inside it's just an envelope around you well now now you're inside that envelope and that's where like you're working all the controls right you got the stick and the gas and your throttle and everything and so when you turn on directional microwaves from inside that craft and you shoot directional microwaves through that massless uh field you're manipulating

(37:39) the quantum vacuum right so so the universe is pushing super hard all around you trying to push matter into that mass hole and if you release microwaves like out the front the universe is going to go hey there's a little something here in the front so we don't have to push so hard on the front and so you create essentially a a diff you manipulate the quantum vacuum so that there's less Force pushing towards you in the front because you're blowing microwaves out the front and now you have a a greater differential force in

(38:11) the back and so you go forward so you fly around on a tractor beam essentially wherever you point these microwaves and you're following essentially the beam that you're that you're uh you know that you're that you're that you're emitting you want to go up you just emit microwaves out the top and then you you fly up and if you look really close at one of those videos you did the uh share thermal one I think yeah you can see the lines in front is that what you're talking about where you see the lines in

(38:41) front that's exactly how they Ste that's exactly how they fly that's exactly it that's exactly it I'm telling you and if you look if you look close at that video if you look close at that video you'll see they are flying exactly towards the direction that they're emitting the those that that they're that they're emitting that you know and it and it looks like negative energy and I did a podcast episode called um predicting Quantum Echoes of a future past or something like that and I talked

(39:13) about the reason that it looks negative is because you got conservation of mass energy right in the universe you can't add energy to the universe but if you're one of these craft and I we'll talk in a minute about what a Quantum Echo is but if Quanto is throwing microwaves out of essentially it's throwing it into the past and I'll tell you why in a second the universe is going to go oh no we can't have that like we can't have like extra energy and so it's G to essentially create gravity

(39:43) to compensate to to uh cancel that so okay so if anti-gravity works the way I think it does right so kind of a big if but not really if anti-gravity works the way I think it does you create this Mass hole right well that energy of your mass  $e$  equal  $mc^2$  the mass time  $c^2$  is there it's in our universe it's right here and it you can't violate conservation of mass energy so the only thing and this only works if we live in a holographic universe and if time is resolution pixel resolution on the Hologram so anyway if you create that

(40:25) mass hole that Mass that energy has to go somewhere I think it goes into the past and I I can we can talk a different episode why I think that is but essentially there's there's one view of sort of the mathematics that we're actually moving through time at the speed of light too and so if if the Higgs field is what connects matter or connects energy to this instance of time and when you create this Mass hole essentially you leave your mass into the past you leave your mass in time it like you drop it and you you race away from

(41:02) it at the speed of light well here's the thing that mass has to go somewhere and if it goes into the past then it can only go exactly as far back as the energy as the tension in the Higgs field because it's still quantumly entangled right like it's still you know still quantumly entangled to your massless particles in the present and so but the mass can only go as far back in time as it takes to totally cancel it from the tension in the Higgs field so it it's like it can only go back so far because when the gravity across what we

(41:39) call an ER Wormhole that in that Wormhole the tension between this moment in time like it's like you know when you hit your gas in the car and you you take up there's something called time dilation you're actually part of your body's like slowing down in time well when you go completely massless that's gonna you D that time dilates your mass goes into the past and so and it's going to go exactly as long as it takes for the gravity to cancel it and it won't go further because that

(42:08) would be more gravity and so it would be taking away be more negative energy in someplace and you know and it can't go it can't go less than that right because then you still have positive energy that's not totally canceled and so it can only go exactly as far as that gravity takes to cancel it and that's why it holds open a wormhole is because the negative energy density which is the gravity wrapping a massless something that's massless is the exact recipe in ER for a wormhole and in ER if you look it's only five

(42:41) pages it says Einstein says two sheets two identical essentially space-time Sheets if it's a holographic Universe we're talking about essentially you could take you could take so the the

state of the universe is the surface of a black hole at any moment and if you peel that surface of the black hole off the energy like and hang it like a sheet that's the state of the universe in that instance well you could peel off every instance all the way to the beginning of time and now the distance across those

(43:13) those sheets of time is Tim likee right because it's like chopping the frames out of a movie reel right like the beginning of the movie to the end of the movie and so and so somewhere we're in the middle of the movie right here and when we eject our Mass it goes somewhere back here and it goes goes as as far back as it takes to cancel it well now you have masslessness wrapped in negative energy density which is Einstein's recipe for Wormhole which he says two sheets it becomes pointlike where it's like and so and that's that's

(43:42) what I think of the ER Wormhole is yeah every every point in the universe is actually connected we just don't perceive it right like that's the situation I mean if the universe is a hologram then everything that is a trillion miles away is right in front of your face you just can't see it because it's a a resolution that your that your Consciousness is in tune to biology is set for it yeah but that makes things like remote viewing if you could tune your Consciousness to a different pixel resolution then you could see something

(44:10) 100 miles away because because the Hologram is right in front of your face no matter what right I mean if if we live in a holographic universe and blah you know I mean so well I think we do I think that there's two things that we need uh one of them is the one you just mentioned which is that we have to understand that it's a holographic Universe I call it like the Matrix other people call it the ether counter space whatever you want but there's an underlying framework to our reality that we don't perceive right and that there

(44:34) would be some levels of like if you think of a computer program like a base level of code like an operating system that's wrting on top of it you know and then the other thing I think we understand is mean that's what Juan Mal desna and string theory was born about like it's like this is not the the holographic Universe it's not mainstream but it is definitely not a fringe Concept in physics and I have the video which uh yeah it's not maybe 10 years ago it would have been but yeah not anymore I think it's getting more and

(45:01) more mainstream yeah 1997 I think Juan Mal desen I think he like won the Nobel Prize or something for it you know I mean I think he's a genius honestly I mean I I was funny because I was talking to Brian kein on Twitter going back and forth and he goes oh I I interviewed one micina because I said you know what do you think about ER equals epr and uh and Leonard susin I personally I think I I love their theories and that's why I just interviewed Martin Gibson because he has his own unification Theory I

(45:25) think there's half dozen or more that are out there and I don't know the **truth** is somewhere in there right but conceptually I love the ER equals epr what I would kind of ask you maybe we have a minor debate over it is um sure the thing I I'm not sure about is whether or not you can go to the Past right and if we can break primitive causality I think of time dilation as

like the universal corrector the way I perceive it is that um I think a good thought experiment somebody posted is let's say you want to travel somewhere

(45:56) that's 5,000 light years away okay and one Light year is exactly how far it takes light to travel one you know one year or how far it goes in one year so if we go back if we go somewhere that's 5,000 light years away and we look back at the Earth and we travel there instantaneously people ask will you'll experience it instantaneous the pilot will but everybody else will see see you go take a year 5,000 years or whatever to get there exactly so that's the question right is that if you have because people ask well if I if I

(46:25) instantaneously transported somewhere that's 5,000 light years away and I looked back at the earth when I see the pyramids being built and my answer was no because when you show up from your perspective you'll show up there instantly but from The Outsiders perspective it's going to look like you showed up 5,000 years in the future and to me that's time dilation correcting itself to make sure that you cannot break causality because otherwise if I could instantly transport somewhere else and look back into the past I would now

(46:48) have information about something that I could then change because I could instantly transport back and I could tell people oh yes you know here's what happened uh po in the past or and then those people could then uh well I don't know that's the part I kind of struggle with mentally so I guess that's my question to you is do you think that we can travel the past do you think we can change the past and if so how do you think that would play out so okay now a lot of people might not agree with me but so I don't

(47:15) think I don't think there's such thing as free will I think that there's no grandfather Paradox because you didn't go back and kill your grandfather Yeah okay and so have you seen the show dark by the way on Netflix okay so the show dark basically like it does that it's this German show where he goes back in time but he can't change the past because whatever he went back that has already happened right so he sees himself in the future of the past but it's kind of like you know it's a

(47:43) paradox where it's like he can't change anything whatever he did he always did and so even if he goes to again like he'll always end up even if he knows what's gonna happen he knows he's gonna end up having to do that no matter what right like it does bring the question of do you have free will or not so go ahead see because I think I think well well and you'll see like and I'll tell you I'm kind of locked into this right because I think and this is what I told Arrow when I on my cover letter which if

(48:06) you want me to I'll read it to you it's kind of a hoot but but essentially I told him that I think the reason that we have so many UAP showing up in our Navy's Flight Training areas is because it's our [redacted] Navy in the future that we're seeing through these ER wormholes and so that's why they're there and so and I'm stuck with that right because in in my view like the if the Wormhole goes and and here's how we be here's how we can travel Interstellar and not need to become nomadic is

(48:38) because if I'm right that when we spin up our Mass hole and our Quantum Echo goes into the past 50 years then we could actually take another craft a massless craft because if you put energy into a wormhole it will close it you can't put energy into a wormhole but you could spin up a mass craft that is you know that's that's massless and fly it through that Wormhole you can and you'll see there are actually videos of UFOs where like the UFO's there and then like UFOs start coming out of it like

(49:13) yeah I've seen those I've seen those and so if a UFO spins up it becomes massless and another guy flies through it and comes out 50 years into the past that's 25 light years of range out and 25 years back so you can be home in time for dinner even though you just like in a blink went 25 Lighty years out checked out some world or whatever and then zipped back you could still get back in time you know you know to have you know dinner with your kids or whatever and and and and it wouldn't you wouldn't

(49:49) have to become nomadic you you would be if it's true that that's the way it works but that means that whatever happens in the future has already happened and time exists all at once yeah and so you could actually go back to Elementary School go back in time and walk into your Elementary School class and highfive yourself and then but as a kid somebody you would experience somebody high-fiving yourself but it would be you you wouldn't probably know that but you could actually do that and like you could actually and and the way I think

(50:25) of that is kind of like a you know like when you're rowing a boat imagine you're rowing a boat and time is the river you can row a boat and when you put that ore in you pull back and you look down there's like a little Eddy right little time Eddies can happen and so where where something you know goes back in time and forward in time and back in time and forward in time and that could be like the note that you write yourself that says hey why don't you study Physics from the future you give it to the past and if you actually

(50:54) if if you if you keep using that note you know I mean like you I anyway bottom line is there's a there's like a story that's like well where did the note come from if you know but I think there Eddies that can happen in time like that um but I do think there's no free will I do think everything is set um and I think I have to think that way if I think that the UFOs and UAP that they're showing up in our flight training areas is our future Navy or is our future Air Force zipping around you're all in on

(51:25) the future human hypothesis then with the UF well I think that the UF the UAP and UFOs that are zipping around in our Navy's Flight Training areas I think they are our future Navy so I think those ones yeah probably our future Navy that's that' be wild but that would actually be consistent with Aro came out with right where they're saying it's not extraterrestrial that we're seeing it's like exactly right it's it's almost darker you know and that's one thing I've always said about the UFO

(51:50) phenomenon is that I think it's going to be darker than anyone's willing to accept and when I started seeing the MH370 videos I I was like okay yeah this is dark enough that I think

that no people G have a hard time accept and they didn't I mean I just both sides of the UFO Community hate me the ones that actually believe in UFOs and the ones that uh you know think that it's all fake right which is kind of funny because that that actually supports the idea in my opinion that must be on to something because I don't think it's

(52:15) gonna be as clean as people want it to be if everybody hates you you're probably pretty close because nobody's usually happy with reality right exactly you got it but here's the one thing that I did want to float so so if if you ever hit um Sonic hyen gravity.

(52:35) us that's where my podcast is I did an episode a couple years ago called the madman's curse and the cover art on that episode is the hin lights and and and what I and what it shows is there's like there's like a UFO that's like constantly going around in like hin I don't know if it's like Norway or Finland or something anyway wherever that wherever it is in hin there's a UFO that's always zipping around and somebody pointed a spectrometer at it and if you look at the spectrometer reading that it that it that it put

(53:13) through I went and found a spectrometer reading for daylight and it matches it matches the spectrometer reading of daylight and so whenever I see a UFO or whenever I see like something that's you know you know possibly a UFO right there's either a bright light like it's at night and it's a bright light or sometime and so I think I think that's we're seeing that UFO through a wormhole and it's daylight on the other side of the Wormhole sometimes you'll see it and it's red and I think it's because it's sunset

(53:54) or sunrise on the other side on the on the on the uh other side of the Wormhole now you see what I'm going with the fire yeah I guess I if those Quantum echos of those orbs if they're Quantum echos which I think they are because because the directional you know I'm calling them microwaves but I don't know what it actually is um if it was sunset or sunrise on the other side then those things would be glowing red and I wonder whether that might be what the people on the ground mistook for fire possibly um and

(54:35) so uh and so and but it also it's also consistent with I don't know if you heard recently there were Ukrainian scientists that were saying they were seeing UFOs and they were saying they were calling them Phantoms well that happens when it's nighttime on the other side when it's nighttime on the other side of the Wormhole I think that's what you get you get those Phantoms those Shadows yes thinking of in terms of like literally looking through like a portal where you're looking onto the other side

(55:00) and now you're seeing the environment on the other side through the well there's light light right like I don't know if you could see because you know because gravity you know it it it kind of it bends light you know because gravity bends space and light travels through space so it gets lens and everything and so I don't I don't I don't know that you could I don't know that you can see the environment through but certainly the light like kind kind of a blur right like you that's what you'd get and I

(55:29) think in a lot of ways that that's probably why most UFOs are blurry right I mean probably so what do you think about uh retrocausality you know so do you think that the Mandela the Mandela effect could be real like uh the idea that oh you don't Mandela effect oh yeah sure this is gonna be fun so you're familiar with the brand Fruit of the Loom right yeah yeah so Underpants you mean yeah yeah yeah do you ever remember you know their logo just imagine their logo right now does the logo have a cornucopia in it when you imagine it the

(56:05) the logo Fruit of the Loom which is some fruit or whatever some I don't remember so okay well so Mandela effect is the idea that we can retroactively change the past but when we do like we we like it changes our like our it doesn't quite change all our memories so that stuff like seems like it always was I think the most common ones are that people are that the Fruit of the Loom brand logo used to have a cornucopia on it they are people adamantly argue they remember it I actually even remember which is weird

(56:35) from being a kid but there never was a cornucopia on the brand or that Sketchers was spelled with a K but there's no I think I think that's one of the ones I may be saying this incorrectly so it's the idea that if we can impact the past that when we do so it creates this retrocausality where now that's what always happened right and that maybe there's some subconscious level where it doesn't get changed right so we still have these memories that were like basically false memories now

(57:05) because the past has been altered without us even perceiving it um because we don't see the past being altered so I'm curious about your thoughts on that versus like you know multi- timelines and multi- universes right because that would be the other thing is that you create like a splinter Universe if you change the past right so I think you said that like whatever happened is always happen so that's the reason why I brought the Mandela effect in this universe in this hologram yeah yeah yeah okay well now we're really kind of going

(57:32) into my theory of everything right and so yeah sure so I think that the universe is our universe is the 2D holographic surface of the black hole and when we look up at the cosmic microwave background what we're looking at is the inside of the black hole where like we are and our Consciousness sits on the surface of the 2D holographic surface of the black hole and that's where we get our information from and so and I have like this other podcast on if you're into this if you're really into this I have I have um a couple

(58:15) podcasts about um Consciousness and how you actually slow the flow of time with your Consciousness and the way that the reason that works like that is because if we're on the the 2D holographic surface of a black hole Hawking proved that the energy on the surface of a black hole is uniform and finite right and and that um you know perturbations in the like that was the word I was looking for earlier by the way pertubations oh okay yeah go ahead yes so so perturbations in SpaceTime around the black hole the energy from that has

(58:51) to come from the black hole and that's why the black hole evaporates um short you know kind of condensed version so to speak Hawking radiation yeah Hawking radiation and

Hawking radiation is black body radi which is heat okay and so I think our energy on the surface of this black hole when we die bodies actually get extremely cold like if it's like say it's like 98 degrees outside 98.

(59:22) 6 degrees outside when you die did you know you actually get colder than 98.6 degree you do I did not know that and you'd think that if you were just matter in space and you were 98.6 and it was 98.6 degrees outside you just kind of stay the same right because there's nothing there but you get colder and so I think so we're on our Consciousness is on the surface of this black hole and when we die I think our Consciousness leaves the surface of the black hole is hawking radiation and that's why like our physical bodies get colders because

(59:54) actually a lot of our energy departs but um but to answer your question so when um when we're awake right when our Consciousness is awake since the energy all comes from the surface of the black hole like Hawkings said our Consciousness is actually fighting for the energy on the surface of the black hole and I think that SpaceTime is blowing out of black holes in all directions and that's what causes Universal expansion and actually um I think that neutrinos that are always blasting through us right are the marker

(1:00:32) for SpaceTime and so since we're on the surface of the black hole and we're moving through time we're not actually moving anywhere because we're on the surface of this black hole but space time's blowing through us and it's SpaceTime blowing through the surface of the black hole that changes the black hole and which is what we notice as the passage of time and the experiments that we can do to prove this if Consciousness indeed and if you look this stuff up like you will see that it it like what

(1:00:59) we've observed and everything totally supports this is that when your when your Consciousness is active right you're actually you slow time because your Consciousness has taken energy that SpaceTime needs to move the Hologram which is why when you fall asleep time moves faster right and when you're awake time moves slower because and you know like the six hours when you're awake moves way slower than six six hours when you're asleep right and so and if you look at hummingbirds if if there's a metric for

(1:01:34) sucking the energy off the surface of the black hole and that's energy that time can't use to move the the the Hologram humans have like 54 million neurons per gram of brain matter hummingbird has like 240 million neurons per gram and so the hummingbird when it's conscious takes more energy off the surface of the black hole that time doesn't have because time can't use it because the conscious hummingbird is soaking up so much more energy density and so that's why hummingbirds move so [redacted] fast is

(1:02:17) because their the the CL the their clock can't tick as fast and so they're doing more action between ticks of the clock humans do and so and it's crazy because when a hummingbird is conscious its heart beats 20 times a second like that's a fact like it heart beats 20 times per second but when it sleeps its heart beats like just like humans one time a second when it's when it's not taken not when it's beating its wings but when it's awake its heart beats 20 times a

second and and the way that we

(1:02:55) could actually prove this is if we surgically sort of implant a clock in like a hummingbird or even inside us and actually if you look up yeah if you dations yeah if you if you if you look in in biomedical journals and stuff you'll see that there's a calibration problem where if you insert a device that requires timing if you surgically insert it into a human that device speeds up and that's why is because because you're when you're conscious I mean if it's inside you right if you're conscious that you you

(1:03:34) it slows the flow of time because the Hologram has or or the surface of black hole time has less energy to move the Hologram and so and there are tons of people Carl VI is a friend of mine he lost 400 pounds with diet but mostly like meditation and so and I told him I said man if you're activating tons of more nerves and pulling more energy off the surface of the black hole dude you're G to you're G to you're going to jack up your metabolism you're gonna you're gonna you're gonna move faster you know

(1:04:07) relative to I mean anyway and you can look it up I did a podcast on it called you know you're preaching the choir over here I uh you should check out uh Roy de Herbert dilation theory for sure or maybe I podcast with him because yeah this is I mean he looks at from a theoretical physicist perspective but basically says the same thing I think you guys are saying the same things although it's just the wording is a little bit different because he would say that time is Flowing faster for the hummingbird or for a fly or for an ants

(1:04:35) and that's the reason why they seem like they're moving so quickly whereas if you were to scale them up they you would think they're moving at like warp speeds but the reality is just because they have less Mass their time is Flowing faster than what our time is flowing and so yeah I can explain why the humming bird's wings flap so fast why the little fly seems like it can move around so quickly is that the flow of time is is working differently for them than it is working for larger things and that's an

(1:05:00) interesting unification Theory too because of what if you look at a black hole has a huge amount of mass right and now that black hole your time is going to slow down and if you're near the black hole looking out it's going to look like everybody else is moving at super speed and those people that are looking at you near the black hole is going to look like you're moving in slow motion right um but from your both your own frame of perspective it's going to look like you're moving at normal speed

(1:05:22) right so it's pretty damn weird you know when you think about I think time dilation is nuts I didn't even know about time dilation until I watched the movie Interstellar and I I went back home and I Googled it and I'm like wait is this real and you're like yep they sent clocks out in outer space and they get out of syn and you're like what right it's crazy totally totally actually I have this crazy theory for black hole Genesis too I don't think it's Mass actually because if you if you

(1:05:50) take a star right that starts out the energy of that star if you start subtracting out everything that happens like you subtract out the amount of the Nova of the brightness of the explosion you take that energy out if you take all the the stard dust out you know you subtract out the Stardust and then if you uh and and sub and then when one what you're left over with isn't enough Mass to be the black hole that it is it's not and so because if you take the total energy of the star and you tracked out all the stuff that

(1:06:27) we know happens in a supernova you're not left over with enough Mass to be a black hole and so what I think happens is it's like an ice skater now Einstein said that when something goes if something goes faster than the speed of light it goes back in time and so if you take a star and it you know builds you know hydrogen and you know then helium and whatever and they think that it when it gets to iron or whatever it starts to be endothermic and then it collapses I don't think that's what happens but but

(1:06:57) anyway but bottom line is is when the star collapses right it has a certain amount of uh rotational energy called moment of inertia and the moment of inertia when it's big has to stay equal to the moment of inertia when it collapses and that looks like an ice skater when she jumps up in the air with her arms out when she pulls them in she spins up really fast yeah it's like a neutron star too right yeah well when a star collapses it spins up like a light speed axle yep and if it's big enough it spins it goes faster

(1:07:30) than time and I do the math it's on I have a kind of an anemic YouTube page where I put my theory of everything on there and I did there's one black hole Genesis um it's like five minutes the five minute math on it and you can calculate if you have an initial rotation you can calculate the radius at which to conserve the moment of inertia you can calculate the radius at which it would have to spin faster than light and so and I did I did the math for V canis majoras like on during the thing it's

(1:08:05) just napkin math it's really easy and it it comes out to almost the same Schwarz child radius which is the radius under I think the misimpression that a black hole is a big ball of mass but but essentially and it and it shows that a black hole is actually a dut and if you look at the The Event Horizon telescope and this and then the Event Horizon telescope after I you know I did this and then the Event Horizon telescope showed us what um m87 which is a black hole looks like and it's a doughnut dude and they think that they

(1:08:41) think the black hole they think it's a hole in the middle that's not dude that's empty space it's a donut and and we also they they showed us um Sagittarius AAR which is the black hole in the middle of our galaxy you know what the real image is the unadulterated unchanged image it's an ellipse because it's a donut from the side but then they went in and monkeyed with it and they did all this like you know we think it's scattering and whatever and they kind of assume their conclusion that there was a

(1:09:08) black hole like in the middle of it or whatever but the actual image of it is like a big orange ellipse just like m87 is a big orange donut and so so I think the black holes are donuts

and they're creatures of spin super luminal Spin and when it when something spins super luminal I think what happens is Einstein says it goes back in time and I think what happens is it essentially rips out a time it goes back in time but like it goes back in time but it can't go like just a day back because it would add

(1:09:41) energy back to that day right so it has to go back before the beginning of time it Go and it carries the space that's inside the core of that star back before the beginning of time and it big bangs into another universe and that's where the space inflates is is the space that's inside the core of that star when it rips out and goes back in time goes back before the beginning of time and then it big bangs and the space that the core that star brings back with it is what's inflating and that's so what do you

(1:10:12) think about the Big Bang do you think the Big Bang we need the Big Bang Theory in order for Universe yeah I think I think when a star collapses it spins faster than light it goes back in time I think it goes back to before the beginning of time and then you have there's just nothing there's just like space and nothing and that's when the weak nuclear force just rips everything just totally rens every single thing and you know blows up and and the space inflates and that becomes our new universe and that's why the surface of

(1:10:45) every black hole is a universe it's a universe inside that's why so when we die and this goes back now finally right I'm getting back to answering your question about why do I think some people think the Fruit of the Loom has a cornucopia and some people think it doesn't is because when we die I think our Consciousness leaves the surface of this black hole and goes to the surface of the black hole that circumscribes our black hole and when our energy when our heat hits the surface of that black hole

(1:11:14) and coales us together I think that's when we're born in that universe and I think that's ultimately going to be heaven right on at some point um but I think it's plausible that we exist and the mult so the Multiverse is black holes inside black holes inside black holes and the DNA of the universe is essentially the same but I think I think there could be some VI some variations that change and if I had to put my finger on a variation that was different between the universe we were in before which was inside the universe inside the

(1:11:51) universe inside and the universe we're in now is that maybe in in the universe we were in before there was a cornucopia oh going back to the Mandel bringing it all the way back a cornicopia in that Universe yeah that's that's a interesting thought um I mean and and then and then you know then uh what's it called dja Vu yeah yeah makes a lot more sense yeah and someone was mentioning in the chat too the idea that when you sleep you know their time speeds up someone was actually saying the same thing you were right before you

(1:12:21) said it in the chat which I thought was pretty interesting it was Merlin who's bringing that thought up um I don't really love the Big Bang Theory in general but I don't disagree with anything that you just said either at the same time uh and and I think it's really just matter like perception uh for the most part what is your thoughts on like are do you become more spiritual

the more you learn about science I guess would be my first question oh God yeah isn't that weird like I would have

(1:12:48) before I dug into all this I would have thought it was going to be the opposite because I had been kind of brainwashed with this idea that it's the religious people holding back you know ufology or what have you because they think it might be demons or whatever but um first of all I think that people's perception of what the nature of the phenomenon is is of course going to be a little bit esoteric because we might be talking about future humans we could be talking about whatever I don't know we are not

(1:13:10) really sure but the thing that was interesting to me is that there is this religious connection where you get in my opinion more spiritual the more you learn about it because when you learn that magic is real now you need like some you know higher level understanding but if there is a holographic principle then that would imply that our universe is a construct right and that if there's a construct there must be a Creator who created that construct so I was surprised to find that um the religious perspective and

(1:13:41) persuasion of humanity I don't think has any problem with any of this science and technology and that it'll get incorporated into that worldview much easier than the people that you know think there's nothing special about the world right well you know the like if you Google like what the Vatican says about aliens like from years and years ago they've been saying that no aliens are pretty consistent with uh you know you know it's a big universe you know God made it all you know what I mean and so

(1:14:12) but I think I I I definitely think well here here so this here's this kind of in a nutshell so and I just did a podcast called alien logic right which is I think that in sufficiently earthlike environment right we would evolve right because we're here right that like you take it all the way back to its just core principles right like you know there's something called the stationary action principle and what that says is is that you know you know nature will minimize the action um and essentially energy follows the laws of

(1:14:50) physics right and so what goes up must come down you know you can paraphrase it and and you can the bottom line is is that that nothing's really an accident like everything happens because energy follows the laws of physics and given enough time a sufficiently earthlike environment we happen we just do because we're here and so if that's true you know and there's all kinds of examples of like what they call convergent evolution where crabs evolve from you know different species in different

(1:15:23) places in on the Earth and and the whole idea is that in sufficiently similar conditions you know the same things are going to happen and so when we're only a like a four or five billion we a five billion year old 4.5 billion year old uh planet right in a 14 or 15 billion year old Universe a sufficiently earthlike environment that happened you know 10 billion years ago right is going to have humans right and if it only takes time for the Apex species on a planet to go and I did a podcast episode called the the real

(1:16:03) prime directive where this kind of just hit me but it in a sufficiently earthlike environment that happened you know 10 billion years ago you got humans that are going to be billions of years bet more evolved and if it only takes time to go Interstellar and if anti-gravity certainly if anti-gravity works the way I think it does we're pretty close to going Interstellar now we could be then then especially if we' sto shooting at each other and we just like got to it you know um then then you have a scenario where what would we do what

(1:16:33) would you do Ashton if you all of a sudden were Interstellar what would you do yeah no it's a good question I think the one what would you do what would you do well so I talk about it all the time I kind of have to set it up a little bit but first of all the the crab thing is really weird I read about that like yesterday or two days ago that crabs have independently evolved into that shape multiple times right like Earth a 3D crab printer but here's the question I think I would I would answer your thing like this your

(1:17:01) question like this is that I've wondered often if we can change the past what would I what would I tell myself what would I do if I can if future me could impact my current life or my past life right or the other way I look at it is if you could pick any time to live in what time would you choose to live in I and I think about that question I I would say the scary answer is I would probably choose to live whenever the world and the universe ended right because I want to see the end of everything right if you were to take

(1:17:29) time and all time and look look at like a string when would you choose to live in probably the beginning or the end and probably the end because we'd be more advanced at that part I want to see the cool stuff right but the other part too is I wonder like what would I do if I could change the past would I overtly just give myself the answer to the lottery numbers or would I do something more Less Direct right and that's what I don't really have an answer for you in general because because I I'm not sure

(1:17:56) like I think I would do something stealthy where I wouldn't even recognize that I was doing it right and the thing that scares me about that a little bit and creeps me out and I think of this pretty frequently nowadays is like I look at what my life has been doing the last six months and just how do you know that you haven't exactly that's the question how do I know that I haven't right I look at it I go wow like the people that I've been able to talk to the connections that I've made in the

(1:18:20) last six months nothing that I would have ever anticipated in my life my my life has taken just a complete different trajectory since MH370 videos and everything else and I think the future trajectory of it is even crazier honestly I don't know what what there is planned so um yeah but I have high hopes and that's the thing is that I go wow maybe we really can change the past maybe future me already has and change the trajectory of my life now you know it's hard to say I I really don't know but that's what I love about these

(1:18:49) questions is that I don't know the answer to that like I know the answers to the MH370 stuff because I've been investing inating it and like I've seen the evidence and of course I don't

know the inner workings of how all the super advanced technology works but I'm I'm trying to catch up to that to get on like your level and other people's levels that I well don't say My Level like I'm I mean you're pretty impressive man pretty impressive um but at the same time like you know I think there's still

(1:19:14) even knowing as much about okay that there's probably a breakaway civilization that's the military-- industrial complex knowing that there's uh that we are capable of conspiracies that will break people's mind you know that the government is a lot darker than I would have imagined even knowing all that there's still so much more that is just I want to know the answers to like what is the nature of our planet like are we a prison planet is it the future human situation going on like what is so

(1:19:40) dark you want me to tell you what they' gotta hide this right yeah absolutely all right so if we agree that it only takes time for humans or any species any Apex species it only takes time for them to go Interstellar right and so that was sort of the Epiphany I had in a a podcast I did called the real prime directive and what that to me what that meant was if you look back in the fossil record right there's this nice laminar evolution of dinosaurs where it's they went from goo and then you know tadpoles

(1:20:17) or whatever and then they became dinosaurs and then 65 million years ago everything gets zorch and mammals come out of nowhere okay so the what I was trying to provoke from you is what would we do if we became Interstellar we would go colonize other worlds yeah and we would essentially you know Elon mus talks about needing to become an intercell or an interner planetary species colonizing Mars all that kind of stuff but but what we would do is we would colonize other worlds and so and that's what I think happened here I

(1:20:54) think Interstellar human humans found an exoplanet Earth um accelerated its rotation um to create a magnetic field that would you know protect our atmosphere and whatever and then they planted us here um and there's I have lots of podcasts about like actually you know the the the pyramids Drexler university did a study it's National Science funded from 2008 and they showed that the the pyramids were made of concrete concrete that's more advanced than the concrete we have today and so what that tells me is that you know they

(1:21:30) kind of put us some starter structures you know for us to you know to kind of get after there's a whole bunch of reasons that I did two podcast episodes recently called alien logic and that's what they're about they're about like how we know that we are actually a colony of interstellar humans and I think and the real prime directive which I actually came to earlier was kind of darker because in any sufficiently earthlike Planet not hit essentially terraformed with a meteor and with Dinosaurs wiped

(1:22:03) out any sufficiently earthlike Planet will grow dinosaurs first which means in any Planet not hit by a meteor I think the tradon which is a velociraptor big brain opposable thumb goes Interstellar first the reptilians guys they're real confirmed here Brad's confirmed the reptilians so but then like you know and but any species that becomes Apex on a particular Planet given

enough time they could go Interstellar so you have like what what's the contact or the inter you know the one where um anyway like the

(1:22:42) octopuses could be octop who knows yeah Ral or or insects who knows you know just kind of just depends yeah District n yeah there they have a movie for every single one I think at this point yeah so I mean at the end of the day like it's and it's it's plausible and this is where I sort of started kind of trying to freak out a little bit because or not really freak out but in my head I was just like wow that's really crazy was there might be a prime directive like a real prime directive yeah like treaty

(1:23:11) which could be a treaty that says hey we're not going to put our thumbs on the scale and and we're going to let everything the chips fall where they may and you know we're just going to we're going to see whoever you know whichever species yeah and so we could be coming you know and the national ignition facility um very recently just you know achieved Fusion if anti-gravity works like I think it does then we've got Interstellar travel we've got time travel and so we might actually be

(1:23:43) getting invited to the Federation you know at some point Galactic Federation are you a believer in in the Galactic Federation uh stuff well I mean after I sort of independently figured it out in that episode the real Prime directive yeah I mean I think it's possible yeah I think it's I think it's likely right like well like to your point I think that the idea that this technology I think that what people to realize is the difference between an invention and a discovery right is that a discovery is

(1:24:10) inevitable it's just a matter of when people are going to figure it out so to your point of the prime directive it's like if uh you know Quantum field Theory unification theories which I think open the pandor box for anti-gravity and everything else including portable C Fusion you know Etc free energy is uh a discovery then I could see there being a prime directive where it's like it's time is Just an Illusion anyway so why would you even need a tip of scales it's like a question of okay let's just see

(1:24:39) which races have the level of Consciousness required to not destroy themselves because what comes along with all those positive things like free energy uh maybe medical healing stuff like that is also potential weapons right and I personally the belief that if uh the firmy Paradox is is true and that we can't see any other species which I'm not 100% convinced of but if there is nothing else out there we see then I think the big concern is is there a discovery that's so big that most civilizations wipe themselves out and I

(1:25:09) look around in our planet how divided we are and I think back to this weird letter that I got that said that this type of technology that we see in the videos that we're kind of talking about now uh that any two Waring factions that got access to it game over right someone's going to destroy the whole planet because this is not just shooting a nuclear weapon at people I watched this video on Twitter you've probably seen it like the last couple days where they they show what our reaction to **Russia** would be and we're shooting all

(1:25:34) these nukes down on them over and over and over again I'm sitting here going uh no I think we just press one button and goodbye whole planet right that's the real the whole the real risk in my mind and that's what I think would end our civilization uh before anything else nuclear weapons or or what have you but that's just my opin any species that made it to any future humans that made it they would know what technologies unify us right they would because they made it they would know what could save us and that brings

(1:26:11) us full circle back to what I think MH370 is all about so imagine this we we if the humans who put us here can poke us and prod us in the right direction technologically and all that kind of stuff by planting little you know Little Gems for us to find Technologies for us to you know like Muses right um we pick up these Technologies and it kind of brings us together that's what I think MH370 is all about it's a Plane full of people who were planting IDE ideas and Technologies and all that kind of stuff and when their job's over where do they

(1:26:59) go back home that's creepy maybe to the Future right that would be a really dark Twist on this whole m370 stuff that's why why I wanted to talk to you about it because if I'm right if those little balls are quantum Echoes right which means the quantum Echoes are going exactly far as far into the past as MH370 is they're in the future right and their Quantum Echoes are zipping around that means there's massless orbs zipping around empty air right but they're they're zipping around the plane in the

(1:27:35) past so if there was a big mother [REDACTED] right that moves over and contains those three orbs inside its hold right and then spins up its anti-gravity right creates its masshole throws its mass into the past if the empty space of its hold Goes Through the Wormhole it could scoop the whole plane as its Quantum Echo drops into the past and as it passed through as it passed through the Hologram because if if if now is the present resolution and it spins up its anti-gravity field and it goes into the past like it's it's

(1:28:22) it you know it's its mass occupies essentially a a lower resol or a higher resolution in the past as it goes through it would scoop that plane right out because it knows the plane is in that spot on the Hologram because it's the the actual massless orbs are inside its hole and and the quantum echos of the orbs are all around the plane so if it's if it's got the MH370 if it's got mh3 70 right in the middle if it's like if the Hologram where MH370 is is right there and it knows that because the orbs are spinning

(1:29:02) around in the in the future because the quantum echos are spinning around the plane in the past when it spins up its anti-gravity and it drops its mass into the past I think it could scoop that plane right out of uh right out of our essentially our time yeah local time and then it would be captured inside the quantum echo of the of the of the big plane and then or of the of the massless craft and then it could set down and it when it killed its field it would renormalize now I think it if it did that it would probably release a massive

(1:29:40) gravity wave right because it would have to cancel the positive energy that it would be bringing to its time because it brought the plane from the past right so you can't add energy so I

think it would counterbalance it with a massive gravity wave release and if you if you listen to a podcast episode I did called the um the madman's curse I I document or I I I lift the audio from Kelly Cahill which is a a UFO experiencer in Australia and she described exactly that when she got abducted and there were a

(1:30:20) bunch of people there and there was like medical reports and everything it's like the most credible abduction story ever it's one of the most the most credible backed up abduction stories I think that we've seen um it's called The madman's Curse if you listen to it but she describes when the craft landed in her you know in our time and and essentially renormalized you know the aliens came out um that spoke English by the way um she got hit by a massive she felt this like massive gravity W go through and a

(1:30:55) horrified her um but I think that's what happens um to balance the energy like you know something that wasn't here before like shows up but if you listen to that I mean but it's consistent with kind of all that but that's what I wanted to tell you that I think that the quantum Echoes of those orbs that are zipping around MH370 in the video I think you're seeing Sunset Through the Wormhole um in the future and that's where the that's where the I think the misimpression of the flames and Fire

(1:31:24) fire came from and I think when you see that thing just completely just disappear I think that's the hole of a much bigger ship that just went and scooped it um and I think that like we were talking about before the reason is because it was time for them to go back to the future because they've and and so and that's why I told you I don't remember like a few months ago when when I I suggested you or I dm' you or something I was like like I think the key to MH370 are the passengers who were they what were they

(1:32:03) doing what are their backstories and because if they're all like crazy ass brilliant scientists a bunch of the word it's weird yeah okay dude I didn't know that but I'm just saying that right now scale semiconductor scientists I mean it's that's the motive 100% like 20 of them we found out they were sitting next to each other on the plane which is like hey that should have triggered if they if they got booked together by the company that should have triggered a red flag so that's too many people several

(1:32:32) of them brought their entire families with them which is like are you kidding me I told you okay so yeah you should you should read I'm talking about yeah that's exactly I think it's an interesting Theory because you know my mental block to it is the idea of time travel right like I just I'm trying to explain it in a way that's like doesn't break my perception of reality it I guess and so the time travel thing is the hardest thing but if you do I think the thing that's kind of rings true

(1:33:00) about the time travel theory in general and future human stuff is that if we can move faster than the speed of light and there is some type of uh time travel becomes possible then that is dark right because that is now we're talking about like is retro causality real is it alternate dimensions and and timelines that we have going on here whatever it is that's going to break

people right because now people are wondering like can I go change the past and who knows what the full implications of a lot of

(1:33:27) that are and then like you just said you know what if these people were sent back because I mean this is super dark but like what if our entire Evolution over the last several thousand years right has been Guided by people from the future us from the Future who've been giving us information right and giving us technology and maybe religion you said that they brought their whole families cuz that's somebody who came to the Past who didn't have a family met somebody was here for a few years whatever like

(1:33:58) maybe had some kids whatever and they're like come on let's go we're going back home yeah we're going the future you know I mean so like I'm from the future you know what I mean like that's the conversation where that's literally the plot of Back to the Future too back it's all scientists yeah if it's all scientists and they've got their whole families and stuff now like I mean dude like it I you know it just has to be that I mean there's just there's it just

(1:34:21) nothing makes nothing makes more sense you know you know what I mean I mean it is weird because it does fill the Gap where like and I would say my my belief still is that the the issue is that there's evidence in the malds where the people saw the plane but they saw it at 600 in the morning which is like an eight hour six- hour time jump from when the plane disappeared where based on our evidence and the coordinates in there and I always thought okay well is there some kind of time dilation effect that happened to get the plane somewhere else

(1:34:50) on the planet or whatever but that's not the big thing I have an issue with thing I have an issue with is like did the people survive and I feel like they would have had to survive this event because otherwise you would just blow the plane up right if you're trying to kill everybody there's much easier ways to do it so in my mind some people at least some people had to survive I don't know if everybody did and if the people survive what do they do with them what do you do with all these people right

(1:35:12) now if the answer is they went to the Future instead right then they went back to the future back to the Back to the Future T it came from the future right because because this this goes along with what we were saying that that you know if this is a human civilization that was planted here by Interstellar humans then they know exactly what the recipe for getting through the fmy you know the great filter and the fmy Paradox and maybe they're planting Tech maybe they're doing that stuff maybe that's what this UFO business in some

(1:35:43) ways is about and and that's cool and I I think I think that in some ways though I I find that less dark because knowing that it's a little bit nhi put us here you know and and we're a colony there they might be you know trying to incubate us so that we can get to the point where we like you know kind of join up with the Federation and maybe it's a race to you know hurry up and get us to you know to kind of join up so we don't you know so they don't get busted for you know violating the prime

(1:36:17) directive when they hit the planet with a meteor 65 million years ago and wiped out the dinosaurs and what looks slow from our perspective but from the perspective of Intergalactic species looking down on us it would look like we're they're speeding the process up right like to us it would be like oh well that was a total violation of the prime directive it would be a complete violation of prime also be like oh lifetime why would they just give it to us right like I remember this one space that kim.com did I'm just going to rag

(1:36:41) on him because I think he's a little bit uh he doesn't really think about things as intelligently as he probably should he thinks oh why don't the aliens just give us the cure for cancer or whatever right and it's like well no that's not really how they're looking at it right they're looking at it as this like evolution of our whole species at the macro level not as simple of oh we're going to make these people have the longevity or cure for their diseases or what have you from the if from the

(1:37:07) non-human intelligence perspective like this is they're in it for the long game right the long cons isn't just like a we're going to change the we're going to change the whole civilization tomorrow right because it's it's too much shock to the system you've got to slow acclimate them to it and and get them up to speed with the technology over period of time I honestly think that um like microprocessors and the whole miniaturization of technology in general dating back to the 60s and before was

(1:37:31) potentially related to either UFOs or what have you just because of you look at how far we've advanced in the last hundred years and it's I mean you're looking at the curve it's like exponential inre right like I did an episode called Roswell Through the Wormhole and I talked about like I talked about exactly that how we went from vacuum tubes in you know 1947 to integrated uh microchip circuits by December of 47 like we defin how we have ai like now like 10 years ago people were thought AI is like fiction right

(1:38:06) and now we're like they're making like whole movies out of AI it's like you know it's uh it's incredible how much we've Advanced so I think that that that's a very interesting theory in terms of the whole future human stuff it's funny I think that you've given me the best arguments out of anybody today to really make me consider it um deeply in terms of all that stuff so yeah and it's just hard because like what I've tried to do is as somebody who's been like a Normy brain I call CNN brain type

(1:38:33) person in the past it's like I'm trying my best not to jump into every single esoteric aspect of it the remote viewings one's the one I get the most at least early on everybody wanted to know have I seen the remote viewing stuff and this and that and the **truth** of this is this is that um you know I've intentionally not tried to go there because when you look at the M37 videos there's enough going on there right trying to tie more esoteric stuff to it it's like I wish there was less esoteric

(1:39:01) stuff going on it' be easier to convince people that that's what's going that that's what happened in the plane um but you know if the holographic principle is true then I think the idea

of deja vu remote viewing all that stuff comes back into the fold for sure right and that's what I tell people is yeah go ahead and you think about like there's there's things that I think people you know when you think about your brain right synapses firing in your brain is your thinking right it's it's it's

(1:39:28) electricity right it's bioelectricity zipping around well electricity perturbs magnetic fields and there's a huge magnetic field going through the whole earth and so really probably I don't know that anybody's figured out how to read it but right now you know it could be that our thoughts our Consciousness is wired to write with our thoughts we're writing into the magnetic field around the earth you know what I mean like we're literally writing our thoughts into the magnetic field as we

(1:39:59) think because it's electric synapses and there's magnetic field and we're perturbing it it's conceivable that you could alter your State of Consciousness to go into read mode and then you could be reading thoughts like in the magnetic field of the earth and if you think about it that way it's not totally imp aible those stories of you know something terrible happened to someone I love that I'm so connected to or whatever and you know like you know sister or whatever and then and they

(1:40:36) they just know that something happened you know because you know maybe they're extra sensitive to you know you know those waves or whatever that were etched into the magnetic field by their sibling or who knows all saying is that things that are woo tend to become less woo when if you just think about the technology if you just think about basic sort of fundamentals and first principles it's things that kind of seem magic before really aren't all that you know magic and it it kind of comes back to

(1:41:20) what we were talking about earlier when like I think I have anti gravity and I tried to build my fifth generation um anti-gravity generator and the motor started melting right there's a difference between getting the theory and understanding you know essentially you know how air foils work but then being the right right brothers and being able to build the plane you know what I mean yeah it's a difference between like yeah and I what I equated to is the idea of like the theoretical physicists who are

(1:41:52) understanding the concepts versus is the actual Engineers who are putting it together right and it's funny because I've interacted with both and the physics concepts are very elegant and and be have this beautiful kind of symmetry to them right but then it's it's a little dirtier when you dig into the actual engineering of it and seeing how it all plays out you know and so it's kind of like trying to figure out where the the line is between those things that weaves them together you know and I think that's it's a little

(1:42:18) bit fun to to figure out in general um and yeah to the point of the magic stuff you know I think that the thing I tell people is especially the Skeptics is do do you think that we're at the Pinnacle of all technology right now I think it would be extreme huous and ego to think that we've got it all figured out right now in 2024 on this planet especially looking at how far we've

already progressed in the last hundred years you know I think that if you were to give the caveman the iPhone right or if you

(1:42:47) to go back the the Salem times they're going to burn you as a witch if you show them your iPhone right they're going to say that's black magic right um because yes like the sufficiently advanced technology is indistinguishable from Magic and when I first saw the mh37 videos 370 videos that's when I went you know my first ontological shock that hit me was like this can't be possible right and then you dig into it and you start looking at the science and you go wait a minute this this does check out for me I

(1:43:13) think I was already just far enough to be able to accept it where I had looked at the double slit experiment I had watched enough PBS SpaceTime uh videos right where I'm going like wait a minute there is something going on that we don't understand related to higs field and non-locality right there's there's something there we can the Double C exp proves there's something magical about our universe that we don't quite understand with our current framework right and I wasn't I wasn't really ready

(1:43:40) for as far how far we could possibly be Advanced because you know if you listen to my investigate Earth podcast which is the very first one I ever did like I was actually like almost panicked because I'm sitting here talking about like there's got to be non-humans visiting us thousands of years more advanced right because I just thought this is so us and that's funny because it kind of lines back up now with what you're saying and and then I went away from that went more towards like no we could have this but

(1:44:04) it's like the military knows and has this and it's like a hundred years or more advanced and where we would be publicly um so I do think like I the **truth** is I don't really know what the nature of the UFO stuff and phenomenon is but my mind is wide open at this point right like I'm I'm ready for just about any dark answer that they could throw at me whether that's we live on some kind of Prison Planet uh where maybe our souls are being harvested who knows maybe the Mormons are right right

(1:44:30) or you know or was it Scientologist the I forget the Mormons I forget are the one where uh he reads the the tablets is it the Scientologist or the ones that are thetans are being you know absorbed from a alien species or something like that in a volcano I don't really I don't remember at all but um it does make me think the extent that there's more alien species out there that that you know they could all have degrees of **truth** no exactly that's it right it could be don't know absolutely and and I I think

(1:45:02) like I don't know I'm I'm more hopeful like and you know you you mentioned earlier about oh you know you know about the Mandela effect and all that kind of stuff for me a lot of these things like the answer is no like because I was very I was very sort of engineering methodical and I'm like okay they can't have mass okay what causes Mass it's the higs field okay how do I get a hold of the higs field it's left-handed electron you know what I mean and so and how do I you know deliver energy into the higs

(1:45:31) field I'm gonna oscillate these left-hand electrons with a you know with a harmonic signal high voltage and and it was like so I knew exactly or I I learned exactly what I needed to know to sort of back into the anti-gravity solution and so just from observables and first principles that's and so but then it was you know as I marinated on this that's when sort of The Theory of Everything started to emerge for me that's when I started oh real prime directive oh you know and then I started seeing hey look I'm talking about

(1:46:09) graphine and hexagonal structures and there's Tom Dong's uh to the Stars Academy uh UFO fragment that's uh nanolayered bismuth magnesium and zinc I'm like okay that totally perfectly fits what I'm talking about here from Dr Lawrence E from University of Nottingham 2008 where he's talking about you know essentially hexagonal crystal Itis is how you fill a magnetic field with left-hand electrons to create anti-gravity well he didn't say create anity that was me but so I think there's

(1:46:37) a connection there to room temperature super conductivity by the way because I was reading so I've been reading so many papers about it and one of them has to do with specific lattice structures crystal lattice structures which will allow the electrons to flow freely without bumping into uh any atoms right and that's what zero resistance and I think that there's a connection where that's what you need that's the effects that you need to produce in order to get the anti-gravitational stuff to work because everything is like

(1:47:04) uh vibration there's resonance right which is also important it feels like you have to you have to yeah exactly yeah so the way it works is this so you have your magnetic field lines you catch all your left-handed electrons in there and resonance is like what you see it's when the loading frequency right like bum bum bum bum matches the natural frequency of the electron vibration and so it's like we need to build 246 gigon volts into the Hig field by shaking it into that electron and it's a lot like pushing a

(1:47:44) kid on a swing there's a certain frequency That Swing goes out and comes back and we the only way we could do build that much energy is by pushing exactly when the swing comes back it goes out it comes back we push again it goes out it comes back we and and if we can time that essentially that harmonic pulse with the frequency of the oscillation in the magnetic field then we can essentially Jack and push that kid and like dump him out of the Swing right because we build up so much energy because right when he swings back we're

(1:48:17) pushing forward if he was coming back in and he was like halfway in and then we pushed we would screw it up we would like we would like yeah well I think of it like our energy using sound right like the resonance yeah so the resonance is when you match the pulse with the natural swing of that electron in that vibration and when you can do that when you get that resonant frequency which is the you push it goes out comes back you push it goes out it comes when you hit that resonant frequency that's when you

(1:48:47) can build Limitless energy into that field to that electron because you hit that resonance where it's coming right back and you're pushing again it's coming right back you're

pushing again so you have to hit a resonant frequency to do that because we can't generate enough energy you just in one like punch you know it's let it build up it's the same way like another analogy would be for people to take baths next time you take a bath start rocking back and forth right you'll start to realize that like

(1:49:19) there's this resonance to it where if you get in resonance with it like you there's you feel less force and then it starts to build up and then all of a sudden the water starts pouring over the side of the tub right yeah if you don't go in resonance though then it all falls apart right where now all the waves are going everywhere else right it's you can actually feel it with your body and feel the resonance back and forth right it's pretty crazy and that's how I think of it in terms of the small scales yeah go

(1:49:42) ahead no totally yeah so that's that's just it and so the experiment for the vuse anti-gravity engine was to take [REDACTED] and badges here guys and so but yeah but essentially you know create the magnetic field and then and then send a signal through the disc and if the motor didn't melt like then what we would have been doing was playing around trying to find that frequency um trying to find a frequency where and and you take the whole thing I take the whole thing I put it on a scale and turn it on and when I find that

(1:50:15) frequency I'll know because this the the weight of the of the uh of the whole rig you know it'll get lighter yeah if it works like I think it is and that's the that's the upshot of the experiment and and I think you know ideas are great and all that kind of stuff but if you can't build it you don't have it and if a theory isn't any good unless you can test it and so and so that's why like I kind of fearlessly will talk about how I think our Consciousness on the 2D holographic surface of black hole and

(1:50:52) our Consciousness competes for the energy on the black hole that SpaceTime uses to move the Hologram because I can test it and you know when I get more time or whatever you know when I'm older and I don't work anymore you know man I'm gonna I'm do I have all kinds of experiments I'm GNA do like you know time dilation all that kind of stuff and in my podcast I talk about what the experiments are that we could do right now and so like when I applied to arrow and I said I said hey I think that you

(1:51:19) know you know essentially you know the the government's been essentially laundering money and doing things that Congress hasn't you know authorized you know these UFOs and Technology been collected and it's illegal and possession or knowledge of it is essentially tantamount to an admission of guilt and uh nobody is gonna tell R anything or participate we're never going to collect all the stuff up unless if people are going to have to do that against their penal and financial interests and all that

(1:51:50) stuff and so I told them that if they hired me the first thing I'm going to go do is I'm GNA everybody's going to have a chance to to uh tell us what you know give over all your stuff and if you don't like believe me the FBI they're coming you know like there's going to be a time where you know safe Harbor's over and you know we're coming in with warrants and we're

coming to get it and so it's going to be we can do it the easy way or the hard way and so and so what I said and there's there's

(1:52:18) legislation that says Aro could give everybody who was involved the free pass it says it it says you can be a whistleblower and you can't get in trouble and so and and and bottom line is is that you know we could test this if in fact these U UAP and UFOs are are are are our Navy or our air force in the future our future Air Force zipping around in massless craft we could write I told this is what I told him I said first of all that tells us that we militarize this technology we militarize anti-gravity and we have it so that's

(1:52:54) good right so we know that like you know we've got at least however many years that you know our country you know we're going to be here I said but um and it also says you know if we want to collect intelligence and see where our adversaries are on anti-gravity we ought to be checking out their Flight Training areas their you know military Flight Training areas are there UFOs there too because you could gauge who's ahead in anti-gravity technology by you know the relative density of UAP sightings in

(1:53:22) their uh military Flight Training areas so say like um just sorry that's what people say stuff like you know why are all the sightings in America right well first of all like it's probably a database that's in English and so of course most of the sightings are going to be in American and English database but the other side too is like what if most of them are our technology right then of course you're gonna see a lot if you get there first we're gonna have more of them first but I have to say about your arrow thing

(1:53:48) though is real quick is that don't get yourself boinged if you know what I mean uh well you know in some ways it's part doesn't go well for some of these third party contractor whistleblower guys I don't think I mean well I don't have any classified information and but what I told them was I said look if it's us in the future what we do is let's the RO director should take a policy to the president tootus and say hey sign this which will prescribe corridors and zones for massless craft for our future

(1:54:20) massless craft if it's on in the future it becomes a time capsule to the Future and we would see today those craft conforming to whatever's in that policy in fact they're probably already doing it we just don't know because we didn't write the policy yet so like you could prove and so so what I'm what I'm telling them is like look I'm giving you ways to prove this right now call me crazy if you want I don't give a [REDACTED] but I'm I'm I'm giving you techniques I'm giving you

(1:54:52) tactics and strategies so even if this was in my cover letter so even if they don't hire me like if they have a brain then whoever takes the job will do this because it's ridiculous you could you know you you hear like un certain Vector Graves um talk about you know threats to Aerospace to civilian aircraft and stuff we could fix that right now by writing a policy if I'm if I'm right and if those you know craft in uh the Navy flight training areas are real or our future massless craft we could write a policy

(1:55:27) today that says here you got to be here this altitude or whatever and we could restrict that airspace for everything else boom problem solved like done right I mean if it if it's true then that you know we put it in a safe that goes to the Future and if everybody follows that in the future we could look and see where all the you know the sightings are and stuff we could prescribe where they are in fact we could tell them where to go so we could study them so I mean there's there's there's a lot of things that we could do actions

(1:56:02) like concrete actions that we could take to Define some of these isolate some of these variables and solve them and that's what I put in that letter in my cover letter that was like you know we need to get to work and we need to stop you know you know we need to pull our thumb out of our ass and stop trying to like you know tell people lies that nobody's buying anymore we're just we're just too smart as a population to eat [REDACTED] like that anymore I mean we just know better and so yeah we and we need

(1:56:34) to restore faith in government you know I mean let's have Smart plans let's execute him with confidence and integrity you know what I mean let's I mean because imagine and other thing I said was that right now with this all this you know Cloak and Dagger [REDACTED] you have people who know their committing crimes and the enemies of this country the adversaries of this country can leverage that to extort them I'm Sor because the fear of getting pinched for you know violating Federal procurement law and all that kind of

(1:57:06) stuff that could be exposing our national security to our adversaries who could leverage that to Blackmail people to give them the secrets or whatever so we're really cutting our own dicks off if we don't kind of unify and pull together you know you know kind of approach this with Integrity get it back under Congressional control with the right you know security classifications and all that kind of stuff I'm not saying you know blurt it out to everybody but I am saying we need to pull our [REDACTED] together

(1:57:39) and kind of get on you know you know get on the same page you know and and you know unify that's what I think and so I mean I don't know if they're going to take me seriously or or not but uh that's I have a bad feeling that the bad guys already are in control so it's pretty unlikely they're going to allow themselves to be exposed but the other thing I would say if they have if they have AE if they have a free pass if they can if they can all become whistleblowers and then they won't get

(1:58:08) [REDACTED] give them some yeah you know the only way right do it I mean like some of them probably deserve to [REDACTED] go to jail for a really long time but you know what if if that's the way we want to go then count on not getting anywhere exactly it's never going on to happen if we don't do it right we we just got to suck it up we got to say okay [REDACTED] fine all right but you know give us the stuff and you know then we can move out because right now I we have so few I don't know I mean you know I mean we got

(1:58:38) we got we got I mean we you know I think we s is on it like he's you know involved whatever but man if like you me and sa got together we could [REDACTED] we could blow some [REDACTED]

up you know what I mean no definitely get some get some more like and then if any feds listen we don't literally mean blow something up so please don't arrest us yeah no no no I mean I mean we could blow it up we could totally dominate we could you know we could no I think that's what's important about making these connections

(1:59:02) right now too and I gave Arrow a bunch of verifiable information like you know about the plane situation the evidence we put forth said here's the leaker go talk to him go figure out what this guy was thrown in prison for right if it's those videos that's it right that's all we need you know then you can prove we've got some anti-gravity technology because those videos are showing anti-gravity technology whatever the nature of that is right I don't know they can figure that out but we've given

(1:59:28) them that uh gave I said here's two videos you know one's an mq1 C gry Eagle the other one's some kind of unknown satellite capabilities which we think is a mixture of sentient AI that manages the satellites and cers space based infrared system you know that's all verifiable stuff we even gave him the general Lieutenant Joseph F or sorry **General Joseph F Dunford** right which I don't appreciate like you're a veteran so I appreciate your service um it doesn't make me proud in any way to be

(1:59:55) exposing our military and stuff like this because I do think National Defense and security is important but this goes well beyond that right we're talking about technology will change the planet here like change the whole planet um and that's the part where I think it it does borderline on crimes against humanity but then you know to your point I did an episode called who watches the Watchmen and it's essentially it lays out because I'm a a Jag and so I lay out what all the laws are what IGS do how they work and I

(2:00:26) essentially map out exactly now I haven't talked to Dave grush I'd love to talk to the guy but essentially I called exactly what I think is in his report you know the reprisal that he's talking about what makes it a whistleblower I talk because you know some people like oh he's never seen any of it or whatever if if you're if you're at all interested in the mechanics of what it means to be an IG whistleblower and all that kind of stuff and and how we know what he's saying is true check that out

(2:00:58) it's it's called the who watches the Watchman and I put in uh all of the it it's kind of long but it has all of the hearings and stuff so you actually get the audio of the Congressional hearing so you can hear everything and I kind of unpack it as you know as it goes whatever so um if you if you if you if you're interested in that man think about checking it out appreciate it yeah yeah no I think we should probably wind down here but it's been a good uh two-hour discussion that we've had Brad

(2:01:27) and can definitely do another one in the future at some point for sure but I want to keep up to date too on any your um experiments that you're doing in terms of uh the success or failures you know I just think that either way it's a learning process and and getting better at it and like you said you know since in my opinion I'm a person who learns by doing as well so I

think that you can't get um you know disenfranchised if it doesn't work the first time right you just go back to the board like you're

(2:01:53) the type of person who you've seen the answer right we know UFOs are real so we just have to figure out how they work you know videos you know I think these MH370 videos are undisputably real in my opinion so we know how we can see it and then we just have to figure out you know how it works and I think the reason why everyone's so interested in talking to me too especially people like you who are like people who are Engineers uh or people who are scientists physicists it's because they look at they go this

(2:02:18) matches up with what our you know theor is of how the stuff works right and to me that's probably some of the most compelling evidence part of the reason why I think they're true not to mention just the fact that I've had literally people like s and Dave come out and S hasn't specifically said he thinks they're real but he's gone about as close as you can go right without potentially risking jail and and Dave actually multiple times said he does think the videos are real you know he there's no way those videos are not real

(2:02:46) and here's why yeah in order to be an original Faker like you know the Mona Lisa is there right like anybody can say oh I copied the Mona Lisa that doesn't make the Mona Lisa fake you know what I mean exactly that's funny because I use that exact analogy but yes oh really I use that exact analogy I said I can copy the Mona Lisa people can copy it but this is an original work right it's like who made the original right that's and see here's the thing if you were the original Faker right if you're the

(2:03:17) original Faker that means that you had to know exactly what the heads up display of the Predator looked like you had to know that there were you had to guess right cuz it's fake you had to guess that there were three orbs zipping around it you had to guess the exact coordinates that would match like the Telemetry and everything and so already you know the nerd in his mom's basement making this fake video there's no possible there's no mathematical way that it's that's even close to possible

(2:03:52) to fake all of that technical [REDACTED] then there's the satellite feed that matches the exact that that that the original Faker could never know about yeah they don't know capabilities exist yeah and it and it's showing a different angle that totally matches the video also has the three orbs and they both go and disappear at the same time how about the converging part at the end like what a weird DET and the lines that you mentioned like that can explain how you could use actually propulsion yeah like you said with the microwave just

(2:04:27) using as your directed you know uh there no I've never seen any UFO videos that show anything like that right the closest thing is like maybe Bob Lazar's explanations but not even that and the part where they converge at the end where that's amplifying the energy as well is I mean that's I who came up with this like Bob Greener literally is on the record saying like I didn't travel back time in the alto University paper that explains these low energy nuclear reactions wasn't even available till after the plane

(2:04:59) disappeared right so like later on that year so the science wasn't even out there in the public realm to even fake the stuff so how did they make it all accurate right so that's the part where it's like you could show me any number of **debunks** any number of oh this Cloud picture matches or we found a stock effect that looks similar and that has no weight compared to the weight no weight at all because there's way for an original Faker to make up all that stuff and then have it match I don't know when

(2:05:29) they found the satellite but then have it match the satellite exactly like and there's no discrepancies like nobody made any mistakes on any frames or anything like that right it's all 100% perfect you know like when people make something they mess up like here or there right and the more effort you put into something the more time it takes but the yeah and it was released contemporaneously with the the the uh you know with the the event so I know it's just Unthinkable and one more thing the engineering is accurate too on the

(2:05:58) plane the capabilities of the plane this is the part where people rag on me for posting uh somebody on **Reddit** claimed to be the uh VFX lead artist for top gun Maverick and they talked about how the hardest thing they actually had to cheat in Top Gun Maverick which was 2022 movie by the way uh to get the speed of the plane because when you scale it down it's very difficult to get accurate engineering to be realistic to what the capabilities of the plane are and people did the math on the the turn on the plane and the turn because you have to

(2:06:26) slow down when you turn right just like you would in a car on a turn sure and the plane's going at like 150 200 miles per hour it's basically maxing out the capabilities of a 77700 in a circle turn but it's also descending and the descending part is also important otherwise it wouldn't be uh accurate to real life so not only is this person a mathematical genius a physicist and an engineer that uh you know knows the science better but they're also mechanical engineer that knows planes well enough to get them accurate as well

(2:06:56) like and they have what military knowledge that nobody else knew it's like and they know the HUD they know exactly what the Predator heads up display looks like this is why the bounty was supposed specific is that like I need the hoaxer to come forward and not just this random guy on Twitter I'm not even going to say his name because it's so sad that claimed that he like uploaded the video to a site that didn't even exist at the time the videos were posted but somebody has to bring the source material right because I want to

(2:07:19) show me what you did to make these videos not just like oh I pulled these stock effects no no show me your exact work leading up to these masterpieces that you created right you're not going to oh I threw it away cuz I didn't care about it anymore I just made some perfect two different Perfect videos to show secret military classified footage but then I decided to throw the hard drive out like come on dude no you would have your you'd have that right 15 grand there's no way there's just no way to

(2:07:43) fake all that and then just just added to the reality that no debris fields ever found dude the thing vanished and so been found one different story right but like they literally never

found a plane I mean like it just there's just no way possible that those are faked just absolutely none and so but the crazy thing is is that I just saw them for the first time you know when you were posting them and I'm like oh look he's manipulating the quantum vacuum you know that looks like it's Quantum Echo

(2:08:16) and it's falling like a tractor beam and you can look up like going back two years you know in you know the you know the all of my essentially the Vorhees Mass effects all those episodes going back two years where I'm talking about how ante grav has achieved how the Zero Point Energy propulsion works it all matches and that's why that's why when I saw those I that's why you know I I DM I'm like hey dude I'd really like to you know talk with you and and have the you know interview you and have the space I

(2:08:48) feel like you've been interviewing me but oh this has been awesome back and forth that's the thing when you're a podcaster too you end up just you can't help but ask other people questions right so it's like yeah I've got I've never interviewed any you're the first person I've ever interviewed I don't interview all of my episodes are all monologues oh well this has been an awesome conversation back and forth uh Brad I I really enjoyed it so let's uh yeah we can uh we should definitely do

(2:09:12) something else in the future we'll plan something out maybe we can do like a little panel discussion about either similar topic or something else I just think um you know I like the way you think about stuff where you have definitely have an open mind and a very scientific background on everything and so you know it's just it's it's fun to have a free flow conversation like this I've had a great time tonight yeah me too thanks a lot and thanks everybody for watching yeah do you want to plug anything I mean I

(2:09:37) know that you're technically the host but I'm gonna post this up live no tell everybody what you know what your **I want you I want you** to plug something but okay I'll plug something first so I'll do mine my yeah you guys want to follow me it's just X Aston on Twitter or on YouTube also the hard **truths** podcast a lot of the stuff Brad's been talking about here you can hear on the hard **truths** podcast with Salvadore Pas Bob Greener Dave Rossy I had Timothy Abino on which he's super smart guy awesome to

(2:10:06) talk to royy Herbert and I've got a new one dropping as well with uh Martin Gibson who has a unification Theory as well so um you know the science is is crazy so anyway I appreciate it Brad yeah man awesome and yeah I'm at Brad V the you Sonic gravity is my podcast it's Sonic and then hyphen gravity.

(2:10:29) us um and uh yeah I just I really appreciate you uh going live with me this is my first time and my texts all screwed up I couldn't play any videos and stuff I'll sort all that out because uh and I'll post some links and stuff so you can see that I'm just like when it comes to the holographic principle and all that stuff I'm not making it up you know I mean I didn't think of it was like you know Nobel Prize physicists who did um and watch uh watch PBS SpaceTime with Dr Mano d man it's awesome definitely send

(2:10:55) me those links later I'll post them on the YouTube as well all right cool all right see you everybody thanks for joining us thanks everyone see you Ashton

Ocean Ultraterrestrial Hypothesis - YouTube

<https://www.youtube.com/watch?v=5CTUjZwY7wY>

Transcript:

(00:29) e e [Applause] [Music] [Music] [Music]

(01:59) [Music] [Music] mayday mayday Open Door stand by baruda 01 baruda 01 launched maintain radio contact [Music] [Music] Barracuda 01 to base approaching Hyperion or at least what's left over I'm going out there take a look okay Jake be careful airlock clear oh my God oh my God God help Jake Jake you read me Jake get me out of here

(03:07) Jake hey everybody how's it going uh we got our flashy red light we're doing it tonight um okay gotta get the mood just right for tonight's live stream yeah spooky intro if you guys don't know that intro that is uh terar from the deep one of my favorite strategy games from the 9s uh it's a sequel and is relevant to what we're going to be talking about here tonight we're going to be talking about ultraterrestrial hypothesis from the ocean specifically um the reason why I decided to do this stream is that we uh there's

(03:50) been several different things that came out recently regarding stuff that's being edited in the uh by Google in the ocean and we're going to look through uh the various evidence uh for the ultra terrest hypothesis that's been out here uh for the last probably few years but we we we'll look at whatever we can find out there I will encourage the chat as well to jump in and if there's anything else you think I'm missing to uh you know let me know and we'll go over it okay we're going to just we're going to

(04:22) keep this uh stream uh as high and tight as possible meaning we're going to try to focus on uh the task at hand here and see how it goes um uh but real quick let's switch over to full screen I'll answer a few quick questions um in regards to MH370 do you think there was any sound made at the time of the zap yeah I think some people looked into it we couldn't find any detections of any sounds or earthquakes or anything like that that was consistent we tried oh Boston deadhead says I'm a huge

(04:52) Shadow run fan yes I'm also a huge Shadow run fan as well um it seems to be based off of a book uh I can't remember what the name of the book is but I read a book and it was like basically the precursor to the game Shadow run cheers everybody we're Martini in it up I'm getting better at making martinis if that was even possible but it is also just say quick hi to

everybody James PJ Mike Billy Brew Sandy skinny Bob BBC verify Boston deadhead welcome JL uh braa Brian Justin channels rotary James

(05:29) Pig James if you're out there hello holiday tracks Sam I think I already said hi to Sandy um Danny what's going on Bulldogs gaming my channel okay and we will get more into science in the coming days also I'm going to be trying to do probably be doing less streams so that I can focus on more content and just reminder I do have a normal job so this has been a lot of work also if you see this shirt uh it's because I did two podcasts today so you're going to probably see that shirt several times

(06:01) and one second yeah I could have changed my shirt and you know had it not be weird but honestly I just don't care um but yeah some good podcast should be coming out uh one that I did in the Foxhole with uh George Howard and Bob Greener and Paul stolkin which was pretty good now let's get dig right into the task at hand guys so I think I've been clear about my personal opinion everybody's allowed to have their own personal opinions um but uh the ultraterrestrial hypothesis would be the most likely in

(06:39) my opinion if there are aliens out there which would be that the aliens come from our own planet and they're probably like our cousins or something like that right perhaps even indistinguishable from us and if that's the case then it's pretty unlikely that they're hiding in the mountains or something right so that would be like kind of like Bigfoot encrypted to me the most likely scenario I'm not really a hollow Earth believer but who knows these days uh would be the oceans we know very little about the

(07:09) oceans so what do I want to start with I want to start with what's this I don't even remember pulling this up okay uh okay we I want to start with the for Chan leaker and I'm not going to go through the whole forchan leaker thing uh in fact this is probably not the one I want to go with um I have a better link let me pull it up real quick chat um so that we don't have to sift through all the responses on forchan here it is let's get rid of this this is the same post but this is all the responses

(07:59) now the forchan leaker if you're not aware of it uh Hey Gerald how's it going uh is this post here that was post on forchan back in April of last year and they claimed that they were part of Crash retrieval program and some of the stuff they said was pretty bizarre um we think there's a construction facility that's been around since at least 4,000 BC wow um and the main arguments that they make in here is that they can make they can gravity manipulation the constructions driven by AI that they can wipe out and and

(08:38) Destroy and just basically disintegrate anything that comes too close which is what we thought related to the videos early on or at least that I did um they say that they are there's one of these construction facilities that never leaves the bua triangle this was kind of a weird um crossover event between the Bermuda Triangle and UFO ology as well and that they were only familiar with one but they think there might be more than one of these underwater bases for example and that they produced the UFOs to spec so that's pretty much the last unit

(09:15) we saw approach the facility didn't even have time to communicate they were being attacked before it was over so pretty wild stuff hey UFO Hunters how's it going um let me see I think that's pretty much the the main gist of this but I'll throw this in the chat if you guys want to check it out yourself feel free to read it I think there was one of the more compelling ones just because of the way they were able to answer questions in real time to people I think that's pretty impressive um and at this point I think

(09:48) we're we're very certain that gravity manipulation is real uses something called scalar physics the key is uh re understanding Maxwell's equations specifically about the B field uh that it does not equal  $\nabla \cdot \mathbf{B}$  the B field times the del operator does not equal zero uh it just actually equals the a field um which then allows you to manipulate gravity through uh magnetism and electricity so if anyone wants to know the math and the science there you go I just gave it to you uh I dare anybody to prove it wrong okay now why are we

(10:22) bringing this up why are we talking about weird underwater stuff guys let's go ahead and go to this post post that was made yesterday right and this one is really interesting because somebody uh Kelly Chase here says they scrubbed the underwater anomaly off the coast of Malibu I remember hearing about this underwater anomaly and the weird part is there's been a lot of claims that like Catalina Island and there's like a trench like right outside Southern California that goes down as well which when we looked

(10:57) at when you look at it on Google Earth you would see like these weird lines and stuff like that now this one I don't remember exactly how long ago this was found um but the image this is the best image that shows it I mean look at this what is this like compared to everything else it looks so smooth and then here I don't know if this was an artifact of the angle but like this looks like there's like a structure right this almost looks like a structure and just to be clear I'm not saying that any of this stuff is

(11:28) necessarily true but I think it's interesting to investigate at least you know we can spend an hour on looking into it certainly worthwhile uh and so yeah this structure here is just bizarre but the weirdest part is for some reason Google has censored it now they've blurred it all out look at this they just literally blurred it out and I've noticed Google has been doing this for a lot of stuff where they blur it out to me that's a giant red flag why are they BL blurring stuff out at all whoa Tracy Scott Tracy Scott has

(12:08) been one of the biggest supporters of MH370 and has been respectfully pinging a lot of people asking them to look into the evidence and I just want to let you know that I appreciate it Tracy I've seen you in the chats I've seen you in the replies um it's even a little bit awkward because the way that you ask people so nicely it's hard for them to to say much in response you know so Tracy Scott says uh 30 30 pound I believe that's pounds donation uh which is a lot thank you my love to all and

(12:43) thank you all on MH370 as you've helped me fight for **truth** to all that don't believe take a stick and play where the sun don't shine and research happy hug face thanks Tracy that's

pretty awesome um so yeah I appreciate your support uh just as a reminder you know I don't need people to donate but if you do obviously it's very thank I much appreciated I'll put it to good use put it to finding the **truth** uh and improving our our production qualities to be able to get our reach out to more and more

(13:16) people honestly um so thank you very much okay uh fanf funding live chat okay I switched it over to the live chat so yeah thank you again one more time Tracy Okay so they' blurred this out and when we look at all the images you can see how it used to look right like this is very clear this is not a situation where they've blurred it out because they messed up it's not blurred out because they had like different frames stuck together when you look at this here as well especially the non-blurred out version like look at how

(13:47) the land like you can see the ocean here like sinks naturally here and then it gets to this spot and there's just this crazy anomaly here right like this should right here be where the ocean where it sinks down right along this this Ridge here for some reason it sinks down and it comes back up so if there are beans how crazy would it be for them to be this close to the to the land right what if they're just like a couple miles I don't even know if this is a couple miles this might even be like a mile off the coast and the

(14:22) thing is the water levels here if you look into it and I actually dug deep into this like before any of this stuff happened um the water levels like it just sinks like once you get off the coast like it goes just straight down especially off Southern California so Malibu if you're not familiar this is north of Los Angeles here the Thousand Oaks here all this stuff is like uh I think this is the valley they call it once you get up past Los Angeles uh and Santa Monica you go through the mountains here and then you get to the

(14:52) valley so if you watch some of those TV shows that's what the valley is is this big area north of Los Angeles and then you've got Malibu here um okay so this is pretty weird there's also a video out there where somebody Zooms in on it but I think this this picture we don't really have to find that because this picture shows it pretty well here pretty bizarre um I also want to do a quick search for the stuff off Catalina uh what should I look for uh water anomaly Catalina let's see if we can find the

(15:34) images well no this is just pictures of people throwing poison into the water great let's do underwater Oh no so this is the same one so this might just be the same thing uh is this a different one I think this is the one we're about to look look next yeah okay we're about to look at that one next okay so this is our first underwater pretty damn bizarre uh let's look at the next thing okay now this is one too that man guys earlier today I searched for like 45 minutes trying to find this and I I

(16:17) thought I had seen it on **Reddit** but I couldn't find it and then I did find it and it just led me back to a news article uh that was like 7 years old so instead I just decided to retweet think tank because we've made amends we follow each other now so whatever he posts a lot of UFO stuff and some of it's pretty good I think he's one of the better UFO picture video person out

there right he does a modr at least of uh vetting of stuff that he's going to post or not post and we're all on the same side so

(16:52) and what he found is the one from 2017 has also been blurred and I went and double checked this myself because I couldn't actually believe it that this has been blurred as well because I remember seeing this in 2017 and I was like okay I'm going to plug this in so I plugged it into Google Maps you guys can do it right now and you'll see the same blur image it's all of a sudden blurry look at how high definition it was before I even plugged it into Google Earth Pro and I couldn't find it in Google Earth Pro either now

(17:26) I'm not sure what's wrong with the two the um Google Earth Pro thing uh but yeah here we go so uh this comes from this is weird because I thought this came from this secure team 10 people but whatever comes from YouTube uh 2017 and there's this almost uh hamburger shaped thing right now here now this is interesting because of the 4chan leak and also you see it almost looks like a track right here that this thing is in right like this giant track going left to right and a little bit diagonally and the fourchan leak talks about these

(18:07) underwater bases that theoretically would have to be big right now to put a damper on it you can see that there's other anomalies out there like these over here as well so I think you could argue that maybe it's somewhat normal right I mean there are other things like this the weird part about it is this this windy path that you see right where it kind of blurs a little bit right here but you can imagine this windy path kind of comes up here as well right where you can almost argue this thing is like

(18:36) moving along the water cuz this windy path seems very unnatural like what's causing this unless this is some kind of fault line like this is the middle of the ocean right and to show you guys where this is uh crap did I get rid of it uh we'd have to dig around for it maybe let's see um crap I don't have the link anymore either I was going to try to point the put the coordinates in to show you guys where it is but it's somewhere in the Pacific Ocean I believe just like in the middle of Pacific so not

(19:17) sure um yeah and the problem is you can't find it anymore because now it's blurred but so oh uh Chrisley I'm going to say your name correctly yeah here you can see the scale in this picture right here here no it's not 75 square miles this is uh 4.61 km so this is about 2 mil wide 2 miles so it's about 24 city blocks this is huge this is really huge hey yoga with Denise hey Chrisley hey rotary I see you hey Danny um hey newer jot appreciate you guys as well hey dton uh Hey skitso enemy number

(20:00) one yeah where the where is the Bitcoin billionaires to to fund the submarine investigation right where are these man at this point uh Tim pool might be correct there might literally be Bitcoin billionaires out there but why can they not go look at some of this stuff in the water same with the MH370 stuff if somebody's claims they know where it is just go take a boat out there rent one I mean it can't cost more than \$10,000 rent a boat fill that thing up with fuel go out there drop something into the

(20:34) water and go look down there right can't be that hard for some of this stuff the ones especially off the coast of California has got to be super easy right so this one is about 2 miles long the weird lines are what gets me on this one otherwise I was ready not to post this because it's you know we're getting kind of esoteric in some of this stuff now um but when I see weird anomalies that I don't quite understand that's that's when I get a little bit interested don't worry guys there's

(21:04) more um the next thing I want to pull up which I don't have it up here right now actually we'll go we'll do the other thing last what I want to do up do is uh NOAA leaker okay I think this is the one we'll we'll come to this one in a minute okay so this is another one guys there's more as well right so NOAA has asked the public for suggestions on what this could be what the hell are we looking at here strange alien holes discovered in the ocean floor this was 2022 okay the holes appear to be closely

(22:04) aligned regularly repeating pattern tiny piles of sediment are piled around them as well I this does not look like what a creature would make right it's too exact it looks like someone just took something and punctured it along the ocean floor right I'll do it where you guys can see it just like like a some kind of wheel it's like a spoked wheel right something like that let's read this explorers have discovered a series of mysterious perfectly aligned holes punch punched into the seafloor roughly 1.6 miles

(22:37) beneath the ocean's surface which is what 7,000 ft deep and they have no idea who or what made them the strange holes were spotted by the crew of the the National Oceanic and uh Atmospheric Administration no OAA guys remember this term no OAA when I made that other post I said I don't trust the no OA a because this is kind of like NASA it's like NASA for the oceans right if there's stuff floating around in the sky like uaps NASA is full of and they're lying if there's stuff in the water then the

(23:12) NOAA is full of crap and they're lying right they were investigating the midatlantic ridge a mostly unexplored region of the seafloor that is part of the world's largest mountain range the holes form a straight line and appear at regularly repeating distances and they are surrounded by tiny mounds of sediment this isn't the first time that holes have been spotted in the area two Marine scientists from the US marine fisheries service also spotted material holes Hollows in the ocean floor during a dive in

(23:44) 2004 okay so let's look at the Mid-Atlantic Ridge where is that on the map okay so let's just get some sense of where this is at so this is in the middle of the freaking ocean this is middle of the ocean so there's weird holes in the middle of the ocean so where's the Bermuda Triangle Bermuda Triangle I think is gets formed between Cuba somewhere over here actually can we find where beut triangle I guess outside of Bermuda yeah so over here right and then claim in the midatlantic ridge which I think extends

(24:31) pretty far I don't remember how far it extends pretty far over here okay so why is this relevant so this is relevant uh oh Noah yeah Noah I think I said it right did I Noah NOAA um this is

relevant because again going back to the 4chan or uh yeah 4chan leaker another thing that the forchan leaker mentioned when they were talking about their underwater bases is they mentioned that mine for materials at the bottom of the ocean honestly mining in the bottom of the ocean would make a lot more sense first of all you're closer to the center

(25:09) of the earth and the thing about heavy metals is they sink so the heavier metals are going to sink towards the center of the earth right of course they don't all sink to the center of Earth but this would make sense then in terms of you're looking for rare earth metals like gold and stuff like that and we would have no idea like no way humans have no way to mine like that right but if you have some kind of underwater submersible technology mining technology it could make sense this when I look at this the

(25:40) first thing that comes to mind looking at this pattern here is somebody is testing the ground for materials I don't know why that's what I think but that's the first thing that comes to my mind I don't know about you guys the ocean is rich in gold is that true cuz I was just guessing honestly we're going to look that up right now if the ocean's rich in Gold then this is all starting to get super weird uh let's take a look these olives I got are terrible it's why you guys don't buy olives from

(26:22) Target well this is a weird ratio the amount of gold to water there's undissolved gold in the seafloor the ocean is deep meaning Min that gold deposits are a mile or two underwater so yeah apparently well National ocean service well that doesn't tell us anything oh here we go Forbes here we go guys \$771 trillion worth of gold lies hidden in the ocean good luck getting it okay what is God uh ocean waters contain about 20 million tons of gold in them when I say in I mean literally that the gold is in the ocean water the concentration lies

(27:22) in the order of parts per trillion huh I didn't know it's like literally dissolved into the into the salt water that's pretty interesting so it's actually like literally in the ocean huh even more interesting yeah gold dredging who knows so Okay so we've got these weird holes right and we've we have a 4chan leaker we're saying there's huge underwater bases we've got uh satellite imagery or ocean imagery that's being uh blurred by Google uh we've got them claiming that

(28:01) that they mine rare earth materials the other part that's odd is that Ik99 okay so Ik99 the room temperature superconductive meta material that is produced from lead and copper a better way to produce it is using lead and gold the reason why they don't use gold is because it's like a thousand times more expensive in fact how much is copper cost copper \$2 per pound okay copper is \$2 per pound what do you guys think about gold \$25,000 to \$30,000 per pound so it's 15,000 times more expensive 15,000 times more

(28:57) expensive so so uh what JK Philly fan we'll come back to that at the end I'll make a note if that's true wow if if that's true okay I'm gonna write Mak I'm making a note JK Philly fan we're we're going to look we going to look after this and hey Bernie welcome to the chat hey Evan uh yeah feel free to hit that like button everybody so if Ik99 is better at being produced from gold than copper then gold could become one of the most valuable I mean it already is one

of the most

(29:41) valuable but one of the more valuable resources not just the planet but in the entire galaxy right and gold or is a metal that we think if I if I am saying this incorrectly please correct me is uh one of the ones that would take several generations of stars explod in order to produce the heavier Metals um take more and more generations of star deaths and rebirths um to create that's essentially how all the heavier Metals get seeded throughout the universe as we know it is destruction of stars we think that's the

(30:15) only place where the energy levels and densities Etc are strong enough to create higher more more powerful elements we've been on for 30 minutes we're probably only going to go for about an hour we'll see is gold synthesis possible good question uh I think you're talking about like Alchemy for example uh I would argue that if we can achieve enough energy densities to teleport an airplane then absolutely we can create Alchemy as well we can probably synthesize any material that we need now that's a good question because

(30:51) if you can synthesize the materials then why do you need a mine for them if you're technologically advanced enough not sure we don't even have the material Science High Enough strong enough to even begin to answer that question at the moment maybe there's another reason why it's necessary uh Bernie says I'm pretty sure I've actually figured out metal transmutations so maybe Bernie can answer that question uh B uh maybe in the future we will do a whole stream just about that I think that the

(31:34) idea that we can produce metals and what have is pretty interesting Okay so we've done this one now here's another one and I think there's more like this but there's a lot that have weird lines like this like looking at this this does not look natural right and this is from 2009 now I don't think we're looking the LW city of Atlantis here but when we look in the ocean and I see weird lines like this in a grid format it does make me wonder right cuz it doesn't look natural what looks

(32:07) natural is stuff like you see in the left in the top left in this image in the bottom left of this image right smooth uh Hills and Valleys and Peaks rarely do you see like grid formations like this and this is why they're they're arguing it's a LW sa Atlantis so UK tabl the sun has an article claiming that someone found Atlantis using Google Earth as someone's personally interested in okay um however a grid of crisscrossing lines the size of whales buried 3 and 1 half miles underwater which is 177,000 Ft so this

(32:42) is very very deep guys there's nothing to sneeze at Mother Nature does not make straight lines intelligent beings make straight lines these lines are apparently 620 Mi west of Morocco near the Ary Islands so 620 miles west of Morocco oh I think I remember looking at this too so these are out here somewhere as well these are the Canary Islands yeah so these Canary Islands so this probably somewhere out here where I got my mouse right pretty far out here there's some pretty tiny Islands out here as well

(33:29) so all of a there's some weird straight lines out here off the coast of Africa um and so this is just another example where there's weird stuff in the ocean right so at the end of the day uh the question is what's going on in the bottom of the oceans we know very little about what's happening in our oceans and the oceans are very deep this is 177,000 feet so we're it's going to take us a long time to get down there and check it out I don't remember what the depth of the the Titanic is but we'll Google that

(34:07) right now the Titanic is only 12,500 feet deep and the last sub that went down there imploded so 17,500 ft 3 and 2 miles is significantly deeper than this the pressures start to get huge right it's hard to even fathom the scale of how far deep that is here's the Grand Canyon right the Grand Canyon isn't even halfway that's how deep this is US Navy submersibles only go down 4,000 ft deep which is pretty crazy I didn't even know this but that means like when the submersibles get deeper the pressure is

(34:54) getting too strong for them right this is why I think a few have been lost cuz they sink and then that's game over there's there's no rescue no rescue possible and this is so deep you wouldn't even be able to swim to the surface and even if you could the pressure would blow your eardrums out and kill you that way as well so the Burje Khalifa right here is the tallest building in the world still I think it's still the tallest building in the world uh is it on my list no it was produced after my my

(35:26) picture here yeah cuz this middle one here is the uh Sears Tower so yeah the British Khalifa was produced after that pretty crazy so the ocean is extremely deep guys now uh let's go to the last piece here and now if you guys find anything else that you want me to look up or or check out let me know uh I thought I saw a link from somebody here did I click that oh okay here we go let's watch this first this will be fun Uso caught on video following a ship off Catalina Island let's see if there's any

(36:17) sound oops okay the sounds clearly not relevant okay um is that a Uso because that's um above water that's not even below water chat isn't this what is this is this the one that was shown by Jeremy Corbell or somebody else going into the water why is this a Uso isn't this above water I think Everest is the biggest is the tallest still right K2 is up there though um Hector it wouldn't surprise me

(37:26) if the there were uh several filmmakers who've been read in to the stuff it wouldn't surprise me at all okay is this even underwater this isn't even underwater okay this reminds me of another one as well um UFO glowing water California coast there was I remember a UFO seen from a pretty grainy picture I can't find it and I I don't think I have the link there was a underwater glowing object that was going underneath the water off the coast of California somewhere Southern California and you could see it from somebody's

(38:22) like beach cam uh where they were like looking out into the water from their like house or whatever and you could see this object kind of float or not float but just be barely underneath the water glowing moving underneath the water it was really bizarre that's kind of

what that reminded me of I think that's a better it's a better UFO the video than that one so if anybody else does find it uh let me know pretty interesting yeah that one was n me okay yeah that one did look like the you the jellyfish though didn't

(38:56) it okay um so this is another one here where I don't know if this is real or not but it's pretty weird this is the I think the person who posted this originally deleted it I know someone that works for the Noah n OAA the disclosure rumors are 100% true and the species in question is aquatic for discussion and actually this is just remember we're going to look up the lake by call incident as well I think it's refered in here weird how come the link doesn't come up this is you would expect it to like

(39:52) anytime I Google something and I'm like Googling the exact thing and I don't find it weirds me out I don't trust Google at all anymore so I'm going to read this whole thing here because we got time please read this as a fictional work meant to stimulate discussion in summary it discusses an advanced aquatic species with live which lives in our oceans I remember when I read this for the first time and it freaked me out that's really this when I first read this uh I think this was a few years ago

(40:24) this was like when I was early on in my Awakening of thinking that UFOs are real this is actually the thing that got me to think that the ultraterrestrial hypothesis is the most likely one and I'd say since then I have only become more and more ingrained in that belief I know someone that works for Noah the disclosure rumors are 100% true and the species in question is aquatic now the other thing I want to say too is when somebody when people say stuff like please read this is a fictional work I do the literal opposite

(40:59) I do literally the opposite when people are making fictional works up they don't ever give a disclaimer they're trying to trick you right the time when people say please re read this as a fictional work is when they're going don't let this blow your mind right like if if I show somebody the videos the MH370 videos now and I go okay you know just don't take this 100% seriously just imagine if it were possible Right my goal would be to not have their mind get blown not like literally destroy their mind so

(41:31) this is what worries me a little bit when you see that disclaimer I go hm okay I'll read it as a fictional work the other thing too is that if this was classified information then this is the situation where you are saying that because you don't want to go to prison you don't want to go to prison for revealing classified information right I really should read all these with the creepy AI voice with the letter dashed and that's a very good point and honestly people have found like six different places

(42:03) where that voice has been used so it's definitely some kind of default AI voice that they used um and it's really damn good um okay yeah can we not destroy people's minds well guys uh when you watch my channel it's it's basically like the X Files but real unfortunately um I only go through the stuff that I find the most compelling now I'm not uh just this is like those typical disclaimers that people have on their Twitters which is like uh this is not an endorsement to any

of this stuff I'm just saying that

(42:38) in the past six years since I've considered UFO stuff to potentially be real uh I've gone through with you guys some of the stuff that I find the most compelling um and there's a lot of connections between a lot of the stuff that I talk about so the we talked about ebo scientist post where EO scientist post is a physiology of an alien being that supposedly the United States government has their body they're dead whatever um and it claims that they're like basically like manufactured organisms that have very similar DNA to

(43:09) we do creepy um and then that uh coincides a little bit with the 4chan leaker who says that these underwater bases that like it's basically like uh organic AI that like can operate them like like creatures if you can build UFOs to spec and you're Advanced enough you might be able to build beans to spec as well so there's crossover in a lot of this stuff now my opinion on UFOs right now is uh I I think that UFOs are real for sure I just don't know the nature of them right I don't think we figure out it's

(43:45) possible we figure out anti-gravity technology by ourselves but Thomas tonson Brown the reason why Thomas Town said Brown was interested in understanding anti-gravity um and the person one of the people I did the podcast with today uh Paul SK stolkin you may see he may look familiar to you because he was the guy that uh Jesse Michaels was talking to on the Thomas tonson Brown documentary that he did um and he thinks there's advanced technology that's unknown to us as well um and Thomas Thomson Brown if you

(44:18) listen to the history of him he wanted to figure out how UFOs were able to hover right just like and he imagined it the same way You' imagine a surfer surfing on a wave right and that's I'd say that's accurate in terms of understanding how you can manipulate gravity uh magnetism Etc okay so did I answer oh so yeah so again my opinion is that UFOs are real I don't really know the exact nature of them but if you can teleport objects faster than the speed of light then I'd say that it becomes very possible that

(44:50) uh intelligent beings from another univer or another anywhere in the universe could be visiting us um but if I if I had to guess I'd say that aliens are us or that we are aliens or that we are cousins of aliens I think that we are if you look at us look at what we're doing right now look at how advanced the stuff we're doing compared to other animals like my dog who's sitting down here and stuff is like we are several orders of magnitude more complex than every other being we see even monkeys

(45:24) which are as probably as close and we think we've evolved from them like we are on another level than apes and monkeys are right so I would argue that it seems more plausible that we came here and we've lost our history we lost our our uh our origin story right onto this planet but who knows I'm open to to anything everybody and I'm starting to open my mind to the time travel stuff I I've previously thought that the uh future humans hypothesis was stupid because I didn't think that you could go

(45:59) back in time uh but um uh now I think it's it's less and less silly to me as I've been talking to very smart scientists and Engineers who you know have been flirting with the idea of retrocausality and uh what that means and retrocausality uh if that really means the ability to change the past right which would basically bring the future humans thing back into play again I don't really know uh I just want to figure out the answer just like you guys end of the day all I really care about is the technology whether or not we're a

(46:37) prison planet or we're lost aliens or aliens are interdimensional from the oceans it's not really going to change anything about whatever my my world view uh what will really help people is getting that technology so we can have free energy that's I mean just be honest with you guys Jack from cosmic Wonder mentioned you okay let's finish this up uh then we'll go digging around for that is that if that's money Penny hey money Penny money Penny media uh it looks like we're going to have a couple things we're going to

(47:09) have to dig into Sirius I appreciate the the kind words Jack from cosmic wonder you're going to have to tell me how to find that if that's a YouTube channel or whatever uh we don't use simulation uh Martin Robert Madson we are we're very PC here we're very politically correct on this stream and uh we we call it the um the Matrix hypothesis or the uh holographic principle uh simulation offends uh certain people and makes them think that their lives don't have meaning so that's the reason why I don't

(47:44) call it a simulation even though yes it would technically be a simulation yeah um and and the reason why that's important is and I've said this many times but I'll say it again uh yeah we we live in Westworld in real life and when you watch the show Westworld the reason why it seems to ring so true and creepy and compelling is cuz that's kind of what our life feels like right even down to the NPCs feels like not everybody in the world is awake and like half the people out there don't even have an inner monologue just

(48:18) keep that in mind half the people out there do not have an inner monologue they don't have a voice that talks to them when they think whoa hey Andrew Reid welcome so yeah it feels like we might be in like a video game that doesn't mean you should go hurt yourself or you should check out from the game uh I think that you should if anything I think it gives it more value right I've played a lot of video games in my life the thing that hurts me the most when I play a video game is deleting my save file right because it's like you built

(48:48) this whole thing up you don't want to get rid of it because it has meaning it has purpose you did something you built something right so yeah look into the big unnatural Caverns off the with the huge pillars of the coast of Malibu oh we already did that CB that was the very first thing we did my man uh CB please let me know if this is what you're talking about CU I did a whole post on it it's got 75 75,000 views guys everybody loves the weird stuff nobody cares about the science 75 thou 77,000 views for

(49:22) this okay yo you guys I guess the fans like it huh so I'm pretty sure this is the one you're talking about R CB the pillars and the and the big Malibu thing yeah we looked at it okay while

we have this noen let's not get **sex**ist guys also some of you guys need Dei training for aliens some of you are man I did a poll the other day about aliens and where what you think what your favorite aliens are and like 60% of the people said the nordics the ones that look like humans yeah we got to get you guys some Dei

(49:52) training um you got to get more respectful towards the mants and the Draco and the uh what are the other ones the lizard men or whatever the reptilians yeah you guys are man seriously okay we're going to show Lulu I'm not picking her up she'll bite me but hold on oh she's already growling okay this is failing it's failing Lulu oh there she is Lulu look up Lulu there's cutest dog oh okay oh damn that wasn't full screen okay hold on one more

(50:56) time Lulu she doesn't give any FS by you guys Lulu try chat okay okay we're back okay that was for Chrisley hopefully she was still watching yeah Lulu does not does not care does not care also ignore my my laundry as well in the hallway okay yeah she's a sweet girl for sure oh I hold on I got to realign the this is why I don't mess with the camera

(51:59) guys I don't mess with the camera okay hey everybody and uh glad hope everybody who just just jumped in appreciate you so did we was this the thing that that person was asking about the Malibu stuff Cryptids are Supernatural I don't know but I know somebody who's an expert at at Cryptids and that is Tony Merkel so if you want to know about Cryptids check out the confessionals that guy is like the master of Cryptids man master of Cryptids oh my dog how old is she she's like eight years old I think eight or

(52:42) nine she's pretty chill though although in the mornings now she's got a new thing where she jumps she jumps up at me like I'm on a one of those elevated like doctor stools things she jumps up at me like stop until I pick her up and put her on my lap which she doesn't do it at night because if she did it at night uh we can turn on a light if you guys want sure uh if I did it at night then you know you guys would be able to see her man I'm swear I'm getting you guys Dei training for reals all these Nordic

(53:16) lovers in the chat right now um okay let's go back to let's finish this bad boy off we got we got sidetracked chat we got sidetracked okay yeah and feel free to like the stream here as well um let's focus back on the task at hand uh no Lulu is not part Sheba she's supposedly Siberian Husky I've seen what her parents look like I don't know if she's full-blooded or not but I got her from a family that couldn't uh take care of her after they got divorced and she had kind of a rough

(53:48) upbringing um she may have been abused as well so that's part of the reason why she's so sassy and doesn't give a crap and people have to be very careful when they handle her cuz if she doesn't like you then she'll let you know it's true I have a white dog but I used to have a black dog so no racism here chat I'm an equal opportunity dog lover one thing I will say as well real quick is that wait what is it oh that's Lulu is a she but um what was I going to say uh yeah boy dogs are way different than girl dogs my

(54:40) goodness boy dogs like my last dog was a boy lab pit bull mix and he was a big chunky boy I mean he was 85 lbs and I still miss him but he was the greatest dog ever he would do anything I say I didn't even need have a leash on him uh you know he would just listen to me even outside anywhere even if there was other dogs around as long as there no cats he he hated cats he he just like lost his mind if he saw a cat but anything else he was chill with nicest dog ever and Lulu is like the exact opposite like she is super high

(55:17) maintenance freaks out doesn't listen to me can't have her off the leash she doesn't care about cats weirdly but she hates turkey um Ducks rabbits and she hates squirrels the most like she just loses her mind if she's a shees a squirrel I swear female dogs are just it's night and day you know if you're if you want to get a chill dog you get a boy if you want to have a high maintenance get a female dog okay but yes dogs are great okay now that we've talked about that let's go back to the task at hand so this was the

(55:55) post that creeped me out about the idea that ultraterrestrial aliens or whatever might come from the water and before I read it the other part that was weird is this idea that there's a lot of UFO sightings over the water like a lot of them it feels like the vast majority are now of course there's some over land as well but a huge percentage seem to be waterbased the Tic Tac the gimbal I think the goast I think all three were overwater a lot of them are close to the coasts as well now my new theory is that

(56:28) a lot of these are probably human-made because we've figured out anti-gravity like decades ago potentially and we are improving our anti-gravity ships and now maybe even **China** and **Russia** can make them right the MH370 situation was 10 years ago if **Russia** and **China** saw those videos 10 years ago they've had enough time where they could be making their own anti-gravity craft even if they didn't know about it at all back then and they probably did okay so let's check this out so this person claims that the

(56:59) rumors are true that the aliens are an aquatic species I don't expect anybody to believe me and that's fine I know a lot of BS posts get posted here for shits and giggles I'm just sharing a story from a few weeks ago I feel that is relevant due to all the disclosure talk I have a college friend that landed a job working for the Noah in a pretty high capacity I won't say more than to protect their privacy around the holidays me and said friend were catching up and they shifted the topic to Millions this friend is very levelheaded

(57:30) and we usually don't talk about stuff like that it's mostly family talk and work they asked if I believe in aliens to which I replied that I'd like to but we simply don't have enough evidence their expression perked up and they said I'm going to tell you something and **I want you** to take me absolutely serious guys you know what's weird about this is that this is so similar to what the **general Joseph Dunford** Source asked me you remember the story where I told you guys about **General Joseph F Dunford**

(58:04) and the leaker the person The Source came to me and they said well I want to tell you something but first I want to ask you do you think the videos are real right this has the same ring

to it right where that's a weird thing to add into your story if your story is fake right now maybe you're trying to upsell it maybe right but those are the kinds of things things where people ask you that and you're like okay what what are you going to drop on me right okay so okay where is this going I thought they never they never seemed so

(58:38) intense in a conversation before so I braced for some kind of huge personal reveal or something but they started talking about the **Russian** submarine incident that happened not too long ago where supposedly a fire broke out on board a nuclear powered **Russian** sub and killed everyone on board they said this was a cover story that **Putin** came up with for what really happened the sub was apparently investigating in an underwater base that is controlled by non-human entities they got too close and the sub was destroyed by these

(59:12) beings my friend went on to detail how most of the world's governments are aware of their presence yet keep it undisclosed because of the ramifications to society it may have also because we can't do anything to stop or Force ful reveal them okay this is where I start to get real creeped out because this predates the 4chan leaker and the 4chan leaker was basically saying the same thing right forchan leaker was saying yeah we've got underwater bases or the aliens got underwater bases or whatever and they can annihilate anything that

(59:45) comes close and this person is basically telling a similar story we got too close and we got wiped out right and here's the other creepy thing I didn't even make this connection till just now but if we go back to the MH370 case what we've been disclosing for the last 6 months we believe now that **China** knows and **Russia** probably knows too they know that the United States teleported the plane or zaap the plane or if you believe that aliens did it non-human intelligence that they zaap the plane right and then the people ask well if

(1:00:23) **Russia** and **China** know that the United States government took the plane why don't they say anything why don't they tell the whole world because that's not how that's not how it really works because if they were to say anything nobody would believe them right this is why disclosure is so hard because the governments know right we we keep thinking that the governments don't know or the governments would tell people or they would tell on one another they don't because it's a big covert

(1:00:53) game of who can figure out the technology first because whoever figures out the technology first controls this planet right or worse yet maybe we don't even control this planet maybe some other higher intelligence controls this planet either from the water from outer space or somewhere else the ultraterrestrial hypothesis right maybe we're their cousins maybe they've had technology that's thousands of years more advanced than even us figuring out anti-Gravity the one thing that freaks me out

(1:01:29) actually there's a lot of things that freak me out one thing Dave rasi said on one of the podcasts I don't remember which one but they were asked about the shape and he said sphere is the most simple shape right a sphere is the easiest shape to get to float and that's why when you look the objects that out there and we look at the Spheres those are the ones that I think

that are ours the shape like a pyramid or a cube stuff like that those are more difficult so you can imagine that if these other

(1:02:04) shapes or even maybe a saucer right maybe those are the ones that are uh you know non-human intelligence versus maybe a triangle like a triangle maybe that's also a simple shape right pretty weird have I ever seen the former Russian president Dimitri Medvedev statement on alien life no I have not but I'm going to write that down We'll add it to my list to look after here in a second you guys have got some good stuff to check out okay so this is part of the stuff too where I and this is where I'm kind of breaking my own

(1:02:40) rule where I say we can't connect everything but when we investigate something and then we find similarities to other stuff that's out there it makes it pretty hard to not say hm maybe there's a tinge of Truth to that and it also costs people not to take everything to be true maybe there's bits and pieces of individual stories that are true not sure yeah the craft balancing software could be AGI which is uh artificial general intelligence right um that's why we looked into the the uh quantum

(1:03:15) computers thing the quantum computers thing is mind-blowing man that there is something there I'm 100% sure in fact I plan to make a summary post about the quantum computer stuff there's just not much to discuss but I think even explaining quantum computers to people will be helpful so probably tomorrow or the next few days um let me just make a note to remind myself guys my task list of like stuff to post on Twitter is very long um okay let's keep going okay they told me that Noah has had thousands of incidents of contact

(1:03:55) quote unquote with these underwater beings and that is fairly common knowledge amongst certain departments and roles in the organization they said they have witnessed video audio and physical evidence of these beings residing under our oceans but it is kept under tight wraps by senior officials and whatever government sectors control Noah the friend said that the recent disclosure Buzz is legit and had been carefully planned they said they don't know exactly what the uh exactly what details will be provided to the public but then

(1:04:30) in general it will be made known that there are other beings occupying our planet and that they are not from another planet but have been here long before us okay why is this pretty wild because this syncs up with what we've been getting told in disclosure right the A said there's no extraterrestrials from other planets which is weird and that's why I posted the screenshot uh do I have it still see I have it I don't have it but of all the different possibilities even if you rule out the entire column of

(1:05:16) extraterrestrials there's still like three different columns of ultraterrestrials which are possible if there was no abnormal UFOs or or anti-gravity happening on this planet why would a be super specific related to extraterrestrials from another planet seems very bizarre wording to me in general right and this when I read this for the first time I thought huh this the ultraterrestrial thing makes more sense than what I would have thought before reading this right I mean and now after digging into what we've discovered

(1:05:52) the last six months I'm sitting here going it makes like the most sense to me out of everything else right uh is that they could our oceans are huge and they're deep and we don't look into them at all right certainly could be something going on there um and then they also mentioned that the disclosure Buzz is carefully planned I I'm a th% sure that there's a slow disclosure plan but I don't think that slow disclosure plan ever has any this is the date we're going to tell people the **truth** I think that what they

(1:06:24) plan on happening is it becomes self evident and then that's when it just comes out right okay they also said these beings actively keep us out of certain parts of the ocean I'm already thinking Bermuda Triangle apparently their technology is Advanced beyond anything we could come up with to withstand SL negate the insurmountable pressures at the extreme ocean depths so this makes me think right away about manipulating gravity because if you can manipulate gravity and and inertial mass reduction then the

(1:06:59) pressures of the ocean don't mean anything you can create an artificial bubble right they are able to freely enter and exit the water in their craft without displacing or disturbing it physically now that's huge as well because that's anti-gravity technology right there that's the orbs guys uh and we're going to show the clip one of the Clips in one of the videos right now because of how important this is guys look at where this orb comes out of right there it comes out of the water and it's coming out at super high speed

(1:07:34) right here look at this comes right out of the water right out of the water there out of nowhere it's just there's nothing even there unless this is some kind of craft here but you can see up here like right where my mouse is right here oops appears right here orb comes straight out of the water and shoots up through the cloud or past the CL like right past the cloud I wish it went right through this Cloud imagine if this orb went right through that middle of that cloud these videos would be impossible to fake right I mean they

(1:08:04) already are pretty difficult but we need more stuff going through the through the clouds in these videos that that's to me right there I mean so this is and this was when did this come out this was three years ago I mean to me the timing of this stuff coming out is is very difficult to rationalize where we don't even even people in UFO Community couldn't accept the orbs that we see Defying Gravity and but this explains like in the in the zeis we have this trans medium craft even the I forget the uh aadila is that how you

(1:08:43) pronounce the name of the city the one where it goes in the water and comes back out and doesn't even slow down it's pretty wild in the same way they say space is hard they say that the ocean is too deep to investigate to deter people that's why Rockets they explode get a boatload of attention maybe okay let's finish this off okay they've been captured innumerable times on Sonar traveling at speeds underwater that are impossible as far as human technology or marine biology is concerned so this makes me think of like

(1:09:22) the supersonic weapons or potentially the the Usos and I think that was it uh Darcy oh boy I'm already butchering his last name you guys know the dude on Twitter just made a a Uso

underwater submersible uh um video I think it's available on Amazon you guys can watch for like \$5 or something like that fast movers they also mentioned a place called Lake Vol stock and uh and said a very large base was discovered under the ice and that the **Russians** have control over the operation there my friend also detailed that they have witnessed

(1:10:02) outside of any craft swimming in the ocean freely by submersible divers and cameras at the bottom of oil rig platforms that creeped me out can you imagine you have those cameras at the bottom of the oil rig platforms just looking at the stuff and then they just see some creature fly by they are humanoid resemble what most people will call a typical gray alien oversized head large dark eyes no visible ears smile mouths this is very similar to The Ebo Scientist explanation it is not known how they breathe and move

(1:10:36) underwater um and this is also links up with the forchan explanation of the manufactured aliens as well uh that's pretty much most of what I was told they didn't give a date they just said it would definitely be this year according to what they've been hearing apparently this is going to be a worldwide disclosure not a us specific thing well that part didn't really pan out cuz this was 3 years go and didn't come down oh yeah so Darcy's uh new documentary is the one that I was just mentioning there as well now Lake Volto

(1:11:05) I think is this one that we that we were looking at here so I think we will try to listen to this we're not going to do the whole thing they'd ever seen or experienced before uh dis shaped objects traveling in formation continue on their trajectory gaining speed as they head directly towards the submarine they were going at incredible speeds but then when okay is and now I know who they all are from being in the UFO Community what they've come to even though none of them will talk to me called the swimmers of Lake Bal what

(1:11:42) were these creatures why did they these guys broke through the ice and then they supposedly find these crazy creatures so The Story Goes that **Russia** is hiding this stuff um and this is just more evidence that there's some potential underwater creatures or whatever yeah Nick Pope and Richard Dolan yeah these guys have apparently been in the UFO game a long time I'm a Noob I'm a Noob on the scene guys uh what was that other one that called I think I think lake volock is the same as Lake by call it

(1:12:11) could be wrong okay well let's check this out real quick I didn't think we'd run across this two 2012 life in Lake Volto the link between Antarctica and the extraterrestrials oh look at this so I think this is what they're talking about right they oh yeah this is one where they core down and they think that there might be like some kind of underwater liquid water depth down here this is about 2500 ft or more so not super deep but pretty deep this is 20 2012 uh **Russia** announced they successfully

(1:12:58) drilled into the elusive subglacial Lake Volto oh this is one where people are freaking out because they thought like the movie the thing was going to come to life because that there was going to be like bacteria that was locked underneath the ice that we haven't seen in like tens of thousands of years or something like that so this is kind of interesting now um yeah here

it is so I I was correct much is much more though it's 30 million years um much of the interest uh in the lake volock revolves around the

(1:13:27) fact that any microorganisms within it would have been isolated for anywhere up to 30 million years trapped in an environment similar to the moons of Jupiter you already are creeping me out a little bit when you start talking about the moons of Jupiter uh it does definitely make me start thinking about stuff like Europa as well as any other uh like ocean worlds that might be out there so what does a subglacial lake in Antarctica have in common with the alien moons of Jupiter and what's the significance of Lake volto exploration

(1:13:58) when we consider the search for extraterrestrial life every time astronomers look at Jupiter with different instruments they seem to discover a couple more moons when I was a child I learned there were 16 moons now there's 66 and I'm only 28 and this was 12 years ago but it's the four largest moons that attracted the most attention I think that's Titan Europa Enceladus and one more uh oh no I was I was off IO Europa Kalisto and gamine are the ones that they're talking about but Europa honestly this could be

(1:14:33) a whole different Deep dive into Europa chat Europa has definitely got life going on on it okay like I forgot uh and is this one IO no this one's Europa Guys these Brown lines are potentially indications of Life uh underneath the ocean um because it's I think the answer I can't remember the explanation I think it's spewing out like sediment from these these glacial like lines that are like basically like huge Canyons um now let's see uh this was detected because the salts in the ocean caused a change in

(1:15:16) the magnetic field of Jupiter as the icy Moon move through the field Discovery and so this is how they able to find out there's a huge ocean underneath the planet that might be mineral right mineral Rich would be necessary for life um some scientists were concerned that the liquid being used to stop the bore hold from freezing over a mixture of kerosene and other hydrocarbons would leak and contaminate the lake the **Russian** scientists refuted the claim uh and blah blah blah Discovery in life in Lake bstock would be a major significant

(1:15:50) Discovery for any start organisms that lived in the lake would have been trapped for millions of years any microorganisms could be an unknown unknown form of life and an excellent candidate for life on Europa so this is the idea that whatever we find under there that's been you know locked away could be similar to what we would find on one of the moons of Jupiter so this is just more evidence uh I want to see if there's a followup there is life in Lake volock thousands of specimens have been found and S

(1:16:26) samples unknown unspecified microorganisms there are likely many other larger species yet to be discovered there you go that's from 2022 let's just click on this real quick as well Heaven on Europa it doesn't sound like heaven to me I don't want to live in an icy frozen uh ocean myself but you guys are free if you want to go move there for sure okay so quick recap what did we discover oh is this the same video imagine what if this is the same video we just watched it is it is exact same video we we independently found

(1:16:58) that video um what did we discover here so we've got Google is blurring out pictures of structures under the water for who knows what reason I mean this is clearly them blurring it out this isn't the picture didn't all of a sudden get fuzzy they're just literally blurring it out uh which to me is inexplicable and then we've got another example of it happening that was just found as well like today where somebody went search for this other one where you could use to see this stuff here and

(1:17:29) now all a sudden it's just blurred again for no reason like what right so they're blurring stuff out we've got potential life underneath oceans on other planets that we don't know we don't know anything about our own oceans that are out there we've got uh Noah leakers from the NOAA saying that there's alien life in the water and they being seen uh what have you we've got uh uh Usos fast Movers underwater that seem to be trans Medium as well UFOs that are trans medium moving from

(1:18:00) water to the sky that are not being impacted by the force of friction uh or anything that we can understand so to me this is a strong evidence that if there is life on this planet that's not human that it would be coming from the waters and also someone mentioned octopuses I I would you could even I would argue octopuses are almost aliens they're so different from us such a different form of life imagine if our planet was filled with multiple different species that that they didn't originate here how

(1:18:34) would we even know right I think it just we're a big Melting Pot right what if our planet has just been seeded by different types of aliens we don't even call them aliens because now this is our home right pretty wild stuff guys okay let's take a look the abyss I'm going to have to watch the abyss I know about it but I have I haven't seen it but yeah the abyss would be very similar to um to the idea of the lake black Hall thing Dragon Ball Z was based on a true story that rest in peace the creator of

(1:19:07) that he he passed away um check out under underwater Area 51 I don't know okay so let's go take a look at some of the other stuff guys I think that summarizes everything on the findings related to the ultra extraterrestrial hypothesis and the underwater sea hypothesis um pretty interesting stuff oh somebody asked is this the next investigation no no I'm just doing whatever I find is interesting um until the next big thing comes along if the next big thing will even come along I don't know um I am planning on posting

(1:19:46) probably tomorrow a a uh like a debrief post what do I call it or a housekeeping post um that there are a couple podcasts where people are still asking about MH370 stuff I I'm not turning them down um but I am trying to do less and less cuz I want to have a normal life and focus on other stuff and try to learn about the science and not have this stuff take so much of my time up but I am happy to talk about the MH370 stuff if people want to know um and there's there's a couple big ones potentially

(1:20:17) that are still going to happen um but let's not get our hopes up on some of the stuff that's out there and uh but yeah and I I only probably will be posting like if there's news articles

that come up related to MH370 I'll probably post that there's actually one that I'm going to post I think tomorrow where uh and actually Victor Ananello you guys know him from Twitter as well as Mike Exner we know him from Twitter as well uh they're both quoted in it saying that like oh now they know where the plane really crashed

(1:20:47) it was in this little trench like where we looked but we just somehow barely missed it and I'm just going to put those guys on blast I'm going to put them on blast man and I and this kind of leads into the next thing which is I um I have a feeling that the Ross Kohart thing is going to quote some of those guys where if he starts quoting them but he doesn't reach out to me for any kind of statement or or or or comments um I'm going to put them all on blast 100% because at this point like we know as

(1:21:16) much about the plane going missing or maybe even more than those guys do right and I'm not to say that I've researched it longer than them but we researched way harder right they're just individuals we had the power of an entire Discord of like a hundred people and that was back when it was very small now we're at like 300 or so uh and we've dug into everything about the case like it's just incredible how much stuff that I have in my head related to MH370 not just the videos but just everything oh

(1:21:47) now we're talking thank you Amanda oh yeah this one is real weird this is real weird I remember this thank you for finding this oh God that's weird what is that is that a creature I mean what even is that the person's watching this the bottom of the ocean right and they're just like uh what's this they're like um Can someone just tell me what this is well I'm never going in the ocean again chat I'm never going in the ocean again guys if people want to know like I I'm afraid of flying I'm actually more

(1:22:24) afraid of the ocean that I am a flying I do not like the ocean I do not like weird crazy creatures in the bottom of the ocean uh I don't trust the ocean and yeah there we go now guys we don't block people for being irrelevant and we don't block people just for having different opinions I do block them if they are straight up rude or unnecessarily vile though um or if they come after my job or rather we weird crazy stuff like that all the 4chan stuff got scrubbed on MH370 dude M 4chan was actually pretty

(1:23:04) legit early on and my some of my earliest posts guys about MH370 I would shout out to 4chan and people would joke about it it was pretty funny um okay back to the task at hand let me look at my list of stuff we're going to go through here real quick uh let's let's finish this up guys for tonight let's go through the rest of the items housekeeping items we've got um God this this no OAA thing though is real weird Okay Okay Ross Kohart apparently Ken said that Ken Stabin said that Ross Kohart reached out to him if JK Philly

(1:23:40) fan is still on is that true what's uh guys what is Ken's tag I thought it was K Stabin there he is okay oh stab in I was so close and there's a Au Stabin okay so for those who don't know Ken Stabin uh has very similar Theory to us actually he just thinks that um and and the thing I like about Ken is that he uses all the evidence too right so he doesn't just discount

witnesses that he doesn't like right he he looks at all the evidence uh but he believes that the plane was that there was another second plane that is

(1:24:29) how they spoofed the ersat pings I think the answer is just simpler than that uh I guess we could follow Ken the answer is just simpler than that the answer is that they just fake the iMat pings you don't need to have a second plane it's too complicated all the all the satcoms are hackable all of them are they all have zero point zero day exploits um so they could have just changed like one number around and it's going to make the plane look like it went completely different direction all right um so that's that's where we

(1:24:59) differ and so he thinks the videos are real but that they edited in the the zap the portal effect whatever you want to call it oh JK Philly fan found the link although I'm guessing I'm going to run across it yep there it is I just had a nice convo with Ross kohart and I'm looking forward to listening to his upcoming podcast in The Disappearance of MH370 if any journalist has the ability to break the story and expose the US government cover up it's him wow chat wow um okay what do you guys guys let's let's

(1:25:43) put it in the poll do you think Ross kohart is going to reach out to me uh let's take a poll what do you guys think answer the poll guys so he's reaching out to uh random guys who think the videos are real uh but that they've been edited um that has he's a nice guy but his presentation's a little bit more out there than ours is let's say and he got away from thankfully spamming everything oh look at this hey look that's nice guy Ken oh he liked that yeah the good thing is I'll say this

(1:26:43) this is one one step closer to the **truth** than all the other experts that are out there at least Ken realizes that planes don't crash into the ocean without leaving the debris field right but I think it's kind of crazy that Ross Kart's reaching out to somebody who has 1,600 followers before he reaches out to somebody who has 880,000 followers and has done 80 podcasts over the last four or five months right like I've literally done like every podcast out there even Alex Jones Tim Po Costa Coast

(1:27:19) AM and there's a connection to ufology as well and Ross kohart doesn't he's like too afraid to talk to me like I I have to be honest like I actually think Ross kohart is afraid to talk to me because the answer is like I'm somebody who isn't an idiot and and I don't mean that I'm not trying to put Ken down I don't think he's an idiot I think he's a smart guy but I mean like I'm gonna ask tough questions of Ross right like I If Ross reaches out to me like my first question is like how much

(1:27:53) do you know about what the government's covering up right um that's probably my first question to Ross kohart and who's giving him information and who told him that uh the nro the nro doesn't doesn't have satellite capabilities like that right that's probably my first question is to Ross and that's probably why he doesn't reach out to me if we're just being honest with each other here chat that's most likely that Ross won't reach out to me um because I would probably want to

(1:28:21) ask him as many questions as he's going to ask me but I would always I would be nice to Ross for sure um you know my my true opinion on the Ross C hearts of the world as well as some of the other UFO investigators is that the true nature of this phenomenon is more than what they were expecting and this is people who think there might be aliens visiting us right it's more than what they're expecting the idea that we can achieve super luminal speeds and energy densities that can create super weapons

(1:28:52) that can destroy the planet that's more than what people want it's a lot more it's the **truth** but it's more than what people want um okay so yes 60 votes good votes guys uh yeah I think the people who said no 66% of you uh you guys are probably the ones who are right but hey maybe we'll be wrong we'll find out uh lion head 97 says hey can you hook me up with an IT job uh I would say look into Healthcare it we need more uh competent investigators in healthcare it it's been uh a downward spiral I

(1:29:27) would say uh and this is not an endorsement or uh criticism of my company but um we don't use AI as much as I wish we used AI uh in my job and I think it would make our jobs a lot easier and I think that in healthcare it we have to be more forward-looking in terms of what the future the next 20 years looks like I've been doing this job 20 years and I feel like very little has changed and we need more smart people and it's it's a job where you have to be very smart because Healthcare it is not a job where you just add more

(1:29:59) people to the problem to fix it it's the kind of problem where you need very talented highly skilled people yeah wow this is rude Ashton has had too many drunken unhinged and highly entertaining outbursts lately to be getting interest from anyone who wants to be taken seriously really I just call it speaking the **truth truth** but sure I think that anybody who is afraid to talk to somebody because they uh don't know how they're going to react or how if they're going to question them too hard to me that's

(1:30:37) not somebody you can take seriously to me I take the person who is going to spit the **truth** the hard **truths** the ones that you don't want to hear those are the people that I personally want to hear but I guess that's the difference between me and mainstream media right mainstream media wants to listen to people that aren't going to push the envelope that are going to say what they want to hear right and I'm certainly not that person so that maybe that's a fair argument I don't think I've had drunken

(1:31:03) Outburst though I don't really drink that much and I haven't gotten blacked out drunk in like 15 years or something like that maybe longer um and I don't even really binge drink so okay so he did did he DM him anyway oh also he may be a little bit upset so real quick guys we do have to show one quick video before we go to the other comments um I did troll pretty hard Guys somebody asked me I don't know you to be somebody who trolls guys if you don't think that I troll then you don't know me very well

(1:31:47) I will say that 99% of the time I am uh extremely upfront and honest with my opinions but I do have a dry sense of humor so sometimes you can't tell uh if you know you can't tell if

I'm being serious or not in some cases you should pretty much assume I'm being serious unless it seems way too over the top okay um so I did edit this guys this is not what it originally looks like but I edited it in a way where you can barely tell the difference what lies ahead well we're not just looking at uaps I have a

(1:32:20) lot of things in for example I'm interested in the of the missing jet MH370 I've covered that here in Australia as a journalist and i' I've taken a very close interest in what's the story behind the biggest Aviation mystery imagine that's our next show but I've definitely got some very interesting UAP stories coming up what lies ahead so you can tell because look at the red bar here it covers it up I was trying to figure out a way where I could get it to not cover up this red bar but

(1:32:54) then I just figured I just don't care but very few people noticed that I edited this in um but yeah it basically just had like pictures of grush and and the UAP hearings in the background and I was like you know what this would look so much better if it had the MH370 videos so I just edited in clips from the MH370 videos and it looks hilarious like I would love for this to be real one day where Ross kohart is talking to a mainstream media which was like this was news ation and then all of a sudden it's just got the videos and

(1:33:27) he's talking next to the videos like this this would not be his face if this was the videos right next to him I guarantee you that chat no a lot of people believe that they were like like whoa they showed the videos on TV I was like no just kidding I was almost threw it into the comment but I I felt like it was funnier when I don't let people know that I did it just because of how similar it looked it just looked so good it looked so natural okay um let's check out we'll go in reverse we'll go to this Jack thing

(1:34:03) last and that's what we'll end tonight so let's go to the next thing Demetri medov statements on alien life what does he guys help me out here oh oh he jokes on secret alien files okay so 2012 Men In Black yeah no I think **Russia** would know if there's aliens or even anti-grav technology they they know about it right the planet is really big and any large country would have um even if there was a couple incidents they even and a lot of them were fake they still would know one or another right okay well this isn't very

(1:34:47) helpful strange off a comments his views on Father Christmas and aliens while the cameras were still rolling I Believe In Father Frost but not too deeply but anyway you know I'm not one of those people who were able to tell their kids that father Frost does not exist I assume he's talking about Santa Claus yeah he went on to take a jab at Mr **Putin** oh that's not a smart move uh he's now President **Putin** and has been for 12 years uh um where's the alien comment let's see top secret along with the briefcase

(1:35:43) with nuclear codes the president of the country is given a special top secret folder this folder is entirely in in its entirety contains information about aliens who visit our planet in it along with this you're given a report of the absolutely secret special service what just what the hell is going on that ex exercises control over aliens on the territory of our country more

detailed information on this topic you can get from a well-known movie called Men In Black I will not tell you how many of them there are among us because

(1:36:17) it may cause Panic oh I remember this joke I I don't know if he was being serious or not I couldn't tell yeah he was talking about Men In Black he may have just been making a joke about men in black but hey if there's a lot of aliens if there's nordics and reptilians and uh what are the other ones the ebans and the uh guys I'm getting good and the the mants and then now the jellyfish monsters who knows man Richard doy says there's 57 uh species by the way if some of you saw the comment where somebody said they have a

(1:36:46) whistleblower and they want to let me know the information yeah that turn that person's whistleblower turned out to be Richard doy he was just talking about something Richard said in a in a space guys if your whistleblower is just somebody who's in Twitter spaces like every single night uh you don't need to send it to me in a DM you can just literally post the information on Twitter um so far of all the people that have wanted to send me secret information uh none of it's ever ever ended up being legit so far maybe it'll

(1:37:14) change one day okay um oh also there's one more thing I'm going to mention here too um this will come out in the uh when the Foxhole podcast comes out we'll go to that next after the underwater uh underwater movie let's check that one out okay the movie underwater 2020 oh I saw this movie I saw this movie yeah I saw this one with the crazy creatures that live underwater it was it was H pretty pretty bad but um it was interesting it was just kind of scary because they're like in the Mariana

(1:38:02) Trench and this uh some kind of like Mining facility and it goes down the way you would expect they mine down and they find these creatures under there and there's these they're kind of like crab creatures or or uh squid creatures I can't remember exactly um yeah it's got TJ Miller in it before he got cancelled he got canceled pretty soon after that uh the Silicon Valley TV show guy yeah I saw that movie yeah I mean that's kind of interesting I did I remember when I watched that movie the whole

(1:38:30) reason why I watched this movie was because of the uh that that post that we just read actually I'm pretty sure it was like Loosely based on that actually I'm pretty sure that post was like that led them to actually make this movie uh pretty interesting so Bob greener on the podcast that I did today we did a panel podcast one of the things he told me that I did didn't know is the reason why he made the fractal teral moment clip where he talks about MH370 is that somebody he knows sent him the video and told him he needs to look

(1:39:06) into it that's pretty damn weird I would have thought that he would have independently found the videos and talked about it but no somebody sent him the videos someone sent him my work and said you need to look at this and that's why he looked and he made that video fractal tral moment where then that's how I talked to Bob Greener and how we found him um which is weird because that's kind of similar to the whole situation with the letter to me and how we found Randall Carlson and um those guys so it feels like there is

(1:39:42) maybe like people trying to connect us all together and I want to know when you guys listen to it when it drops I think it'll probably be a few days he says the guy's name wait that was actually you Bernie you sent it to him wait Bernie you sent him the videos to Bob Greener okay well that's really weird if so um maybe it is you if he says Bernie I I feel like I would have known if he said Bernie but maybe maybe uh I want I didn't hear the name so if it is you awesome if it's somebody else I want

(1:40:19) somebody to listen to that and figure out who the name of that person was I want to track that back and figure that out so yeah he and Bob Greener actually mentioned how his dad was a Freemason in the in the podcast today as well pretty crazy man maybe Bernie made the letter to Ashton guys guys did you think crypto Alchemist made the letter to Ashton Forbes we can't rule it out anyway Bernie I appreciate you a lot guys if you haven't followed crypto Alchemist check him out he's on um he's on with Jeremy reefs alien

(1:40:52) scientist pretty frequently cool guy he does disappear from the live streams a lot like he just goes to another room or something I don't know if he's like smoking a bowl or having a drink or just you know chilling or whatever uh I'm not judging not judging at all just saying you know you do kind of a tendency to disappear I appreciate you that brother um and also alien scientist is how I met Dave Rossy which was just real quick that was one of the weirdest the AI voice is from 11 Labs oh good to know

(1:41:22) someone should send me that in a DM so that I can use it I want to use that voice um oh yeah then we're going to look at the Jack cosmic Wonder um I would have never met Dave Rossy unless had it not been for the panel interview with uh Hamm on alien scientist with Salvador Pas um which was super weird because he had texted me before that cuz I had met him somebody oh I remember why because every time people would recommend podcasts to me I would follow them and so I followed Dave Rossy because his was generation Zed podcast

(1:42:04) on Twitter and then he DMD me and that's how I had his phone number and then he heard me on my stream talking about him and then that he messaged me and said I'm I'm Dave Rossy what this is so weird running into people all like this guys like the world's a lot smaller oh one more clip that I want to talk about is um before we go to the Jack from cosmic Wonder thing uh let me pull up my Twitter if this shows my DMs I'm GNA be so pissed okay it doesn't okay good good good good um oh yeah okay there was another

(1:42:48) clip jeez bro these people are they're going hard on these uh I'm I'm just staying out of the whole AO battle cuz I just don't care uh UAP Mike guys UAP Mike doesn't follow me back kind of rude kind of rude but that's okay we'll still follow him uh is he didn't even post this clip but somebody else posted it oh he got retweeted by by UFO Joe it's funny because he stole this from somebody else but that's fineing because you sort of feel sometimes I just feel I was walking down a street in Washington

(1:43:27) and I was looking around at the people around me and thinking my God you people don't know what I know and okay first of all what how is Ross kohart G to say that he's looking

around and people don't know what I know this is why I can't take the UFO people seriously guys this is how I feel when I'm talking to Ross Kohart right Ross Kohart's looking around at random people going you don't know what I know and I'm sitting there looking at Ross Kohart going you don't know what I

(1:43:59) know right this is a guy who's like oh we've got aliens and reverse engineering craft and he thinks that everybody else can't accept that and I'm going yeah and those craft can move at Superluminal speeds and this can be turned into a doomsday weapon and he's going nah that's too that's crazy come on people please man please I just come away from an incredible conversation with a staffer in the Congress who was telling me what they knew was going on and it's Revelations of direct firsthand witness

(1:44:31) evidence of a retrieval program and a reverse engineering program inside the United States mainly run by private aerospace companies what more do we have to say like we've literally been saying this and it's not it's not like we invented this but like this is where the information is coming from private Aerospace company IES third party contractors they have the technology why does congress not know about it because they don't have access to that information it's private company that's

(1:45:02) the whole point it was set up this way the government is not directly doing it they're selling it out to third party contractors they pay them the money now the information is protected pretty simple guys but also overseen by a very small group of gatekeepers this the key part there's a small group of Gatekeepers this is why I wanted to pull that clip up a small group of Gatekeepers is the ones that manage it it's not this huge sprawling organization that's hiding it why is this important because there's even

(1:45:34) factions within the own our own government that don't realize that it's real if you're not one of these small groups of Gatekeepers probably the CIA and probably some intelligence community members which include some of the engineers that work on that stuff if you're not one of those small people you have no idea right or if you're like the general of the very militaries like General Joseph F. Dunford maybe General Flynn knows about it as well but the reason why General Flynn would know is

(1:46:01) because he was head of the DIA the defense intelligence agency like those are the people that going to have to know about the technology uh but you know they've been sworn to secrecy and they're the types of smart people that know that there's smart people that play dumb right where they where they pretend like they don't know and this is how it works is that it's not this huge group and this is what's crazy about all the different connections that we we've been making because the connections that

(1:46:26) we're realizing is the same thing it's a small group of people that know about this technology it's like Salvador Perez Bob Greener Malcolm Bendall Dave Rossy these people represent various different factions right you've got Salvador P who's literally in the Navy probably working on these types of craft directly right you've got Dave Rossy who's a defense contractor and he

contracts around right and he has his own company LLC a lot of these people do they do it that way instead of working directly for the

(1:46:57) government they probably make way more money when they do it like that then you've got Bob Greener who's doing his own independent research where he cannot be controlled right and he's doing it open source where he's making it all available to the public now people don't really understand this post because it's too scientific right and that's where I helped try to bring it down to earth so people can understand we're looking at overunity and then you've got Malcolm Bendle who's like the mad scientist but

(1:47:21) I mean that in the best possible way where he's like f all these people I'm going to go live on an island in the Mal Dives for seven years and just do it and engineer it myself screw everybody else right I respect that more than anything probably um and that's probably why like he's had his life threatened multiple times um and why no one can really believe it right there's this small group of people that are in the know and then there's a bunch of people trying to exploit that information for their own

(1:47:49) benefit right I would say as well people like um what's the Eric Davis Eric Davis knows 100% guys he's probably one of The Gatekeepers right how many papers have we read from Eric Davis about teleportation and Zero Point Energy how Poff how Poff has literally papers about Zero Point Energy these guys 100% know right um and it's just not going to be a lot of them right um maybe even uh Jack sarfati May as well right um but you know he may not even be I don't know if he's like an actual engineer or if he's

(1:48:29) just a theoretical physicist right because if you're just a theoretical physicist and you're not going into the labs you probably have no idea the people that people listen to the Eric Weinstein and I don't mean to group all these people together Eric Weinstein's not equivalent of Neil degrass Tyson if I had to give you guys a scale Neil degrass Tyson and Bill NY the science guys is down here like with **Mick** West okay like zero respect Eric Weinstein's somewhere in the middle like light years

(1:48:55) ahead of those guys but uh he hasn't quite awakened yet to the reality of the situation because he's never he's never been on the inside if Eric Weinstein went into one of the labs the third party contractor Labs it would blow his mind he would he would be uh sharpening his Pitchfork and then you've got the Hal poffs and the Eric davises who are way up here right and they have the scientific knowhow and knowledge of someone like Eric Davis but they've seen seen the scci the labs they they know

(1:49:25) it's real right because they've been working on it and they have ndas so they can't talk about it and some of them just don't even want to honestly guys if I were to disappear at this point it probably wouldn't even because someone's hurt me it would probably just be because I've been brought in the inside and I wouldn't probably want to talk anym about it either honestly if I signed in NDA that's probably the end of my streaming it's probably the end of my social media presence uh if they pay me

(1:49:50) enough money to just go work and do something else related to this I'd probably give all this up I'm just being honest with you guys because the **truth** is like it's not worth it try to convince everybody and you guys have seen that as well but I would still try to fight to get the information out there for everyone and that's what I think I want to end it on tonight um I appreciate you guys being in and joining me for this stream it went a little longer than I expected they usually do let's see what we have to play us out

(1:50:15) tonight um let's play us out tonight with the the Tucker Carlson uh Jake piece from earlier today what are they afraid of well if you look into the patents that Donald Trump Declassified in 2020 three patents that Donald Trump Declassified they were filed by a man named Salvador pasas these three patents have the ability to just com make this full spectrum dominant system completely obsolete number one is a Zero Point Energy engine that means we're extracting energy from like the vacuum or the zero point of space and time

(1:50:48) which is filled with energy it's an infinite clean energy Supply number two a room temperature superconductor that allows a Zero Point Energy engine to function without overheating and number three it's called a tr3b that's a triangular shaped craft that uses what's called inertia propulsion or anti-gravity to not just fly through the air but also to go underwater to the bottom of the ocean or go into outer space so this actually threatens the full spectrum dominant system of the deep State and I think imagine what

(1:51:20) Trump is going to do when he gets back in office he released these patents in 2020 and even he's not really talking about it but I guarantee you they're real you can look them up I can send you the links to the patents on Google I added them right there just in case anyone's confused now technically Trump didn't technically release them you can also see the dates 2019 2018 2019 so not 100% accurate but honestly close enough like light years better than what normies think now tuer Carlson's reaction kind of surprised me

(1:51:52) I I got to say I've had very few conversations where the spread between public perception and even my perception and the reality uh was wider than in this one I mean I I can't assess anything that you just said I've never heard of any of it before obviously my fault um but I think it's legitimately interesting and so are you what are they really okay so wow chat this this actually made me question a lot right uh he's got he's bald so he that's the reason why he's wearing a bandanna

(1:52:24) that's why he wears a lot of hats and bandanas people that don't have hair usually do that a lot um just heads up that's why he's wearing the bandan so um this made me realize something chat uh I had another Revelation which is that Tucker Carlson remember when he went on redacted with Clayton Morris and he said that the nature of the phenomenon scared him both of them said it and said that they couldn't talk to their families about it I'm starting to realize that we have the same problem with these uh

(1:53:04) podcasters that we do with um the UFO Community this is so far beyond what the podcasters are ready for even with people like Tucker Carlson this is well beyond what these

people are for like we sound like literal crazy people when we're talking about being able to teleport an object macroscopic phase conjugation think of Tim P for example Tim p is a very open-minded guy I think I agree with like 90 to 95% of his takes I'm not all in on the anti-transgender stuff and what have you but most of the rest of the takes 100% agree with the

(1:53:47) guy he even talked about he knew faster than light communication was possible he said he's seen the documents but the idea of teleporting an object is just a bridge too far right if these people have not seen uh the Salvador Pas patents then they are much further behind than even I anticipated and these are the people who I would consider to be the most informed because of all the different range of people they talk to and how they're more open-minded than mainstream media is so if even people like talk Carlson haven't even heard of

(1:54:24) the Salvador Pas patents we've got to take baby steps like this is I I've been thinking that people are super smart and they're going to be able to pick their stuff up that they're as smart as my chat is here you guys uh but the reality is they're super far behind I need to be focusing on the basics so every podcast I do from now on I'm going to bring up the Salvador Pas patents the same way he did Jake is super smart the guy impresses the hell out of me I feel a kindred connection to him um he's blown

(1:54:58) me away since the very first day I met him on a space with kim.com uh in his knowledge and I don't even know how he knows about some of this stuff right now granted was he a little bit off on some of that yeah but doesn't matter right like we're spoon feeding people here right and he knows how to spoon feed people he knows how to communicate with people um he knows he he's smart enough to come up with realistic Solutions he sees the landscape of the deep State as he calls it right the people that are

(1:55:27) The Gatekeepers he doesn't try to battle them he just tries to render them Obsolete and this is the stuff that I want to learn from Jake right um you know I don't agree with riding at the capital I would never have done that myself but he paid his time for it and I think he overpaid he was sentenced far too harshly he's got people talking about wanting to shoot him dead for nonviolent offenses you know so he he's done his time the guy deserves Redemption more than most people on this planet do and I think

(1:56:00) he's given us the framework for what we have to do as well he said that on Tucker Carlson Tucker Carlson goes on Tucker Carlson and says you've got to look into the salvator Pas patents says salvator P's name Jake Chanley is the guy you're looking for America shaman on Twitter I'll pull up his thing here cuz honestly he's one of my favorite people on Twitter uh I consider him a good friend um even though we've never met in real life we've dm'd back and forth we've done three spaces together I try

(1:56:29) to join every space that he does um even the stuff where he's more esoteric in nature like that's fine I'm not against anyone's esoteric beliefs I don't care um but the stuff he says about the patents and the technology that's where we align 100% so thank you guys very much uh for following the stream tonight we had a very big audience tonight we were looking at some

pretty fun stuff if you were watching watching later on I hope you enjoyed it and I hope to do more stuff like this as well in the

(1:56:56) future have a great night and uh follow us along for the Journey of disclosing advanced technology and one day one day we will get the **truth** for the families of MH370 that I promise you guys it won't be now won't be next week but one day in the future it will happen have a great night guys and uh yeah enjoy for

Transcript:

(00:29) e the last sliver of Hope vanished in an instant Malaysia's prime minister announced today that flight 370 went down in the Indian Ocean and all 239 people on board are dead most of the circumstantial evidence I believe points towards an Abduction of this plane I I don't know why and I don't know by who but I'm I'm convinced that that plane was taken hey everybody how's it going good to see you guys today hope everyone's doing well on this beautiful evening here we got nice weather going on it's been a

(01:19) awesome day uh thank you everybody for chilling here uh I just decided to play that intro one more time because we've had uh you know case wrapped up uh you know we didn't get the conclusion we wanted but we'll always be able to come back to it if necessary or you know um present the evidence when the time comes eventually people will get on board uh how dare you say that song sucks how dare you Arwin uh hey Randy hey Sandy hey His Highness mystical Wonderland sham 6 skinny Bob benator you uh no we're still retired from the

(02:03) case uh Yousef hey PJ Mike hey Aaron hey everybody yeah hey uh braa Brian nice to see you out there as well okay so what are we doing tonight um we're going to do a quick recap of some of the recent posts and then we're going to get into some quantum computer investigation to understand what the point of quantum computers are that's going to be tonight's stream and then uh yeah I don't know how long it'll be normally I don't like to stream while alien scientist is doing his thing but H

(02:34) just can't do much about it also I'm probably going to in the next week or so try to set some uh consistent schedule as well I'd like to be able to stream earlier where the people who are in UK and what have you can watch better but we can't make everybody happy so it's probably going to be between be around 8:00 but it could be as early as like 7 not really sure we'll see what's up okay let's go ahead and take a look at what we got going on here um so and at some point I'll probably

(03:10) move the evidence list off the pinned profile list um so first thing is uh I found this **Russian** secret military base and figured you know what we can expose them too although I feel like my life expectancy keeps dropping every time I make a post like this um but there's like this secret base that has been talked about since 1996 uh in the New York Times there's a **Reddit** post about it as well you can find a lot of stuff if you guys Google this base they don't like nothing about it other than between the SE late 70s

(03:46) and and the 90s **Russia** spent \$6 billion do on this base some kind of underground Mountain Base kind of reminds me of Area 51 um so you know what we'll expose Diego Garcia and we'll expose uh the Yamantau Mountain Base as well so yeah I also I want to hey Stevia and uh everybody else hey Sandy I I want to make it so that and Arwin hey uh that everybody can um Everybody in the United States can at least join so we'll see yeah I'm not going to remove the evidence list right away but eventually eventually I

(04:25) will um so then also this whistleblower for uh for Boeing just committed suicide pretty pretty damn weird he only 60 years old he's been in a lawsuit uh arguing that Boeing has had lack safety standards and this whole time we've had uh oh that's what's going on turn this down a little bit we've had uh let's see we had a wheel fall off a plane while it was taking off last week we had had a door fly off several weeks ago and another plane crashed into another plane and I mean it's just been a disaster I think

(05:09) there was even another one that like fell apart on the lane on the runway like this is weird this is extremely suspicious um I don't really know what to say but yeah you guys it kind of speaks for itself um I also posted this weird clip bunch of people sent this to me Project Unity sent this to me so that's why I pulled it from his profile here um automatically credits them when you do that kind of nice I don't know what this is what is this you can see there's a little what is that I I don't think this is

(05:54) CGI but I just don't get it is he guy's got his camera just set up looking up is that what the deal is here anyway pretty cool looking on this one um the Dei jokes are funny but in this case I I don't know if it has to do with that oh yeah um so I guess I I made this post last uh yesterday as well um Candace Owens basically calls out Chris KO who Chris KO is trying to play they like you're supporting **Russia** card because you said something that's not negative about Vladimir **Putin** right which is absolutely

(06:34) insane to me and the reason why I posted this is because people are saying the same crap about me right they're like trying to say that if you post anything about Vladimir **Putin** that you are somehow uh sympathizer or something like we got straight up Cold War propaganda going on right now right um it's okay to think that somebody's capable and not a good person right and you hear a lot of this too when you talk about people who who are not **Russian** but uh like Andrew Tate if you say anything if he says

(07:04) anything good and you try to praise him then people say they just just jump down your throat I have to repeat this guys the world is not black and white guys the world is not black and

white it's not just good guys and bad guys people if they do something you don't agree with that doesn't make them an evil person right people can also be not great people morally but still say stuff that is correct like it's scares me that people have this rigid mindset where everything is just either black or white because

(07:37) this is how nothing can get resolved in the UFO Community or maybe in any communities in general right and this is what makes me think that we're going backwards um towards idiocracy as well so Candace Owen basically describes the same thing that I was saying is that you know at least um Vladimir **Putin** can put a coherent sentence together right um and then I guess Chris KO retweeted it which is probably why it has so many views right Chris KO retweeted this and um let's let's read his comment I couldn't even understand what he meant

(08:18) when you are looking at a man who spent two hours twisting facts and circumstances in an NTV to suit a murderous narrative as something that makes you envious you are way past Maga this is a pathetic thing to applaud can anyone convert this from uh I think Chris KO had like a several too many drinks last night I think he posted this at 10:00 at night he seems like he was already super sosed at that point cuz I can't even makes sense of what he's saying there's like an extra space here that there doesn't need to be I

(08:59) don't know I think in an incv like I don't even know what he's talking about here and this just kind of like this is I'm just going to throw this out there guys if I got in a debate with Chris KOMO I would destroy this man no doubt whatsoever um anyone who is playing on Mor **Russia** narratives and and that's their big go-to is that you're a you're a bad person for saying the wrong thing you have no chance in a debate at least versus me um because normal people see through this right but the

(09:36) thing that's important is that what **Putin** said is that the United States government succumbs to propaganda and it the it's the height of hypocrisy for Chris KO to be saying this this is a man who is literally running his brother's PR against the **sexual** harassment uh cases that were being brought against him and having his brother on CNN to do PR for him this is not some this is somebody who is very morally flexible when it suits him and his family but then when somebody else makes a comparison to Vladimir **Putin**

(10:17) goes immediately into Cold War propaganda right like that's a little bit alarming to me because we could use the same arguments against Chris KO and say that nobody should be talking to him because he literally abused his position as a reporter on a major Cable News television station like to me that's wild right Chris KO or Andrew KO is not a good guy right he got a lot of people in nursing homes killed as James has pointed out in the chat it's been argued over 10,000 people when he put positive

(10:56) covid patients back into nursing homes where the most vulnerable able people were right and then he had the **sexual** harassment thing come up against him and Chris Kom was doing doing like just PR for him that's the reason why he lost his job because it came out that there was a bunch of emails and they were able to prove that Chris Como knew about the whole

situation he was like writing his brother's statements so if that's your position you have no footing to go and say somebody else shouldn't be talking about

(11:30) whatever praising somebody or what have you right so again the point is though that and somebody who works as CNN or worked for CNN should absolutely understand that the United States government has just as much propaganda as we do right just as much or as much propaganda as **Russia** does right we're better at it probably than they are right and that's the thing that scares me and Candace Owens pointed some of that out so we're not going to make this a whole political stream uh I just wanted to post that out my my response

(12:02) to him was the problem with America is this brainwashed mentality that Chris displays the world isn't black and white we don't have to agree with everything **Putin** does to find him capable **Putin** was right America is just as good or better at propaganda Chris should know he works for CNN right and here's my followup too is that I respect Chris on discussing the UFO phenomenon on news Nation but I've noticed a clear political divide in the UF community and it's the ones who think that they aren't

(12:32) victims of propaganda in America that are holding back disclosure now this is just a shot across the bow out there to all the CNN brains you are literally the ones preventing us from getting disclosure and the reason is that they think that the government is going to give it to them and that's never going to happen and if you think that the government is only going to tell you the **truth** and what have you like you are one of the people who's making it impossible for us to move forward right and you guys seen

(13:00) a lot of these people they a lot of them have blocked me even though I've literally never interacted with most of them because in their mind if you're not in their tribe then your voice doesn't matter right and it's very sad that the UFO Community is like this right extremely sad and this goes to my next post which we're going to listen to together here this was from a live stream somebody uh pointed out I went and clipped it this is the problem with the internet in general is that there's no

(13:31) there's no accountability these people don't want any accountability for the things that they say and the things that they do they want to on other people and they don't want anybody else to be able to on them back and the moment you do they have they literally have Nut Job meltdowns you've got in the UFO Comm you've got criminals you've got Psychopaths you've got the worst out there for some reason all these UFO celebrities latch on to these troll too you know like I'm sick of all of them

(14:02) man they're all losers and there's no surprise whatsoever they've never accomplished anything right this is the problem with the booya I mean that's just dropping the bomb on the UFO Community right um this is the issue is that everybody wants to talk about stuff but nobody wants to actually understand the science um nobody wants to investigate anything they all just want to talk and they don't even want to talk to each other they just want to talk past each other um I can't decide which

(14:34) side makes me more sick uh the Skeptics who are just completely um brainwashed and think and a lot of them have a savior complex where they think they're saving other people from their problems including Mick West including that loser average Chris like these guys are just huge huge losers anyone who listens to these people like find better role models right but the other side may be even worse the UFO believer side that um at least on UFO Twitter that I've seen that this and this is not going to be exclusive but a lot of them are

(15:12) leftwing a lot of them if you're not in their tribe if you are not spouting the exact same narratives they are if you don't have the same political beliefs that they do um then they shun you and what you say can't be true or whatever and that is probably more devastating than the than the skept are because these are the people that are supposed to be for disclosure and yet they're crowding out the voices that are trying to achieve disclosure just because of their political bias and that is wow right and

(15:44) the worst part is they're terrible people too I you guys have seen me interacting with them they are absolutely terrible people um they they act like Mean Girls in high school right just like like I said complete um and this is you look at both these sides right and it makes you realize that no wonder nothing has ever been accomplished in the UFO Community right no wonder nothing's been accomplished neither side is trying to investigate or solve anything the debunkers are just trying to rationalize to themselves that

(16:17) everything is fine and the Believers out there are too busy talking about their experiences to actually dig into any evidence and they're happy to have stuff be debunked even if it's not necessarily debunked they just don't care they just want their their world view to stay intact both sides really do right um so honestly I just I find the whole thing pathetic uh and I'm glad that we are going to be focusing on the science side of it which gets us to today's topic which is uh quantum computers okay so

(16:48) let's go dig into some quantum computer stuff okay I want to start with uh The Whistleblower letter to Ashton Forbes and the reason why I want to start with this is there was a very clear part of this that weirded me out when it talked about quantum computers because there were three things that I primarily brought up when I first started looking at those MH370 videos and the more that I've talked to scientists and Engineers I mean a lot of people have reaffirmed that Ashton you nailed it right it was like throwing

(17:22) a dart at a dartboard and you just hit a bull's eye right one of them was that we need quantum computers AI can explain the orbs spinning around that's the one we're going to be focusing on tonight right the other one was room temperature super conductivity you see rocks floating around on magnets reminds you of anti-gravity right and then the third one was um Wormhole science right and so these are the things that we've been looking into trying to understand E equals e b Einstein condensates um

(17:57) Etc okay let's go go ahead and take a look let's listen to the part of this letter that's relative to this the big breakthrough to apply the tech as we do today came in the beginning of

the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited as I said what you have found is not the

(18:36) technology itself it's just one of many derivatives of the tech the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited as I said what you have okay chat so the letter argues that in the early 2000s that's when the

(19:15) technology took off machine intuition quantum computers um now the weirdest part about this is when we look into quantum computers the big thing about them is it's similar to the double slit experiment if you were to imagine conventional computers to be uh the double slit experiment with the wave function broken down where you just see the two slits then the quantum computers are the double slit experiment when you see the wave function with the interference pattern and why is this important because it's a gaussian uh probability

(19:53) chart right is that the way quantum computers work is kind of like how a human being thinks about all the things that can happen is that you look at the probability wave and you say these are all the things that can happen and then you you do this subconsciously where you take in all the factors if you were to make a prediction about something you would be basing off all your knowledge right and all the predictive information that you know the idea is that quantum computers can also do this is that quantum computers can look at all the

(20:23) probabilistic options of what could occur and they can highly probably determine the possibility of what's going to happen now some of the craziest claims that I've heard about this is that the quantum computer can for example predict um what side of the coin is going to flip is going to be face up when you flip it with better than 50% average which even something just even 51% would be remarkable right cuz on average if you flip a coin and guess you should get 50% now if you're somebody out there who

(21:00) when you guess you're getting 75% of it right now you are psychic right you are somehow looking into the future now this same thing is being argued here for quantum computers it said in that letter that places where event-based logic breaks down right now what's it talking about there it's talking about this same thing about here's all the probabilistic things that can happen quantum computers can figure that out now how does that relevant to teleport in my mind the way that is relevant to teleportation is something we're going

(21:33) to be digging into here about the quantum computers but the idea that the quantum computer can like guess where things are going to be at specific point in time um and that's a little bit kind of esoteric but the idea here would be like somehow it's able to you know entangle the particle entangle the orbs potentially potentially able to um have the information be read

that's required when you make a wormhole to pass the information over to the other location not entirely sure but it seems like somehow these quantum computers are

(22:08) related to extremely advanced technology and the reason why that's important is that um I'm just going to flip over to full screen that we don't fully understand the point of quantum computers but they're being used we produce them why did we produce something that we don't even know how it's going to be used doesn't that seem odd to you guys and if we take the understanding that the military is decades or more advanced than we are then doesn't it make sense that they have some purpose for it that

(22:44) they've already figured out and that the information **leaked** into the public sphere about quantum computers now the public is making them but again what's the point of them right and not to rag on L reviews L reviews thought quantum computers were fake which is pretty absurd and ignorant but he kind of has a point in terms of well what's the point of them right we're not like using them now theoretically this idea that you could have computer machine intuition should make quantum computers significantly more powerful than regular

(23:15) computers where it's just ones and zeros and processing through functions quantum computers can look at all the probabilistic natures of everything and and piece everything together almost like a human brain can right it almost makes me think of um you know the same way that the human brain works right that's kind of how I think about stuff as well some of you who believe in some of the more esoteric aspects like if you believe that you have precognition that sometimes like I've had dreams where especially when I

(23:44) was younger that sometimes like those dreams felt like they would happen in real life this is how I equate that machine intuition this idea that your brain is subconsciously able to pull in all the factors and create a series of events that's very likely to occur in the real world just based on everything that you've experienced everything you know it's going to happen in the future um and now if computers can do that do they become conscious themselves so I think those are the questions that we

(24:10) should be thinking about here um and uh artist and Tony brought up a good point here in the chat says our current AI will need to move past just predicting the next word to be able to couple it with quantum computers I would argue that the AI that we have is probably on the commercial side a very rudimentary form of what is possible and they talk about putting safeguards on the AI as well I would imagine that the military AI is potentially decades more advanced especially if it was early 2000s like that letter States in terms

(24:43) of when the uh stuff became available so and if you guys have any insights here as well um a Boeing Dreamliner nose died yesterday as well dude what is going on with these Boeing planes holy crap that's like five incidents in the last two weeks um so if you guys have any insights in terms of the AI quantum computer stuff before we dig into all of this um feel free to put it in the chat while we're going through this is going to be a group investigation that we're doing here today if you find out anything else that you think is relevant

(25:19) around quantum computers um you can put it in our Discord please keep in mind guys um I have to say this a lot um just because I don't want to hurt anyone's feelings or whatever but like if you post like an hour long actually anything over 30 minutes please post the clip that you want people to listen to right people send me stuff that's hour two hours three hours long I don't have time for that just reality I don't have time for that um please post the Tim stamp of the segment that you want us to listen

(25:46) to um if it's just a general link that's about it you want people to know about that's fine but if you want us to really dig into it best thing you can do is you can take a read listen for yourself listen to any segments and clips that you think are very important um I appreciate when people do that and if you post it on your Twitter then I will either retweet you uh if your context is nice otherwise if you don't put good context or you have a lot of stuff up there then usually I'll just copy and

(26:11) paste the video but it'll still say you know from so and so in there so um one sec guys no martinis tonight chat we're bearing it up we're Beering it up and if anyone wants to know before we dig into this what I've been up to the last couple days uh building a puzzle building a puzzle almost done almost done building that damn puzzle but it's a super super annoying one um okay Microsoft azer and Google has one as well so AI companies have quantum computers the big question is what are they doing with them one thing we know

(27:02) quantum computers can do is they can entangle cubits but what does all this mean what do you do with it right um so let's go let's start off with this quantum computers what are they good for um for now absolutely nothing but researchers and firms are optimistic about the applications okay uh let's see they say that there's nothing that they can be used for all quantum computers could be described as terrible um computers that exploit The Strange Behaviors of the atomic realm could accelerate drug delivery crack

(27:43) encryption speed up decision making and financial transactions improve machine learning develop revolutionary materials and even address climate change now one I want to point out right here climate change what the how the hell is climate change getting how's that being addressed in here the the Revolutionary materials now this is one where I think is really interesting uh I might actually post this later tonight um because I think this is a good question which is could quantum computers give us disclosure now why do I say that because

(28:24) quantum computers can pull all information that that's out there right language even just from the language learning models which is super interesting where I can pull all the information in they're using it to actually create meta materials right now where they can have quantum computers create different materials and say Here's what those properties are going to be that is amazing to me because now we can find other stuff like Ik99 super easily especially when some of the elements are extremely expensive like

(28:51) gold right I think that gold is a better candidate for Ik99 than copper but it's like a thousand times more expensive maybe even more than a thousand times more expensive right

so quantum computers can look for meta materials they can absolutely help potentially with they might even be a help in the future with UFO investigations similar to the one that we did helped us a lot we look used it for a lot as well um the speeding up decisionmaking transactions this is pretty interesting right guys because this seems very similar to what

(29:24) we've been talking about with what could they be used for from a technological perspective you know if there are some orbs floating around out there um and then cracking encryption is another one as well where remember when we had the the **scam** situation go on we were trying to crack the raar file remember how many billions and billions and billions of passwords we were looking there now quantum computers can probabilistically you know hone in on the right passwords and and solve it and significantly more

(29:53) time or less time um let's see Justified skepticism blah blah blah um okay quantum computers store data in Quantum binary digits called Quantum bits or cubits so Cubit stands for Quantum bits that can be made using various Technologies including super conducting Rings guys there's our favorite word superconductors so apparently quantum computers use room temperature superc conductive microchips which hey you guys want to know have you have you guys checked out recently to look at what uh let's take a

(30:36) just let's just look at one semiconductor stock called Nvidia if we look back six months let's just take a look back six months what it was at 400 6 months ago it's at 857 it was at 92 6 it was at 416 on September 22nd this stock has doubled Nvidia stock has doubled why is Nvidia stock double it's definitely not off graphics cards guys it's not graphics card is causing this to happen I think the word is starting to slip out towards investors room temperature super conductive microchips I would bet almost

(31:27) anything again that's not investment advice but keep it in the back of your mind okay and now let's keep reading here because I'm seeing a word here um some technologies require cooling to absolute zero others operate at room temperature it's almost like they're telling us about the room temperature superconductors but they just don't want it to get out there um whatever the design the clever stuff happens when cubits are carefully coaxed into superposition states of indefinite character essentially a

(32:04) mixing of digitals ones and zeros rather than definitively being one or the other running algorithms on a quantum computer directly uh involves directing the evolution of these superposition States the quantum rules of evolution allow for cubits to interact to perform computations that are in Practical terms impossible using classical computers yeah Nvidia chips power the AI llms I did not know that I I would bet you anything they have extremely powerful chips that are I bet they have room temperature superc conductive

(32:37) microchips almost certainly guys almost certainly uh that said useful computations are possibly only one Quantum machines with a high number of cubits those do not yet exist Okay blah blah blah let's keep going [Music] skepticism okay Quantum hop okay I want to know what they can do here um they published simulations of this sulfon suum [Music] ion so this is the

part where they're talking about they can understand the mic the stuff okay well this one's kind of lame let's look at a different one let's go to a video to build the

(33:25) most powerful computer on the planet and that's a universal quantum computer quantum computer which is able to run any Quantum algorithm and it does so um by using Quantum error correction and built on a platform of silicon technology did we see that on of silicon correction and yeah so look at this microchip that they've got here okay let's see what we got here cuits are made using physical systems such as the spin of an electron or the orientation of a photon these systems can be in many Arrangements all

(33:59) at once a property known as Quantum superp position cubits can also be inextricably linked together using a phenomenon called quantum entanglement the result is that a series of cubits can represent different things simultaneously quantum entanglement chat wow um I keep thinking back to E equals epr right in ER equals epr you can have a system that can go through a Wormhole system of information and when you read one answer on one of the pieces of system information it makes the system information show up on the other side

(34:38) unscrambled now why is that important because if it shows up unscrambled now we have this possibility where we can send something extremely complex like an airplane full of people through a wormhole and have it show up on the other side now what does that really mean right if it's it really equates to the double slit experiment is that what we do is we break down the wave function of the system and we or we turn it we rebuild the wave function of the system I apologize turn it into a wave function now the plane is not in

(35:13) any one particular point and now we have the quantum computer read that information it's receiving location the area where they've entangled these particles to let's say a fourth orb somewhere and now that information will instantly appear over there now what happens is the wave function breaks down and when that wave function breaks down now the plane gets a probabilistic place in SpaceTime or not a probabilistic a definitive place in SpaceTime sorry if I said that wrong um and so to me this somehow intuitively this is definitely

(35:51) connected to the idea that we can teleport an object right somehow quantum entanglement and super these um quantum computers are enabling it companies have been working on building quantum computer chips for decades I'm here in London to visit a Quantum startup that's taking a different approach we're taking one of the most uh ubiquitous devices uh in in the world today the Silicon transistor you and I will have billions of of transistors on our person in our watches our computers our phones and take that

(36:23) silicon transistor and use that to store a Quantum bit or a c bit and in that way we'll be able to make Quantum processes um that can scale up and really tackle who um in in the Box in the computer uh design uh new kinds of materials new chemicals yeah so this is one of the things that they're talking about using it to design different materials right so we know about that new drugs uh in a way which is much much faster to wire them up uh to be able to to run Quantum algorithms uh and then you need interactions between the different

(36:56) cubits to form that that basic unit of we use it to cool down our Quantum chips to 100th of a so this is interesting this whole apparatus is what they're using to cool the chips down because they need to be cooled down imagine if they didn't need to be cooled down now your system your processor could get extremely tiny right pretty wild degree above absolute zero this cat Works in in it has different stages when it's cold um there's a there's a plate here um which is uh a temperature of one of the

(37:31) uh the planets further more distant planets in man imagine if we've got this and the government has room temperature superc conductive microchips imagine their quantum computers right their quantum computers are like going to be the equivalent of magic and hey alien girl and Tony I don't know if I said hi hey James Pig James is out there hiding hey in our galaxy um this plate here is about the temperature of deep space um and then this plate here is 100 times CER than that about 10 m or 100th of a degree above absolute zero what is yeah

(38:03) so they have to keep it at absolute zero in order for this to work so this is the part where **I want you** guys to remember the first bold prediction that I made room temperature superconductive metam material right if you have room temperature superc conductive metam material all these problems they have this cryo chamber that's freezing it down below deep space temperatures right yeah this is a 100 times colder than deep space that's what he just said here so just think about how important it is to have room temperature high temperature

(38:37) superconductors that would change everything about Quantum quantum computers are going to take off the moment we have like 1k99 right because what they're going to do with that is they're going to turn it into superc conductive microchips and you know how small those superc conducted microchips are it doesn't even matter that the 1k99 is super tiny in terms of how many how much they can make because they don't need that much for a microchip you don't need much for power transmission over power lines you would

(39:04) need a lot but for just making little microchips probably not much at all they need to be so cold so that's why it makes sense that they would be the first things that we would produce right room temperature super conductive microchips the more I'm thinking about this that's probably going to be one of the biggest things we uncover now what have we already learned we've already learned that there are useful mechanisms for it one of the useful mechanisms is for uh finding out the properties of potential

(39:29) materials that are going to be out there I think that's huge imagine if we can just have you know um other types of uh materials um some of the other things that I'm thinking about right now that I don't want to forget are what this would do to like mining Bitcoin if this computer is thousands of times more powerful than regular computers then this thing could mine you Bitcoin and make you millions of dollars right the faster it is the more powerful it is uh the you know cuz now take imagine you have like a million

(40:06) computers you have a botn net and you have put a virus on people's computers where it they're mining you Bitcoin all the time if this thing is a thousand times more powerful or a

million times more powerful this thing is going to mine you Bitcoin like instantly right Bitcoin \$71,000 right now I imagine that when quantum computers come out the price of Bitcoin is going to collapse s um that would be my prediction U because people are just going to be able to mine it therefore it's supply and demand right so you just

(40:35) got another prediction from me um what was the other thing I was going to say the other thing is the stock market I imagine that quantum computers can do the same types of probabilistic Nature and and looking up information that's out there to prop probably adequately predict what that's going to happen in the stock market right tell you which companies you should invest in which ones are going to go up or down which ones are overvalued Val or undervalued it's going to make a big big difference down here what what's happening in this

(41:03) area that's not happening up there we want to cool our chips down to very low temperatures um to and Harriet just said they already using it for infinite distance communication yeah yeah there's definitely faster and light communication is definitely possible as well even Tim P didn't have any problem believing in faster and light communication which I thought was just funny because you know uh it's only one step up to uh teleportation of an object right but they are using it to entangle information here and entangle cubits

(41:35) together and then just like I mean even just using like something like Morris code right like Morris code can send information with just beeps so really if you can send anything over a vast distance at faster than the speed of light there's you're going to have a way to communicate using it right to suppress noise and errors and allow uh these single electrons to be well behaved as cubits in the Silicon chips at the moment we're very much in a in an R&D phase right we're we're developing

(42:03) the technology so a lot of what you see here wouldn't be required for a a a standalone operating quantum computer at the moment we want a lot of flexibility we want to be able to change the types of measurements that we're we're probing our chip with but pretty much everything that you can see in these racks um could be uh miniaturized to to to a a very small um controller but the great thing is is that now with cloud computing so he just mentioned the thing about it getting miniaturized as well and that's

(42:33) where the super conductive microchips would come into play the room temperature ones right if this can be miniaturized oh boy and people say yeah Bitcoin has a difficulty adjustment absolutely but these computers are thousands or millions of times more powerful than regular computers the moment your computer no longer heats up and you can and that's just with conventional uh Hardware if you can make it where you can computer no longer heats up now you can overclock your your PC significantly right thousand times uh

(43:04) and quantum computers are don't even use traditional processing right they use probabilistic it's pretty wild um there's another interesting side question or note is that whether or not you believe blobz are or not he said that the engines produce the UFO engines produce

zero heat but huge amounts of power like you said it went against all laws of thermodynamics um no I think that one thing thing we have to keep in mind is that the energy of vacuum energy of the vacuum is not zero there's energy in the

(43:34) vacuum State all around us everywhere right and if you can tap into The Ether into neg entropy then you can even have situations where it's cooling down your system right then this is like where I think Salvador Pas potentially uh talks about achieving room temperature super conductivity uh without meta materials and that's something i' like to focus on a little bit more at another time but I don't think that for quantum computers you can it' be harder to uh use a nonm material overclocking is turning

(44:09) somebody else can help me out but I'm pretty sure it's like um making your processor run faster but the problem is you're going to heat up your processor so when people back in the day before um uh graphics cards got like really really good there it was always a Battle of getting a better graphics card to play the games that you wanted to play on your computers and so what people would do is they would overclock their their CPUs in order to get better performance so that they could play all the shooting games that have better you

(44:42) know frames per second because all those things would matter right and so the cool thing to do when I was in high school and this was 20 years ago more more than 20 years ago was everybody was overclocking their their their processors but they didn't want them to overheat if they overheated then you'd fry you try your computer right I never did it but people did a lot um and yes so if you're the superconductors make it so remember guys let's just get back to the basics of what is resistance electrical resistance guys is

(45:14) when electrons are flowing through a system and when they go through the conductor the semiconductor the reason why it's called a semiconductor is that some of the electrons are bumping in to the atoms when they bump into the atoms what happens causes friction causes things to heat up what you want is you want a highway you want a highway where your electrons have no resistance whatsoever where they're flowing freely and none of them are ever bumping into any of the other atoms remember that's Cooper pairs now when you achieve that

(45:45) state now you have super conductivity and if they're not hitting any atoms then they're not heating up at all right if you're not heating up at all now this is where you can overclock your processor so significantly the user from the from a smartphone can access the power of quantum computer without even realizing that it's not in the in the palm of the hand but the actual Com~~puting~~puting is being done um in some remote location yeah they're talking about Cloud as well right so you can set up a cloud

(46:16) processor that has a quantum computer and then you can just log into it on your phone the same way we log into language learning models right is on with dozens of companies and instead of one slender Twist of wire it has organized silvery swarms of them neatly braided around a core they are arranged in layers that narrow As you move down Golden Plates

separate the structure into sections the outer part of this vessel is called the chandelier it's a supercharged refrigerator that uses a special liquefied helium mix to

(46:49) cool the computer's Quantum ship down to near absolute zero that's the coldest temperature theoretically possible at yeah so this is a big problem is they have to cool these things down right um yeah computers have throttling now to make sure that you can't kind of like when my my remember when my uh camera was turning itself off all the time guys at such low temperatures the tiny superc conducting circuits in the chip take on their Quantum properties and it's those properties as we'll soon see

(47:20) that could be harnessed to perform computational tasks that would be practically Impossible on a classical computer the Cooper pairs themselves are quantum structures guys when the Cooper pairs form not only can they not go up to a higher elevated State they get stuck because they're they so cold there's no way for them to jump up uh but they basically begin to form like a wave they they get they form that Bose Einstein condensate uh actually that's probably I'm probably Mis misusing that term but

(47:55) the same idea applies right is that they form a state where they can flow freely like a wave does it's like quantum teleportation right traditional computer processors work in binary the billions of transistors that handle information on your laptop or smartphone are it's almost like a singularity either on one or they're off zero using a series of circuits called Gates computers perform logical operations based on the state of those switches classical computers are designed to follow specific inflexible

(48:24) rules how crazy it is that our computers right now just use Gates of ones and zeros and that produces everything you guys are seeing right now produces these the videos that I'm looking at right now with you guys the fact that I'm streaming to you guys the fact that you see myself picture and picture in the bottom right uh the chat that you see all of this is just ones and zeros in a computer right so even if we think about quantum computers in their base form which is uh measuring spins in probabilistic nature just think of how

(48:55) much that can advance in the same way that you think of just ones and zeros have advanced to the point where you see all of this stuff that we're looking at right here this makes them extremely reliable but it also makes them ill suited for solving certain kinds of problems in particular problems where you're trying to find a needle and a hay stack this is where quantum computers shine if you think of a computer solving a problem as a mouse running through a maze a classical computer Finds Its way through by trying every path until it

(49:21) reaches the end what if instead of solving the maze through trial and error you can consider all possible routes simultaneously okay guys this is the money right here right a regular computer this is a great analogy a regular computer is trying to go through every permutation just think of us trying to hack the password right it's going through every permutation one at a time the quantum computer can look like we look down at the Maze and it can immediately find the right path right can immediately figure out that

(49:56) this is the right path here just like I just did right there that is a huge huge upgrade and when you think about that like this is the type of thing that when we think back to the letter that we played early on this is the kind of thing that would be required in order to achieve that machine intuition right where it's almost like it's tapping into some type of esoteric capability of the universe itself that's pretty crazy guys like that's a huge upgrade in in processing capability now how do we connect that to

(50:34) teleporting objects not quite sure but we got to start at the ground up and work our way up there and then the answer will at some point when we get knowledgeable enough present itself to us quantum computers do this by substituting the binary bits of classical Computing with something called cubits cubits operate according to the mysterious law that physics Works differently at the atomic and subatomic scale the classic way to demonstrate quantum mechanics is by shining a light there it is there it is chat there it is look at this

(51:13) literally showing us a double slit experiment a barrier with two slits some light goes through the top slit some the bottom and the light waves knock into each other to create an interference pattern booya but now dim the light until you're firing only individual photons one by one these are the elementary particles that comprise light logically each Photon has to travel through a single slit and they've got nothing to interfere with but somehow you still end up with an interference pattern here's

(51:46) what happens according to Quantum Mechanics until you detect them on the screen each Photon exists in a state called superp position it's as though it's traveling all possible paths at once that is until the superposition State collapses under observation to reveal a single point on the guys I got to be honest the only way this makes any damn sense whatsoever is if our world is a simulation that we live in a computer program and ourself there is no effing way that the wave function can break down like this and that light can be in

(52:22) some type of super position right unless we we live in some type of simulation there's some processing happening all the time around us right to me and people argue that no no no double slit experiment doesn't prove that uh holographic principle is correct yes it does yes it does nobody can explain why the wave function breaks down right guys observation is just another term for measurement they're they're synonymous guys a lot of people split hairs over this when you observe something that's

(52:57) measuring it with your eyes right so observation is synonymous with measurement um and why is that important that's important because this is the same idea of eer equals e that we have right where you pass the information over to the other side and now the object starts over here on this side of the Wormhole and next thing you know it's on this side of the Wormhole right so I mean to me I don't know if somebody El can come with a better explanation you can win a win a Nobel Prize but this is to me is proof of an

(53:32) extra dimension in my opinion the screen cubits use this ability to do very efficient calculations for The Maze example the superposition state would contain all the possible roots

and then you'd have to collapse the state of superposition to reveal the likeliest path to the cheese just like you add more transistors to extend the capabilities of your classical computer you add more qubits to create a more powerful quantum computer thanks to a quantum mechanical property called entanglement scientists can push

(54:01) multiple qubits into the same state even if the qubits aren't in contact with each other and while individual qubits exist in a superposition of two states this increases exponentially as you entangle more qubits with each other so a two Qubit system stores four possible values a 20 Qubit system more than a million so what does that mean so the more qubits that you store the more information processing you can do right because each Qubit has any number of possible states and when you add more now you're exponentially increasing the

(54:35) possible states of everything which is all the different possible permutations that it can perform right so instead of going through them one at a time it can store all the possible permutations of what's possible if you have a system that's large enough um and then it can uh solve for it wow guys damn this is freaking me out so let's say that there's so much information in let's say a 77720 the size of a 77720 has almost in our minds almost an infinite amount of information if we were going to use let's say a

(55:15) traditional computer to map every single atom in the plane it would be impossible there wouldn't be a computer there there no supercomputers on the face of the Earth powerful enough right conventional ones but but when we start to deal with stuff like exponentially increasing capabilities this is where quantum computers start to go nuts right because now even if the amount of information that's in a 777 is a huge amount every time you add another Qubit your information is increasing that you can

(55:52) store and process exponentially so at some point you're going to catch up really quickly right just like if you were to add 2 plus 2 plus 2 plus 2 it's going to take a long time to get to let's say a million but if you go  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2$  you very quickly get to a million right much less permutations you can simulate entire worlds you can simulate the entire galaxy right if you if you make it powerful enough and we don't even need that much all we need to do is simulate an a plane we want to simulate a plane

(56:28) and we want to move a plane from one location to another location right this is where I think that that's the secret of how we can have enough information to map it and then the other one is how do we increase our energy densities right this is another thing that I think superconductive magnets can allow for us to do you have a room temperature superconductive magnet and you Jam these magnets either together or some type of interaction action where they amplify they don't amplify linearly they amplify

(57:02) exponentially and when they amplify exponentially now you're reaching a singularity where you're going to get to infinite power states right or enough that doesn't really matter enough for whatever you need to accomplish if you need to break through the fabric of SpaceTime break through the speed limit we can do that this is the secret of the universe is

that things we think in a linear fashion linear progression but if things can increase exponentially then we can achieve information processing that is

(57:33) essentially infinite and we can explain uh power density power generation that's infinite as well pretty wild um and I won't be calling it simulation anymore it offends some people but the reality is that that's you call it whatever you want I call it a matrix um I mean that's what's going on here right that's that's what's going on here does not make our lives any less meaningful um our everything we're still doing is absolutely real because reality is just what we see around us right um

(58:10) but but I think there's no other logical conclusion to what this to the double slit experiment uh faster than light communication faster than light travel all of this stuff is only possible if there's some underlying framework just like computer code within our universe know it's just that's really how it that's that's how the chips fall guys so I will be referring it to as a matrix because that's how I like to think about it I actually had a talk with a woman at the dog park today she

(58:40) she mentioned that her husband that she was a widower and I told her that she'll meet her husband again in another life and then she mentioned uh quantum mechanics next thing you know we were sitting there talking for like 30 40 minutes about everything pretty wild oh okay we're going to look into the fifth generation d-wave in a second thank you skinny Bob uh yeah dry I I briefly talked about the Boeing Employee at the beginning if you got want to go back check out the first 20 minutes we went over some of

(59:10) the recent stuff uh the Boeing Employee stuff my message to the UFO community and what I took away from it and now we're hard into the quantum computer stuff what does that mean for computing power it helps to think about applying Quantum Computing to a real world problem the one of prime numbers a prime number is a natural number greater than one that can only be divided evenly by itself or one while it's easy to multiply small numbers into giant ones it's much harder to go the reverse Direction you can't just look at a

(59:38) number and tell its factors this is the basis for one of the most popular forms of data encryption called RSA you can only decrypt RSA security by factoring the product of two prime numbers there's a there's an fx show I've heard about that show devs I've never seen it that's pretty cool um okay we're going to look at Quantum what was it called the d-wave fifth generation after we we're going to we're probably not going to go through this whole thing but we're going to look at

(1:00:12) this in the second too okay each prime factor is typically hundreds of digits long and they serve as unique keys to a problem that's effectively unsolvable without knowing the answers in advance yeah so quantum computer is going to crack this uh prime number thing like instantaneously that's that's no big deal at all for computer in 1995 MIT mathematician Peter Shore then at AT&T Bell Laboratories devised a novel algorithm for factoring prime numbers whatever the size one day a quantum computer could use its

(1:00:46) computational power and Shores algorithm to hack everything from your bank records to your personal files yeah I mean encryption means nothing guys so one of the things yeah entanglement is non-local so what does non-locality mean it means faster than light non-locality came up from the double slit experiment that's how we found out about quantum entanglement um because we had to figure out how is the universe reacting faster than the speed of light which is how fast we see something that's how we measure something

(1:01:16) right um and so yeah when you have these faster and light effects happening this is stuff that's essentially magic I would argue that breaking encryption like super powerful encryption is essentially magic as well right because now think about the same thing we just mentioned is that we need a certain amount of processing power like just think of the idea of we're going through the passwords one at a time right if we have 256 bit encryption we're never going to break it right you could spend all the time in the universe and you

(1:01:44) would never get the password correct it could be anything right quantum computers can just hack it instantly why can they hack it instantly because they can achieve information levels that are so high that they can figure out everything about the universe right because again it increases exponentially instead of linearly and so if you have a powerful quantum computer it's going to crack your password instantaneously and it's going to figure out the the password probabilistically I mean it's cheating it's cheating there's

(1:02:12) no other way to put it to explain it right it's like if a psychic just said oh here's the password and gave you the password and you just cracked it immediately you would say well you are psychic right you must have some kind of psychic powers but no quantum computers can just process everything instantaneously like that pretty wild huh in 2001 IBM made a quantum computer with seven cubits to demonstrate Shore's algorithm for cubits they used Atomic nuclei which have two different spin states that can be controlled through

(1:02:41) radio frequency pulses this wasn't a great way to make a quantum computer because it's very hard to scale up but it did manage to run Shore's algorithm and Factor 15 into three and five hardly an impressive calculation but still a major achievement in simply proving the algorithm Works in practice even now experts are still trying to get quantum computers to work well enough to best classical computers that remains extremely challenging mostly because Quantum states are fragile it's hard to completely stop

(1:03:09) cubits from interacting with our outside environment even with precise lasers and super cooled or vacuum Chambers yeah so I see they put them in a vacuum chamber because any anyone looking at it right any measurements anything looking at is going to break it out of its alignment so they need these things to be absolute zero probably not visible no interaction with the environment whatsoever seems like a vacuum something like a vacuum chamber would probably be best huh any noise in the system leads to a state

(1:03:41) called decoherence where decoherence guys remember early on macroscopic uh Quantum decoherence and we changed it to macroscopic Quantum coherence when we started

to learn more it's not decoherent that we're trying to obtain we're trying to obtain coherence we need everything to be in the same exact position that we need in a very specific position so that we can move that exact information from one location to the other location without anybody coming out like Lord of the or what's it called the fly man or you know

(1:04:14) stuck in the walls superp position breaks down and the computer loses information a small amount of error is natural in Quantum Computing because we're dealing in probabilities rather than the strict rules of Bin and so here's your gaussian um function here so this is you guys have probably seen this a lot right the whole universe almost everything there is Works in functions like this even let's say the average height of an individual of of a human being the average height is going to be right in the middle right

(1:04:46) and the number of people that are going to be taller or shorter is going to be consistent with this uh this function that we see here probability function someone who like Shaquille O'Neal is's going to be way over here in the 99th percentile right this is where you start to talk about the percentile what percentile are you in everything everything that we do we can measure like this basically I don't think that's I don't think that's a coincidence but decoherence often introduces so much

(1:05:12) noise that it obscures the results when one cubit goes into a state of decoherence the entanglement then enables the entire system breaks down so how do you fix this so what did she just do right there when she talked about the decoherence The Decoherence is measuring it right this is the exact same thing that we see when we're talking about the double slit experiment and the wave function collapsing the wave function is collapsing when decoherence is applied right the moment you have decoherence boom wave function

(1:05:42) breaks down looking at even one part aspect of it boom breaks down this is like Schrodinger's equation right is the cat alive in the Box we don't know until we look the it's weird stuff to think about people answer is called error correction and it can happen in in a few ways error correction number one a fully error corrected quantum computer could handle common errors like bit flips where a cubit suddenly changes to the wrong state to do this you would need to build a quantum computer with a few

(1:06:09) so-called logical cubits that actually do the math and a bunch of standard cubits that correct for errors it would take a lot of error correcting cubits maybe 100 or so per logical Cubit to make the system work but the end result would be an extremely reliable and generally useful quantum computer that's interesting so what's the solution to having errors and things breaking down just add more cubits just add more cubits right and um then you you know you figure it out ER correction number two other experts are trying to find

(1:06:45) clever ways to see through the noise generated by different errors they are trying to build what they call noisy intermediate scale quantum computers using another set of algorithms that may work in some cases but probably not across the board error correction number three another tactic is to find a new Cubit source that isn't as susceptible to noise such

as topological particles that are better topological particles what you're talking about topological monopoles here is this the same thing as Bob yo

(1:07:20) William you need to chill out man I might be giving you a **timeout** as well um I just want everyone in the chat to to take their ego down several pegs um if if everyone knew the answers of the universe then we wouldn't have to do any of this stuff so we don't need anyone pretending like they know everything it's not that's not really helpful to anybody at retaining information but some of these exotic particles or quasi particles are purely hypothetical so this technology could be years or decades off because of these

(1:07:49) difficulties Quantum Com**puting** has advanced slowly though there have been some significant achievements in 2019 Google used a 54 Cubit quantum computer named Sycamore to do an incredibly complex if useless simulation under 4 minutes running a Quantum random number generator a million times to sample the likelihood of different results Sycamore works very differently from the quantum computer that IBM built to demonstrate Shore's algorithm Sycamore was the one that people were talking about that was Google's quantum computer right Sycamore

(1:08:18) takes superc conducting circuits and cools them to such low temperatures that the electrical current starts to behave like a quantum mechanical system at present this is one of the leading methods for building a quantum computer alongside trapping ions in electric Fields where so they can make a quantum computer differently well that's pretty important different energy levels similarly represent different Cubit States Sycamore was a major breakthrough though many Engineers disagree exactly how major Google said it was the first

(1:08:49) demonstration of so-called Quantum Advantage achieving a task that would have been impossible for a classical computer wow wow wow this is important chat so there's different mechanisms to pull it off and some may be more effective than others right so the difference here is that if they can do it with super conductive especially room temperature superc conductive microchips there might be completely different ways in order to entangle the cubits different than old Str so think of it like you're getting

(1:09:21) better at the strategy so let's say you like to play a game right the first time you play the game you're going to be not very good at it and now you come up with a better strategy for it and now you get a lot better right same thing is seemingly happening with the development of quantum computers and how they function so we might have to look into Sycamore here as well in a second it said the world's best supercomputer would have needed 10,000 years to do the same task IBM has disputed that claim at

(1:09:48) least for now Sirus quantum computers are ways off guys okay so if you don't think that we've got the mil if the mil the military has some of these things right this is why they're hiding I they might be suppressing this technology as well this and they might have been suppressing it for 20 years right and it's getting out um and yeah I mean it's God the amount of Technology that's been suppressed is Scary Man scary this is just the stuff we know about right

Sycamore is a transmon superconducting Quantum

(1:10:23) processor created by Google's artificial intelligence division it has 53 qubits so remember each Qubit is two possibilities and that they increase exponentially so if we pull up our calculator the amount that it can process is two to the power of 53 whatever we'll just we'll just do like this two where's my carrot guy to the 53 the number is so large it has 15 extra integers here 15 extra integers so just keep in mind it only takes nine 10 integers to get to a billion so uh five more Beyond a billion

(1:11:14) we're talking like quadrillions of integers of possibilities here right I don't even know exactly how many numbers but a lot a crap ton right this is a huge huge huge number so I'll write it out here nine with 15 zeros 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 uh so that's 1,000 million billion trillion 9,000 trillions is how many of this is able to pull off I don't even know what comes after trillion guys that's it's quadrillion nine quadrillion they can do nine quadrillion things so yeah nine

(1:12:07) quadrillion possibilities seems like a lot of possibilities guys holy crap that's pretty damn powerful Google's quantum computer okay here we go Google's quantum computer psychor did something that's going to break your brain once again it achieved Quantum Supremacy by performing a calculation within a few seconds that Frontier the most powerful supercomputer in the world would take 47 years to complete this is something similar to what Google did in 2019 with 53 qubits but this time psychor performed the task with 70

(1:12:45) qubits 70 how is this not getting talked about more chat so we just went from nine quadrillion and they just added 17 more qubits so you have to uh Square it another I don't know how many times this is going to get absurd right 17 more times so we're definitely getting to the point here where we can probabilistically determine like crazy stuff right the quantum equivalence of classical bits that can represent one or zero or like with just a quadrillion I'm sure we can crack any encryption right now we're getting to the point where

(1:13:27) like we can teleport information of uh a 77720 and this is just the stuff we know about both at the same time potentially allowing for certain calculations to be performed at astonishing speeds quantum computers are still in their early stages of development but the progress that Google has made with psychor is a major step forward for Quantum Computing it shows that these machines are becoming more powerful and capable and it suggests that they could soon be used yo people are not building this for no reason right people are not building

(1:14:00) this for no reason like this is people are building this for a reason chat um and and that's the crazy part is like we have to think about like people are not spending billions of dollars on these for nothing right they're doing something with this to solve real world problems to get regular technological updates follow the secrets of the wow um okay well I'm not watching something that's an hour long let's look at this Quantum Supremacy using a programmable super conducting processor this is with their

(1:14:38) thing right let's just read the abstract we're not going to go into all this the promise of quantum computers is that a certain comp computational task may be executed exponentially faster than a Quantum processor than on a classical processor a fundamental challenge is to build a high fidelity processor capable of running quantum algor algorithms in an exponentially large computational space remember exponentially it's getting exponentially larger here we report the usage of a processor with a programmable superconducting cubits to

(1:15:06) create Quantum States on 53 cubits corresponding to a computational space State space dimension of 2 to the 56 remember that was now about 9 quadrillion we we did the math we did the math guys uh measurements from repeated experiments sample the resulting probability distribution which we verify using classical simulations our Sycamore processor takes about 200 seconds to sample one instance instant of a Quantum circuit a million times our benchmarks currently indicate that the equivalent task for a state-of-the-art

(1:15:40) classical super computer would take approximately 10,000 years 10,000 years for a super computer it can do in 200 seconds whoa this is a dramatic increase in speed compared to all known classical AI algorithms is it experimental realization of quantum Supremacy for the specified computational task heralding a much anticipated computer Paradigm guys you know when I begin to take a paper seriously when it doesn't just put one source but they put six sources seven sources on this one just just in case people want to be like no

(1:16:23) they're faking it like nah bro I got seven sources whoa okay you have my attention now okay let's see what d-wave has got going on here chat 5,000 Cubit fifth generation Quantum anal I don't know how to say that correctly but we're going to call it analer cuz say anal sounds funny and I like it is this okay Los Alamos National Laboratory well guys have you guys ever heard of anybody else that worked at uh this Los alos National Laboratory chat H H interesting I can't think of anyone Canadian purveyor of quantum computers

(1:17:20) d-wave systems announced their fifth generation 5,000 Cubit system late Tuesday at the company's annual user conference cubits in Newport Rhode Island the new quantum computer named Advantage will be made available for on premise deployments and d-waves leap cloud service in the mid 2020s the advantage design incorporates d-wave's new Pegasus topology which was announced in February the new topology design provides higher connectivity influencing how problems are solved higher connectivity allows for more

(1:17:54) complex problems to be solved using the same number of cubits with higher connectivity less cubits are needed to solve problems so the military is going to have some crazy chat if some random Canadian company's got a 5,000 Cubit processor and Google's got ones that can do nine quadrillion uh the military has got ones that can teleport objects I would guarantee it um how do we find out about the the militaries uh quantum computers that's what I want to know next I want to know what kind of quantum computers the

(1:18:27) military has and it's going to be classified so they're going to have room temperature superconductive quantum computers that are probably going to make these look like little

child's toys right this is scary this is almost like the show Westworld where there's like this supercomputer in Westworld that's like predicting that what everyone's going to do with their life and if anyone deviates from it it just sets a system in motion that's going to just destroy their lives wow [Music] uh how do we find out more information

(1:19:00) about this this was a one year ago uh and then in a way that is not better better and better number of Cubit built in an entirely it doesn't always work out that well but we'll take it on the Y is residual energy so for context the lower lower on that plot less residual energy better performance in an optimization context and on the x-axis in that plot is the analing time the amount of time we algorithm to unfold and they reflect themselves they manifest in performance Cubit system of a this also seems very

(1:19:57) similar to Optical phase uh conjugation as well noise performance this is the fuction prim approaches qu Compu model quantum computer and let me we thought that this we doing this so Quantum analing different modalities for performing Computing end up being fairly complimentary to each other and how they play into kind of weird Los Alamos is the place where they were figuring this out B was let's look at the road map uh built on top of a super conducting validate air correction Cubit within demonstrate logical Cub

(1:20:43) manipulation fabrication stack that allows scal task compon all of the control circuitry embedded control circuitry on chip technology that has allowed us to build a able technology uh with aning based quantum computers and and and since the time of our announcement we've made a number of uh steps along this path uh We've fabricated uh and and started testing uh our our gate model Cubit our first generation gate model Cubit again within an integrated circuit fabrication stack and are performing one and two Cubit uh

(1:21:18) gates with that uh We've demonstrated uh a a unique approach uh which I think is cool uh um okay let's now that we understand a little bit more about these guys I think we've now just armed ourselves with the base knowledge that we need to be successful here um let's close this Paradox free time travel is theoretically possible uh this is the one I want to look at Quantum Computing breakthrough stable cubits at room temperature wow this makes a lot more sense chat I'm glad we learned about the

(1:21:53) quantum computers before we read this researchers have achieved Quantum coherence at room temperature by embedding a light absorbing chomos Spore within a metal organic framework this breakthrough facilitating the maintenance of a Quantum System state without external interference marks a significant advancement from quantum computers and sensing Technologies researchers observed the quantum coherence of a quintet state with four electrons spins in molecular systems for the first time at room temperature in a study published in

(1:22:32) science advances a group of researchers led by associate professor nobiru yanai from uh kushu University falony of Engineering in collaboration with associate professor uh Koshi Miata from kushu University and Professor uh y uh yasu hero uh kabor of Kobe University J

these are Japanese people I can tell Japanese names uh they've achieved Quantum coherence at room temperature the ability of a Quantum system to maintain a well-defined state over time without getting affected by surrounding disturbances now why is this important

(1:23:11) we just learned that one of the big issues is decoherence which uh leads to situations where we need more error correction so if you can get rid of the error correction problem now you can make your quantum computer way more efficient right pretty amazing this breakthrough is made possible by embedding chromophore a molecule that absorbs light and emits color in a metal organic framework or MOF a nanoporous crystalline metal composed of metal ions and organic ligands I don't know advancing Quantum technology their

(1:23:50) From their findings mark a crucial advancement for Quantum Computing and sensing Technologies while Quantum Computing is positioned as the next major advancement for Quantum Computing technology Quantum sensing is a sensing technology that utilizes the quantum mechanical properties of qubits okay how long is this not too long here we go we'll finish it up so let's look at this image here observing Quantum coherence of high spin states at room temperature just trying to see Quantum coherence of the 5th state has been

(1:24:27) observed only at cryogenic temperatures they were able to maintain the quantum coherence of the quintet state for more than 100 ns this seems like a pretty damn big advancement everybody oh yeah we're definitely being monitored if we if we weren't being monitored by the government I would feel like our government's kind of failing honestly hell man Putin will be Putin would definitely be uh watching us especially after I just outed his secret military base area fake Area 51 Russia Area 51 whatever you want to call

(1:25:02) it um by leveraging the extremely sensitive nature of quantum entangled states to environmental noise Quantum sensing Technologies is expected to enable sensing with a higher resolution and sensitivity compared to traditional techniques however so far has been challenging to entangle four electrons and make them respond to external molecules that is achieve Quantum sensing using nanoporous MOFs notably chromophores can be used to excite electrons with a desirable electron spins at room temperature through a

(1:25:31) process called singlet fission or fusion however at room temperature causes the quantum information stored in the qubit to lose Quantum superposition entanglement as a result it is only usually possible to achieve Quantum coherence at liquid nitrogen level temperatures now guys liquid nitrogen what do we use liquid nitrogen for we use it to achieve super conductivity and cool things down now you can already see if you're thinking like I'm thinking you can see how room temperature super conductive metamaterials would change

(1:26:04) everything about this the moment we have room temperature superconductive metamaterials hello quantum computers say goodbye to your old computer chat computers are about to get millions and millions of times literally infinitely more powerful infinitely more powerful um it's going to be a new Revolution that will come into play with Computing and why is this exciting to me actually I'm going to save this to the end let's read through the rest of it to

suppress the molecule uh molecular motion and Achieve room temperature

(1:26:37) Quantum coherence the researchers introduced a chromosphere based on penine uh and a whatever this okay um the M Mo structure facilitated enough Motion in the penine unit to allow the electrons to transition from the triplet state to the Quint quintet State while also sufficiently suppressing motion at room temperature to maintain Quantum coherence of the quintet multi- exitron State upon photo exciting electrons with microwave pulses the researchers could observe the quantum coherence of the state for over 100 NS at room

(1:27:17) temperature so this is basically their first test right while the coherence was observed for only NS the will pave the way for Designing materials for the generation of multi cubits at room temperatures it will be possible to generate quintet multi- exitron States cubits more effectively in the future by searching for guest molecules that can induce more such suppressed motions and by developing suitable moff structures this can open the door to room temperature molecular Quantum Computing based on multiple Quantum gate control and

(1:27:50) Quantum sensing of various Target comp compounds what wow that's pretty amazing um so before we go into our final Moment of Zen discussing this let's take a look at what this thing now about quantum has to do with here yeah this is going to happen in our lifetimes if you are young enough absolutely I would say that we're probably looking at 10 to 20 years for this probably closer to 10 years but the way things are happening and evolving so fastly with AI um it really is just a matter of when r room temperature superc

(1:28:25) conductive meta materials become public knowledge once they do things are going to just uh leap in bounds grow out of control if you ever wonder what quantum computers do You're Not Alone um let's see competition 20 finalists will share a \$1 million prize in advance the finals Google's invested 866 million no they've Millions um uncover secrets about Dark Matter okay okay this is just some dumb competition okay let's go to our End discussion okay so if you are uh my age or older and I'm 41 years old then you

(1:29:17) remember that in the 90s um and even through the early 2000s computers were just booming right you always wanted the next computer because they were just getting more and more and more powerful right and if you're a gamer like I was you really wanted the next computer because every upgrade made that generation of games and older run faster and there was a lot of times where if your computer wasn't good enough your computer was like a year too old you couldn't even play certain games like they didn't meet the

(1:29:48) minimum requirements you would see on the side of the Box nowadays that's not really an issue anymore you don't have that anymore now is basically every game can be played on most rigs that you would have as long as it was produced in the last 5 years or so right and so things have started to like Teeter off a little bit right they they increase and then they Teeter off what will happen with quantum computers is we're going to have that happen again where it's going to I mean we went from 53 cubits which

(1:30:15) can do nine quadrillion calculations to 70 cubits which is multiply it 17 times more SE multiply 2 17 times again and then all the way up to things like 5,000 where the numbers are just like at that point we can calculate probably every atom in every single person inside of an airplane maybe even more than that right and that's not even going to be the heights of it right it's just going to keep going up and this is where we talk about linear versus um exponential so if anyone doesn't know what that

(1:30:50) means linear growth would be a line growth right straight straight line exponential growth is going to be a curve where it just achieves a singularity where you are just this is what allows for quantum computers to achieve um processing capabilities that seem like they would be magical as well as for those energy densities like remember when the orbs are converging on the plane this is where your energy densities are achieving they're going up not linearly they're going up exponentially and it gets to a point

(1:31:21) where you can achieve essentially an infinite amount of power this is why Salvatore P's patents talk about achieving energy densities so powerful that they can destroy a planet or asteroid right and he's at that point he's being koi because he doesn't want to let everyone know the Doom and Gloom which is they can achieve energy densities of anything we need we can achieve energy densities of destroying the sun energy densities that can potentially create a big bang right maybe we created our own Big Bang maybe

(1:31:50) not us but maybe our our ancestors did right um cloud storage will be infinite that's a very interesting aspect I think that yeah probably actually because you could store the information in real time right you can probably make hard drives that have basically infinite storage space pretty scary right you don't even need storage space because the way the quantum computer works it can just store every possible State at once right that's wild I think you should have invested in Nvidia 6 months ago uh if you look at

(1:32:27) Nvidia now they're worth uh so if you guys don't know how Corporate calculations work I'm going to do this will be a quick quick explanation for how stock markets work okay so the value of a company is calculated several ways um and they must be equivalent okay if there's not equivalency then a stock is either overvalued or undervalued so the way you determine how much a stock is worth is by all of their profits in perpetuity what does that mean all the profits they make every year for now into infinity and there's a specific

(1:33:12) calculation that you can use to estimate that based on their current profits and then obviously there's speculation that comes into play how much are they going to grow right and so there's a speculative approach that allows the stock to go higher than what their books show you from a profit level this is why companies that don't make a profit still have a positive stock value right same way where Tesla didn't use to make a profit and therefore uh you know the value of the Tesla stock was much higher

(1:33:40) than what people thought it should be worth because their profits and perpetuity didn't make a lot of sense right now the market cap market cap is equivalent to the value of the

company and the way the other way you can calculate it is the current stock price times the total number of outstanding shares this is how it always works so the market Capal you see down here this company is supposedly worth 2 trillion 2.

(1:34:13) 14 trillion dollar just wrap your brain around that supposedly the profits in perpetuity are equivalent to \$2 trillion at least the investors who have invested think that they are right that is more money than a lot of countries uh that is a huge huge company this is a large market cap company um stuff that would be like medium market cap would be stuff that's like I think 20 to 100 billion so this is a large market cap the total number of shares that are out there times 857 is equal to 2.14 trillion so you can

(1:34:54) just reverse the math right here and you can do 2.14 trillion divided by [Music] 85774 and that will tell you how many shares there are this is how many shares that the company has uh two billion two and a half billion shares is how many shares that Nvidia has and that's always going to come out that way the price of the stock times the number of shares always equals the market cap okay now let's look at nxpi okay another this is another one this is the one that free scale was sold to later on um I sort of regret

(1:35:40) investing in them as opposed to n to Nvidia because Nvidia most likely has some kind of arrangement with the government or something like that right um but nxpi is a much smaller market cap right so their market cap is \$65 billion same calculation you can take 65 billion uh 2 okay so they have 256 million shares okay um but both of them if you look at them over the last 6 months that's a lot of growth they were down at 172 at one point now they're at 253 that is a huge amount of growth just since November that's not even 6 months

(1:36:30) right uh and now if you look at a fiveyear I mean look at the five year they went from \$2 \$100 now up to 256 and this is just they only do commercial stuff now they're not selling to the government anym anymore as far as I know the ones that I would be interested in on um are the ones that are selling to the government cuz those are the ones who are secretly producing room temperature superc conductive microchips now look at a 5e of Nvidia whoa 2019 Nvidia was worth \$35 \$40 and now they're worth 800 something's going on here right this

(1:37:07) growth right here is astronomical \$120 in 2022 now \$800 you would have made your money back eight times this something going on there chat okay okay guys um so I think we learned a little bit about quantum computers today if you guys find out anything else uh actually first of all make sure you hit that like And subscribe button everybody if you like the the stream tonight but I know a lot of you are already subscribers um if you guys find out anything else about quantum computers feel free to put them in the comments or if you guys are in

(1:37:44) the Discord I will post a link to the Discord right now we'll let uh another 10 people join that want to join the Discord and uh we've got just some a quick quick announcement I've got some hard truths podcasts guests getting lined up uh should be some pretty good stuff and I'm hoping to get some more as well as I uh you know spend more time on the podcast and and upgrading that kind of stuff guys so uh feel free to join our Discord please uh do a verification

when you come in introduce yourself you

(1:38:15) don't have to tell us your real name but tell us why you want to join Etc and feel free to share any Quantum Computing information that you find into the Discord as well uh thank you guys very much tonight uh I'll go ahead and play out uh one more video just because there's a little bit of a delay on the stream and we will go ahead and close this will be your Moment of Zen the last sliver of [Music] Hope [Music] that was fun have a great night everybody peace

Transcript:

(00:59) e the last sliver of Hope vanished in an instant Malaysia's prime minister announced today that flight 370 went down in the Indian Ocean and all 239 people on board are dead most of the circumstantial evidence I believe points towards an Abduction of this plane I I don't know why and I don't know by who but I'm I'm convinced that that plane was taken by hey guys how's it going tonight hope we're doing well uh that's probably a little too loud huh uh oh why is it so loud I don't know anyway guys uh maybe

(01:38) we'll join Green Street space if he's still going uh I don't know what's going on um the Skyfire space maybe because they did it earlier they're not doing it uh tonight not sure see what we can find out here uh Steven Green Street how's everybody doing tonight hopefully we're doing well looks like you guys did not enjoy my video game stream oh Stephen Green Street is going he's popping off here we go here we go guys oh average Chris is up there a li it's just their version of reality

(02:16) latsky strikes me as someone who's like a True Believer um here all right uh Lou Lou Angeles hit me why don't I hear anything oh hey um so I I just wanted to comment on you on what you said a little earlier about uh it's weird to get thanks and the basic journalism aspect of this but man stepping back I it's a bunch of douchebags a few hours to explain the complexity now the volume is maxed out it's really loud you got to check your volume on your side goes you might think of it as basic journalism but honestly

(02:57) man it it was one of the main reason that game was fun I'm going to definitely play that later did a 180 on the topic primarily because of your reporting and you know our discussions behind the scenes and stuff so I you know oh God these guys are absolute losers holy crap short like that or or um I don't know not not uh you know I understand beg grudgingly we got L reviews and average Chris and Steven Green Street yikes chat yikes it will be looked at in a few years I mean it took you know the yeah it just it takes too

(03:32) long sometimes for people to catch I might as well just monologue right like what's the point of listening to these guys total morons considered insanely valuable because people are GNA come back and go oh [ ] how BL review is just an embarrassment I think well I appreciate that I hope so I mean I spent a I spent a [ ] [ ] amount of time on it no I know I know you did well I here's the things that I took away from the report the first thing that I think is very encouraging is that our military Pilots

(04:06) are confusing in some cases not all cases but in some cases they are confusing our new hardware for alien craft which tells me I mean [ ] man maybe we have kind of broken through as far as uh some sort of new tech uh is concerned and I think that's pretty exciting and I think that's a neat story what's your take on that yeah yeah yeah I'm glad you brought that up um and again you know like the uh Hey guys say everybody conscious energies these Pilots a lot of these you know these Pilots I don't think these

(04:46) Pilots are liars I think they believe they saw something otherworldly or something very very strange that they couldn't explain I don't think these military Witnesses are just make well at Le I don't know maybe that guy with the where was it where he touched the football size I don't know but most of these guys most of these people they seem like they legitimately experienced something saw something but and I initially uh with the New York Times okay so now I can't even barely listen to these guys man um sorry we I had it

(05:23) on the not on full screen there uh I can barely listen to these guys there's just such morons like now they're going to say they think they they they saw something like these are the idiot debunkers right who think that the pilots are lying and now they're doing a full 180 and claiming oh yeah maybe the pilots did see some advanced technology but it was just our advanced technology are you are you guys freaking kidding me man are you kidding me these are the same people that are trying to debunk us when we're literally

(05:54) talking about that we've got us advanced technology guys I'm just going to throw it out there uh all the people people that are in this space are [ ] morons and I've been trying to tell them that we've got technology that is advanced technology right uh I don't even really care what people in the UFO Community believe anymore uh because whatever man it's just it's such a [ ] show uh with these people that it just doesn't even bother me uh if they what they believe and what they don't believe

(06:24) right and this is why I stepped away from the case because these people are just unhinged they're mentally unstable uh this is everybody on all sides man and uh the reality is whatever we're just going to abuse and and and profit off the technology right if you were smart you invested in uh semiconductor stocks 6 months ago when we started this investigation when we found out that super conductivity had already been figured out and if you look at semiconductor stocks you'll see that they're up like a huge amount like 40 to

(06:54) 100% right like Nvidia is worth \$2 trillion guys \$2 trillion is what Nvidia is worth does that sound like a reasonable amount of money for a graphics card producer no because they're

producing super conductive microchips for uh quantum computers right that's why they're worth so much money this is not investment advice but just want to let you guys know that my God okay let's listen to some mil's crap read into that when the mil when DARPA and the military get together and create some groundbreaking technology they

(07:25) don't send a you know department-wide email saying hey FYI everyone in the government this exists like they don't do that only a select few like know that thing exists and so Random pilot a flying his F-18 off of whatever ship off Georgia probably hasn't been read into that and so if he looks off in the distance and 50 miles away they're cond some separate test over there I could see how he could go wait what the hell is that and then come back can not get answers because he's not read in you

(08:04) know like so it's like no one's really at fault there but the problem is is you have these activists who are taking advantage of that confusion and of that you know that story and they're they're appropriating it and taking it to mean aliens or otherworldly or interdimensional and they're using it as a you know to platform themselves the thing with those activists that you mentioned is that they all have they also are the only ones who have access to the guys that have stopped guys there's like two

(08:43) competing spaces going on and I hate bull sides right you've got the **Green Street** lure reviews like [ ] PTSD wannabe CIA Chris and one the **debunkers** and then you've got the cosmic doia UAP mic like True Believer on the other right neither of them have any concept of what the what is like what ufology is even about right like they're they're all in it all both of these sides are all just in it for the freaking drama right none of these people have any concept of the science that's the funny

(09:17) part is nobody on either side has any concept of the science and what's and what's possible that's what I think is just so embarrassing about the UFO community and why it's just such a [ ] show uh I'm going to just pop off on these people honestly with drones a thing that was jaw-dropping to me was during the uh St Patty's Day Parade in New York City which is a huge event in New York City um a post reporter a named Kevin shean I should give him credit caught this and dug into it um the uh

(09:51) NYPD was speaking to the press and speaking to the public and at the very end they said please don't fly any drones it was the last thing they said and they emphasized it um and shein went up and was like why the emphasis on that and basically it's because the NYPD at the time had no jurisdictional power over stopping drones investigating incursions of drones and it was like well who does and it's like the Department of Justice in the FAA well is the Department of Justice and FAA going to be in New York

(10:27) City during the St Pat's Day Parade probably not so the NYPD kind of had its hands tied and it was just scary kind of to think about that New York City there was a guy in Times Square who got on top of like a eight foot quadcopter and sailed around he he was standing sailed around Time Square okay I I can barely even listen to these guys man these guys are just terrible

um so my options are either this terrible space or the other terrible space with Cosmic dollar UAP Mike Nick gold this guy's like CNN brain

(11:00) zero right literally thinks that aliens are visiting us but uh them faster and light travel can't be possible because he hasn't heard it on CNN uh as well as Carlos Danger is like one of the most unhinged nut jobs in all of UFO Twitter um and then Kent Reynolds the guy who is got like I don't even know how many issues this man has but literally thinks tried to claim to podcasters that I stole his information which gu is just complete cuckoo cuckoo in in for Cocoa Puffs like man I don't know guys uh I can't stand

(11:33) the UFO Community I really have I this is why I don't want anything to do with it it's just all terrible on all sides nobody on either side gives a crap about the science or what's possible or what's not uh they all just want to talk past each other right like youve got literally two different factions that are both in their own space and nobody's talking to one another kind of feels like we need our own space for this it's just so garbage melons you know hey alien girl do you think welome Friday night the intention

(12:09) of bringing not only the dod's attention to it but cities like New York and you know Metro big metropolitan areas you think any Divas I can't access that link because it's behind Fox News sort of like a puppet show to to actually get the right people's attention on this stuff maybe we will just start our space talk about3 is just terrible yeah like what is there a chance that all of this UFO stuff was just a kind of like hiddenhand uh way to kind of like promote a actual important real issue I

(12:47) have thought about that but you know um I I think initially perhaps thought that but like the folks some of the main folks here the are I just no I can't say that I I just their actions just both publicly and behind the scenes and privately so terrible don't speak to that there are a lot of people with actual real selfish dubious motivations um involved in this you know and it's I'm going to say religion but it's same with every religion you have within that religion you have your like power hungry people who don't give a

(13:32) [REDACTED] and they just want and money and then you have like your group of True Believers hey Arn hey Amanda they're they're the ones like gripping the cross and like they're they're ready to go you know to bat for Jesus and you have like this dichot we got total idiots and we've got true beli group of UFO Believers it's like the same thing you've got like your power hungry narcissists and then you've got your like true like real honest to God Believers you know like Eric Bard for

(14:03) example at Skinwalker Ranch yeah let's see what people want to do you guys want to do your own space s like I spent an entire talk about whatever the hell talk about he's someone who's VI he's just True Believer true true true I don't see him playing any real games you know uh whereas someone like elzando my opinion just strikes me as someone who is trying to win you know um who's just trying to to uh that there there are dubious motivations there I I think some of them have been established

(14:35) in my reporting some perhaps in others reportings I mean I see Jeremy Jeremy McGowan on the on the space here he's written his personal experiences it's a so I don't think so I don't think there's some like secret Ploy here and in fact I think the government I think there is a cover up you know these people are the **debunkers** are now saying I was talking to some UF the other day and I was like look we may not agree that it's aliens but we can at least agree that there's a cover up uh to some

(15:09) degree I can't believe Sten green right now I mean that's nothing new it's not like the military industrial complex started suppressing and controlling information yesterday that's just like what happens but I personally believe that there has been a muddying of the waters with regards to thank appr fore adversaries sometimes with impunity the bunkers are now saying that there's a cover drones and balloons over American airspace both the Continental us and our interests overseas yeah he to know push

(15:45) back or ability to push back and this is scary stuff um you know look at the Poo Verde Nuclear facility in Arizona swarms of drones capturing God knows what Intel and the facility had no counter uas abilities and there was this like confusion like wait what do we do what's going on what are these things where did they come from nobody knows and they're gone and it's like this this has been going on off the coast of California it's been going on everywhere is this **China** is this **Russia** is this you know

(16:21) down by the Arizona border is it the cartel is it the cartel via uh let's check out the other space for a couple minutes and then if that's a I'll take a look and we'll just start our own I can see a lot of people want to do our own space we'll probably get booted out of this space up front because I really really want to participate but I forgot I had an appointment for a massage which I really need badly um it's okay sced does everybody in these spaces have a [ ] yeah soundboard uh um I

(16:55) did I I did have some questions I wanted to ask and I talked to Carlos about because N I do want to fight back in a sense in a very legal and a very appropriate way the only comment I have for now before I'm I before I arrive at my appointment is that um I have she's going to get a massage it's not to read it because I know that when I read I'm going to be really mad and I want to be ready to channel my energy with my application to the water review journal because I that anger in my application and um I want to

(17:28) wait I don't even know what these people been talking about um Carlos can describe what that process is like um if I have to um hang up um and go to my appointment and I'm hoping that when I get out of my appointment you guys are still going um but out of her appointment where is she going is she going to a brothel katrick would not survive it's 9:40 p.m.

(17:48) on the east coast and he would have gotten kicked out of school nothing's open she's going to get a massage at this time the the minimum level of analysis that's necessary to draw a conclusion um based on what I've heard is completely absent you don't know what a soundboard is even for a scientist and I I am dead look we got Nicholas in the chat huge

douchebag this guy and his wife total [REDACTED] losers citable documents that will be citable in a court of law for two years two years of fighting back I'm done with

(18:22) that okay you guys remember the yesterday or was that yesterday guys this woman has a complete [REDACTED] meltdown when I call her by her first name which is Carly Ray she acts like I had just shot her or something like she screeched like a harpy like what was mentally wrong with this woman where she's sitting there gaslighting everybody for like 10 minutes straight I joined the speaker panel and she's talking about how she doesn't want to be in the speaker panel because I'm on there and I call out her [REDACTED]

(18:55) gaslighting her and her disgusting husband and call her by her I address her by her name her actual birth name and she has a complete and total meltdown complete in total meltdown and they act like I've gone and killed somebody right these are the same disgusting [REDACTED] heads who are sitting here trying to say that I'm a crazy person and defaming me and this Nicholas nut job is like talking about me non-stop while having me blocked and to them the bigger agree uh egregious uh offense is to call them by their first

(19:35) name these people have no connection to reality whatsoever no connection Nicholas and his wife Carly Ray the rest of these UFO people whatever they have no connection in reality right like it's the UFO Community is an absolute [REDACTED] show it's really what it comes down to right yeah Ray Ray was Carly Ray I'm not going to say her last name so that she doesn't melt down anymore on me cuz you know people watch the streams or whatever and they clip them and do all kinds of crap uh but this is the problem with the

(20:06) internet in general is that there's no there's no accountability these people don't want any accountability for the things that they say and the things that they do they want to [REDACTED] on other people and they don't want anybody else to be able to [REDACTED] on them back and the moment you do they have they literally have Nut Job meltdowns these are literally insane people I mean this literally they're literally mentally ill and they actually need psychiatrists to help them out like most of the people in

(20:35) this community unfortunately and this is why nothing ever happens like every day it's like this the embarrassment of it is that like even the streaming Community the video game Community is not even this bad like you've got in the UFO Community you've got criminals you've got Psychopaths you've got the worst [REDACTED] out there right man it is disgusting you know and then for some reason all these UFO celebrities latch on to these troll [REDACTED] too you know like I'm sick of all of them man they're

(21:09) all losers and there's no surprise whatsoever they've never accomplished anything right no surprise so we're going to break through the [REDACTED] um that's going to be what we do [Music] cuz the reality is it's just not it's not productive all this crap that they're doing right so God it's embarrassing man anyway uh I guess we're going to do our own space whatever here we go uh I actually kind of need to get some food but I guess I can just do that later tonight so whatever uh I think

(21:44) we'll do our own space we'll maybe just talk [redacted] about all of them and talk about MH370 since it's the retirement day and whatever else you guys want to talk about AO and all the other stuff um but yeah the the soundboards are like little buttons you press and it plays like flushing sounds and fart sounds and like all these losers have like their soundboards queued up because they're like 8 years old right it's again just complete embarrassment on all sides um nobody in this community

(22:12) has any idea what the hell they're doing you've got morons like average Chris who like have he has obviously nothing going on in his life like no job or anything right and he just spends all day tweeting at people and thinking that he's smarter than other people and like trying to save other people which I mean my God man my God and lure reviews I mean I is literally a failed actor who is now like a wannabe UFO Community type person right and his takes are just egregiously bad right he has no concept of science he

(22:50) can't even form a coherent sentence he can't form a coherent argument his arguments are you didn't agree with what was said on the TV oh you're a bad person and it's just nothing but hypocrisy from these people and then on the believer side they just play fart sounds and uh and flushing sounds right and then they just scream at you and have their little clicks like they're wannabe Mean Girls and of course they all hate keemstar because he's somebody coming in and saying screw all this [redacted] right

(23:22) and they all hate it CU it threatens their little hierarchies that they've established it's my God man um so let's go ahead and talk about the AO stuff we will uh look into uh we'll look into the stuff that was posted today we'll I guess look about U talk about ufology I'll let anyone who wants to speak on the panel jump up or whatever um it'd be nice if some of you guys jump up I mean a bunch of you guys voted for our own space so some of you guys better jump up on the panel otherwise I'm just going to end it

(23:53) early so I'm going to start my own my own space up right now hold on uh first I'm going to search for any other spaces that might be going on that we might have missed how do I search for spaces doesn't even let me search on this okay create your own space uh UFO news and AO report neutral space I'm G to call it neutral space because some of their SS crap is just awful man uh what does allow incognito mean sure you can allow Incognito um okay we just started our own space

(24:59) chat here you go uh I'm going to copy the link if you guys want to join see if we can get anybody to join our space here chat oh okay we already got some people up in this business here we go Taco Loco let's get Taco Loco up chat let's get Taco Loco up let's see if Arwin wants to speak uh you know whoever wants to get up on this bich oh rwi jumped up cuz we were trying to talk to Taco Loco before right T equals mc squared let's get you up anyone who wants to talk hey everybody in the space right

(25:44) now so if you were uh joining our stream and you saw us uh streaming we decided to start our own space cuz I was jumping between the uh Steven **Green Street** space and jumping

between uh uh the the mic space and um both of them are just kind of garbage and I actually want to talk about the stuff that matters related to this a o Revelation and what your guys thoughts are so here we are in this uh space uh T equals mc squared man how's it going do you have anything to say good good how you doing Ashton can you

(26:19) hear me okay yeah you sound great man how's it going good good um so I just uh that space that you were referencing the other day was was it was probably the most psycho thing I've ever heard I was sitting there and I was just listening and I was like I can go down to downtown Portland right now and probably find serer people that than that station um but I wanted to just uh bring up one thing I have never heard anybody talk about it but it's actually like kind of crazy the uh have you guys seen have you guys like either

(26:55) heard of or seen the uh 2003 stepen Spielberg produced miniseries called taken um it was actually starring Dakota Fanning when she was like really little and in the first episode there's a crazy scene it's like right out of the gate the first episode within the first two minutes they have a uh a plane being dis being teleported by four orbs yeah I've seen it it got posted on one of the [reddits](#) early on and people were Lov in Okay cool so you've seen it so real quick like that was in 2003 I mean yeah do you think that's like art

(27:34) imitating life or life imitating art I mean it just seems so similar to the kind of the videos and and this whole conversation I mean yeah I mean like there's a lot of stuff like that you know and a lot of people are looking for meaning in stuff and if anything uh at best what I would say is that uh yeah it's it's life imitating or art imitating life right and and sometimes people say it's stuff like predictive programming in general but I don't think people can really see the future I think

(28:06) it's just a matter of what happens is that uh the science that's out there people extrapolate on what could be possible right so people that are like TV producers writers Etc they look at the science um that's publicly available and they extrapolate it to what it could mean and that means that sometimes people do stuff that's never going to be scientifically accurate but sometimes they do stuff that is scientifically accurate and like you see in Tak in lost manifest all these other shows as well

(28:31) like the idea of time travel is not some novel concept right the idea of having orbs out there I mean they're all over the place right now what that means with respect to MH370 and the videos um you know I think that we have just have to be cautious and not try to look to try to connect everything that's out there um it probably just means that people saw some videos I totally see that point right it just seems like awfully coincidental that a plane on fire is literally teleported right like the thing is is

(29:01) literally smoking right it's almost like Steven Spielberg produced that thing I mean he's already got connections to the whole you know advanced technology you know UFO debates I mean maybe and you know to your to your to your points about the Philadelphia Experiment on one of the streams that you did a couple weeks ago you know if this technology is a lot older

than we originally maybe have thought who knows who knew what when but that's really all I wanted to bring up just real quick thought I'd kick us off I mean you see

(29:31) like you kind of want some speakers so I thought I'd jump in yeah no I appreciate you jumping in to speak and yeah definitely I mean I think that even going all the way back to what was it like Close Encounters of the Third Kind with stepen Spielberg right like people people definitely I think know some stuff and uh they kind of profit off it no matter if that's through the science patents or just R entertainment right um and that's why I'm looking forward to that that movie that's coming out right

(29:58) called uh was it the three body problem right yes yeah yeah I mean I have a feeling there's going to be some weird stuff in there and I will always tell you guys everything that I can tell you until they put me under an NDA which they still have not so um like Interstellar as well right that was the first time I was introduced to time dilation I didn't even know what time dilation was before then right that's a movie that when I saw that I went holy [REDACTED] can that is that real and you go look it up and

(30:27) you're like oh that is real right and you're like wow okay and you find out that like they it was like Christopher Nolan right and he had talked to some scientists about like what black holes would really look like and what the scence how the science should really work right and it makes you wonder like is he talking to like DD contractors or like other government scientists and that and that's how they know this stuff's real um it wouldn't surprise me at all because the same thing's happening to me like right now

(30:55) when we talking about these videos all of a sudden people want to talk to you and they want to be like oh yeah you're on it like this is this is it right this is how it really works in the real world um and so that's how the stuff leaks out there and same with like the movie tenant what I'll say about the movie tenant you guys if you guys have been watching my streams like last week we were sitting there trying to figure out like can you break causality you know and I think the answer is like you can't

(31:18) but um I've been talking to some of those same scientists that I've had on my podcast and stuff and I'm sitting there like having private conversations with them going like can we can we actually break causality right because if you watch like especially the Salvador pi and Dave Rossi combined hard truths they start talking about stuff like the Mandela effect and when I was sitting there listening to it I'm like nah these guys are nah these guys are like pushing it too far into esoteric right and now I'm going hm maybe not

(31:45) like if you can move faster than the speed of light like maybe string theory is the answer maybe we can somehow impact the past uh and then the question is like what does retrocausality really mean does it mean that we will perceive that change like was there really a cornucopia on Fruit of the Loom I'm not sure but we can chat about it you guys and anyone else who wants to jump up and chat feel free go ahead the uh the thought just came to me when when you were just speaking there I forget who it was but somebody was

(32:19) talking about how I think it was either dark energy or dark matter was the increasing complexity of the system that yeah it can't be seen but can be measured um yeah that was um uh royy Herbert so Roy Herbert has dilation Theory right and the interesting thing about talking about royy Herbert and I'm actually planning on talking to Martin Gibson who's his counterpart who's on the math side uh this weekend I I've just got a book it I've just been with all the stuff been going on been it's been crazy

(32:51) but um and I want to talk to him about his unification Theory but the thing I love about Roy Herbert is so he's a theoretical physicist pH IST and when you guys when we listen to these guys you have there's like you've got the theoretical physicists and they're the ones who kind of conceptually understand how the universe works right and then you've got the engineers and they look at the problems a little bit differently the engineers are the ones that are going okay here's a floaty craft like

(33:14) how do I make it float right and what do I have to do and how do I verbally explain and mathematically explain the equations that will allow that to happen and the the physicists are the ones that are like trying to simplify it trying to logically explain how to make it intuitive so Roy Herbert the thing I love about him is this idea that complexity can cause gravity so that even on very very small scales like the quantum scales the more complexity that we get that causes like minutes amount of gravity but you know it kind of adds

(33:45) up and that the more complexity then then we this can account for dark uh matter which is the stickiness in our galaxy so the more complex even a Galaxy would get the more stickiness that you're going to have I I personally love that idea I think that's a great unification Theory um but I still don't know how it kind of fits in with what the engineers are saying you know the Salvador pases and and the Dave rossies but that's that's totally fair I guess I just I feel like there you might be a

(34:11) connection between that concept and the concept of like the longer the string the more complex yep you know those two things seem like they might are awfully similar in concept at least but who the hell am I yeah and the people who are listening right now too like that doesn't that's not the same as string theory if you're curious like string theory is more of the idea where if we can have some type of retrocausality you know how would we prevent some of these paradoxes that can occur and the answer is well you can

(34:40) have like these different string uh timelines or Dimensions or whatever right universes even where it's like if you change the past then you're you're basically branching off your Universe into a separate Universe right which is to me that's hard to wrap my brain around uh but I think that's kind of where some of the might be going gotcha cool well I'll uh let others jump on and we'll just leave you with a prediction I don't think this space is going to devolve into name calling and fart noises

(35:09) so excited about that I hope not and we'll see how long we go we'll just go until it gets boring um cool thanks a yeah thanks T equals MC squ man appreciate you buddy uh Taco Loco I

know that you are trying to get into the speaker spot uh before we shut down yesterday did you want to jump on and say anything I was just going to mention that um for people kind of new to this and I'm sure there's a lot of them there's a there's a YouTube channel called beneficent TV and they've got a couple

(35:40) of overview sort of sciency videos that that whip a lot of this like Bob rer stuff uh and some of the other stuff related to this they kind of take you from zero to to that and and and give a good overview and I thought that that would be something for people to look at and you know then the other thing that I would just say a propo of all the uh um crazy stuff is we flip this one rock over you know that's MH370 I've kind of been studying this since I was a kid back in the 70s and uh ended up having firsthand experience

(36:16) with some of this in the Navy and like you know when you get into the Philadelphia Experiment you watch some of those old lbck videos and duning Cameron and and and the other guys involved I I mean I understand what they're talking and you know if it's not real it's the greatest LARP ever um I mean I don't understand exactly all the nuts and bolts on it but they keep coming back to the same stuff that we're touching against that we all came to from a completely different direction either

(36:47) MH370 or like the free energy thing we've been working on for years with Bob grer p and FL and on the cold fusion you see all the fingerprints the intelligence Community trying to shut it down and uh um you know the same consistency you know the sacred geometry popped up the other thing I'll I'll mention then I'm going to sh off this you know think about the philadelph think about Manhattan Project okay that was about the atom bomb and every was like oh you know the government can never keep a

(37:14) secret look at the you know the half project well they did keep that secret until they didn't and what else were they working on these are the greatest Minds up there there's plenty of evidence that Oppenheimer was in on you know the area stuff and a lot of other guys there's a guy named SAR Barker that was a peer of oppenheimer's that said oh yeah we've had him we looked at him you know we saw and then he after the second time he reported he died very mysteriously with some kind of goop on

(37:41) his car door handle so um there there's just too many smoking guns out there but as you get higher and higher into this stuff it does get a cult and a cult just means hidden and I I think people need to realize that before they reflectively go from it this is hidden physics I mean if you showed an iPhone to somebody 50 years ago they think it radio 100 years ago whatever maybe a little more like ger germ Theory too right I mean well and I mean I'm not even gonna open that no I'm not saying anything like like Co or anything but

(38:18) like you know 300 years ago 200 years ago you you'd have to convince somebody that an invisible molecule or whatever or series of compounds and molecules can make them sick and kill them yeah or not I mean that's the thing is they're we're still not talk back then they were talking about the energetic aspect of it I mean all the we we keep finding over and over

with the mfmp that like we've gone the hard way and slog through and say oh this is the way the forces is flow and blah blah blah I'm like oh my God it's

(38:48) just like the picture on this Palace wall from you know 10,000 years ago and it's like showing it there's no way it's a coincidence and um we you think about it is like we're so materialist now what does cause you know they say oh well this hormone does that or this germ does that well what causes the Cilia on the bacteria that's supposedly killing you to move the whole energetic as just something yeah and so just to kind of bring it back to I guess what the space is called with the a report right so

(39:23) this a or a o which is the all domain anomaly resolution off office report came out uh I don't think that it included my report I think that it was just stuff from before um but I I will be curious to find out if it is or not I still haven't got an email back I did end up emailing the person who uh contacted me uh about a few days ago and they came out and said oh there's nothing anomalous going on we looked into everything we have access to everything and we found that there's no aliens going on here and it's just

(39:53) they're getting confused between us classified information right and I don't really know how to take this in general cuz I know that there is actually advanced technology that they're hiding so you could say that you can interpret this as okay we don't have any proof that there's aliens or alien crafts right uh but that doesn't mean there's not advanced technology because obviously there is going to be secret technology it's just a matter of how advanced is it and I'm sitting here

(40:19) saying it's so Advanced that we can teleport objects um and and I don't we don't we just don't know right but I think the other part of it is this is that this they clearly don't have access to third party contractors I know for an absolute fact that there are defense contractors uh and and engineers and scientists that are going to Labs that are run by these thirdparty of DOD contractors they have to sign ndas when they go in there these uh AO would have no access to them whatsoever um and that

(40:53) you know they would have no idea what they're those people are working on right if we theoretically had let's say Roswell for 1947 gotten a UFO and we gave it to the third party contractors then AR is not going to have any idea about it so this is the part where it's like I don't know what to make of this report in general it but it just feels like [REDACTED] no matter how you look at it uh because of that like that view on it right they don't have access to the things that they need to have access to

(41:19) to figure it out so um conflict interest right I mean you're trusting them to investigate themselves yeah I don't trust the government to investigate themselves at all they have no incentive to share the accurate information even if they were you know they did have it which to your point they probably don't and look at it this way like let's go back to the Manhattan Project right if it was 1944 and we were demanding that the government review and tell us about the advanced technology they have is that

(41:52) government agency going to come out say yeah we just made nukes guys no they're not going to say that cuz they want they need to drop it to win a war right it's the most classified information that's out there they're never going to admit it until they dropped the bomb on Hiroshima and Nagasaki right and the Philadelphia Experiment happened in 1943 which was two years before we dropped the bomb right so if they have some kind of weapon that is well beyond what a nuclear weapon is some kind of Doomsday

(42:20) weapon or technology that's equivalent to that right they're not going to admit that and they're certainly not going to admit where it came from either so this is the part where I look at it and I go this is just kind of circus and peanuts for the masses right to keep people entertained what are you guys thoughts Prefontaine I see you in there too well you have something you want to speak up and since we don't have many speakers you guys can just feel free to just chime on in whenever you want to

(42:45) otherwise I'll just opine I don't even know why they would even release this report I don't know how anyone would even take this serious at all it just seems like I hate the word side because it's used so often in so many bad contexts in in this conversation not just this one but all the ufology uh but it just seems like it's just a the whole thing is a waste of time you know you're really just trusting that the offender is going to investigate themselves and then you know I think to

(43:20) your someone's Point earlier it might have been my brother or whatever on the one side they're coming out with the 2017 video saying oh they're real right this is these are you know real valid UFOs then they come out now and they're like oh there's no there's no evidence of a cover up it's like well those videos didn't like stream real time so somebody decided to suppress them for some amount of time and that's well known that they've suppressed they suppressed those videos

(43:48) as well as probably hundreds of others yeah what are we supposed to think that we're looking at in that video like we're definitely not looking at a jet flying away like mck West the saying right like I don't need uh Advanced Computer models and the weird stuff that he's doing to know that I'm not looking at the engines of a jet in that video right it's obviously something that doesn't have uh standard propulsion mechanisms it's obviously rotating not consistent with the clouds rotating um

(44:13) you know is this a drone from **China** like I just don't get what they want us to believe in some of this stuff uh and this is the part two where what I want to say to everybody out there whether or not you are on the believer or the skeptic side like they are never going to admit that this stuff is real right they're never going to disclose this technology is a sad State and I know a lot of people here are supporters and and what have you but there's a lot of haters out there and what I would say to

(44:38) the haters too is that this should hopefully prove that the MH370 stuff was not distracting from anything else there was nothing getting accomplished right like it's just more

obfuscation uh more denials of the stuff that's out there and if anything like this report in my opinion sets stuff back because this hurts like the Normy brain people out there uh and they're going to go oh NOP this report came out that said there's nothing out there nothing special right it's going to get misinterpreted as like nope there's

(45:07) nothing special at all about there nothing hidden you know when it NE doesn't necessarily mean that I mean they also **leaked** a flying jellyfish like a month ago what even is that I still don't even know what the hell that thing is man dude I don't know all I know is it's like it's a pretty lame version of War of the Worlds but it's not scary to me at all but it's weird looking not it didn't scare me I mean I guess maybe up close if it was like trying to like you know capture me

(45:36) in a pen or something but I I I just don't I think they're just trying to fusion and Chaos right and like so that nobody knows what to believe and that so that also so that stories like MH370 where MH370 is the best example of a um a situation where you actually have very fiable information right everything else is like oh I saw an orb in the sky right uh uh oh like this video is this thing was turning great it was moving fast or was it m MH370 is verifiable like to your point yeah I mean your your evidence you

(46:15) know yeah there stuff you can look into right and this is why like I I want to get an email back from them because okay either somebody was impersonating AO and the military which I just think is very unlikely but there's a lot of psychopaths out there um or like I gave them verifiable evidence and and the guy claimed to me just like in the a report that he had access where he could talk to the nro and the Navy and what have you invalidate whether or not like we have satellite video and stuff that looks like that right and that's exactly the

(46:46) kind of evidence that they should use like that's why when I see this report it makes me think of the **debunkers** where it's like they just ignore all the stuff they can't address and then they just like cherry pick on certain parts that they wanted to bunk right like that's what it makes me think so um I hope that they email me back soz I emailed him back and was like hey man I gave you a bunch of verifiable evidence I hope your next report doesn't have a bunch of **[REDACTED]** in it and this is exactly what

(47:08) I said of course but you know but that's the idea is like I gave you the evidence I showed you orbs that are floating around I told you which companies you need to talk to I gave you **General Joseph dunford**'s name I gave you the names of the leaker it's like this is a lot of verifiable evidence man um so I don't know I guess we'll see on that front uh interest that you've been make an attempt to verify it on an itemized basis yeah I want them to come back and make a statement one way or another

(47:34) right I want him to reply and be like yes we got in touch with the a or the nro and yes or no we don't have those satellite kind of capabilities right it's a little bit worrisome to me that they haven't come back to me yet because it makes me wonder if like that the answer is yes we do and I I there's we don't have a good response to you right but it's just me kind of speculating

um real quick red panda hey welcome up buddy you uh I thought we were having a a Skyfire news space tonight but I guess you guys did the one

(48:02) earlier that was really long so probably didn't have one tonight then instead so I decided to do yeah think might do something more fun a little bit later yeah we did [REDACTED] or sorry we did like four hours five hours on this thing earlier and uh obviously it's been a huge day right everything's breaking we're just uh super busy today but yeah the report is kind of uh trash totally uh think uh and in our earlier space we go through uh super deep dive like there was just a lot of kind of inaccuracies

(48:27) and it uh it's basically just kind of like the Wikipedia version of American UFO history just kind of uh saying like oh Blue Book investigated things and it was uh all fake you know they don't no acknowledgement that like uh throughout all those uh early programs project sign Project G Project Blue Book there's like people along the entire step of the way who saying it's um like a cover up there is a disinfo you know no no addressing that heinik kind of came out and said that the chief scientific adviser some

(48:56) of these other people um what about the um I saw somebody claim that Mike Herrera has been that they like confirmed that he had given a statement by like they were able to match the facts up did anyone talk about that yeah we did see and that was another interesting thing too is um because there's been this debate back and forth of like uh Arrow getting ghosted or ghosting certain whistleblowers or people giving testimony and then at the end little like section where it uh it doesn't doesn't name the people but like if

(49:28) you're a super UFO nerd you could kind of tell who they're talking about of um different people who came in so yeah there's Michael Herrera if you like deduce like from what the report says he's in there same with h Bob Jacobs the man who claims he saw the vandenbberg UFO which is kind of in the news again few weeks ago uh Robert Solace I think you could read uh his part in there too this other um the malstrom air force uh they had Robert solace's thing isn't that a long time ago yeah that is a long time ago but uh it

(50:00) do show that at least I don't know at least they they did they did also kind of just like uh **debunk** those but actually if you listen earlier too that was one of the interesting things was um they listed a bunch of these different testimonies right and on some of them they would say Arrow investigated This and like it's not true but some of them they didn't do that and they left it kind of open-ended and even said like uh in part two of our report we're going to be addressing these so PR but they did

(50:27) they did list some what they didn't list which was interesting was I don't think there was anything in the report about the 2004 Tic Tac or the 2015 gimbal go fast uh which is kind of like uh insane that they didn't include anything um to at least address those or **debunk** those or anything I thought that was interesting yeah let me address that because somebody linked to me Ryan Graves post from uh about an hour and a half ago and he says in the actual report the Pentagon again acknowledges that they're anomalous objects in our

(50:58) airspace demonstrating concerning performance characteristics per for example the UFO videos the 2004 nits and the 20155 Gimbal and go fast experienced by a squadron remain completely unexplained and the Pentagon has no new update on these on this Myster uh the Pentagon is unable to determine whether or not these are Advanced UAP are foreign just as the former director of AO is calling Advanced UAP a potential National Security crisis now to me this is interesting because brings up that same point I was just bringing up which

(51:28) is like what is this **China** is this **Russia** are these aliens my personal opinion is that I I think that a lot of this stuff is actually human technology but I don't really believe that we've magically got floating orbs and stuff like this without having some help um but that's what I would want the Aro to come out there and tell us right and they're obfuscating that and now when normal people like my parents and what have you read this stuff they're going to go okay there's definitely aliens

(51:57) there's definitely nothing magical going on right but as Ryan gra points out they didn't even look at like the two most prominent situations that were Declassified in 2017 2018 it's ridiculous to me yeah totally right that's look those are the cases those are the videos that kind of got everything started so to not address those is insane and um I I got to agree with Lou alzando tonight you know some of the things he was saying uh are totally true like uh all these other foreign governments are really moving

(52:28) along with their UFO stuff Japan Brazil come to mind um Mexico uh and um for the dod and the Pentagon to put this out is just very weird but I'm also like pretty curious to see what happens next I mean I don't know if you saw like Lou Lando's cryptic qinon uh tweet where he's like the storm is coming it's always quietest before the dawn and all this stuff I'm curious to see what they have up their sleeve because he was also I don't know if you covered this he was also kind kind of

(52:57) like super slided um you're kind of new around here but like uh a big point of debate these past few years has been like was a tip a real program or not uh and because that was kind of uh the 2017 story that broke everything like uh it was really presented that way and over the years through some reporting of like **Green Street** and some of these uh Pentagon um statements from like Susan go it was just like back and forth of like alzando obviously saying like a tip was a real program blah blah blah and then the other end saying like atip

(53:28) wasn't an official program it was more of just kind of like a hobby amongst UFO enthusiasts within the dod and uh today that report um kind of called him out basically saying that like atip was never an official program it was just a collection of people very interested in UFOs within the dod and um yeah and it's funny even today on his statement he he made an emphasis to like sign it as like Lou alzando the director of atip so he's probably definitely worked up uh I'm curious to see what him and melon and

(53:59) the pro disclosure people do like I said giving their his recent tweet of like the storm's coming and whatnot yeah that's wild man like I I still have no freaking clue what's going on with

this atip thing right people are going like it was a body but it was named something else and like knowing the government like I I can't even tell still what's real on it and I actually was asking people on both sides and I'm people just talking past each other um uh you know from my sources I you know my

(54:28) understanding is that you know lose a a regular guy he's got his own self-interests right and his you know from his position if you look at it like they he kind of took a put his neck on the line to come out and be a public figure like anybody who does in this uh space and you know he's got to he's try to got to set set himself up to be able to make a living you know especially if he's can't be in the military I don't even actually know exactly what his job is at the moment um so from that

(54:55) perspective I I definitely respect him but it's super confusing and it almost felt like he was taking a play out of my playbook where like when I was uh you know this is my retirement day from MH370 investigation but I would put out these daily kind of update posts that people really liked and I'm going to read Lando's thing here because it feels like exactly one of these kind of motivational speeches you know that I would put out there early on in the investigation says friends it's always most quiet before the storm there's no

(55:26) going back some members of Congress finally know what's going on some officials in the executive branch are scrambling efforts are underway below the wave Toops the results of which will break the surface and reveal themselves at the time of our choosing this is going to be an interesting year for those following or for those who continue to offc we are hard at work for you that's a I don't know like the thing for me is like this seems like one of those messages where it's like if you have some information you just post it

(55:56) right you don't need to obfuscate about this kind of stuff you know um and this is where like my post today about Edward C Linn the reason why Edward C Lyn is my hero is that if he is the guy that leak the MH370 videos which I'm very certain that he is then that's a real hero right that's somebody who's like not only am I going to come forward but I'm going to drop hard evidence right and people aren't going to believe it but I'm going to drop it I'm going to force that conversation forward as opposed to this

(56:26) like I have secret information about a 23 minute video but I can't really talk about it at all cuz I'll go to prison about it right but it's like someone's just got to say it you know and and go to jail and then have people rally around them and and try to get that evidence out because otherwise like it's too easy for them to and them being the government to just be like nope this is all made up this is all fake whatever right like that's just my opinion anyone else have any thoughts feel free to just

(56:51) jump in yeah I'm glad that he did say that I always get this saw Qui I'm glad that he did say that I'm glad there's something going on but it is almost kind of like an insult right to to the everyday UFO nerd or whatever that his whole like at a time of our choosing right it's like that just this whole like it's it's a trust me bro right it's I have info yeah and I get that he's like saying

it to Kirk Patrick and the dod but he's also saying it to like the average person and

(57:18) it's just kind of I don't like that energy yeah I'm with you uh terrestrial ice cream Scoops what's up what's up buddy what's up dude I'm I'm looking through this this Arrow report right now and yeah I mean it does kind of put like elzando and everybody's Back Against The Wall pretty far but at the same time it's like dude where are the documents from Arrow like when you read this stuff that's in here this is the former military member signed an MFR testing the truthfulness of his account why are

(57:45) we not getting documents from them though either this is all just kind of trust me bro on their side too am I wrong like is anyone else seeing like any actual documents from them or no yeah and that's that actually again like I must have been talking to an arrow person cuz they were literally saying the same stuff to me on the phone about this like he's literally the guy I remember vividly is telling me like nope it's all balloons we've we've confirmed that it's all you know there's all

(58:10) totally normal stuff and I'm sitting there telling him like well okay I'm about to show you some crazy floating orbs go you better go check this [ ] out um and yeah it is kind of trust me bro on their side right like I don't know if they've got like the debunker mentality or or what it is but my personal opinion is if they're there was nothing here to this at all then it wouldn't even be a thing there wouldn't even be a ufology right now whether or not that means there's aliens visiting

(58:35) us from the zenu or Andromeda galaxy I think that's a different story right but like there's something going on here and if everybody's just saying oh nope nothing nothing to see here right then it doesn't really get us any further anybody else has got thoughts go ahead yeah yeah no I mean it's I know they were talking over in Green Street space and they're saying you know this has been seven years wonder why it's been taking them so long and I'd say well because even some of the smartest people

(58:59) in the world are going to take their time on how they're going to approach this thing man I mean for me Arrow has been just the ultimate answer for them to get the toothpaste back in the tube I mean look at the community I don't see a single document in here that's that's actually proof of anything and these people are just eating this up it's really wild like and look I'm not on a team if grush and everybody's full of [ ] then they're out dude but at the exact same time I'm requiring document

(59:26) from both sides you I don't give a [ ] if it's the pentag god I don't care about that I don't I'm not taking trust me bro from [ ] anybody dude this is really strange to me yeah and I haven't read it yet because I was busy playing video games all day just having a good time and enjoying my my supposed retirement from that play games too in the metime yeah but I'll take a look at that later because I do want to I do want to try to see like how [ ] this report is um in general and I was

(59:52) on stepen **Green Street** space earlier and I I jumped really quickly into the the late group space and like nobody's really talking about anything that really matters like it was weird to me when I was listening to the Steven Green speet Space where they're like almost like flipping the script now going like oh well there must be something hidden from us right and I'm just sitting here going I'm just showing you guys crazy advanced technology on two videos and you're [ ] all over me and now

(1:00:15) you're going to flip the script and go and these are the **debunkers** are going no they're all you know making this stuff up and profiting off it and now they're going oh yeah of course the government's hiding some stuff from us I'm like what you kidding me I I mean you know why though Ashton I mean they got to extend the content bro I mean at the end of the day with the way a lot of these guys are talking like I don't know what they're doing in the field anymore tomorrow then like because to them they it's like it's

(1:00:37) so weird dude on one hand they'll sit there and say it's nothing it's nothing rip UFOs it's like okay well so you're not gonna be here tomorrow then right because you got your answer but they're still gonna be here tomorrow so it's I don't understand it it's the weirdest thing I'm not telling them that they shouldn't be here I'm just simply saying it's very weird that you would talk so certainly that you have the answer but then show up the next day it's so

(1:00:59) [ ] weird yeah we saw that with the mh7 investigation too where it was like people were **debunking** it and they were like oh it's fake now I'm like okay well you can go away and then they never would go away right and now we're kind of seeing some of that same stuff here too where it's like well you got the answer you wanted there it is you're satisfied right nope nope nope I now I've got to change the narrative right it's seems sketchy I don't know exactly what it means I'm like you like I I

(1:01:21) don't know I'm not committed to any particular answer but from what I've been told by the very smart engineers and scientists uh that you know these these people are not like just making up stories out there uh at least in my opinion I don't I don't think they are but again that is kind of a trust me bro situation like you know David grush is going and talking to billionaires and stuff because and and these private meetings that he's doing because he doesn't care what the The Peasants like

(1:01:45) us really think right doesn't care what the **debunkers** think you know he's going out there talking to the money people the people that are like oh we can invest and we can do some advanced technology and stuff that's out there and that's what **I want you** guys to know is that because I'm somebody who doesn't have an NDA like I don't want to break anybody's trust that I've talked to but there are several companies at all the different aspects of the type of Technology think of all the implications

(1:02:07) of the stuff that I've been talking about um anti-gravity overunity um you know superconductivity all of these things cold fusion there are companies out there that are working on these things right and there are big money investors putting money into them because they

know the stuff can be that stuff can work right so just keep that in mind uh trest any other thoughts yeah yeah last one would be um kind of what I stated when I came in here dude which is this do grush and then need to go ahead and do something bro like this this is like

(1:02:39) way way too far on the other side of the scale the scale is way too tipped right now if these guys have anything like what are the who's going to really listen to them past like six more months bro like if you really want to know the **truth** of what's going on and you really want to pull your bias out how much longer are you going to wait for these guys to sit around and say yeah we got it but we're just waiting dude come on you see them terrestrial I want grush to go ahead and put the emails out put the put the oped

(1:03:07) and put the emails out that that kpatrick didn't talk to him like they've got to do something dude like alzado tweet where he's talking about you know the C before the storm I don't think alzado is paying attention there is a storm there is no calm right now Twitter and the UFO Community is **[redacted]** up in arms dude everybody's pissed off like there is no there's no calm and and the reality of is is that they're losing ground very fast and and so there there's not a whole lot of more room for

(1:03:36) them to continue to make these predictions it's at the point to me where it's like every time I hear a prediction from alzado I'm like **[redacted]** nothing's coming now it's like I'm I I think something something's coming until he talks and then it's like that's backwards it shouldn't be that way yeah and that's the part too where I totally agree with this idea that now like this is like a shot across to Bow right the people that are on the UFO disclosure side like have to shoot back now right

(1:04:02) this is AR 100% bro they can't keep sitting on their hands for for six months bro there's no way at this point and that's the scary part too is like what do they because I think that what red panda asked is also a good question and we can open this up to the floor as well is like what would you guys like to see them to do because coming just back with stories probably isn't enough anymore right like they already told their stories David grush said he saw b or that he knows about bodies and crafts

(1:04:28) right Lis zandos talked about some of this stuff like and then Aro came back and said nope there's nothing at all right so it's like what's what's the counterplay here right and before you guys jump in What I would say is like this is an information War this is a propaganda War right everybody's kind of playing their cards the way that they can and then the question is okay what's the counterplay now how do we get it back to the okay yes we do know about some crazy stuff what do you guys think

(1:04:53) go ahead and jump in or raise your hand whatever you want Star captain go ahead so they specifically don't cover like uh personal stories and stuff like that it I I did look through some parts of it um I think the value in it that we can look at is that there's some programs that they've talked about in there that might correspond to some sightings but it doesn't account for all of the sightings it just might be able to say that you know this one and this year might have

been this program if it

(1:05:22) was in this area right so you might be able to use it for that extent um but I I don't think it you know shoots everything down it it's just what they had access to um and and there's still more data out there that they haven't covered but it is a chunk of data that has some value it's not a complete set of data of all the data that's out there it's just what they were able to find and their their uh perspective on that may have been biased against it uh in that but it is a collection of data

(1:05:57) nonetheless and I think you know because of that bias being there it should be looked at in that light um and you know it has that value accordingly but it's not the do all end all answer there's certainly a lot more out there uh that they did not look at but uh you know it is what it is yeah and so uh and real quick if I drop you down a speaker it's not personal uh I'm trying to give uh other people up as well and if you want to talk um go ahead and uh request as well and I'll try to shift people up and

(1:06:26) down and red Panic can assist um but that's a really good point that star Captain brought up which is absence of evidence is not evidence of absence right so just because they say oh we didn't find anything doesn't mean that there's not anything out there at all right and and that's kind of the trick when you kind of have to read between the lines probably on some of this especially when we're looking at this report that's out there because you know whatever we have to be careful of what

(1:06:52) they say and also what they don't say as well so that would be what I would say keep in mind on this and I'll probably take a look at it this weekend guys and and maybe give my feedback but I was just trying to chill a little bit today uh UAP Michael do you want to jump in do you have any thoughts on that yeah yeah I was just gonna say I I can't help but laugh at this [REDACTED] I mean we live in an absolute clown world you have the Pentagon sitting here they can't even account for trillions of dollars and they're here saying nothing

(1:07:21) to see here guys look the other way right and I don't know you asked what my thoughts were but you half the time you asked for you're already speaking what I'm thinking so what I'll say is I join that **Green Street** space you got average Chris you uh [REDACTED] lure reviews and uh area 503 as speakers they're not letting anyone else up if only you knew what I knew unbelievable I mean this this insane yeah and it it's just it kind of goes to like God but yeah I mean there's it's a slap in the face to disclosure

(1:07:59) it's a slap in the face to Dave grush it's a slap in the face to all of us and all the experiencers I have nothing else to say I mean it's a clown World it really is a clown [REDACTED] world man uh and you know I hate swearing but it is and I don't like jerking keemstar off but you know keemstar Skyfire news red panda Tupa the fact that these guys are like in the middle and impartial and everybody hates them for it like that's what this community obviously needs you have like competing spaces going on where like

(1:08:29) neither side is talking to each other too nothing's getting accomplished nothing's getting resolved one side doesn't want let the other side speak everybody's trying to exclude everybody else from the conversation right and then you've got the Pentagon the whole time going like yep we go ahead and prove that this we did this report and there's nothing to see here and like you said the trillions of dollar trillions of dollars it never passed an audit right we're supposed to believe that oh

(1:08:53) yeah there's no advanced technology going on that we we've been doing nothing since the '40s right like absolutely [REDACTED] man I mean I know for a fact that there's people going to labs and working on technology that would be we would deem magic and having to sign ndas to get into those labs every day they go into the lab put their phone in faay cages that's not CU there's nothing there's nothing special going on right it's just it's basic logic it I don't know man this community

(1:09:22) it's it's wild but it is entertaining at least so uh go it is it is if if you uh and if anyone's wondering what I have against Chris it's literally that he thinks that there's literally no disinformation campaign there's there's no like active cover up here and just for him to be the speaker up on the top of the space even having an opinion on this is hilarious to me yeah and I think it's Chris is the disinformation campaign right about that vaccine stuff L reviews didn't play the full clip on

(1:09:51) his show I can't even listen to L reviews anymore honestly after that because I was just so Dishon and stuff what he did the other day and like yeah I can only imagine the circle jerk that's happening over there it's a lot of bad faith that's the issue right it's a big and and I don't think these people are necessarily being paid or directed by the government like directly and that's the scariest part to me is it would be less scary if some of these people were actually being directed by the

(1:10:16) government instead like they just taking it upon themselves from their own weird issues and savior complexes that they have that they have to correct everybody else and in order to do that they have no problem pushing disinformation and misinformation and propaganda against the other side and that's the part where I'm like oh [REDACTED] like this is one of the things I've realized in the last six months is like it's not all disinformation operatives out there it's just normal people acting like

(1:10:41) Psychopaths right and that makes this really really difficult to get to the **truth** because like some of you guys I want to be like oh this person's a disinformation op and this person's not but it's unfortunately I think more complicated than that might be like a protection mechanism yeah I I mean for me man like I never expected the Pentagon Arrow any of these programs to tell us the **truth** bro but I just I just really expected that they would lie to me better like show me some documents make me make me give you a

(1:11:07) little bit of credibility dude don't trust me bro and then blame everybody else for being trust me bro too it's the only thing that's frustrating I just want some evidence bro yeah no I'm

with you and I think that a lot of people in here know that there's some sketchy stuff going on like you can just walk around every day and you see other humans and you go Consciousness itself we can't even explain we can't even explain why we exist right so the problem I have with uh people like UFO

(1:11:32) Chris and L reviews and some of them as well is that they think there's nothing special about our lives and our reality right and we know that there's something else something more to that that's going on and I don't know if it's necessary that there are beings From Another Dimension or another galaxy visiting us but to think that we are at the Pinnacle of all science and advancement right now in 2024 seems like the height of human hubris to me an ego right like clearly there's going to be more stuff to unlock

(1:12:00) I mean just look at the super conductivity news tomorrow I'm going to post like four different articles that I've just been sitting on where I think Brian Romel already beat me to like several of them uh but like room temperature superconductivity is coming like I'm sure that's a discovery that's about to happen and it's going to change everything about our planet and they're talking about I think the MIT they use room temperature high they call it high temperature superconductors

(1:12:24) which is just another fancy word for room temperature superconductors to actually create cold fusion or to create uh fusion power right like this is all the stuff that we're talking this is the stuff that we literally need in order to have UFOs and stuff exist so follow yeah go ahead yeah thanks for having me up hey I was just curious on everyone's ideas or thoughts about um what happens if as far as physics we break like uh we tap into a more un abundant energy source like Zero Point Energy or use Fusion or be able to

(1:13:01) conduct electricity with zero resistance um what happens to like kind of our social economic system if that's the case how do you monetize something that's abundant if there's no scarcity based economics yeah that's this the crazy part right and uh what I know and what I can prove are two different things uh I know there's overunity out there and already people selling devices just like that uh to very rich people for lots of money right some of these people in their bunkers that you guys

(1:13:31) see getting built are probably have overunity devices in them right that are very very expensive more than probably a car costs um but that it's out there right because some people out there know and this is what happens with the science is that it seems like what the government wants is they want some of it to just leak out naturally and then slow drip it out right and they don't want it to get pushed out there too hard so if anybody comes out and says here's my overunity device then in comes the

(1:13:56) suppression in comes the disinformation in comes the discrediting we're going to take all your contracts away from you Etc right now your point is great is like what does that mean to our socioeconomic status what does that mean to our way of life what does that mean to our fossil fuel based economies right they're going to change for sure and this is where like I didn't

believe in stuff like the Deep State before this and now like it's hard for me not to say stuff like the Deep State because you

(1:14:23) have this enriched Elite class that not are just politicians but uh some career bureaucrats some career scientists they keep it in the family right and they are they know that some of this technology is real because there're some of the scientists that are working on it and then they own the patents right and then those patents get licensed out to companies and then they make tons and tons of money on it it's like it's an enriched group of power Elites that are keeping and enshrining the power into

(1:14:51) themselves it it's I mean to me it's a crime against humanity but what do you guys think on that and then we'll go to investigate Earth ason hey NC boy is that you hello yes Kev here from the UK um so yes not to get too political but yeah I think you know my thoughts and free NG it'll never be um um it'll never be available to to us um minions as you say hydrocarbons you know it rules the the economy really globally doesn't it you know and it's much like Gillette bought the the patent

(1:15:26) to ceramic razor blades probably about 40 years ago because they would you know ceramic razor blades don't blunt you know so of course the vot that out it's in a safe somewhere you know so it protects the their livelihood doesn't it and um it's much the same with with energy so the the tech that they have it'll never be available to us masses unless they can tax it you know it's much like um in this country that moved from cigarettes to to vaping they couldn't tax the battery and they

(1:15:53) couldn't tax the the liquids are going into it de vaping liquids because that was a food product but slowly the well the EU are now finding way it attacks us you know but um but anyway enough about politics um other than just to say this is all about splitting the left and the right and then the right again and again and again and again it's just it's it's diminishing the Army it's diminishing the counter Force but anyway on your last day I I just want to say thank you Ashton um you you've been a great um

(1:16:23) insight to myself you know my skills you know and to me I think that there hasn't been enough questioning to well H plard who are now known as agilent who are now known as key site now they've digressed into Communications Fusion all those kind of systems and they had stuff on board and me personally I I I do believe there wasn't enough questions from the investigators and the official Aviation safety report about their cargo um that by caused The Descent of the plane and try to covered up by spoofing the data

(1:16:57) because they make software for in Marat and they make hardware for in Marat so if they didn't want the plane found thinking it did go in the sea they would be the ones who to do it thinking that they down the plane you know um so again just a big thank you ashon I hope this isn't the last of you um this is just one play from the the forces who who rule us um so I I look forward to to your next Adventures yeah thanks so boy I don't know if we've ever spoken directly like that but uh it was good to hear from you and hear your

(1:17:29) accent I I I love it um you know a couple aspects on it uh I think I'll start from the beginning of what you just mentioned as well which is that they'll they'll never potentially let us have access to this but if you think about the razor blade situation that you brought up as well uh I actually went and bought some razors recently at the at the Target and um there was the the new brand I can't remember what it's called but like there are ways to render them obsolete right where now you come

(1:17:56) in as your own brand and they I can't remember was like men's club or something like that right and now they're yeah but that's the idea though right is like you come in with your own thing and you undercut them right you hit them at a different angle of attack within from a marketing perspective or whatever right and that's the way that you can beat that right and that's what I want to do honestly just to be blunt with you guys perhaps there's a paradox there yeah maybe open and this is where we have to be

(1:18:29) craft giving things of higher value than material material gain you know what I mean like different like value alignments and maybe that's something that Humanity has to go through and I had seen Jen here do seem like any different from any other technological advancement right I mean yes the impacts going to be very extreme but any technological advancement is going to have you know consequences right you're going to have short-term turmoil to be able to reap long-term massive gains due to free energy right I mean if to go

(1:19:00) back to the Z point you know energy concept right like you can't fight you can't fight that that's just the march of History yeah no it's a discovery yeah I think maybe there's a paradox there I think I think it depends man I mean when you look at the weaponization like Pro possibilities of this technology dude you're talking about something that's way far beyond like any kind of wmd and I wonder after the Manhattan Project and after we drop those bombs in they realized that wow we just used a

(1:19:28) weapon and exposed technology that we have no defense of that was probably a bad idea that the next time we're not going to do that and I'm wondering if this whole time if you're g g gonna get an actual end of the coverup it's because they finally have a defense for it yeah it absolutely could be um and again with respect to the technology and stuff out there I think that we have to be crafty I I had seen Jenny in here before who I've done a lot of spaces with Jake chanle on and he has a lot of

(1:19:54) really good insights actually impresses me every time I talk to him but um one of the things he mentioned about like how we beat this deep state or whatever you want to call it that knows about this technology is now we know what they have right and we have to be cunning we have to look for their weakness we have to exploit it maybe their weakness is that we can undercut them in the market maybe we can find out since we know that overunity is possible that the vacuum energy of SpaceTime can be uh tapped into you know we can figure it out

(1:20:23) ourselves and then we can bring the the products to Market without their permission right like screw them you know and stuff like that you can't wait I hear like when are they going

to let us have it yes right we can't have you know there is going to be no let us have it you have to take it I mean you have to do you have to kind of do it yourself like you're saying and so the other thing I want to say real quick to NC boy thing first of all thank you very much NC boy you've done a huge amount of

(1:20:51) investigative research Kevin I think your name was and um it's want to thank you for that in general um MH370 is not going away uh you know I I posted a little music video thing that I made as well I and I made a **Reddit** post today about it and the **Reddit** post I mentioned that the world's just simply not ready for this right but if you are one of the people that's ready you shouldn't be disheartened by this what you should look at it is as an opportunity is that if you know that we have this extra

(1:21:19) dimension in our reality that we can tap into the Zero Point Energy of SpaceTime that's an opportunity that's an opportunity for investment that's an opportunity for invention that's an opportunity for marketing uh it's an opportunity to look at your life and look at reality in another way as well so I think that that's how we should look at it and we should look at it as the rest of the world is going to slowly catch up to us and this is why like I've positioned myself and made various

(1:21:45) proclamations about what I think will happen with technology so that if that stuff does happen people will be like oh is this guy a suser no I just talk to the people that knew the stuff way ahead of time right and that's how the world really works is that the **truth** is buried out there and the people the Normy people and what you see on social media they're way behind right they don't know the real **truth** and so that's what I think is great about the people that are in here and people having these

(1:22:10) productive conversations um now real quick I want to go to investigate Earth because uh I think it's either Chad it's probably Chad uh that's had his hand up there hey how's it going man you want to uh tap into anything that we've been talking about here or just be quiet and super awkward that's fine okay well if Chad's not ready to go we'll go to Noah I was gonna say hey Ashton thanks for the time brother I'm gonna go back to do some gaming I'm just gonna listen dude so a appreciate you

(1:22:39) dude it's fun talking on alien addict too man no I think tustra had a good point to in like you know being careful how technology is used and have the responsibility for it I think that that there's an aspect to that for sure yeah and I and just for the record for people who are out there because it is I the day I said I was going to retire from the case in general um there's a couple more podcasts that I kind of promised to people they're going to still happen but I'm not going to be putting out any more

(1:23:04) original investigative work from this point forward I am I think I'm planning on doing one more to just wrap up like what I think happened to the plane in general that I'll probably push out tomorrow um but what I want to be doing is just like stuff like this I'm here by oh sweet Chad we'll get to you in just a sec yeah I just want to be talking to like people like you guys

about what the implications of all this stuff are pushing the conversation forward right not really digging into that much drama

(1:23:28) although sometimes I do enjoy some of that drama that goes on you guys know and you guys have listened um but the bigger things too are like how we can try to talk about the stuff that will help change the planet right and that's what I love about the people in this space is I think that probably like 95% of the people in this space want to like know about what can we do to really change things you know actually impact stuff so uh go ahead Chad sorry oh you're good man um yeah so when you called on me my this screen appeared

(1:23:58) and it said your account is locked which is strange oh FS are coming for you know how to go through some stuff I have no idea but either way that's because of you're State of the Union response yesterday they know about you well no I think I mean literally as soon as I I retweeted this space and I said UFO Community or UFO Twitter ufox and then it said my account was locked it was weird anyway I'm not sure but I'm able to talk um yeah some of the stuff you guys were talking about earlier I mean

(1:24:26) if we talk about UFO Twitter right in a hole and the groups and and all that stuff um you know with the podcast a lot of stuff we talk about is corruption government corruption deep State you know we also obviously have talked about UFOs a lot but you know we also always talk about division right and so the best way the Deep State bureaucrat government control the people is to divide you know you've always heard the statement divide and conquer and most people think that is just you know yeah that makes sense but in reality that's

(1:24:59) what they do um the reason I'm bringing this up is because really UFO Twitter has went um toxic in a lot of ways really since Dave grush right so since Dave grush came around uh he started speaking obviously in Congress uh that's when I saw UFO Twitter just go to um toxicity and and part of the reason and part of the the reason why divide and conquer work is for example the NASA mummies or NASA however you want to call them but the mummies um if you actually want like real disclosure I believe anyway I think these mummies they found

(1:25:38) in Peru and you know what they call the NASA mummies they recently did a DNA test where it showed um the DNA is not linked to humans or primates it is an unknown source um of DNA they cannot pinpoint what the DNA actually is and this is being done then you also have doctors that are analyzing skeletal uh X-rays of these actual creatures um not only do they were they not put together or paper maché which is what mainstream media you know when that when the whole story came out they're oh these are paper mâché it went viral across um UFO

(1:26:15) Twitter and then a lot of people just kind of forgot about it and then they just start arguing about you know what report is Dave grush correct is he not but the reality is catastrophic disclosure which means you know people are really about to realize that we are not the only species um I think that's happening I think it's I think it's currently happening in Peru I think it's happening in Mexico I think it's I think it all surrounds NASA mummies and you have doctors saying that not only um is the skeletal remains intact

(1:26:49) and they have not been manipulated but they also doctors have talked about the fact that these the way these bone structures are and what they connect to and how they connect and you know three three fingers three toes also the elongated skulls plus very long leg or not legs but very long feet um everything points to these things are actual alien bodies of some kind we don't know but we know that it's not human DNA and it's not animal DNA um so all I'm saying is is that divide and conquer really works because the biggest

(1:27:24) story really in the UFO Community should be this at the very least if if you want to go historical value you want to go science value that is something that everyone should be talking about and they're not which is crazy yeah and so I actually have a pretty fun story about that which was that uh I forget which one of you pinged me into the fact that there's like a thing going on on the 12th in La I think uh about the the mommy's another presentation that's out there and uh the person that uh not the

(1:27:53) person that pinged me but the the person who made the post was like oh I don't want any influencers to be involved in this or whatever I didn't or specifically didn't want me and I kind of laughed at it because from what I've kind of discovered with this is that people are are definitely if they're not going to take the videos that we've been presenting seriously like everything that's out there has been **debunked** right like they're not we're not going to move the needle on this like if they were

(1:28:20) willing to uh go ahead and claim that this was like chicken parts and papier-mâché and all the stuff they said about the NASA NASCAR mummies whatever you guys want to call them I'm joking um you know it's unfortunately that even if I actually think there's a pretty good possibility that those bodies are just completely legit and that's non-human intelligence right that they we found some bodies on our planet if there are aliens visiting us then you would think that we must find some of their bodies

(1:28:46) out there right um but no one's going to take it seriously that's the sad part even so um because that's just the state of our civilization right now is that it's not even a matter and this is just my personal opinion from what I've uncovered is that it's not a matter of proving things to be real or not it's a matter of waking people up right and so it's not a situation where like you're going to go and have a bunch of scientist show up and say yep here's some aliens blah blah blah even if they

(1:29:14) literally had real aliens doing that people still wouldn't believe it right I think that the people that are doing that presentation do not realize what they're up against in general and that's what I told that person I was like look I'm just an influencer with 80,000 followers who can help push the information out there right and I'll do it if I think it's um uh credible right but if you're pushing people away that have huge followers who can help and assist you and you don't realize that

(1:29:40) the whole thing is just a big information War then you're never going to be successful even if your claims are 100% valid that's the sad part unfortunately any follow up on that chat I

was also told that asht oh go ahead they're pulling they're pulling a suing go the the the mummies are bro they're they're only having their select median it's like we're here trying to help oh that's going to just not work at all right yeah and I don't know what their thought process is behind that but like

(1:30:06) that's not how you get the information out there like the way when MH370 was most successful was in late November when this huge ramp up it built in and then kim.com gets involved and then we have this bounty and it was a big information where we were pulling like 100 million impressions a week right and somebody posted and sent me stuff from like Tik Tok where one I think it was U Matt Kim's Tik Tok video of me going on his uh podcast had 41 million views right and this is this is Impressions that are bigger than CNN right bigger

(1:30:37) than mainstream media that's what you need you need to have a huge amount of just support and Views and eyeballs on it so that you're waking people up out there it's not a matter of oh yes we had uh five scientists that did these uh MRI tests on it or whatever the the diagnostic test they do on them right it's just even if it's 100% valid it's it's not going to wake people up sadly and I know that seems kind of De Feist but I think that the more we realize the nature of that the more that we can help

(1:31:07) and so when you look at stuff like lk99 uh and meta materials that can be high temperature superconductors this is what I said in the space about that is we cannot let it get suppressed right we need to keep talking about it the same way the weird creepy letter to Ashen forb says you talk about it and you don't stop talking right I would say the same thing for the mummies same thing for any topic you guys want that you really believe in you know talk about it you think that there's a possibility of like self-suppression through keeping

(1:31:38) things closed behind ndas and [REDACTED] like that yeah absolutely I think that most of it's self-suppression that's that's the saddest part is that I think that if we were more open-minded and critical thinking uh as a species I think all this stuff could have come out decades and decades ago I truly believe that even the technology for even teleporting stuff might be decades old right and if it's really that old it's just us hurting ourselves you know it's not even government doesn't have to do anything

(1:32:06) government just has to sit back and then put out stupid reports that say like nope nothing can be possible it's just like it's just kind of like stirring the pot right they don't even have to actively uh involve themselves and to me that's the scariest part cuz it means that we are very far away from ever achieving true disclosure that's just again my opinion uh Noah hey how's it going man hey man Ashton thank you for taking me on the space and uh a lot of familiar names and faces I don't speak often on

(1:32:39) here so um I'm honored uh but uh hey there's money Penny investigating Earth really cool you guys are amazing ashing amazing work just real quick uh two questions my first question is regarding in one of your posts you put up of a uh A Min clip or an edited clip of several Snippets of people back in the day investigating The Disappearance of MH370 and I

noticed that there were a lot of very popular at the time journalists on big mainstream Outlets like CNN and the bunch investigating the claim that there

(1:33:18) was no other way for the plane to have disappeared other than for it to be taken and I did take your J and I'm buying that Florence to Cheney book I really haven't had the time to tear into it quite yet but just the the writing style and the photos are fascinating I can't wait to dig into it so my question was have you looked into other of these other journalists because like you've already said before there's no way that an investigation like this big can ever really leave your psyche it's always

(1:33:47) going to be a part of you so my question was have you tried reaching out to any of these journalists from back in the day and getting any more possible leads from any of their sort you know what I'm trying to ask that question yeah yeah yeah yeah and so I think that what you're talking about is that that music video that I made which I'm kind of proud of it took me a little bit of effort and I thought about it for like over a week in terms of what I was going to clip together for it um and what song

(1:34:13) I was going to use and all this stuff um and this is the part where uh you know we saw Sarah reply to Sarah Bach uh I think is how you pronounce her name she was the the girlfriend of Philip wood right particular yes she was sitting there and she went did the most media appearances and she sitting there just literally saying she thinks the plane was taken right and doesn't and that the families don't believe the narratives that are out there you know which is pretty incredible um and uh yeah and I replied to one of her posts I

(1:34:44) actually haven't checked my email today to see if she responded back to me um but I felt uh brave enough to to send her an email as well um but you know I don't know how she's going to take like again a lot of this stuff is is more than what people are willing to believe and being willing to accept but people that are out there especially some of these investigative journalists and if you dig in and talk to read Florence's book um a lot of what you'll find is a lot of the evidence is the same evidence

(1:35:07) that we've uncovered and she's a logical person she came to the same conclusion we did which is that if there's no debris field then the plane didn't crash right it's it's really that simple um that's hard for a lot of people to understand um but then there's a lot of other most of the investigators out there and I've reached out to as many as I could reach out to to tell you the **truth** but I would say like 90% of them believe in the iMat pings and their whole basis for their theories are based

(1:35:34) on the iMat pings and if their theories are based on the ersat pings um and those pings are not accurate then that throws those theories just completely to shreds right and the problem with the iMat pings was twofold one there was no debris field they found nothing along the arcs where those iMat pings say the plane crashed right at some point you know if if you're playing a game and you just keep losing losing over and over again you got to think that maybe there's something wrong with your strategy right but it's 10 years later

(1:36:03) and these people are still dying on their Hill of these ersatz pings and the second part is that the debris is completely the debris that they did find and I wish I had uncovered this earlier but the debris that they did find is completely inconsistent with the plane crashing in the South Indian Ocean the debris some of debris should have washed up in Australia stuff like the engine Cen which is just like imagine like uh not quite like a piece of paper but like a flimsy kind of thing that is never going to float 3,000 miles in a year

(1:36:35) never going to float that far right it should have washed up in Australia instead it's showing up in South Africa 3,000 miles away from they said claim that the plane crashed right no debris washes up in in Australia at all at some point these people got to like rethink their theories but the is that they get too tied to them so Florence a Changi is one of the good ones in my opinion if you read her book uh you'll find that a lot of the conclusions are similar to us the only difference there is that she

(1:37:05) didn't have the videos she didn't have the the science knowledge of talking to the engineers and stuff that we have crazy advanced technology that we think is out there um but yeah so from that perspective yeah we reached out to them um and I think that that's why like again just stepping away from the case is the best move here it's not that we're giving up uh we're just shifting gears because what would be required for people to realize it is a more time uh they're never going to find that plane in the

(1:37:31) South Indian Ocean and then B to understand some of these scientific Concepts like room temperature super conductivity um overunity you know free energy fusion power and then uh one day I think macroscopic phase conjugation like literal teleportation of an object and when that day comes I think people will believe it but we'll see good questions no any follow up on that before we go to money Penny I just wanted to say that uh what you're doing now is very commendable and and moving on to other subjects and also uh

(1:38:04) conducting experiments because uh you're right this is the way that we're going to or that you or whoever is working on this is going to have to force the action forward uh we're in a perilous time and in my nothing opinion I believe that the time for disclosure is now it has to be now uh we were stuck in an information prison and the thing about prison is that you have limited resources but you get very very creative I think uh you're doing a marvelous job um not to get too political but uh

(1:38:44) anybody who sets themselves on fire for any kind of a cause means that there is something defly defly wrong in the world no matter the things you believe and and to just discount these people as crazy well there's all kinds of crazy people in the world and they don't set themselves on fire the only time you ever see this is when the world is on a Razor's Edge and we all know that there is something super super wrong with the world the world is sick so if we're gonna kill ourselves I want all the

(1:39:13) cards on the table I don't want the nuclear bomb to kill us if we decide to take ourselves out with the advanced technology and the UFOs then so be it but I want all cards on

the table and I think that the way forward is through mutual respect and moving forward and using this technology for good we are at that time right now the time is now yeah anyways uh everybody thanks for listening and uh you have a great night I love listening to you guys amazing and any any uh support for projects that people want to do in these spaces and

(1:39:48) stuff like uh experiments you know mathematicians engineers I think it'd be great it'd be a great thing to like what is that where you crowdfund for something I don't know I'm I'm new to all this but uh you get what I'm saying yeah and I think you made a great Point too about when people are lighting themselves on fire and this is a reference to the guy that was like the free Palestine burnt himself to a crisp right and people are going oh well he's crazy well it's not that simple it's that the world is

(1:40:17) [redacted] up right now it's so [redacted] up right now and there's so much gaslighting and propaganda is this is the damage that it causes to people is that you tell people that the sky is green and the sky is blue right and you keep repeating it to people at some point people start to freak out about it you know and this is the same issue that we have and I think that unfortunately you cannot disconnect it from politics I wish you could one of the things that I found in the UFO Community too is that there's this political line in UFO

(1:40:47) Community where you know if you're if you're not leftwing then I've got 50 people blocking me over and if I'm not right-wing then you've got people you know doing some similar stuff as well right now my opinion is that because the leftwing in the United States is in power and they're the ones that control you know probably most of the media right now is that they're the ones that kind of have more influence on what people think um but I don't think it's strictly uh one party's issue or

(1:41:17) the other you know I look back at the early 2000s when you had the Bush Administration and they're talking about yellow cake urani when we got to invade Saddam Hussein it was the same [redacted] and the same people going yeah we got to invade Iraq blah blah blah right and it was just all gaslighting right it's all lies and gasl these kinds of distortions cause real damage to people and real damage to their psyche and I think I I don't know what the answer is out there but that's where you've got to break

(1:41:43) through and we've got to at least agree like we can all have our own opinions right but the facts you know Everyone's entitled their own opinions but you're not entitled of your own facts same kind of situation so great great point on that Noah um real quick uh we'll go to money Penny in a second I want to read a few headlines from the uh AO followup because I I presume that all the mainstream media were the ones who were inv invited to this AO thing I don't know that for a fact but I know it's

(1:42:09) true um and so CNN US military developing portable UFO detection kits as Pentagon says no evidence of alien technology fund I don't know what the hell a portable UFO detection kit is but sounds like a scam uh BBC says us says UFO sightings likely secret military tests okay maybe there's some orbs I don't know um Jerusalem Post says UFO sightings in the 1960s were

secret Aerospace tests according to the Pentagon report I don't know how this is supposed to comfort anybody uh that was a long time ago uh New York Times

(1:42:44) Pentagon review finds no evidence of alien cover up I'm just going to go ahead and call [REDACTED] on that um NBC News no evidence that us covered up existence of UF Pentagon report says again I don't believe it uh Politico us once considered a program to reverse engineer alien spacecraft Pentagon report reveals now that one kind of goes against the grain of all the rest another political one though says oh no that's the same one again uh and then Washington Post says Pentagon finds no evidence of alien visits or hidden

(1:43:15) spacecraft now the problem with I have with these narratives is that I watched the Jesse Michaels Eric Weinstein and Hal Poff interview and Hal POF who is maybe one of the oldest most tenured Engineers electrical engineer uh tied to the the government tied to potentially the CIA and DOD literally says they set up the system to make it impossible to find out from foyer requests right they set it up so they would go to third party defense contractors the locked Martin north of Grumman Boeing Bigalow airspace battel

(1:43:47) Institute all these people right and they would be impossible to get the information so when AO is just checking into the government organizations they don't have any power to look into the third- party contractors it doesn't give me a lot of faith anyway money Penny go ahead hi there sorry um it's quite late I was just dropping off um the information that came out today in the UK and Europe on MH370 on its 10th anniversary plus the information that you just run through smack so hard of the biggest bloody distraction block it

(1:44:23) is just shattering um our newspaper headlines today I don't know if you've seen all this presumably you have let me just read you a couple of them Daily Mail MH370 flight documents show Extra Fuel and oxygen added at the last minute proving pilot knew what was going to happen then you've got the Sun not necessarily newspaper more of a comic but bombshell MH370 docs prove in capital letters pilot plan to make jet vanish forever after last minute changes to doomed flight um and it continues in that MH370 shows extra fuel loaded onto

(1:44:56) flight that's the express the mirror it's in every single National newspaper it's on every single news channel here and all the reports say that um the uh remnants that were found all the bits that were found were confirmed definitely belong to the airplane so there's the biggest coverup campaign I ever seen on the same day that all that stuff happened in the states with the arare stuff and the same day that is the anniversary which is the one day that journalists can actually make some room

(1:45:24) in their newspapers to do something that has happened 10 years ago because otherwise they would never ever consider writing something this small but it is just so desperate and chose to be they're bloody terrified so well done because I think you've brought this back to people's attention and I think they're [REDACTED] themselves yeah thanks money Penny and I since yeah we will talk about that just for a second I mean it is the 10 year anniversary and so for one of course this is where all the headlines come out

(1:45:50) right and I don't I'm not even convinced they're going to do another search even though you see headlines that say they're definitely going to do another search as well right because they talk about it when it's the 10 year anniversary because it's you know draws clicks but doesn't necessarily mean anything I saw that one about the extra Fuel and the extra oxygen somehow meaning that the pilot meant to be that proves that it's a pilot suicide this is the most absurd thing ever this is where

(1:46:14) like people just have to think critically like if it's a pilot suicide scenario they don't need extra fuel or oxygen they're just going to crash the plane right like like this idea that it's some covert mission to fly as long as possible in a high press suicide situation where anything could go wrong at any moment is absolutely insane if anything I would argue that proves there's some kind of like uh hijacking or a covert Espionage scenario right where you need that extra fuel because you got to get to I don't know uh Diego

(1:46:47) Garcia or some other base right like somewhere that's like really far away um something it it's this this trench that is very very deep that he was going to apparently try and dive St into to hide it the guy's killing himself why does he care about hiding the plane it's just so it's absurd to me that people run with these kind of theories and they don't really think it through right especially when you just look at the German Wings guy who literally did this scenario the next year he locks a pilot out and

(1:47:17) crashes the plane in 9 minutes from it from its cruising altitude immediately descend and flies into a mountain right it's that's what suicidal people do they don't go oh I'm going to take the roll the dice and try to knock everybody out even though that they have oxygen Mas that can last for 30 minutes automatically deploy and bet and pray they don't get into the cockpit somehow right through the various different means there's override means the uh the panels break out when the oxygen doesn't

(1:47:46) uh equalize in the plane uh they can they can go through the electronics Bay and disable the doors um you know it's just it's wild to me but uh the other thing too is just in terms of the narratives out there like I do hope they keep searching that's actually the number one thing I want them to do is keep searching for the plane because if they keep searching for the plane and keep not finding the plane then people are really going to begin to ask questions about it right and unfortunately I think that when you look

(1:48:14) at all those news articles uh at least about MH370 I think it proves what **Putin** told Tucker Carlson which is that you know the five eyes countries the UK United States uh Australia and I don't know what the other two are probably Germany and another one they control all the world's media right and nobody else can compete with that they have full propaganda control they're not talking to me about this stuff most of them didn't even bring up the the orb situation and the the videos in general I think I saw one article from Australia

(1:48:45) and I asked them to correct it because they bring up **Jonas** Dro a guy who didn't even want to be involved and they won't bring up even name drop me I spoke to Florence dangi uh I

she speak to her pretty frequently and even she got nixed from the BBC because just because she's also like implicated in the United States government and her theory is either like you know it went to Vietnam or shot down but she knows that it didn't crash somewhere where there was no debris field um and she they didn't even let

(1:49:17) her on the BBC so if they're not letting her theories go on there they're definitely definitely not going to be letting us talk about some orbs teleporting the plane but pretty crazy um any follow up on that money Penny before we go on the next thing you might want to listen to the interview I've just done with Tony Aron and the guys I know they interviewed you as well um they interviewed me we did a lot of quantum stuff but um the interview started touching on questions that they really should have been asking

(1:49:47) you and not me because I just of threw it and said ask him you know the one MD stuff though pretty well which is also pretty wild like and it wouldn't surprise me if there was a connection there right that's the only interesting thing was they said what proof do we actually have about the um lithium batteries being on board and I said well presuming it was on the cargo um you know uh like the passenger list you'd have a cargo list and you'd probably have a security thing as well um they said well what what realistic hard

(1:50:15) evidence do you have other than something written down on a piece of paper I didn't know the answer to that yeah the way bills got released I think uh there's a Strait's Times article about them how they were not scanned but the Malaysian uh Airlines CEO also admitted it on March 20th which was a week after he had said that there was nothing dangerous in the cargo Bays because the first thing people ask was like what what do you got in the cargo bay right like this plane just went missing um which to me that's super

(1:50:42) suspicious so yeah we we know that there was lithium ion batteries with a hrre of certainty on board that plane for sure um Craig I know that I don't know if you maybe can't put your hand up but do you have uh something you want wanted to say Ad oh yeah hi Ashton again um what I'd like to talk about tonight just real briefly there's one hero that I'd like to shout out for that's a Phil of wood you gotta imagine what this man went through now like I said I only have one good friend he's com by tomorrow and

(1:51:09) take me pick up my Jaguar but he was on Diego Garcia he said my friend you are not getting a phone call all that attit told and he goes you want my opinion what happened to that poor gentleman he goes he did get that call made that call from Diego Garcia he goes and I researched myself the lifespan of a iPhone 5 is 9.

(1:51:33) 75 days on standby and he said tragically when they put when we put that hood on it never comes off because it's for our benefit and their benefit he said that poor man somewhere in that time his body was transported someplace and it made a call so that's my hero and he's American and people do not give that enough recognition thank you very much God bless you all thanks Craig it's pretty damn dark man um you know I I think uh and I think this something I told Sarah as well because she was that was her her uh boyfriend right is that I like to

(1:52:10) hold out and be optimistic that somehow some of those people survived but um from what I've heard from the scientists and Engineers is like no chance right I mean you've got to survive uh depressurization where they're flying low and get enough oxygen to breathe you've got to survive toxic smoke spewing throughout the plane you've got to survive some macroscopic phase conjugation event which who knows maybe you come out like the fly man on the other side right and then after all that if you somehow survive all of that and

(1:52:39) you're still yourself when you get on the other side then you got to survive the US military in a CIA black site right like where the hood doesn't come off like you just said you know I mean it the odds are not not looking great um no matter how you shake it the best case scenario would be that they gave him a new identity and put him in witness protection and told him he's never going to talk to anybody ever knew ever again right that's the best case scenario so I agree with you I think that all the passengers especially

(1:53:09) Philip wood the American adult passenger are all heroes uh made a giant sacrifice and I think that in the in the future 50 years from now 100 years from now people will look back at that and go those people did make a sacrifice they sacrific their lives so that we could have true disclosure and no [REDACTED] about you know we don't know anything anomalous happening out there there's no nothing special going on in the world right you know when we figure out unification theories of quantum and macro and they finally make their way to

(1:53:38) the public sphere um and we've got magic technology right that's where people will look back at that and go man those people they they really were collateral damage they they took the hit they were they were Heroes so were the people that leak the videos everything so great comments Craig uh Jay I saw you come up as well I don't know if maybe you cample your hand up but do you want to say anything yeah can you hear me yeah how's it going yeah I was uh wondering if you have any thoughts on the hum phenomenon

(1:54:07) I've experienced it myself couple times and I know um a lot of the investigation you've been doing has been into like electromagnetism and uh different like historic records of like phenomenons like this is is there any thoughts that you have on this no I'm I'm not sure about the hum phenomenon is that just when you hear certain hum so every so often or I mean you can go ahead and tell us uh about it a little bit if you want briefly yeah like so I experienced it last night I just came across like that

(1:54:44) people experien this a lot like not just me and um so like last night I was uh outside and I heard this loud humming sound and it sounded like kind of like thunder but I was looking it up and I I really didn't think it was Thunder and there was I looked up the weather report no clouds No like uh no rain activity so ultimately I came to the conclusion like this is something different and and it sounded mechanical but all the conventional explanations really don't make sense to me all all these experts say that it's something

(1:55:28) mechanical going on like in your neighborhood or something maybe um to do with auditory issues but you can look up videos online it's pretty it's pretty absurd yeah no I mean I I

don't know much about it in general um one thing I do know is that that like younger people can hear frequencies um that older people can't and I actually remember that too when I was younger where I could like tell if the TV was on downstairs not I couldn't hear the TV but you could hear this like buzzing noise and if the universe is all uh

(1:56:01) frequencies and waves which I think that it it probably is in general then I guess it wouldn't surprise me if you have stuff like that um that is possible uh but unfortunately I don't have any insights on any of that in general um but you know you could research it I think and look into it and find out if there's anything to it I would say that like don't uh one thing I've learned in general is like I don't know where the line between reality and fiction even is anymore right and I try to keep myself

(1:56:28) as grounded as possible and just um you know not try to freak myself out as much um one thing I'll tell you guys is that I am potentially planning about uh doing one of these like ghost hunting experiences where you go to like a haunted place uh you know and I'm actually really afraid I'm going to freak myself out because the mind is probably one of the most powerful things that we have and you can convince yourself of stuff that isn't really there uh just through the power of your mind and that's what scares me more than

(1:56:58) anything it's like I can imagine myself going to one of these like haunted like prisons or something like that and then just convincing myself that I'm seeing something that's not even really there and uh and just freaking myself out so if I do it'll be entertaining for you guys but uh it it can be very scary so what I would say is that I'm not saying that what you're experiencing is not real I think that experiences are very powerful um but just try to keep yourself grounded as much as you can and and yeah

(1:57:23) look into it and see you know and see if other people are experiencing around you as well can I can I also tell a quick anecdote of some yeah so I remember this exper or like I've had this experience multiple times when I was younger I used to like get home from school really uh late and I would like after uh track practice I would be super tired and I'd be watching like a hockey game like NHL I fall asleep on the couch and I would be in this weird State when I wake up that the game would still be on and

(1:57:54) all the players the way they move they would be like on like on like 1.5 times speed and I don't know if it had to do with like it's just it's a weird experience with time like how you can experience like time differently in like different states of Consciousness I don't know it seems yeah definitely thank you for sharing that with us um Nathaniel I saw you put your hand up what do you have to say Sir hey there I just um I had another point but I wanted to corroborate Jay's um thing not with a personal anecdote

(1:58:27) but just with the phenomena being called the to hum uh I think Steven Greer even spoke about it and said that um it might be underground drilling equipment creating a kind of a resonance and the Bedrock uh that's in the to scenario but there's also videos out there of this kind of like Cloverfield trumpet thing that's uh you can hear from the sky in many different

locations and um I think it would be interesting to uh investigate because it could be a knock on effect of an advanced technology perhaps something atmospheric

(1:59:04) and um anyway I just wanted to give uh that uh data point yeah thanks I appreciate it man uh yeah there's a lot of uh I don't know if they call it high strangeness or whatever stuff that's out there in general um and reality is I don't know how much of it's uh true or not but I I do think our experiences are are definitely very powerful um couple last people and I think we'll probably close out here I'm going to try to get some late night food um Sandy do you have anything you want to say I know you've

(1:59:30) been up speaker for a while up here and I appreciate you've been following along hanging out with us or Antonia either of you guys you don't have to speak if you don't want to um can I speak sure go ahead he um I I wanted to address that other letter to you Mr Forbes um that came don't call me Mr Forbes that's my dad you just call me okay it's dis respectful that's all I know I know I'm just messing with you um yeah there was another letter to Ashton in between there that I believe you

(2:00:03) might even been perusing it one one of your um streams or your podcast and it mentioned thermodynamics it was uh it was um posted by um uh God uh um it's not the nicobar one is it yeah the nicobar one yeah I listened to that one it's pretty me to me I'm 99.9% sure that was somebody who thought that it would be easy to create one of those videos who thought that cuz I listened to it and it was the robotic voice was super bad it was very clearly like AI produced and that's the thing about language learning models llms with AIS

(2:00:42) right is that AI just borrow information from somewhere else and then they like summarize it and it's kind of like when you look at stuff that's like obviously CGI where you can tell there's something wrong with it it's the same thing with some of those learn language learning models so when I listen to that I I couldn't even get through 30 seconds of it CU I could tell right away that it was question they added the word thermodynamic company into that and I've never even brought that to my attention

(2:01:05) prior to that and um one thing I will not beat this Trum to death but that um British um administrative Elite paper if you look at the date it is four is uh March 4th 2014 if you you put that name and that date next year letter to Ashton I mean if you're in trouble with the law and you're within three feet of something you're it's yours you're in trouble you know so it's pretty close I mean it's not it's might be some weak sauce but it's it's right there and I'm perplexed by the date that

(2:01:41) it said it all happened on a Friday yeah I I can't speak too much about that um I appreciate I appreciate your comments though enjoy the mark cies hey do you drink what do you drink um a stoie a beef eater what are you everyone wants to know which which is my favorite vodka um I ement no endorsement I understand no no I like Grey Goose but it's more expensive than the other one so usually it's just Kettle one but I like Tios a lot as well keep a bottle stol it in your fridge that's appreciate you Craig thanks man

(2:02:14) uh I think we'll just do two last people here a pre Fontane I saw you jump up several times was there something you were trying to get in and say if not we can go over to Wes I saw you just jump up as well did you have any comments you wanted to add okay well if not then I think we're probably just going to close out here uh we talked a little bit about the AO oh go ahead Wes yeah I'm so sorry mic was muted first time ever doing this um thanks for the journey brother it's really been amazing to follow you doing

(2:02:45) this um I uh I'm really taken by the video that the the real creepy dude or organization or whatever put up about the whatever site that has the the scary thing the operation happening on it that is generating some sort of apparently top secret uh aluminum micro element for which I can imagine a variety of really nefarious purposes at a time when stuff's being sprayed the ionosphere is being weaponized and planes are disappearing and I'm wondering if they're and to say nothing of the Randall Carlson tangent so I I I found those

(2:03:40) videos to be surprisingly provocative and indicative of somebody who I think has put quite a bit of thought into something um yeah and and I'm just one guy with no stake in any of this I've just been fascinated by those videos I keep watching them but particularly the thing about this this super scary Tech that's being produced in a clandestine place under great pressure and and discomfort to people and consequences and then freaky [REDACTED] happening in the atmosphere left and right is that the glitter one you're

(2:04:18) talking about yeah yeah the glitter one the weird part is like I didn't know even know what dendrers were and then it's talking about like them producing some kind of delivery mechanism for drugs that can just be like you know delivered through like an aerosol format right that was just that one was really weird honestly um because the glitter conspiracy was like a real conspiracy and apparently like the biggest producer or purchaser of glitter is like the military um and there like there's only

(2:04:51) actually two glitter companies are both in New Jersey so a lot of that was just very unusual to me my true opinion is that I think that those other videos were sandwiched in there like if you're trying to send somebody a message and you want to do it in an anonymous way like that's a really good way to do it where you have these Miami aliens videos right uh and then there would think there was one about like the the New York tunnels right and then it's like the letter Dash and Forbes and then it

(2:05:19) does the glitter and like two-part on the glitter and a two-part on the chant Thomas stuff and I didn't know about any of this stuff which is the weird part and then it just goes dark right so I honestly have no idea um but I I'm with you like there a lot of thought went into those at the minimum right and that's why at least with the letter Dash and Forbes still the creepiest thing that's ever happened in my whole life uh it's definitely either a stalker that knows that knew the case extremely well

(2:05:48) that knew Randall Carlson and Malcolm Bendle really well um or it was an intelligence Community play by a foreign adversary or our own government or maybe it was really just real

and or partially real right like somebody who's throwing some real stuff in there and some stuff in there to just throw people off um well imagine you're you're you're somebody sitting on a nugget or two of information that's really relevant but you don't know how to try and disseminate it in any way that's going

(2:06:21) to move the need and then you show up and then this person goes whoa whoa hey check hey Ashton hi weird way to introduce myself here I am and then over the course of these videos it it goes to this place and I don't know I've just been reading about this whatever the hell it is that they're spraying in the sky and watching and they you know the patents they that the government's registered talking about the weaponization of the ionosphere and all of a sudden there's high tech chaff glitter

(2:06:52) being produced in a weird ass facility yeah and planes are disappearing I I would be surprised if there isn't some reasonably close connection between the two but maybe that's just my conspiracy theory optimism I don't know but any event thanks brother I appreciate it no I I think that the way to approach it h and this is truly the way I approach it is that I go I had the same thought process that's pretty damn weird that and I thought I saw that stuff about the ionosphere as well I'm that's also super

(2:07:19) weird um but I I try not to take it too seriously until I have really hard evidence for it right but you always keep it in the back of your mind right cuz it is a little bit too weird to just completely ignore and like you said it's a really good way where if they there's this person getting a lot of Internet traction right and you've got some information that you want to get out there you want people talking about it's a it's a good way to kind of latch on to some of that but it's hard when you

(2:07:44) don't have uh like a chain of custody over where it's coming from and it could someone could be easily be lying to you to take it to seriously but again yeah I think that it's the kind of thing that you always want to keep in the back of your mind and then if something else comes out in the future that corroborates it you go oh I remember that right and that's why I started doing what I've been doing which is um you know I keep uh my own repository of Articles and things related to various

(2:08:09) topics and I've been doing that for several years now and then when the MH370 stuff came around that was a really good opportunity to be doing that and then it became its own thing it became m370x so you know that's what I would urge you guys to do as well is that when you find those videos like that when you find articles that corroborate that you know make a folder make a Discord server make a channel save the stuff in there you never know couple years down the line you know you might want to come back to that stuff so good thoughts West

(2:08:39) um I think we're going to close it out here now guys I'm going to go get some food getting a little bit tired but thank you guys for talking about AO thank you guys for talking about the MH370 stuff uh thank you guys for being part of m370x thank you for being part of the UFO community in general um you know more stuff to come on this uh I appreciate everybody who's

been following Along on this this is not the end uh this is if anything is is just the beginning of uh a group of very knowledgeable well-informed people who

(2:09:05) want to change the world who want disclosure um and who want to know about uh technology that can help us all so thank you guys very much and have a great night are people dropping hard RS in the chat guys hard RS are not good uh actually hard r Wait hard R is in like regarded reg if you guys are regarded that's totally fine but um okay guys thank you very much appreciate you guys tonight uh I'm going to go get some food I'm hungry and uh I don't know maybe I'll play some more video games when I get back but might just pass out

(2:09:49) as well so uh more people are interested in the ufology stuff anyway than they are in the uh the video game stuff but if you like unicorn Overlord and strategy games that's probably what I'm going to spend some of my time on this weekend just decompressing from everything else that's out there uh but yeah I'll I'll I'll be back into the ufology advanced technology stuff here in um the next few days I'm also going to try to do hard TRS number eight I've got like a few people lined up uh for

(2:10:20) hard TRS podcast casts uh and I'm working on a few others as well that are pretty big I think uh yeah pretty big so should be awesome guys uh yeah I've been playing this game called unicorn Overlord if you're interested it is a strategy game I really like strategy games um it's on the switch I figured out how to get my my setup working but I can't I can only stream on one platform so I was streaming on YouTube for now I wanted to try to stream on Kick and the other whatever gaming things but

(2:10:50) whatever anyway guys have a good one uh I'll talk to you guys tomorrow peace everybody thank you MH 370x we're out

Unicorn Overlord Live - Expert Mode Session 1 - YouTube

<https://www.youtube.com/watch?v=zHxarJn343M>

Transcript:

(00:01) [Music] [Music] okay chat what's up we're going to try this out new setup as you guys can see I'm on my couch I'm hanging out we're still drinking martinis cheers still boozing uh yeah so we're

(01:07) still we're doing some of the same stuff I'm enjoying retirement for right now uh we're going to chill we're going to play this game called unicorn Overlord uh I'll give you guys a little background on this game hey Sandy hey Nate hey Aaron uh this game here is like not quite a remake but a reimaging of an old game I used to play on uh super Nintendo called ogre battle

uh it's a strategy game you can see there's red and there's blue so the idea is you got your armies and you got to make your way

(01:39) across the battlefield and uh take out the other armies and you it's a strategy game where tactical you got to like make your guy your armies the right way and you got different classes and stuff like that so should be pretty interesting cheers as well for your Friday um and yeah I may depending on if the I'm going to probably be muting the microphone as much as possible because the sound is getting picked up in the background uh and I may turn off the uh video as well depending on if it's in the way or not I'm not really sure if

(02:16) it's going to be I'm not sure if it's going to be in the way yeah it's like Final Fantasy Tactics uh Tactics Ogre is just a uh different version of ogre battle and Fire Emblem a little bit like all those so let's get this bad boy started hold on one second chat right before we're going to get started in just a [Music] second okay let's try this thing out [Music] everybody [Music] wait it didn't even let me pick my difficulty how do I know what how do I know what difficulty this is I want

(03:16) expert oh by the way we're going hard with the hardest difficulty right away we're just going straight into the hardest difficulty no questions asked yo I'll watch the cut scenes for you guys okay hey Pamela hey Boston hey Nate hey Joshua I beg you my queen take leave of this place while you to where I might ask n every last of coria's no refuge remains for a crowned fugitive yes the general seeks my death and mine alone I shall not flee from that fate though you still can a soul Rider with a take him

(04:13) Joseph raise that delicate seedling into a sturdy that AIT hey mystical Wonderland I pray safeguard the Ring of the Unicorn as well they said the word ring ring of the Unicorn hold it close to you until Elaine is a man grown he will have my queen I mother guys I think that's us look at that little kid coming for us heed well these words Lane I from here forth you're to treat Joseph's command as though it of course [Music] but so this is like our Father Figure guy or something here and More Lies with

(05:16) you Joseph farewell why are you just standing there Joseph we're gaming chat aren't you going to help her would that I were able my prince come we've not damn this game looks sweet everybody [Music] spe

(06:40) [Music] consider wisely our [Music] options [Music] forward on your card looks like we're going to have to edit a lot of our tactics here but I think we're just trying to figure out how this words ready yourself I am your Shield we strive to I'm pretty sure

(07:43) we're just like Invincible this suit you enjoy this Victory Is Ours oh I can definitely still be a nor Me by loving RPGs chat I wonder how you paus now I have you you'll see no harm I trust you witness the Royal blade I shall protect you allow me behold my might does this shoit

(08:53) you I never miss this I must fight on yeah I mean we're just acing people right now guys

pretty yeah this is classic tutorial Victory game right now oh here we go cut scene it's cut scene time seiz her enlighten me vmore to what end do you seek to usurp self-centered fool it's not M zenoa are the rightful sovereigns of fth and I the you seek to plunge the continent into war a proper ruler demands Unity not

(09:58) pointless politicking now I shall achieve that Unity through conquest and reclaim that which is rightfully mine I would sooner see you slain by my hand okay I adjusted the background noise hopefully it'll be good I don't think there's any portals maybe there's a Pyromania VFX you my queen the royal then you shall endure it is but a great shame I couldn't Aid you further all has come according to plan my [Laughter] Lord and yet our work only just begin We Stand now at a new dawn for fth one

(10:55) which will seize an Nora's Dominion curious though that we've no trace of the old about that my Lord a lone Cavalry unit was spotted riding through and the boy is lost to us a truth obscured only by his mother's it would seem I underestimated her there's always some kind of weird wizardy Necromancer guy in these games 895 I doubt mck West created this game I don't think he's had a job for a long time of theen Empire's once deor General valmore rebelled hey baby Rockefeller home at the seat of its monarchy Grand

(11:46) Karin its Queen elenia bold in the face of this staggering betrayal stood unshrinking as the shield to her son elain's safe flight and mustering what meager forces remain by her side she rallied a defense as valorous as it was damned with cornea's Queen lost care of the Young Prince felt to her faithful Knight Joseph yeah the portal games are sweet I wish they make another one grasp to Asylum on the fored aisle of Pia in the Holy Kingdom of albian and boastfully proclaiming himself B's new emperor valmore dawned a

(12:35) second name karus and began a Relentless Onslaught the continent's Nations could only but struggle against yet each realm's Endeavors fell in vain time and again and heong zus final Dominion was realized his blood soaked unification come to Bear few dared stand against the Ironclad fist of Emperor garus Embers of resistance burned on yet the downtrodden could cling only to ferve hopes of Liberation desperate prayers which maybe that's the pyom VX at the bottom guys night after unceasing night why didn't they edit it and make it into

(13:31) AAL effect passed since the shroud of war first set over [Music] cornea yeah I like how the comment sections are just full of me it's pretty hilarious gets awkward I wonder if those two are added again well that takes care of the altar I [Music] suppose yeah we're boozing here uh okay I don't know what's going on but the graphics are pretty damn sweet in this

(14:33) game I like it sorry elain but this round's mine ah you always worth damn it you got a good hit in we give you that yo main characters always have to that blue hair in this game there's just no stopping in this genre yet you've grown no less than I have still we could likely train for the rest of our lives even weird to think he's back on the mainland now guess that means we'll be going up against the indeed it does the people of cornea are suffering Rex crying should I turn a deaf ear to those

(15:10) voices that and I owe it to my well yeah but Zena's got the the Earth may be theirs but the heavens will surely you got a point there sorry for not just make sure you don't take who talks like this I'll be with you every step of the way thank you Lex oh stop anyway that's enough training for today hey Ben how's it going if we don't get moving I suppose it is that you see something out there it's looks like they're flying this island is no longer safe with you there you head for the

(15:56) cathedral seal off the harbor and do do it quick not a soul gets off this island under our [Music] watch yo what up see how we're living how you guys doing sir dispatch the Vanguard to the cathedral and remember we're to apprehend the tar understood generic bad guy we're going to wreck that guy oh heav Father learn how this game works land Andy above we pray this day for deliverance from Evil grant us the meager sustenance to nourish our fragile bodies in the times to come w't let me skip this guide our

(16:45) lost souls on the path to Salvation shine down your radiant light upon us for Darkness looms thick through all corners of fth such is my request as your hum servant in the name of the Guardian unicorn and that of the holy mother is that you Elaine what's about the unicorns in this game I ask you not to stomp around in the cathedral what is the meaning of this well look what we've got here seems we're the first to show rough her up if you want but don't forget yeah that's true the girl dies and our time for some video

(17:32) games this one does not have per death JK feel not go unpunished not in the house yeah then she's fast not as fast as us what Scarlet are you hurt only a little shaken that's damn you just rolled up on him was like Po to us Elaine a sh has come ashore on pavian soil one hoisting the banner of this and are they aware that you're the Crown Prince yo she's pretty chesty say for certain we doesn't look like she can even walk straight these people are our enemy and they must be stopped yes my Cathedral will see no

(18:21) come let's move outside your highness hold on he went ahead to alert the town indeed a Ring The Ring Of The Unicorn Queen elenia in truth I had intended to wait till signs of age played more deeply cross your face but I have the utmost a Keepsake from my mother thank you for this job make no further mention of [Music] for the day will be

(19:50) ours onward [Music] doesn't appear like I can do anything right now so we'll see you're supposed to be able to like change some stuff around

(20:59) [Music] easy now [Music] good the time is at

(22:35) hand the path is set you always get first strike here it looks like if they're messed up so we're just going to wreck these guys light we march on what does PSM pmsl stand for again Victory grows ever closer the time is at hand onward is ours now [Music] I'm

(23:49) up yes sir I'm here [Music] ready on it this guy's going to solo them okay here we [Music] go damn it

(25:05) in service of the loyal family what would you ask as you wish I shall hold come I shall hold nothing back okay that's pretty cool this is not bad oh what's going on Big Mike yeah I know I need Lulu to get over here healing I've not chosen My Grave yet yeah those dudes Just Bounce they're like nah we're

(26:10) [Music] good I just want to sleep [Music] we

(27:38) march to me the time is at hand sure thing very well come come then let me a fine job awaiting your command by your word I am yours to command your highness

(28:44) you face me I wonder if there's a way to increase combat speeds make this go a little faster hard D disclosure and thick D disclosure guys good yeah I'm going to do more uh just putting the stuff together this weekend but uh kind of tired for the investigation stuff come then let me a fine

(29:56) job very well as expect now then you got it your villain this one's I shall hold you face I'm ready to hit something I have you no stop it now come this one's mine your villainy ends here we march

(31:07) on well thought the path is set gaze upon I'm ready to hit something you face me you don't stand a chance service of the crown told you I'm awesome we March as you wish come then easy now I like how you can have more than one guy fighting at the same time pretty sweet how are you guys doing today hopefully we're doing

(32:11) well fine job Pacman number one I don't know about that face me we march on another step forth I can't fail my sacred Mission my legs grow heavy onward this isn't going to end well your villainy ends here I shall hold nothing back we're going to send in our night guy here this struggle will only prolong the pain I fail to Joseph cornea's most decorated Knight you won't touch

(33:21) them I have you glory to the [Music] Liberation I'm ready to hit something come then why are you doing enough of your questions welcome good

(34:29) this one's mine are you okay oh that's how we make it go faster oh now we're talking okay gaze upon I'm ready to hit something healing no stopping now come you face me light a fine job a fine bout [Music] we did it chat we did it whoa first battle Down Easy

(35:38) Money hopefully it lets us change the difficulty come on let's change what all that stuff did we just got one such as I brought Low by the Coria verman that not you've Fallen far in how many times did you stare death in the face at her M I may stand as your swordmaster no longer but I can yet offer you a merciful end to your descent wait your highness tell me hodri do you remember the times you and I played together yours was a bond oh we're recruiting this guy right now could hope to equal why cast that aside and bend

(36:24) the knee to garious I refuse to cut down a friend without first knowing how we've

reached a simple reason Elaine the ring what sorcery is this yo we're turning in blue guys y this is like turning the **debunkers** onto our side guys my head what am I doing here a spell to Shackle the hearts of men men is the only way I can think to describe it my prince that ill- fated day all the Lords closest to your mother turned upon her without so much as a moment's notice unfortunately my memories end there as well uh I like um

(37:12) a frightful CLE one but it doesn't really matter what kind of vodka this spell of control it could be called such magic would go far in explaining I shudder to think what unspeakable evil I wrought up though there is no greater misdeed than turning my spear chat spoilers we're going to end up fighting our mom at the end of the game I can already tell you must blame probably they taken mom over with a spell but I do wonder how is this ring in **truth** I had believed it to be mere regalia to think the power of

(37:44) cleansing **truth** your highness that is the ring Legend speaks of your ancestors wielding it to purify the Orthodoxy has a similar story about the Holy unicorn how it was this it's entirely possible that the ring that bears its should G then this ring is the ra your words ring true indeed it might just bring the iron all told I've often found myself yet the answer is clear as day now the walk it I will mother he just pulled his sword out to talk to his Mom that's really cute marks our first foray Into The Mists of

(38:31) Despair which hang heavy over our home it may take days months or even and how does hodri fair well all things considered any fault my the way your highness Among The Liberation members I've mustered in my past excursions is I'll ride to bring him to you the you have my thanks a word is something wrong well no it's nothing are you sure anxiety will be the it really isn't important I assure you it's just our lives have changed so drastically from I can't say I feel any but I've always known this day would

(39:34) come guys I think she likes him that's why I've spent all these years training under Joseph's careful instruction a shame you never had the chance to meet my mother but as her air I intend is that why you and Lex spent all your days banging you've seen that have you banging swords guys you know what you know what she's talking about and assuming the others who surrendered to Zira are being controled as he was we may just stand a chance in this yet our Liberation is still in its nent days promising yes which is

(40:06) precisely why I'll need your help Scarlet to reclaim peace for all who have suffered Elaine I of course I'll do everything I can as is my role as a priestess of the pavian church hey don't forget about me Lex what I'm sorry my prince it's all right when you've known each other as long as we have there's no but there are protocols to observe rules we must still I'm a I'll give my all in the thank you [Music] all okay let's see if we can make oh there we go okay we can change the difficulty

(41:03) I love that it was like read my mind guys okay quick interlude uh hope everybody's doing great tonight uh I today's retirement day it's also MH370 Memorial Day so I'm chilling I'm having a good time later tonight I'm going to probably join the Skyfire news space uh but until that

want to play some video games uh hold on let me see if Lulu wants to come in want come inside come on come inside come inside come on inside come on no luck guys she's outside Lulu doesn't want to come inside she doesn't

(41:52) like you guys okay uh is expert the highest difficulty guys we only mess around with the highest difficulties also for my ufology fans pretty pretty brutal day today for the ufology people um AO came back and said there's no aliens out there chat Elaine who believes that nobody we're surrounded not the welcome party I was hoping get your V clo let her go I should have known you'd be behind this Treacher reera what is the meaning of this apologies for the icy reception what business could you have with

(42:45) scarlet no I don't think that will be happening I act un as for what he plans to do with her yet I shall see it done no Scarlet well so much for uh chesty Scarlet oh the Cavalry arrived get get wrecked oh we just we just dipped out we just ran I'm ashamed to hear you met such Misfortune before I arrived your highness this man is Clive

(43:50) the night we spoke of earlier a pleasure still I never would have dreamt that garus was after scarlet and not you my prince who was that Knight who took her his name is Renault formerly a proud servant of Queen elenia not unlike myself and just as I felt victim to garus and his foul magic all the same why scar perhaps her role as a priestess has something to do with it lately I've heard tell of Zira's desire to spread its Ro making one with direct ties a prime in any case the risk to her safety is clear should she and sitting idly by

(44:32) only serves to stoke my worry further wouldn't do that if I was you no chance you're helping the girl if you don't even know where you're going and you are don't worry he's a friend I'm going to guess purple means like we haven't recruited him yet like that the one dude's armor has changed to Blue now from red so that's good need intel dirt or just the latest weather I'm your man and what of Rena Road East faster than a clap of Thunder I can only assume he's going for the

(45:02) city but the real problem is his army of mercenaries we W after Renault we've got to go through them your highness we all share your sense of urgency is this guy like a thief or something Scarlet without first routing the enemy before us I like that huge guy in the background he's he's sick right we depart as soon as we're able no I'm playing on Nintendo switch right now guys uh my cousin just text messaged me guys okay house Carls guys you guys house

(46:16) Carl that sounds like uh some kind of concubine or something okay we got to wreck Ain okay sure we listen to their silly explanations here we go okay here we go to begin with Calvary classes such as mine are very effective

(47:19) when facing enemy infantry you may always call upon me to dispatch infantry okay Knights are good against infantry cool okay let me guys Shield you guys Shield stuff wow okay this guy let me guess he's a thief and he's going to evade stuff yep guys when you played

enough uh Dungeons and Dragons and stuff you know what's good okay the Lord in the front row bar the blunts Knight in the background cuts down the Infantry okay Lord in the hoplight share the burden Lord will heal when he uses lean Edge okay Thief can draw enemy attacks while

(48:11) the Lord in the backr can focus on offensive okay okay here we go actually let's talk through this okay uh how do we add dudes I want to add some dudes uh okay press the button here okay I think how many extra guys do we have here oh we got some extra dudes like hold on we got Lex's Army but we only got three armies uh so I think the move is these guys are both defend boys how do we Let's do let's add the the the Thief guy like that Joseph's Army can take uh Clive but wait then we can't one of our

(49:09) guys can't come in to the battle guys this feels bad can I replace this guy oh yeah we could run with HRI I feel like we might want to have the super guy though just to be safe you know what f it let's just roll with this uh actually no we better run with uh we got to run with Joseph just to be safe here guys um you know what we're going to do here actually uh Lex kind of sucks though right I wonder if we putting hodrick in front would be better physical defense is way higher initiative is lower guard rate is

(50:08) higher uh want to put hodrick in here instead then that guy's the leader that guy's a leader okay let's go with that okay deploy the day will be out we can deploy one more dude deploy good hodrick out here as well are they going to come up behind us no I take arms this game is sick chat here we go at once let's go baby let's go your villain ends here for anybody who's watching who has not ever watched me before just FYI there's super advanced technology that exists in this world has being hidden

(51:00) from us so that's cool just want just thought you guys should know nice try good you face [Music] me we march on Victory grows ever closer received your orders my leash your villainy ends here thanks nope saw that good yo this guy can't even hit me

(52:55) come come then we march on I must never yield well fought I ride for

(54:02) cornea I'm ever in your service I depart I shall be your Shield forward you face me yo my Thief is just straight up unhitable F chat he just can't be hit what is this a fine job your villainy ends here prepare yourselves seems we've done it see Chloe I can do stuff

(55:14) received I've arrived good how come I can't take over this Harbor what do I got to do to me for the Liberation there we go ooh Revival orb okay uh let's do oh

(56:19) boy that's big the time is at hand let's move that guy there the is set your orders my leash um oh there's that guy we got to get okay I see let's do send him over there at once what shall I do so about these guys it shall be done I'll prove my worth you face me how do I switch my for Chad how do I move my formation around oh I should take this guy's Shield

(57:25) can't can't exchange here we go I can't figure it out we're just going to go orbs our

lifestyle chat oh this is bad chat oh no that you okay we march on to me come then thanks a fine

(58:33) job we March the path is set stand before me what the Battle Is Ours yo whoa chat Clive is not messing around holy [ ] Clive just wrecked them dude uh but he needs healer Clive needs a Healer like this guy I need a okay so I know I should add Clive with the Healer what shall I do we're going to have Clive going into the Garrison it shall be done you face me I'll take

(59:40) that good I've need of a rest okay your orders sir you're not fit to be rusted on my spear are you okay a thrilling battle I shall be your Shield received oh I mean this guy can't be stopped this guy's a beast that's that's an auto death right there look at this spear lady wrecked dude oh my goodness wrecked a victory for the Liberation one Victory begets another yo this spear guy is not playing around

(1:00:44) holy [ ] at once okay maybe I was wrong maybe that is the right move you're not fit to be rusted on my spear yeah why is Thief so broken in this game he just can't be touched like he's just Invincible healing they Li defeated your orders my leash for the time is at hand I'm ever in your service I depart prepare yourselves come then we march

(1:01:52) on a fine bout skip battles to me what shall I do it shall be done I'm here your highness is ours now a pitiful end awaits I have you thrilling

(1:02:57) battle my shield shall never break I shall be your Shield at once a key strategic point you face me thanks got me good nice try saw that good chat this guy they can't even they can't even touch me they can't even touch me chat uh I don't even need to heal over here right like we just send this guy in right yeah let send him over here can't we can't be stopped come then I mean what's what's going on here why is Thief so broken look at this do I have 100% evasion ability fine apparently when you're in the if you're

(1:04:04) on the the bridge here you don't lose stamina either so they're just getting completely ruined I'm just going to wait here actually I'm just not even going to move let them keep coming you face me I'll take that nice try we march on come then oh I should just skip these battles I don't even need to watch cuz we we know he can't hit us you face me you impressed come

(1:05:17) then we March the path is set you face me Victory grows ever closer onward come then well fought we March you're not fit to be rust on [ ] there's some more guys at us oh [ ] I shouldn't have had to be next to each

(1:06:23) other are you okay they lie defeated your orders my leash forward the time is at hand to me I fear for our safety my legs grow heavy I'm ever in your service I depart you shall go no further okay I get it I should have sent the KN

(1:07:27) guy to take out the uh the axe guy and protect my guys there when I was I shouldn't have been resting you okay it's my bad healing those guys can first aid a victory for the Liberation how shall I proceed received uh think we're going to use a potion guy in this defeat will soon be upon us stand before me a Flawless victory victory what shall I do I'll prove my

(1:08:36) worth it shall be done a pitiful end awaits your orders my leash forward your orders sir I've arrived you're not fit to be rusted on my spear a moment please how shall I proceed the time is at hand onward time is with us should we only keep our Focus to me

(1:09:39) good I shall be your Shield at [Music] once okay we're going to go hit up the last uh guy here in a second Victory grows ever CL here we go it's time to roll up the we March you shall go no further take notes Lex how shall I proceed received oh oh we can save the game right

(1:10:45) here nice how's everybody doing it tonight hopefully we're doing well better call [Music] SA speed running uh yeah sir Ashton here uh I don't know about speed running but you can hit the fast forward button it's pretty goddamn nice not going to lie this game is sweet I've arrived uh I think should we wait for this guy to roll up we still got like a couple bars left oh oh [REDACTED] uh prepare yourselves your villain ends here that guy can't even hit me well fought okay let's let's make all our

(1:11:39) guys get in there now see who should we fight with first I fear for our safety I still bear fa oh wow this guys are just going to kill me they are akin to a well h this is not good defeat will soon be a how am I supposed to defeat this guy luck stands against us start with this guy wow that hurts do we have healer can we heal this is brutal uh how am I supposed to beat this guy chat uh we might be in trouble yeah can we even defeat this

(1:12:50) guy you can now use Valor skills use them by selecting Valor skills option from a unit's action menu First Strike to Allied units in range okay how do I do Valor [Music] skills oh wow there we go increases XP steal gold let's do this oh yeah I have Pro my worth what shall I do what can this guy do draw an enemy towards the user damage all units with within the designated

(1:14:11) range I still bear Faith that's that's not great oh we hit him hard chat oh yeah we got one down oh that hurts is he going to kill my guy I think he's going to kill me you're done you'll be okay damn this is not this is not messing around man [REDACTED] time at uh do we have any more Valor skills we can do what do this what does this guy have over here is a grim day oh life Aid revives incapacitate area units bring that guy back to life oh

(1:15:18) yeah he's back to life baby uh okay this um NE Gates damage suffered by an Allied unit let's hang on to that for a second we March onward I I don't know if this guy can actually hit me come then oh he can't oh oh he did hit me no no he didn't hit me [REDACTED] here we go you face me okay yeah so he he can't even hurt my guy okay here we go time at hand we're going to run out of stamina

(1:16:22) is the problem your villainy ends here apologies thanks a fine job another step forth I've need of a rest okay how are we going to take this guy down this guy's got to rest huh we March um is a grim day I shall never know defeat stand before

(1:17:31) me wait what the hell I used the negate damage one I must endure the Battle Is Ours

oh that counts as a [Music] win this guy's basically dead [Music] um I'm most grateful the odds do not stand in my favor well this doesn't look good here we

(1:18:35) go oh bad news got wrecked I can offer our time grows short I don't know the damage negation didn't work at all it's kind of disappointed oh I should have gave that guy The Experience buff oh well a thrilling battle I much room to improve in service of the crown None Shall ever harm okay what's up everybody [Music]

(1:19:54) [Music] alone are you what happened to your friends long gone by now but with all the time about them never could have done without you L chase me halfway to H and back though the fort's empty your majesty not a soul in sight guy laid out the bait and we just had to take a nipple okay let's turn this guy into a blue guy few leaders would play the sacrificial lamb in such a predicament don't flatter yourselves I would have shook you off like weak old mud if I hadn't hurt my leg on a little scuffle but he that's just part of the

(1:20:45) job you're gambling with your life the second you take that coin then you know how this ends stay your blade Lex there's something I need to what does garious I'll take any scraps of it you do realize I'm they keep my pockets nice and heavy and that's as far as my curiosity goes so sorry but I'm not a questions kind of guy at least not past my B well what let's say I offered to fill those Pockets what then first I'd ask if you still had all your marbles but I'm not the discriminating type as long as the

(1:21:23) pay is right if this is supposed to be a joke I'm not laughing we're trying to it's not every day you come across a man willing to greet now our aim is to live I'd ask your Aid in you know I had heard you were nothing more than the crumbs of some spineless resistance never would have guessed you're really just a this so-called lunatic is none other than Prince and our you're trying around the crown brat of a dead and gone Kingdom trying to flip AO sorry kids but doesn't sound like

(1:21:55) he's hope you know I don't come cheap does that mean you'll join us granted you're willing to foot the bill King mak's not an never but you seen enough to know I'm so we got a deal Le so do I have to pay this guy is this one of those video games where like he just talks about paying him he's just on the squad now he's going to be BL time grows short indeed it's more delivering her from his bloody perhaps but this is far casting The Gauntlet at renault's feet would only

(1:22:28) send us all to an early grave if I may add there are those among Gus's adherence who willfully chose to betray the queen those long years ago I fear we have no hope of avoiding conflict with such base traitors it would seem we'll need to bolster our ranks then your highness a upon ushering you to Pavia I labored tirelessly to build a foundation upon which The Liberation Army can take hold I have seen great suffering in our lands is true and yet greater resentment harbored by the oppressed and the downtrodden I have every Faith such

(1:23:11) Fierce emotion will spur them to join our cause Lulu come in here so we can get some

more uh more viewers L is the real draw everybody Zira and you will surely find Kindred Spirits then I will do just that I only ask that you be the crutch I may lean on when the Perils of War grow too great to Bear [Music] alone [Music] for

(1:24:23) [Music] [Music] [Music] guys I don't know what I just did but it

(1:25:41) seems like some kind of Barbie stuff you know like the trying to look trying to look cool that Barbie look okay let's see um oh yeah I need the doggy treats yeah Lulu's been chilling outside like all day she doesn't want to come back inside [Music]

(1:27:19) guys I'm not sure what to do I need help uh I'm thinking like my main unit doesn't even need an extra guy he's so strong right he's so op he doesn't even need another one uh these guys were kind of getting wrecked maybe what we do is we increase this one then we realign our guys a bit uh nice Rapport level [Music] increases I didn't know that that's cool Rapport conversation

(1:28:28) we got to arm people uniformation yeah this is dope okay let's go with let's see okay you can set new leader yeah we know about that blah blah blah changing the leader will cost a Valor Point sure okay so I want to adjust this guy here set character Joseph so Joseph's going to go in here we're going to reposition Joseph with this guy CU they're both kind of weak uh these guys heal over there and then what we do is we can set uh the other horse guy in this group right that's the play here we're still missing one dude but

(1:29:30) maybe we we'll get him in the game [Music] somehow oh yeah items Quest log say change of clothes select a character from the overall menu modify the character's equipment uh Templar sword is there a way to unequip yeah so we unequip the Templar sword and shield and I think we put that on like Lex or somebody who needs it right yeah and then this guy doesn't need the the good [redacted] so we just put the recruit shield on this guy now Lex is just a straight up Beast right and then uh oh yeah somebody needs the who's

(1:30:37) got the least amount of hit points where do we see their hit points oh probably we give the thief the hit points thing right cuz that way even if he gets hit he can live yeah yeah now we're talking there we go what is Renown do we're going to this nearest town over here okay [Music] quick Supply run here we go oh there's items oh what the hell okay okay it's got to force me to go here got

(1:31:40) it armor complete deliveries to rebuild towns and restore their full functionality deliveries uh okay okay I don't I don't have the materials for the deliveries [Music] provisioner here to shop or maybe to sell the are we here to shop or to sell um probably neither what is novice military treaty oh you gains experience huh that's cool yeah we don't need any of that [redacted] come back [Music] soon if it's steel you're after you're

(1:32:45) in the right place damn look at that runic sword that's expensive recruits shortsword we definitely don't need any of this though oh the spear is pretty good though what's the quest

we have to do see it purchase something we just had to purchase anything huh if it's steel you're after you're in the right place um I guess we'll buy the unwavering spear nothing else really is worthwhile user earns 20% more experience maybe we'll just buy one of

(1:33:51) these yeah let's just buy one of these instead done and done be seeing you oh we have access to the world map now okay Renown increases the range of

(1:34:55) services available at [Music] forts okay so Renown is like how you Beast up no I'm in uh this is uh Nintendo switch guys and hey everybody thanks for jumping in uh I'm glad you're appreciating it I'm taking a break from doing other stuff for a while I just want to chill and play video games okay report conversation locations okay [Music] I'll take

(1:37:20) that saw that nice try saw that we march on [Music] curse this black tal

(1:38:27) scum looks like we just walked into a battle we weren't ready for it you supposed to be the town guard now go on and run home look at this guy's eyes chat as ever SE to vulg such as you the father shall strike you down for your sins not today you won't but I'll let you take that up with him yourself me you know the drill boys grab anything that's not nailed to the floorboards guys we got some smoked nuts there oh so

(1:40:02) that was just like a mini cross uh I don't know that was like a thing that sets up for another battle if we want to do it uhoh here we go what's this he a lot of these cut scenes huh here we go what news do you bring out with it lad it seems Fort sology has and here I thought scorpions could St a faction calling themselves The Liberation from what I suppose there's no pulling the weeds of rebellion sir Moran may I you may have as many as you need just give of course my Lord again again is that Defiance it's

(1:40:53) none of your business to the matter at hand though I'd rather not have self alert the watch if these pups come scratching at our gates you're to see them repelled consider a d oh there's a new orb update in M Microsoft flight simulator wonderful this game's sick though for

(1:42:29) [Music] [Music] as you command your highness hunt it boss

(1:44:15) [Music] [Music] for [Music]

(1:45:30) [Music] [Music] [Music] you're done boy I have you a fine job I guess Lulu's had enough of being

(1:47:16) outside guys hey everybody hey Tracy how's it going man [Music] uh sorry what do you guys want oh the Skyfire space is in like an hour hour and 10 minutes I think usually uh I'll check right now for you guys though guys I got so many goddamn messages I can't can't keep up the a thing was going to going to be spicy tonight guys people are pissed off [Music] man why did Ross card copy and paste uh Chris melon's post instead of just retweeting [Music]

(1:48:19) him uh hold on I'm checking what the hell is a portable UFO detection kit uh let me ask

the dudes holy [REDACTED] I think it's in an hour guys it's not out there yet so I'm not sure yeah Lulu will come up here in a second let me see if I can get her up here Lulu come on [Music]

(1:49:59) [Music] he okay we got to fight these bad boys down here okay question is M should should still be able to move up here though right okay so I got to be careful um is this a ruin over here oh it is that's a ruin right there do a Vitality okay these like hidden items I don't even I don't get it uh recruit someone who can do

(1:51:08) Bridges doesn't say where I do that AIA Harbor should I jump in the in the the ship y see where this goes I got no idea where this is going to go chat okay this is a different [Music] spot oh they give you items you talk to them the vine shards I don't even know what those [Music] are some Stones this looks like a ruin but it won't let me in there hey look there's a

(1:52:12) chicken oh he's running away oh that was weird well I'm glad we came here we're just getting items like crazy let's check out these ruins over here oh there another [Music] chicken [Music] okay apparently we used to get get along down here you play with swords if you know what I'm saying guys ah [Music] hollo oh there we go escape

(1:53:15) [Music] chickens how many chickens are [Music] remaining two chickens healing tonics uh let's station station Lex here deliveries don't have deliveries we can do here armor if it's steel your after in the right place bers thing dancers [Music] bracelet be seeing you here to shop or maybe to sell just sa the word oh can we buy the items that

(1:54:19) we need smoked nuts and cut flowers come let me take a look no no I got this okay we station the guard here give him a gift got some cut flowers uh what do we do down here wait do those chickens come back oh yeah okay okay they came back chat we're too good chicken engage engage chicken Easy Money easy Quest [Music] Chat oh here we go free meal ticket no idea what that

(1:55:24) [Music] means all I know is we got eight honors whatever that means um okay I think we go back to the other place now yeah random carving we can't go across the water I don't think though Oh I thought that was going to make me go faster it doesn't [Music] Bridge got to repair the [Music] bridge bolster our [Music] ranks and do this battle side quest okay got

(1:56:26) it got it chat here we go oh wait we need to station a guard here let's station I don't know hold actually stay Clive here oh wait let's check the deliveries oh there we go [Music] I haven't quite figured out the deliveries yet yeah that chicken's definitely a spook chat definitely a spook uh where's my dog come here dog Lulu come on e

(1:58:04) she's not sure chat she's not sure come on come on there's too much stuff in the way she's not sure come on come here come here come on she just snatched it ran away okay I don't want to get bit is the [Music] problem oh they got me [Music] I don't get what's going on here

(1:59:20) Commander Travis those random guys were attacking me [Music] [Music]

(2:00:41) I'll that nice try good look at Chad's an

(2:02:06) angel look at that that that angel has wings I don't really understand what these random battles that are happening here angel here in cornea I dare say that's a rare sight the Orthodoxy reveres them as got to talk and engage the audience father himself my prince do try to keep your composure uh yeah it's kind of difficult I might have to move my monitor in order to engage the audience men stand before me I am the Knight Joseph faithful retainer of beside me is The Liberation and I'm well aware of you

(2:02:43) sir Joseph word of your exploits has long since reached my homeland my name is n **green Street**'s kind of a nerd man I'm not orod swords of The Liberation I would is that what you guys want me to do though by order of his Holiness ponix arant I've been tasked with amassing luminous gemstones known common those that I've Unearthed I entrusted to an old friend a safe at least it was safe the churchy Shepherds I turn my gaze for one ungodly moment and look what happens apologies regrettably my host alone is

(2:03:28) far lacking the numbers I'd need to mount an adequate rescue these black Talons are the subject of nigh every ill rumor and cornea yet I failed to realize the true extent of their treachery it seems this cleric is damned without our Aid we should help however we're able my countless thanks Prince Elaine it's as though the father himself delivered you to me guys I'm trying to get Lulu up here for some more engagement come on Lulu come on come on you're fat Doos come on come on come here may if I entice her

(2:04:11) with another treat Okay blah blah blah oh uh oh [Music] no [Music] oh here we go your Garb is unmistakable but your name makes matters all the more certain you must be a descendant of the old Court sorceress the great and Noble Jana who served under Queen Elena's grandfather yes such knowledge brings um yeah I don't know Steven **Green Street**

(2:05:17) is's just like a **debunker** right he thinks that all the UFO stuff is fake we'll see I never expected to come across one of her lineage and if I may we caught wind of zenan soldiers discussing their fruitless search for an old witch that would be our Elder yes we magicked her away somewhere safe in hopes of eluding their gaze but those dogs still Bear Down on the Hamlet using their hunt as an excuse to tear its walls apart board by board a distressing tale indeed so the Final Act is yet to be written please help us Break Free of

(2:05:57) their bloody fangs you needn't so much as ask we'll do what we must to bring an end to these abuses she can't quite figure it out Chad oh yeah no we're not to do that stage yet okay uh blah blah blah let's grab this okay I think I get this game now so these are like random little side battles but we got to level ourselves up uh enemy level four okay we got to power ourselves up a little bit [Music] okay you came at me [Music]

(2:07:13) chat okay here we go uh get a PS5 no I don't have a PS5 yeah Lulu gets really upset and you were aided by a man named Ral you say I tried to pick her up but she'll just bite me he claimed to be with the cor militia he may agree to join our cause I'll try to get her while we listen

to this him before the enemy does it's worth the attempt if nothing else we should make haste  
um please stay safe out there we shall the only thing you need worry about is what to do with  
those flowers of yours she's too scared I don't know

(2:08:05) normally she doesn't she likes coming on the couch you don't come on the couch you  
don't come on the couch what's thises come on you guys see her no yeah she's like right here  
come on come on it's okay come on on come on on one okay so I think we got to talk to Ralph

(2:09:10) I don't know who Ralph is I got to have my guy talk to Ral I'm guessing like if you know  
how these games are played like usually you got to like have your person go on there no bro this  
is the coolest game you got to appreciate if you don't appreciate you don't you just you don't  
even know see there's Ralph right there so I got to have my dude talk to Ralph we'll get this  
dude out here I take arms and then uh this magic person probably wrecks me I would guess  
we'll have we March him go talk to

(2:09:48) Roll to Me I shall go like down here somewhere maybe oh that's a rogue okay yeah go  
there forward we don't even really need to bring Joseph's unit out right now we'll bring him out  
anyway though it's service of the Royal Family I'll Pierce you clean through he's just going to  
wreck them do you see now hey come on girl we into the orbs appear chat uh we'll join the  
other space in like 45 minutes here I'm going to play for a little bit I take it you're the one they  
call Ral come on that depends on who's asking

(2:10:50) fine come on we stand with the Liberation Army come on we just spoke to a pair of  
civilians who claimed you helped them to safety so the girls made it out more welcome news  
than I'm there she is chat there she is it's as you say I am Ral captain of the Coran militia what  
militia we have at least if you're truly willing to Brave these Bandits she's trapped now on this  
side chat that's precisely why we come on come on come on okay so we we stole him now yeah  
Hunters can directly attack the back row

(2:11:30) blah blah blah okay that's cool you can also support others from a distance oh ranged  
assist press y to join the battle with range assist okay who's my target the time is at hand the  
path is set I'm ready understood I'll not fail you by your word I shall hold nothing you shall go no  
further how shall I proceed at

(2:12:45) once what would you ask very well well gaze upon the face of you're not fit to be rust  
on my spear come a pitiful end awaits uh my Channel I didn't understand any of the words you  
just said are you okay can you take a camera that has rtsp output and tie it to into OBS I don't  
know I couldn't figure out how to stream on more than one platform even though I have stream  
link it's kind of a kind of annoying awaiting your command by your word you're not fit to be rust  
on my spear

(2:13:50) tempered in the cruel flames of War I shall be your Shield received uh we March right  
come then I never miss my target your villainy ends here you face me I'll Pierce you come then  
Victory grows ever closer to me gaze upon them you shall go go no further I shall hold nothing a

pitiful end

(2:15:01) awaits my shield shall never break I'll not fail you as you wish try me you face me I'll Pierce you clean through your villainy ends here I never miss you face me try me come then I'll Pierce you you face me I'll not let this go to waste how shall I proceed

(2:16:11) forward understood we shall make proper use of this I have arriv what would you ask very well I have claimed it as our own I'll not fail you I shall be your Shield your orders my leash received come then come try me that went better than I

(2:17:15) expected awaiting your command and what would you ask who's my target heading there now the time is at hand onward I am yours to command your highness awaiting your command but what would you ask you face me chat how do I do the arrow [REDACTED] I want to shoot my arrows at him I'll Pierce you clean through rang assist how do I do the range assist I don't get it I'm here too oh there it is oh oh [REDACTED] I pressed the wrong [Music] button

(2:18:19) matter oh there we go we got range assist going stand true the battle is won I'm here come come then uh oh I see Rangers says press y I'll support you so range assist off assist on I'll support you how come range assist does less [Music] damage that one guy is super slow man wow just wreck him huh wait did he kill my

(2:19:28) guy well fought oh he killed my guy uhoh that's not good your villain ends here they hit my KN they hit my guys somehow little bit of prior oh he still levels up even though he's dead that's cool let's have him uh rest here we shall make proper use of this as it not fail you oh we have six Val skills now wish what would you ask try me uh run as much as you like Black Talon swine um what happens when you first my arrows will cover any distance uh yeah I don't know life is a big game

(2:20:37) yeah it's settled oh The Archers have guaranteed hit oh no wonder that's why they hit my my Thief guy okay I shall be your Shield forward I am yours to command your highness do you need something you're not fit to be rust on my spear the time is at hand the PA is

(2:21:49) set how shall I proceed at once I'll not fail you is a deficient plan I shall hold nothing back you got some bad luck there but I have you I fight in me yet to me we March the time is at

(2:23:15) hand excellent there is time yet to claim victory a pitiful end awaits awaiting your command very well I have my doubts hold fast hope everyone's doing good tonight we've been uh grinding this game out for couple hours now it's pretty good I like [Music] it they are akin to a well home I'm here

(2:24:24) too take notes Lex o Viper Fang now we're talking okay we just beat this Mission there's no Perma death in this game which is pretty cool took uh I don't know what that means [Music] hi beers you dare speak of Mercy what of the mercy you showed all those you've robbed and pillaged please it's my sister back when our mom and dad passed I was broken an empty shell of a man but she never left my side stayed right there next to me till the day she

took ill herself started fading and

(2:25:29) fast I carried her slumped around my shoulder to the best healer my coin purse could buy but it was no use only thing I could do was watch her wither into dust you ever seen that it's a pain worse than death itself but I didn't stop searching day after day after Wicked day till finally I'd got what I asked for but the cost of the Cure would make a weaker man now tell me how's a guy who's never had the gold for schooling supposed to make that kind of coin th's all I'm good for so th's how it had to

(2:26:10) be would have turned to this if I had another way a word your highness somber as his story may be you mustn't let pity Cloud your judgment only the town watch can determine the appropriate sentence for his crimes his fate is not ours to [Music] decide my life Square in your palms Noble C please I'll return everything I stole if you just let me go come on Lulu she doesn't want to come up come on come on come here come here can you come up oh wait yeah sure let him free very well Redemption is not Beyond reach neither

(2:27:01) this guy is probably a killer but whatever you mean to let him I'll repay this kindness in FS I swear that guy is definitely a creeper okay so when you kill them then it kills the guys randomly around there okay cool so we get what a a bell and a short bow nice this guy's ours now okay the hoplight in the front row be the blunt the enemy attacks hunter in the back row can pick off enemies range attacks

(2:28:04) that's neat maybe we messed up chat I don't know let's give him some of these we need some trouts yeah active SCH sardines okay uh what does Armor have if it's steel you're after you're in the right place crushing [Music] axe gives you ability Crush Vitality Talisman

(2:29:08) huh wow the shield gives you more more XP as well I don't think we need that though we don't really need XP mock B oh expand units here we go let's expand this guy's units and then let's take another we'll make another slot as well oh you need Renown rank higher is D or higher okay pretty close to that though uh okay let's see what we got going on here oh we don't get the other bow guys we just get one bow guy okay so I think we switch up what the hell okay we put the bow guy in here for

(2:30:08) sure right this person can heal right uh the soldier I think can heal so we'll switch house Carl out for the B guy and then we'll put uh house Carl in here I think that's everybody then let's look at our Quest log see what we got going on oh look at all these quests we got The Bridge wait I I did this though I've done this several times select expand units out of Fort and spend honors to increase the number of units you can deploy oh unlock a new slot okay that's what we need to do got it

(2:31:18) for the hunter we don't want to use this guy oh look at that it's a griffin okay this will probably be the last battle and then we'll switch over to try to do the uh the space tonight that's what I'm thinking hey chat hold on okay girl whoa whoa former companion of yours Bruno was it from my days with the tricorn's yes massive guy tell me Travis

(2:32:25) what's wasn't my baggage me apparently so I saw red and stormed off for good it was all I could do not to scream turns out sometime after I left Bruno took the reins and got the tricornes back Galloping again hence they still endure despite your your sister's best attempts to disband push comes to shove though Bruno would never join arms with garus not by choice he was long tired of living by someone else's Creed even when we first formed the tricornes he craved Independence over all else so I'll talk to him man to hulking

(2:33:08) man I need to see for myself what fashioned him a mere dog in Zena's labp looks funny because you guys can't see I'm petting Lulu right now uh what is all this new archive entries here we go that's Bruno what's that guy he's got a little axe boy yeah we're going to recruit him on our side for sure come on come up come up girl you get up you your pu us good girl Hello can they see you oh they can kind of see your head they can kind of see your head

(2:34:23) yeah Dragon Ball guy died feels bad feels bad chat we almost got her up guys we almost got her we almost got her chat uh let's see let's go with uh on come okay okay okay okay okay it's okay it's okay okay wow so angry she does not like being touched can you guys see her oh you guys can't see her she's like crawling her

(2:35:27) way up come on she do just not does not want to come on the couch man does not want to go on the couch okay in service of the royal family wait I just put the wrong guy out I will not fail you wait it deployed the wrong guy okay let's get out uh uh I don't know which one we want to get out here uh I also don't know what these numbers mean above them let's get our main guy out here let's just get everybody out here they will be ours Let's Just DE playy everybody I take arms she actually doesn't like the C the

(2:36:18) couch for some reason yeah she's like the treats but she doesn't I don't know why she doesn't want to go on the couch hello I know you're a good girl the path is set okay let's see who we're going to fight here with oh wow he's just going to ruin them come then you shall go no further I shall hold nothing back this guy will just kill him uh what they're level four land aits let's send this guy in you face meks we on oh that guy can heal at the end of the battles that's

(2:37:18) cool your villain ends here gaze upon them you're not fit to be rust on my spear None Shall ever harm you by your word I shall hold nothing back okay let's see what we got here you shall go no further come a gaze upon the face of your demise you're not F come level four level two a pitiful end awaits so this guy in I've much room to improve to me I shall hold nothing back horse guy uh oh you're not fit to be rough

(2:38:27) come these uh spear guys can't hurt my super guy though that's the thing about them huh I shall hold a pitiful end awaits one Victory begets another okay let's go to the town over there yeah let's go to the town not too worried about this this guy here let's send your orders my le we send this guy over to this guy here forward then we'll send this guy over here deal with this guy as you wish uh the path is set awaiting your command maybe this is a bad move it's going to hit me pretty damn

(2:39:27) [Music] hard come oh yeah he hit me pretty hard oh just leave it to Lex um what would you ask by Your Word Griffin Knight guys what does that mean dodging attacks okay okay they suffer d double damage from archers I'll not fail you awaiting your [Music] command come

(2:40:33) then we're going to wreck those guys we March onward what would you ask by Your Word you shall go no fur I shall hold nothing back oh wow that's a big heals your villainy ends here come you're not fit to be rust on my spear oh [REDACTED] I I wanted to skip that battle healing a victory for the

(2:41:38) [Music] Liberation I shall hold a pitiful end Waits keep getting sharper None Shall ever harm you I shall be your Shield at once awaiting your command very well you face me I must never yield acquire a new skill cover an ally with medium guard on my honor as a knight a fine vout to me a key strategic point for the liberation

(2:42:52) while Garrison at towns on their facilities the unit will recover hit points and stamina at fixed intervals oh and revives incapacitated people okay uh your orders my leash recover stamina I don't think we really need stamina recovery here let's just roll out we March let's roll them out here uh okay that's kind of interesting the path is set come for the liberation ah archers I'll not fail you let's go let's take out this

(2:43:57) Archer I shall hold nothing back my Ste demands rest what would you ask your villainy ends here to me come then Victory grows ever closer how shall I proceed receiv received we March the path is set you face me the time is at hand onward your villainy ends here oh

(2:45:09) [REDACTED] good my legs grow heavy we March oh that's going to hurt blood will be shed oh this going to hurt a lot what we can do never doubt a desert kid fatigue has struck there we go gaze upon the face of your man so getting hit there when you're resting [REDACTED] ruins you it isn't my finest Hour very well we shall make proper use of this come I've not chosen my Brave yet I

(2:46:17) shall be your Shield at once awaiting your command assist damage visibility range by your word hoist the banners what would you ask as you wish oh yeah he messed up you got there a little too late you shall go no further to me how shall I proceed forward yeah this game is dope how you guys doing everybody tonight hey Pig James what's up dude yeah we're a twitch Channel now but we're only streaming on YouTube like Noobs gaze upon the face of your streaming on YouTube like noobs uh

(2:47:22) okay oh nice we healed our guy come my Steed demands rest crap awaiting your command you face me a pitiful end awaits come then is it going to hit us you're not fit to be rust on my spear you face me a fine bout I shall be your Shield at once the time is at hand the path is set can wear some more than one

(2:48:27) guy how does that work forward I've arrived I am here oh you can only getar some one at a time okay a pitiful end awaits your orders my leash at once to me come then um you shall go nowhere you face me a pitiful and come

(2:49:32) then Victory grows ever closer I think we're oh we can't we got to wait for this next unit hit us um the time is at hand Fortune Smiles Upon Us good where shall I go next what would you ask by your word I shall hold nothing back we march to [Music]

(2:50:34) me come easy buddy for The Liberation I'll not fail you As You Wish uh do we want to double experience here probably not level four your villain ends here you're not fit to be rusted on my come then you shall go no further and this is the hardest difficulty right now as well that we're playing on right now the hardest difficulty yeah after this battle we're going to do some uh what the other thing [REDACTED] the time is at hand how shall I

(2:51:43) proceed we March the path is set I have taken it as our own oh no your villainy ends here let's see what happens let's see what you've got what the hell happen I don't know what [Music] you're oh so these guys just have like a million hit points I see okay he can heal 33 hit [Applause] points fine jum what would you

(2:52:59) ask very well come then I've need of a rest we [Music] March your orders my leash I'll not fail you oh this guy's got a healing ability

(2:54:13) wow stronger than ever gaze upon your villain luck stands against us wow this guy's ability is crazy okay uh I shall hold nothing back you face me the enemy is quite de wait what oh sh well I screwed up in service of the crown chat I screwed up I thought we were going to kill them and it was them killing us that feels bad that feels pretty bad my it seems o that brutal that actually hurts a lot o uh awaiting your command As You

(2:55:22) Wish gaze upon the face of your demise oof that was brutal we got to wa oh wow he got a critical heal there I am with you stand true I'm done with you you're done for no more hurt you guys just heal each other themselves what the hell glory to the Liberation a moment's rest is all I ask we march to me stronger than ever come

(2:56:29) then oh R them I shall hold nothing you're not fit to be rusted on my spear come a pitiful and await gaze upon the face of your demise feels bad I wanted to have my leader guy kill him but i' fighted me yet see Chloe I can do I've not chosen My Grave yet this game is dope okay it looks like uh I think the space is going to be starting here in a minute I will rearrange my [REDACTED] and uh going to start a new stream for the space probably [Music] here oo there we go boom boom ranked

(2:57:43) up I'll handle this okay chat we dunked on it you've taken quite the fall from gra we DED on it chat I know you wouldn't fly Zen's colors without good reason so come on out with it okay blah blah blah here we go careless oh he tried to he tried to Chief shot us and we said no something I wish to try oh we got to hit him with the ring turn him into a blue dude turn him blue we're turning people blue over here those figures the bastards got no choice but to even the score then join us Bruno

(2:58:25) and rub shoulders with the rat who left me y I don't know what this guy is but he's

sweet quit kidding your day gone you and me he's going to heal himself every turn I don't even want to Loken Bruno real op chat what's all this about the company Ren you can't be serious uh serious is a slash throat serious is a slash throat that's pretty slash throat your thick skull tra I'm done dring yo look at those puffy arms she's got going on respect chat respect the puffy arms nothing so I left wasn't interested in

(2:59:03) clipping anyone else's Wings you know good flashback and what that's supposed to make me forgive what's that supposed to make me forgive you dump us in a ditch you [REDACTED] you've got the right of it I'm in no position but the truth is this guy's like a giant look how big he is some of the best I'm sorry Bruno hold it just what do you mean playing the fool you're the one who is squeezing on half-brained ideas like they was harsh words from the the man who thinks hatching up miss this something maybe I wouldn't

(2:59:49) mind giving the old TR huh uh okay so looks like we got Bruno TR Corn's ride very nice oh yeah they all get wiped out now oh we got a recruit shortsword and a light feather Gladiator powerful Warrior capable of hitting an entire row of enemies with a single swing you can stay in the front row soldiers can heal him from the back that's not bad can now unlist mercenaries not

(3:01:03) bad so the fo has finally ceased what are you planning to do with I should think you'd already know I have no intention of helping you your in tensions oh slaver huh it came as quite the surprise Emperor garus has tendered a fine I haven't an inkling how he persuaded you to follow I'd advise you against harboring it my hopes are true as the yes yes a commendable show worry not you'll be freed from in the meantime uh okay behave yourself woman uhoh Scarlet imprisoned what did I just pick up I don't even know what these Divine

(3:01:55) shards even do and I can't tell if that one over there has already been picked up or not looks like it hasn't oh it did get picked up okay let's find a let's find a save spot here oh look he climbed up the mountain what do you find buddy watchman's Lantern blindness and burn [Music] immunity like what is this is this it over here how do we get over the other [Music] side do we need like a boat most common movement type is

(3:03:07) infantry Cavalry while flying can move over difficult Terrain what is this for I'll expand units and hire what is hiring cost oh we can we can buy a griffin Knight oh he cost seven wow that's a lot let's expand our units instead oh okay and then we can increase the max size as well got to figure out if like it's even worth it to uh hire guys or not though right like I don't know if I'm going to find more people how that's going to work okay that's cool though

(3:04:15) not bad let's let's see what this is all about here Lane and Travis sure oh two free honors okay what about this place here oh deliveries oh easy deliveries chat Lumber sure and this one boom

(3:05:33) upgraded oh the deliveries got changed too uh should we do these deliveries too definitely want to station somebody let's station Travis here we just do every delivery we can armor it is steel you're after you're in look at that thing Warriors Medallion oh wow it's really

good be seeing you okay we're going to save the game we're going to switch over what's this no items to give a gift with how do we save game save there we go let's just do it one more time just

(3:06:42) in case we messed up okay guys I'm going to go offline for a second and then I'm going to switch over the stream to the uh the space as well so thanks guys if you're into UFO Aly we're going to join over to the ufology side yeah this game is dope uh it's really fun so we're going to join a space here we're going to um enjoy that for a minute I'm going to move my camera and all the stuff around and yeah I'll be back online like 5 minutes thanks everybody this is a good first session of this

(3:07:15) game

MH370x All Evidence Review March 2024 - YouTube

<https://www.youtube.com/watch?v=gWgndX6YCS0>

Transcript:

(00:29) for okay thanks everybody for jumping on early we're going to get started in just a minute here uh the way this is going to play out here today is that I'm going to go over a little bit of a background in terms of where we're at how we got here uh history of the case going to jump into the all evidence uh uh and then after that I will open it up to questions and people can ask me uh whatever they want uh either about the evidence about the case what you think about everything and what have you and

(01:13) then we will close it out we're going to be aiming for um around two hours maybe a little bit less here today so hang tight just a minute I'm also going to throw into uh the nest the all evidence list so that you can follow along yourself if you are on the xace just turn the volume down okay just doing a quick mic check sound looks pretty good okay I think we're just going to get started here guys uh So for anybody who doesn't know my name is Ashton Forbes I have been investigating MH370 uh for the past 6 months this

(02:07) investigation uh tomorrow is the 10 year anniversary of the plane going missing and this investigation began on social media it began on uh the subreddit UFOs where two videos reemerged after 10 years the videos have been confirmed to have been from 10 years ago uh we found many other posts that referen them going back 10 years um the very first thing on our evidence list actually has the links to the web Archive of those videos um the first video is called satellite video airliner and UFOs and it says in the in the description received

(02:45) March 12th 2014 which is just four days after the plane went missing it was uploaded

May 19th 2014 It also says in the description Source protected now this was uploaded an account called Regis side a non which is uh basically means king killer Anonymous is what that stands for the second video we dated back um is called uh I don't remember the exact name of it but it's a drone video and it's either an mq1 C Great Eagle cuz we can see the Drone or it's an mq9 Reaper but we think it's mq1 C Great Eagle CU they've been

(03:21) in operation longer um and that it's got an aerial surveillance package underneath the wings this second video says receive June 5th 2014 in the description and then it was published uh June 12th 2014 so these videos reemerged on uh the subreddit UFOs around August 7th I think that there was a post from them going back to Late July but they started to pick up steam in August and then what happened was the entire community on red it began to investigate them uh various aspects of it and this is where uh you

(04:00) know I came into play I started posting some of this content on Twitter because I was afraid that it might get censored which is exactly what ended up happening to it um and I began to just uh amplify a lot of the content and write up uh summarize a lot of the content that we were finding there um after about a week um I I begged the media to look at the evidence to look at the information and I said that you know I I pinged all these media Outlets everybody all the news tic news people nobody would touch it and that's when I decided

(04:36) that I would pick up the Reigns if the media would not touch it um and that's what I did I became an investigator and that is also when I started MH370 X which if you want to know how it came up with it I just decided we put an X at the end of it since we're on uh Twitter and on X as well as the idea that X usually seems to stand for this um mesh of Technology as as well as investigation and that's what this case really is about so from their point forward a few days after that around I believe it was

(05:09) August 18th or 19th is when the first Mick West debunk appeared on the UFO subreddit it was posted by a one-day old Reddit account that had to get manual permission to post on the UFO subreddit the only person I can think of that would need to use an ALT account like this on Reddit is Mick West himself and Mick West that very same day within an hour or so uh posted on his metabunk website uh claiming to have found this VFX in a old obscure 3DO video game called killing time from the 9s this almost certainly Beyond any shadow of a

(05:46) doubt connects Mick West directly to that debunk attempt which was subsequently used to ban all discussion of the videos from Reddit from the UFO subreddit um which is what ended up happening everybody got ushered to another subreddit at this point forward um I really started to pick up steam on on Twitter I I began as a 30 follower account I started joining spaces in the UFO Community because I thought we were looking at possibly aliens or at least alien technology on these videos um and then quickly moved over into the

(06:19) conspiracy Community as well when I started to realize that I didn't think that what we were looking at here was actually aliens but potentially our technology that's been kept hidden from us uh so since then you guys have probably seen that there's been a huge rise in terms of

interest and following that I think crescendoed uh in December um and I've been on going on podcast pretty much non-stop since then I want to thank as well the people that have hosted spaces with me where I brought the topic up

(06:47) even though it's been very controversial for a lot of people um and then we did most of the investigation after the uh the case got censored uh from **Reddit** although there were still some people on social media that were doing some investigative research as well um but the vast majority of the research after that has happened either through myself or through the other people uh who the investigators on MH 370x some of them them a lot of work uh just to name a couple JK Philly fan has probably done the most out of anybody um and I know

(07:16) Arwin even though she was a late Joiner to the team she's been put in a huge amount of work a bunch of other people have done research as well that research is included going back to Old press conferences all the old news articles going through every single uh expert investigator who's been out there all of their work and trying to sift through it and determine um you know what information is credible how does the information link together and all of that so the approach that we've taken is uh one of the scientific method which is

(07:46) that we come up with a hypothesis we we look through the evidence we try to figure out how the evidence fits with the hypothesis and if it doesn't work then we kind of go back up to the drawing board what I'll say before we get into this is the only evidence that we've had to throw away or discredit is the iMat pings after 1839 UTC which is the point where the plane turns into the South Indian Ocean we simply think that doesn't happen aside from that we this this story this team this investigation has used more evidence

(08:16) than any other story to date by far more than anybody who's on the Netflix documentary more than anybody who's written any books more than anyone else who was on the independent group uh by by wide margin we brought back in a 19 Witnesses at least um we haven't had to throw out like debris evidence or anything like that to fit our story everything is fit together now still it's a very difficult to believe story um so uh in and this is just a quick recap and then we'll get into the the evidence here while people

(08:44) are trickling in um in December that is when the cloud **debunk** appeared now the cloud **debunk** also appeared on **Reddit** uh but it appeared on what I call the **debunker** sub**reddit** which is the **Reddit** that everybody was pushed to after the case was censored on UFOs um and it was started by **debunkers** it was managed by **debunkers** they banned me as well as anybody else who contributed positively to the case uh under false pretenses um and this is part of the reason why nobody should trust **Reddit** whatsoever uh a Six-Day old **Reddit** account that uh

(09:15) admitted that the reason why they even got involved was that they were upset at the treatment that I gave the corridor crew regarding uh some of the **debunks** that appeared I believe on the Danny Jones podcast and afterwards and that in within 20 minutes the Six-Day old **Reddit** account on an OB obscure uh textures website uh was able to find a picture that has matching clouds from our satellite video they anonymously using a burner email account

emailed the picture taker for some reason and this was in the middle of the night uh my time and

(09:48) this was when uh that that picture taker within an hour of receiving this uh email went ahead and made a **debunk** video and decided they were going to try to **debunk** the case that they had no idea about um and this was around the time when kim.com had put out the Bounty this just to be clear for everybody we had a \$150,000 Bounty for months and months and months uh no hoaxer ever came forward the Bounty was not to **debunk** the videos the Bounty was to have the hoaxer come forward and produce the source files for these videos because they're

(10:21) masterpieces there's no discrepancies on a single frame and they're perfectly in sync with one another right so who made these videos not to mention they're classified military equipment right so who is this this genius right we'll get to that in a minute but um so that never came forward the uh person who took the pictures uh was offered by kim.

(10:40) com \$110,000 on the spot was willing to give him the money right then and there in Bitcoin um on the contingency that they signed an affidavit that claimed that there was nothing wrong with the picture and that you know they really took it and what have you that person uh said that they would sign it and I have that recorded and I ended up posting that recording uh later on and then the next day they were telling everybody on social media that they had never agreed to that uh and that they and that that never happened so I posted that video

(11:07) and then that person backtracked and said okay well now I'll now I'll sign it right well it was already too late at that point um so in addition to that the reasons why that **debunk** did not hold enough water after it had been assessed after about a day or so uh is for multiple reasons but the main ones are that we looked up the Torrance from the old website couldn't find them we looked at the way back machine and the pictures only went back to 2016 the videos go from 2014 um we did a reverse image search on

(11:37) the picture that had the clouds in it and it would reverse image search back to **Reddit** but it didn't reverse image search back to the website uh so there was a number of issues that we had with the cloud picture in general not to mention the fact that in order to create two videos that are perfectly in sync that are um uh have the clouds in the same spot like this from two different perspectives you would need to create a 3D fully 3D rendered environment and that would rule out a 2d picture being used um in addition to the fact that the

(12:08) just days before that **debunk** even appeared we had shown that the first orb actually punctures the cloud and distorts the cloud as well as the clouds move and evolve naturally so at the end of the day with regards to these videos this is why we kept going forward this is why I retracted my statement that I made hastily that next morning when that demonking come out um I leave it to you to decide right what the point of this is to present the evidence and for you to come to your own conclusions um I just give the evidence and I give my

(12:38) opinion on what I think uh happened to the plane so once again I want to thank you guys all for being here for this evidence review uh and we're going to get into it this will be the last one I will be retiring from the MH370 investigation uh at the end of the day tomorrow I have a couple more things that I want to push out before then um and the reason for that is just as you can see for if you've been following there's a lot of hostility a lot of people are very angry at the idea that these videos could be real uh and they

(13:05) seem to take it directly out on me I have never made any money off these videos I never profited off them I never sold anything related to them I never asked anybody for money at all I made all the evidence available be no pay walls um and in real time I didn't lead anybody on with any of this um and that's how I want it to be remembered and that's how I want the evidence to be out there after that I don't know what I'm going to do you guys can ask me that question at the end uh but you know I

(13:28) think that we'll have at least done enough for the families in this case um also the last thing before I get into the evidence is that the reason why I've done this uh the reason why I push forward first of all obviously for the families uh this is probably the most mysterious incident where any plane has gone disappeared ever mostly due to the fact that it happened in 2014 where we know planes just don't disappear right it's not like it was the Titanic or even aelia air Hearts plane right where it

(13:55) was was well before we had hyper Advanced spy satellites um um and then the other reason is the videos the technology we see in the videos if those videos are real um it implicates the US government disappearance of the plane but it also implicates the US government having crazy advanced technology so far beyond what we would think they might have um technology that could be 50 or 100 or more years beyond what the public thinks is possible anti-gravity technology um technology where we can literally teleport an object from one

(14:26) place to another right stuff that we would just consider to be straight up magic um and that if that's true that type of Technology can reshape our whole planet even just some aspects of the technology like room temperature superc conductivity can change our entire uh face of the Earth so that's the main reasons why I've done this um it's not been for any type of selfish reasons whatsoever and I would just be happy if if they would just admit the **truth** so let's dig into the evidence let's get

(14:52) into this thing and then I'll let you guys ask any questions you want to ask um I'm going to do this in kind of a narrative format where I go through the evidence but I kind of give you guys a little bit more background and Detail in terms of the evidence there so the first one on our list here is the requirements to understand the videos to be authentic right and the first question people ask is why now why did these videos reemerge and that's the craziest part is that I saw the the thermal drone video

(15:16) back in 2014 and just like everybody else probably and a lot of people that are still out there just thought it must be fake I thought this is I I couldn't explain it but it just I couldn't

rationalize it to be real and since then we've had a lot of things happen we've seen the dod Navy UAP videos that were Declassified in 2017 that show that Flier footage forward looking infrared that's very similar to our drone video but that drone video predates those videos by three years we saw the 2019

(15:44) Trump satellite image that came from USA 224 spy satellite which was launched in 2011 and this satellite image has very similar Optical look and feels to what our satellite video looks like now it's a still image and ours is actually a video but when you think about it you go well it is 2 even 2014 it would make sense that we would have full video satellite capabilities right after all a video is simply a picture that are stacked on top of each other right like a movie you know um so it doesn't seem that unusual you might

(16:16) have that kind of capability um and then we get into the science aspects of it and this is kind of the creepiest part and I'll be honest with you guys this may seem a little bit out there and esoteric but um there are certain aspects to this where I've always been interested in science I've been looking into things like the double slit experiment uh macroscopic Quantum uh decoherence uh superconductivity just as recently as this last summer I didn't even know what it was before that Lk99 stuff started to come out and without

(16:45) all of this stuff out there I don't think that we could really understand what we're looking at in these videos or at least like make sense of it you know without that I think a lot of people look at it and go this is just unknown technology but it's not really unknown and this is the part where I think the scientist and Engineers have reached out to me or I've pinged them and they've been eager to talk to me because not in all aspects of it I think that some of my scientific understandings evolved but

(17:07) I've been really close in the way that I've been guessing about it that we would need room temperature superconductivity to pull off the types of uh magnetic fields that are required for these types of effects that we would need uh the Wormhole papers that were published between 2020 in 2022 one of which was published by Juan Malina who is an advocate for ER equals e PR which is a unification theory of general relativity in Quantum field mechanics uh and then we need to understand stuff like Bose Einstein condensates which is

(17:38) this idea that you can scrunch down an object into a single point like and now it can become like a wave um and that goes back to the double slit experiment and then the last thing we needed to understand was AI you know 10 years ago I don't think anybody would have understood that AI could be as advanced it is right now we've come so far in the last 10 years and AI is almost feels like it's a singularity all of in itself um how how quickly it's Advanced you guys have seen the videos of AI that

(18:03) have come out as well um and how just remarkably Advanced that is and then you see the video the MH370 videos and you can see that we've got these orbs circling around the plane and it's not something inside those orbs it looks like it's a pre-programmed uh path or route right and that's where we would potentially need quantum computers and AI in order to even

be able to um you know have that kind of stuff be uh possible now um digging into the video facts here so as I mentioned they go back to 2014 in our satellite video

(18:35) there's a ton of very weird details in them so the perspective of the video changes eight times um you can see them shift the screen you can see the coordinates change but only when the perspective changes so this would indicate that we're not looking at a satellite that's moving here we're looking at some kind of computer program that's using satellite data so that the X and Y coordinates shift when they move the screen around because that's the center point of like if you

(19:00) want to think of it like a a Crosshair is being moved during that time we don't know exactly where it is but we know it's not directly on the plane because the plane is in uh has would have a z-axis like an up and down axis which it's only we only have an X and Y axis in our videos um the Drone that we see cannot catch the plane it must have intercepted it a lot of people ask why is the Drone there that drone must have intercepted it so this now makes it to be a situation where either they're

(19:28) intercepting the plane after it went dark which gives us about 1 hour and 20 minutes based on the coordinates those coordinates indicate the nicobar islands uh which is the location where the plane turned into the South Indian Ocean another strange detail about this is that we've only recently uncovered that the raw Telemetry data for those uh satellite pings that they used to map where the plane went uh was only made available on May 28th 2014 which is uh 9 days after the video was published the satellite video so it's very it's weird

(19:58) to think of how somebody could have come up with the exact location where this plane supposedly turned into the South Indian Ocean for their coordinates um the Drone intercepting it then either had to have intercepted it within 1 hour 20 minutes or this had to be some type of Espionage scenario where this was pre-planned ahead of time and that's currently where I'm leaning we'll get into that more later uh the Drone would have either come from card nicobar there is a joint India US base there Port Blair there's

(20:25) also a joint India US base there or from the cop tiger Cobra gold exercises that were going on between Thailand and the United States um in that same area in the Andaman sea um now if it was Espionage it could come from really any of those if it was a situation where they're intercepting it then the most likely place is going to either be those exercises where they would have had the most advanced equipment available uh or from car nicobar which have been close Port Blair is probably too far away to get there within an hour and 20 minutes

(20:54) uh the mq1 C is using a Electro IR camera now these are SE are super super Advanced cameras these are not cameras that you infrared cameras you buy uh off the shelf uh commercially right and they're multispectral um which means that it's not a situation where you can just buy a crappy camera and go oh this is the kind of camera they were using these are Ron cameras that are super super Advanced and uh after a lot of Investigation we found that the blue color uh the blue and like whatever thermal is actually

(21:23) supposedly the default but then the software you can just switch it around that's potentially why when we saw the Fler videos we see them in black and white right so that's one of the capabilities apparently of these cameras themselves um so it it seems very accurate in terms of like what the camera should look like there you can even even find the mq1 C's if you do Google image search uh that have the uh aerial surveillance pack package underneath the wings uh the same way that we see in the video one quick thing

(21:51) on that as well is that we're not necessarily looking at the wing when we look at that drone that drone video um that can be the camera housing if you look at those cameras there's like a housing that's a straight line that goes above the camera and that might be what we're seeing when it it looks like the wing um the purpose of cers space based infrared system and sigint signals intelligence um is tracking boats planes electronic signals monitoring uh intelligence and Battlefield awareness so the missions of these uh satellite

(22:22) systems that we've uncovered are actually consistent with uh tracking the potential plane this is something that wasn't even really known the video from locky Martin is something we never knew even existed out there we only came across it because people kept questioning well shouldn't the satellite be moving more and how would they be mapping this and what kind of resolution do they have and then we find this video from locked Martin where you can see it it's a it's a computer program that's

(22:42) mapping the Earth all the time pulling together all that data and then they're they're looking at that data and using this computer program like a Google video playback of the entire planet all the time which is probably one of the most incredible things that we've been able to uncover as part of this investigation now there are alternate sources that were uploaded later for these videos in higher quality that indicate that none of these users were potentially original Source this is a huge detail to the authenticity of the

(23:08) videos because if reges side and non is not the hoaxer and there higher quality versions that are out there afterwards then why would regid and non lie about when they received the video right now this would then and if regid didn't lie about the video then they received it March 12 2014 that's really really damning evidence for the videos being real um but we can't say for sure what we can say is in one of those videos in the vimeo video in the description it says that that person who uploaded that

(23:35) Vimeo version believed that it was VFX but that Regis side andan argued with them on a forum uh adamant about the authenticity of the videos so again if it's a hoax then why is reidon going into such detail to try to argue that it's real and why they would put protected in the source um we've shown that the clouds move and evolve dynamically now if you look at the high quality video I think the Vimeo one is one of the highest quality ones is out there from the satellite uh you can actually Zoom back and forth in the

(24:01) various perspectives um the problem is those perspectives are only about 5 Seconds long but if you zoom back and forth really quickly you'll see various edges of the clouds like

disappear and and get thicker Etc just like you would imagine real clouds out there now the reason why the clouds don't move that much is because if this is satellite data these satellites are either at 1100 km away uh those are the low earth orbit satellites or if these are coming from geostationary satellites then that's 40,000 km away this is

(24:29) significantly further than if you just go look outside and look at the clouds outside when you look at the clouds outside for a 5-second period they don't look like they're moving either um now the designation the one of the **debunks** out there from Newsweek and France 24 says that it says NRL 33 but when you look at the evidence here and you look at the bottom left you can see it actually does not say NRL 33 it says NRL 22 and this is important because NRL 33 uh is a satellite that was not launched in until after uh the plane

(25:00) went missing but nrl22 was launched in 2006 and it just so happens to be the very first satellite launch for the cers system um so this to me would indicate that they're trying to tell us that we're looking at the cber system here now the mouse moves off the screen uh from the bottom left and on the top right why is that important because this indicates that this is a cropped field of view and we're looking at a much larger field of view in this satellite video this would be indicative of somebody logged into a citric session

(25:31) and they have cropped it on their local screen from a much bigger field of view that they're looking at here and that again would be indicative of these large scans that we see the cers system do um and then you know they just want to show us a pinpoint amount of information they even crop out the Drone um from the satellite video the the way we know it's a a a citric session is that you have six frames per second on the video in the background and then the mouse that's the black mouse that comes on the screen is

(25:59) 24 frames per second in addition to that there's something weird about the mouse where the mouse changes color based on whether or not it is over the water or over the clouds it goes either to be like a white a black on white or it goes to be full black which seems like a very odd detail to add into your fake video the plane is making a left-hand turn and descending consistent with the max capabilities of a 777 in both videos if it wasn't descending this would actually be uh exceeding the capabilities of 77

(26:28) now this is important because the uh um the this is one of the hardest things to fake is to scale down the plane using a model and then have it be accurate to what the engineering capabilities are of the plane and we'll get to that in here a second um the user closes the window right after the plane disappears in the satellite video uh indicating that this was not recorded in real time if this video was recorded in real time they're not going to close that out they must have later on logged in pulled this video up and then

(27:00) recorded it which would then be consistent with this idea that you've got full satellite playback of the entire planet if you Google Sig payload which is the signals intelligence this is how all these assets communicate with one another um the first hit you'll find on the Sig payload is mq1 C gry Eagle pretty odd uh when the Drone video Zooms in we can actually see

the clouds change size and Parallax so it's Dynamic Parallax that you see when you the Drone video zoom in the Drone video has the least

(27:31) **debunks** to it cuz there's so many details that are extremely hyperrealistic on it um also we found that there are night vision cameras that can make day nighttime look like daytime uh almost identical to what our videos look like especially the satellite video where it will make it look illuminated and you will actually see blues and and and uh whites just like we see there as well um which would indicate that we're looking at night time in these videos and that was important because uh when the plane

(28:02) was at the coordinates that we see it would have been around 1840 UTC or 2:40 in the morning and there was no moon out uh there was no sun out it would have been nearly pitch black now some additional speculation uh we had speculated that the satellite VI the satellite feed used to create the satellite video was from USA 229 which is NRL 34 this was also launched in 2011 around the same time that the Trump uh satellite picture satellite was launched uh this has a sister satellite right next to it it's a NOS Naval ocean

(28:30) surveillance satellite so the reg ited on video is a 3D stereoscopic video side by side meaning that that's actually two different perspectives so uh some people speculate that okay maybe that was converted using some type of now non-existent YouTube 3D converter if so then it could be using those satellites but in a number of other satellites uh the main one being like some of the geostationary satellites that are out there but if that really is a stereoscopic uh satellite imagery then USA 229 would be the one that's uh

(28:59) potentially uh creating that video um it's actually USA 229 is at the right time location and near apparent angle uh at that time we have a fly over that you can uh check out if you want to see it yourself um and that will show you uh and I'll I'll do that just in my um in my stream here as well it's very quick video where you can see the sister satellite right next to it you can see a bubble where we have the coordinates of the uh one of at least one of the coordinates from the satellite video and

(29:26) then around 1840 UTC you can actually see the satellites are pretty much right down there staring at the location um so to me that's damning information at the minimum that the United States government knew exactly what happened to this plane they had a spy satellite in the region and we have the Malaysian Minister of Defense admitting that the US has spy satellites in the region um sentient we found out is the AI That's used to operationalize satellites and fuse multi-intelligence for entity resolution geolocation tracking that's

(29:53) the exact purpose that we would see in our videos um this was another thing that we uncovered it was Declassified I believe in 2011 or 2012 you guys can Google sentient Ai and you'll find out about this uh there are reports that sentient can track aircraft movement um once again facilitating the idea that there's no way United States government doesn't know what happened to this plane uh the uh oh we already mentioned a bunch of this stuff um we think the original videos may have been **leaked** to a private form or on the dark web

(30:21) somewhere although we have not been able to track that down um there's a mouse acceleration that happens uh that you have the mouse moving and there's acceleration of the actual perspective moves and there are a couple uh mice we found one's called a plural view 3D mouse with stealth or soft Mouse controllers that could be the type of asset they're using in that case or it just could be like a a middle Mouse kind of button and when you hold it down or uh one of these little buttons that they

(30:45) have in the middle of the laptop so we're not entirely sure but there's a different acceleration that happens there and I already spoke about the citric session stuff um we also were able to potentially find the leaker there'll be a separate section on that um no one was able to find the hoaxer of these videos but we have with a high probability of uh confidence identified who we think the leaker of these videos was uh who went to prison uh for six years um so the speculation here is that the leaker would have been a US military

(31:11) operator who saw the events either in real time or right afterwards had an emotional reaction and felt necessary to uh leak these videos to the world now the fake video requirements now what does it take to fake these videos what are the whole list of this stuff we already mentioned that the coordinates were in the right spot and the Telemetry data was not readily available until about a week later um we even have Mike exner who is one of the original experts who did the uh novel analysis of that satellite data who said that he didn't

(31:40) even know the satellite data could be real until June of 2014 which post States the videos coming out so was the person who faked these videos like somebody who was smarter than him and the inter independent group experts or what we also had the unclaimed \$150,000 bound County that was \$100,000 from kim.

(32:01) com and he's good for it I guarantee you as well as Chad Sher at investigate Earth threw in uh another 20,000 and then there was a wealthy donor who I know firsthand who has run for higher office I talked to uh and they threw in 25,000 and then I threw in \$5,000 myself which I'm not as rich as the rest of them but I could still afford to throw that in there um to round it out to 150,000 this was since I believe November early November nobody stepped forward as there were a couple people that tried to step forward with no evidence and they clearly were lying

(32:31) unfortunately but nobody stepped forward with any of the uh Source data that we would have needed to prove that they made these videos now the timing of those video uploads means you would only have between 4 days uh if you think that reeside and Nan is telling the **truth** about when they received the videos or 72 days to create the videos because the publish date on the first video is May 19th 2014 so between 4 and 72 days to produce the videos no reference copy so if people are actually VFX experts out there they will know that when you

(33:03) make a VFX you usually have a reference copy something that you're trying to match to make it look like that like when they make movies in CGI they put all the dots on somebody right and they have them move around so that they can create a CGI version of that there's nothing

to compare these two now some people claim to have found certain assets but they're very little and with respect at least the thermal uh almost nothing from the thermal video has been uh found that could even be a remote match to that thermal video um you'd

(33:30) have to know how to create these realistic volumetric clouds especially in the in the Drone video where we have the uh Dynamic 3D Parallax you'd have to know how to anim accurately animate these cameras that we have out there there's actually a delay in the camera and the drone camera which is consistent with manually tracking uh that camera from somewhere else remotely uh You' have to know how the clouds form at low altitudes we've proven there's cumulus clouds in these videos which only form

(33:54) between 1,000 or 5,000 ft um and so you would have to to know how to create those clouds uh to make them look good uh you'd have to know how to accurately light the volumetric clouds one of the strongest details is when the zap happens in the satellite video it accurately illuminates the clouds in the foreground and the background now some of these supposed VFX experts who try to **debunk** the videos have actually falsely stated that it does not when it objectively does illuminate the clouds accurately and that's one going to be

(34:21) one of the most difficult details to recreate um everybody who's tried to recreate the videos has failed at that aspect especially because you need to you need to accurately illuminate the volumetric clouds and you need to create a light source you need to say okay the light source is coming from here where exactly with the light beams hit this is going to again require a full 3d rendered environment to get that correct this rules out a 2d picture being used um you'd have to be able to recreate exactly what MH370 looks like uh in two

(34:49) different videos If you see just my profile I've had it up since I very started is that it's a the thermal is an exact overlay of MH370 you'd have to know that turn radius uh when we were talking about that engineering requirement that turn radius maxing out the capabilities while descending at the low altitudes you'd have to know where that plane was exactly as we mentioned as well the accurate coordinate shifts the coordinates are six decimal places accurate this is exactly the same as Google Earth um so you would have to be

(35:16) able to uh create this program where you're going to put in a coordinate shift program in the bottom of your fake hoax video right to me this indicates this is definitely some type of military program that we're using here um how to animate those orate shifts uh cuz when they move you can see the numbers you know moving accurately based on the shift you have to know what the weather was like we looked at the weather and there was low altitude uh weather pattern just like we have our cumulus clouds in the area um you have to be

(35:40) aware of the idea that there was a fire scenario because the planes flying too low for contrails so if you are faking this you're not going to fake contrails in the back of it you would have to have faked smoke or exhaust we strongly believe it's smoke based on the circumstantial evidence that we'll talk about here in a minute um how to accurately create the smoke SM trail with the particles in both videos you can even see in the Drone video when it goes underneath

the smoke Trail after the plane goes past it you can actually

(36:05) see the Smoke Stack up and get uh uh thicker as well um how to accurately animate the heat signature in the AC unit so in the center of the thermal of the Drone video you actually see there's this heat signature in there a very elongated heat signature that's almost the same temperature as the engine and this is consistent with where the AC exhaust ports heat exhaust ports are pumping out the smoke from the air airplane that's that's going through the AC system in the airplane itself uh how the accurate camera Shake uh with

(36:35) addition additionally with it increasing in Shake as they zoom in just like if you're using like a digital camera and you zoom in and it's going to be you know the more you move your your fingers that there's going to be more shake that exact same thing happens with the Drone as well you'd have to have knowledge of the military classified systems unknown to the public you'd have to know that the military is using a Citrix environment uh you'd have to know the frame rate difference created by

(36:57) capturing the satellite footage on a cc session you have to know this special type of mouse they use or to create that acceleration in there you'd have to know what satellites us has in operation what their payloads are U especially if it's a stereoscopic system situation that we have going on you'd have to know what the false color IR looks like especially in our satellite video where we are looking at it at night time and where they are using their own kind of like color schematic for intelligence

(37:21) purposes that's completely unique even we don't exactly know uh the type of schematic that they're using in that case it does appear like other IR videos that we've seen that it could be inverted where cold is white and uh hot is black in the satellite video versus the Drone video where it's just standard thermal coloring with red you know being hot and black being cold do have to know how to animate the orbs nobody's even G come up with a plausible reason for how these orbs are accurately scientifically accurate

(37:52) especially in the Drone video where we can see this forward- facing particle engine it's like uh ripping space apart or creating space in front of the orbs it creates these black lines in front of the orbs that they're following like train tracks how to animate the final frames where the orbs actually Converge on the plane in the thermal video and then they flatten in the very final frame and the plane begins to blur and actually shrinks a little bit uh which is indicative of there this aouth or this kind of sphere electromagnetic

(38:19) sphere being generated on the plane right before we see the singularity form you'd have to know what that mq1 c drone looks like how to accurately delay that tracking that we were talking about that that's being manually tracked by somebody uh what the payload is where they have the cameras underneath the wings um to be able to get that exact angle you'd have to have better VFX skills than the lead VFX artist from Top Gun Maverick who made a [Reddit](#) post um claiming uh that this was the hardest thing to fake from the top gun Maverick

(38:48) movie from 2022 is the scaling down of these planes when they're moving at certain speeds you would have to have better uh VFX skills than the Marvel uh lead VFX expert uh Jeffrey Ford who worked on Avengers endgame uh Captain America Civil War and Spider-Man no way home uh one of the podcasts I did he was friends with him and said that to do all the research come with the storyboard figure out all the stuff about the assets would potentially take four to six months um and we have again 72 days at the most you'd have to have better

(39:19) understanding of physics than most phds but not only that we recently found out as well from Bob Greener that the alto University paper that talks about these monopoles that we see this heat signature in the orb only came out after the plane went missing as well so the science literally wasn't even in the public sphere um until after these videos were were were made or came **leaked** however you want to look at it um you'd have to have an understanding of the equilateral zero zero point sinusal pattern that's the triangle formation

(39:49) that we see spinning around this plane it's a apparently an electrical engineering circuit formation um you again and this is kind of a little bit of a joke but how not to use lowquality '90s video game 2D visual effects in a 3D environment um but I think the one of the other bigger ones is that you'd have to know that we would never find the plane not even 10 years later and I'm going to go ahead and update this now to 10 years because tomorrow is the anniversary because the moment we would

(40:12) have found the plane then this whole hoax would have just Fallen apart so I leave it to you to try to figure out if that list is enough for you to be convinced that these videos are authentic or if you think somebody could uh you know meet all those standards of knowledge to be able to produce these videos now the flight path uh the flight path of the plane this plane is leaving from qual lumur and it's going to Beijing so it's flying Northeast in Asia now like I said we started off by trusting all the data like I was full on

(40:41) that this plane went in the South Indian Ocean I was even sitting there trying to convince myself that the coordinates must have a secret minus sign on them so that we could have this plane be in the South Indian Ocean and it wasn't until later when we realized well both in both videos the plan's turning to the left and we can map the um the coordinates and figure out what directions it could possibly be going and we realized it must be in the nicobar islands it literally could not be in the South Indian Ocean um and so again the only

(41:06) evidence we've had to throw out is the evidence of the iMat pings after this plane supposedly turned into the South Indian Ocean and one of the next pieces that I'm going to throw out there is going to show that there was a ton of speculation that these pings were incorrect um and it was it took like weeks and weeks and weeks if not months for them to release that data potentially because they were coming up with a cover story in my opinion so if you guys want to know more about it I put a flight path explainer videos that

(41:32) you guys can check out um that I I do a very quick two-minute one on there but we lost trust in the whisper data and that iMat pings after 1840 UTC The Whisper data report from

Richard Godfrey never made any sense it's it's like a movie plot in terms of like flying around the coast of the Indonesia to avoid radar which isn't how you do it and doing like weird cutbacks to see if anybody's behind you and then doing a 25-minute holding pattern cuz they couldn't find any more pings to string

(41:59) together the flight path like it never really made any sense to begin with and that's probably why they never found the plane down where he says that it should be um the satellite ping switched to the I there's multiple uh geostationary satellites that were pinging uh supposedly these planes and their satcoms but before the plane even took off it stopped pinging the one that was over Japan even though the plane flies that direction for 40 minutes and never pings that satellite now this is important because when it's only got one

(42:24) ping we can't triangulate the position of the plane so this is more evidence for potential Espionage that might have happened we looked at the flight beforehand which is MH 371 going back the other direction and even after the plane lands in qual lur it's still pinging both satellites so all of a sudden right before the plane takes off it stops pinging one of the satellites and never pings it ever again uh the pilot says good night MH370 at 1719 UTC this is roughly 40 minutes after the plane takes off and then 64

(42:52) seconds later plane just goes dark um both adsb and a cars supposedly are shut off um the official report says that the a cars were shut off at 1707 which actually isn't consistent with the time the plane going dark there's I don't know how that gets reconciled actually still um they also have a report that the the last radar contact was 1730 UTC which is weird so you've got all these different times coming out there that don't really converge on one another um the radar data was not released for

(43:21) weeks but it was sent to the Americans within 5 days uh and then this is very unusual and this is something that I posted earlier is that the people that were actually doing the search were searching out west while the whole world thought this plane disappeared over the South China Sea and if you're old enough to remember and have tracked the plane at that time you know that it was very unusual we had no idea where the plane really disappeared or where it went well supposedly the people that were doing the searching were actually not

(43:44) searching in the same place where all the media was telling us that the plane was disappearing which is very unusual in my opinion then a few days later the Malaysian military comes out and says oh yeah just kidding we knew that the plane turned around and went back West over the country and then went out into the andman sea and then a few days after that they come out and say oh yeah now we're going to go ahead and say it went down to the South Indian Ocean it made a sharp turn from the nicobar islands down

(44:09) into the South Indian Ocean uh but that again the iMat data was not uh released the raw data they released one uh graphic which had basically no information in whatsoever uh and then they waited months to release the raw data the Malaysian minister of defense is in an interview saying that they knew that when the plane went dark that it was a civilian airliner

flying back across their country but that they didn't know was MH370 and he says they also claimed that they knew it wasn't hostile which is impossible unless you have communication

(44:42) with the plane otherwise there'd be no possible way you could rule out a hijacking scenario so I don't think that this was incompetence I think that this was a situation where it was uh malicious like they knew that this was this plane was a malicious cover up let's say they would have sent sent up Jets to at least track the plane if they were afraid this plane was going to go fly into the Patronis Towers or some other type of 9/11 style hijacking yet they did not do that um and it gets covered up as incompetence which makes

(45:08) no sense whatsoever um the plane heads directly to panang the closest airport that can accommodate a 777 in an emergency so early on one of the strongest arguments was that this might be some type of Maintenance event and what we're going to present here is a fire event in a few minutes there's even a wired article that argues that that would have been the correct uh decision ision to do an electrical fire I also recently looked and found that there's a mountain range that extends to about 7,000 ft uh over there as well now if

(45:34) it's nighttime and you have a depressurized plane and you're trying to keep everybody alive you have to fly under 10,000 ft but you also need to Fly Above 7,000 F feet so you don't crash into the mountains so you've got kind of a small uh margin of error there and it's pitch black right so this is why they're going to go to panang as opposed to going back to qual lur where the elevation change would be uh more dangerous but again it's going to be up to the pilot it's going to be kind of a

(45:56) game time decision um judgment decision for them so I urge you to read that wired article if you want to know where the initial thought for the fire came up and I remember when I first read that article years back I thought wow this actually this felt right you know and now we know it wasn't quite an electrical fire We Believe now it's a lithium ion battery fire much more dangerous um when the plane gets a panang the co-pilot cell phone pings this means that the plane had to be under around 7,000 ft because otherwise

(46:20) you wouldn't be able to Ping a cell tower with your cell phone on the plane uh the last Malaysian military radar is at 1815 UT see about 200 mil 230 Mi West by Northwest of panang now this is important again because there's no way that the hoaxer could have known to put the coordinates over 300 miles away from that right if they this is a hoaxer and they're using the publicly available data between March and may they would have put it at the last radar location they wouldn't have put it at the

(46:47) location where the plane supposedly turns in the South Indian Ocean uh 25 minutes later than this uh several hundred miles away from there early reports the next day it's said that the loss of contact by subang air traffic control was at 1840 UTC now this is important because 1840 UTC is the time and location where the plane is actually turning into the South Indian Ocean that exact time we think the videos are happening but this got changed later on quietly to 1815 UTC um and when people are lying and come with the cover story

(47:15) what the information you want to look at is the information that's coming out that very next day um um and then again the anomalous ping data so after 1840 UTC between 1941 and 23113 UTC there's 10 rows of data before that on the raw data there's hundreds and hundreds of rows of data you have to scroll through it for like a minute and a half and then you get to this part where the plane supposedly is flying in the South Indian Ocean it's 10 total rows of data there's a pattern in the data the data changes entirely from the

(47:46) data before that anybody that's looking at that that's ever worked on databases or spreadsheets or anything is going to look at and go wait there's some difference that happened right at this location right now why did the plane not crash in the South Indian Ocean this is probably the most important aspect we don't even need the videos for this aspect no debris field found this is the most important aspect even the people that were officially searching out there uh recently uh I think it was Paul waren

(48:13) he was one like the lead search investigator he he questioned whether or not they were beginning to question whether or not that that information could be wrecked that they were searching in the right location because they're not finding a huge debris field they should have found something anything if that was the right location they found nothing in the location where the IMAP pings indicated the plane would have crashed the experts say and this is Mike exner directly from one of the main independent group experts that the plane

(48:36) must have been crashing at 15,000 ft per minute and it they even admits that it must have burst into a thousand or thousands of pieces his argument is that it all just sank which makes no sense at all because supposedly he's also saying that the debris washed up thousands of miles away in Africa it can't be both either there's a giant debris field and some of us washing up in Africa or or all the debris sank the reality is the debris would not have sank it would have been a giant debris field visible from

(49:01) space from our satellites we would have found it the very next day the most expensive search in history most extensive search in history did not find one piece of the plane above or below water after three years of searching they didn't find any black boxes despite the fact that the black boxes are rated for depths of up 20,000 ft is not too deep for those black boxes they should have found the black boxes they will never find the black boxes because they would prove the conspiracy if they do end up finding some black boxes uh and

(49:28) they claim there's no data on them or some [REDACTED] like that you guys know that they're lying 100% those black boxes use ssds solid state drives uh they would not get destroyed certainly not in a water landing um none of the four redundant elt there's four redundant elt beacons emergency transponders that only go off on a crash none of them went off the Sosa system this was one of the biggest giveaways of the Titan sub this is one of those things as well that we had to know later on that the Titan sub came out uh and

(49:57) imploded and then 5 days later everybody's looking at these oxygen counters on TV and the Navy comes out says yeah we heard about that 5 days ago but we just decided not to say

anything about it and you know by the way we're going to go send a thing down there tomorrow sub and we're going to pick up all the pieces right this gave away the game that they have hydrophone data the sosus system that is basically able to pinpoint any type of sound that is happening anywhere in the ocean right any anomalous sound like a tiny sub

(50:23) imploding for example so a 777 crashing into the ocean absolutely would have been heard there's even two other hydrophone systems one in Diego Garcia and one right off the coast of Western Australia if this plane crashed along the seventh Arc all these systems would have picked up the acoustic sounds they would have pinpointed the plane uh then the radar systems I mean this just gets wild you have Thailand India uh when the nicobar islands the Indonesia as well as the Ginder operational radar Network joran in Australia joran system is super

(50:53) Advanced all of these radars should have picked up the plane either going into the Andaman sea or going to the South Indian Ocean none of them do then the military bases we found a Coco Island signals intelligence base that's right basically on the route where this plane would have been flying south as well as Diego Garcia which is one of the most advanced military bases on the planet and pine Gap if you check out my post today about Pine Gap this Pine Gap base is like the most advanced satellite Network on the planet right and so all

(51:22) of these things should have potentially been tracking the plane from takeoff certainly after goes dark and goes Rogue so again this would implicate the United States government in a minimum knowing more about what happened to the plane it supposedly crashed on active shipping route from Africa to Australia but there were no Witnesses it supposedly crashed in the morning hours but again nobody sees it people would say that there's the ocean's really big which they're right but the the flight path has the

(51:46) plane running out of fuel there's actually nowhere else for this plane to go if those imrat pings are correct which would indicate that they must not be um the official search searched everywhere along that final ping in Arc um in the Mala Straits in anaman Sea and down there in the South Indian Ocean and found nothing now 19 families of the victims signed a joint statement saying they could call the phones of the victims for up to four days uh which is not possible if your phones are off or disabled or underwater even um so this

(52:16) is very strong evidence that wherever this plane was it was somewhere not at the bottom of the ocean one even proved it on uh on television as well which we've posted on Twitter in the past um some social media sites even had the passengers being logged in which isn't strong evidence but it's still compelling given the 19 phones that were still ringing now **debunking** the debris so some debris was found debris was found in Africa but keep in mind none was found by the official search um the people that found this debris were just

(52:45) random civilians one of them is named blae Gibson uh he went around and did his own kind of investigation and found I think about 10 pieces of supposed debris only three pieces of debris have been confirmed tied to the plane um and only one of those pieces was tied with a

serial number um the the one that was tied with a serial number did not use a unique serial number the unique serial plate was just anonymously missing even though it's bolted onto the plane so instead they used a part number um there was a 9M MRI I've got the wrong thing on

(53:20) my evidence list here that was purchased by GA tesis and scrapped in October of 2013 uh it's a perfect replica also purchased from Malaysian Airlines so there is some plausibility that this debris could have been from another plane although given the scenario that we've put forth uh with the fire event that we're going to get to in here in a second and this uh super luminal speed event this warp drive event this debris could have uh come off the plane at a different location let's say this plane gets

(53:47) teleported somewhere over near the Maldives and then the debris falls off over there or that this plane somehow gets to Diego Garcia they rip the plane apart throw some of the debris in the water or falls in the water this would explain why uh the debris washed up in Africa better than if it crashed somewhere near uh Australia now in addition to that the debris modeling uh they did some drift modeling there's huge problems with it the first time they tried it the debris wasn't going to wash up in Africa so then they get a fla

(54:14) Ron from the Americans and they throw it in the water and they go okay it'll be there but then they don't point out the fact that if the debris was uh kind of had its like wings sticking out of the water which we would need to float out there fast enough that why are there Barnacles on it because it can only be Barnacles if it's submerged Florence aangi points out that in order for this fla run to get there it would had to float for five miles a day or is it 10 miles I have to double check uh for 500

(54:38) straight days um this is nonsensical the oceans don't really work like a like a huge uh thing where it's just whipping these pieces across the ocean um so in addition to that too the other pieces even if you assume the debris diff modeling is correct the pieces of like the engine cowling with the Rolls-Royce logo on them those would never have gotten there like and uh they did some models and actually the models showed that some of the debris should have washed up in Africa or in Australia and yet no debris has ever been found in in

(55:07) Australia so this actually the debris analysis having dug into it almost proves that this plane didn't crash in the South Indian Ocean that it must have either crashed somewhere further to the West uh or potentially had the type of indication of the event that we've been putting forth like that it somehow got towards Diego Garcia in the m thieves so why is this MH370 uh that's the only missing 777 that's out there the thermal is a perfect match silhouette of the plane uh the color tone on the satellite video

(55:36) light on the top darker on the bottom also matches Malaysian Airlines which is white and then gray on the bottom uh the satellite coordinates putting in the nicobar islands I mean this is the exact path of the plane that's out there um the uh purpose of those systems is to track the airplanes like this the government had the US government at least if not others had to be tracking a rogue 777 in a post 911 world uh the Malaysian Ministry of Defense admits that

the US spy satellites were in the regions and they were in touch with them

(56:02) uh we proved that satellite was in the region we even found a quote from the military on a website says that they confirmed cbers provided data to the intelligence Community to help solve the mystery of MH370 that I mean how much more damning does it get than just a straightup admission guys also re deide and non if you look at the uh the hidden metadata on the uploaded video you can see that there's a hidden tag of MH370 in the satellite video and then when rded on 3 days later on May 22nd 200 uh I'm going

(56:34) to add this real quick uh May 22nd 201 uh4 three days after they uploaded the video they uh tag made a Twitter post made a Twitter account they tagged MH370 said watch this video before it gets deleted uh pretty interesting thing to post especially if you uh are making a hoax video seems pretty odd but I'll leave it up to you guys again now **debunking** the suicide myth real quick this is the The Narrative I think that has the most weight out there everybody thinks that this was some kind of suicidal pilot uh I would say with 100%

(57:05) certainty I know this is not a suicidal pilot everybody stuck up for him the wife the officials his co-workers he had 18,000 flight hours he had no indication of any type of suicidal intent in the flight path uh there's no reason to avoid radar if you are on a suicidal route there's no reason to go say goodbye to your hometown especially not in the middle of the night at 2 in the morning um if the Jets were if Jets have been scrambled you're just going to crash that plane the German Wings suicidal pilot which was in 2015 the

(57:33) year later where he did lock out the co-pilot um he crashed a plane within 10 minutes of locking out the co-pilot he didn't go on an 8 Hour Joy Ride that's not somebody something somebody does on a suicidal scenario um the crew oxygen as well probably wouldn't last long enough I think that we tried to look at the estimates it looks like at most it could last for two hours so in order for this to even make sense you'd have to depressurize the plane kill everybody uh make sure that none of the other crew

(57:58) were able to access the crew oxygen and then repressurize the plane later on and this just way too stressful way too much of a complicated series of events that has no evidence to support it um uh captain bellany or bellany I'm probably butchering his name he's another one of the investigators prominent uh researchers says that whoever was in command of the aircraft would have been intentionally disconnected all four electrical generators apus that's not something one person can do uh practically impossible

(58:24) to do that especially within the 64 seconds between the time when the the last communication and then the plane went dark uh zahiri the captain was actually rostered to fly mh150 to Jetta on February 4th 2014 and the route that they found in a simulator um is actually mh150 to Jetta uh it's not some pre-planned route he did not practice this suicidal route that is just a narrative and a lie that's been out there for a while there are a couple points that they tried to Loop together to try to say that that oh

(58:55) he he was practicing his route to em uh to Jetta and then just went to the South Indian Ocean or Antarctica or or something like that uh if you're making that argument you could just as easily argue that he flew the plane as Diego Garcia because one of those diversion points they found was actually Diego Garcia um let's see uh The Narrative of the plane running out of fuel again is contrary to the suicide narrative as well it's again not what you do in a suicide scenario and then we have this direct quote uh from one of the

(59:22) officials that says we've examined the plane and first officer and we are quite satisfied with their background their training with their mental health we are not of the opinion that could have been an event committed or committed by the pilot so if one of the most ironic things I find is that people will call us conspiracy theorists when we push out this evidence but then they go oh well it was obviously a suicidal pilot and that that all the countries in Malaysia is covering it up for like Saving Face

(59:49) or something like that which that requires an even more absurd conspiracy theory like you really think that the government of Malaysia are going to cover up a suicidal pilot and make themselves look terrible no they're just going to admit that that was the case they wish that was the case because that would be an easier explanation than uh certainly than teleporting a plane or any of the other stuff that we've got going on now there were cop tiger and Cobra gold exercises as I mentioned the cop tiger exercises were slated to begin

(1:00:11) March 10th um it seems like the Cobra gold exercises probably just rolled in to the Cobra tiger cop tiger exercises between Thailand Singapore and the United States uh the theme of the cop tiger exercis that year was search and rescue it's pretty damn weird um the most advanced assets would in the area if this was a suicidal pilot SAR they're not going to fly directly towards the most advanced military assets and these exercises are going on uh as Mias Chang said that's like flying into the eye of

(1:00:37) the storm so that the route there only really makes sense in an emergency scenario and then the lithium ion battery fire scenario so we've got 221 kg 487 pounds of lithium ion batteries that were put together that same day on March 7th before the plane took off the batteries skipped two security screenings they were were only physically inspected uh one time two of those pallets uh that were looking at the atsb report were clearly unsafely package stacked on top of each other were placed in the forward cargo bay

(1:01:06) right next to the electronics Bay um so that would indicate that if we these batteries exploded they could have damaged the electronic Bay that could be part of the reason why the plane went dark consistent with that wired article I mentioned earlier the fire event is corroborated by 19 Witnesses including Mike McKay and Katherine t uh the cargo compartment was actually designed to withstand Flame of 1700 uh degrees fhe over 900° C for at least 5 minutes if the fire is constantly being putting back out again this is how we can have a

(1:01:34) plane that can last for an hour and 20 minutes um the fire cannot be permanently extinguished by the uh cargo compartment's hon fire suppression device those devices actually

absorb the oxygen from the surrounding area this would be why the pilot would intentionally DEC pressurize the plane but they would be flying low so that the passengers have enough oxygen to be able to breathe those fire suppression devices can last for up to 180 minutes we've actually found that there's some sources of claim that can last for up to

(1:01:58) 4 hours instead of 3 hours so plenty of time for our event to happen um had a source willing to testify that who has had experience uh testifying about the dangers of lithium ion batteries on the hill um the witness sighting from Katherine T the orange glowing plane is consistent with a chemical reaction from the fire extinguishing devices releasing bromine which is a halogen gas makes it would make the plane look like a halogen lamp orange glowing lamp uh there's a Heat Signature near those exhaust panels we talked about before

(1:02:27) the AC units might be flushing the smoke um we can see smoke trails in both videos coming from the from the plane um some people argue they're coming from the engines but when you look at the thermal especially when you look at the zoom in thermal it looks pretty clearly like what's happening is the smoke is coming from below and then wrapping around the fuselage of the plane and that's what makes it look like they're coming from the engines uh there was even a b777 fire suppression device that

(1:02:50) washes up in the malds uh a couple weeks later I believe that's clearly b777 fire suppression device it was reported as being a bomb but it's not uh there's also a Mayday call 243 a.m. uh which if you converted to UTC from Malaysian time is 1843 UTC within 3 minutes of our suspected videos uh intercepted and reported only in the Chinese news as the from MH370 and the plane attempting an emergency landing and disintegrating which is consistent with the videos consistent with Katherine T's sighting

(1:03:22) consistent with the fire event fah change the rules no longer allow lithium ion batteries in the cargo of passenger planes uh there's been some argument over the exact year but it was in the in the subsequent years after this uh 2015 or later um there's more than one lithium ion battery fire on passenger planes per week in the United States even after they've been outlawed in the cargo bay of passenger planes covering up the fire event would only make sense if this videos are real otherwise why are you covering this up just let the

(1:03:49) plane crash or whatever is going to happen right um but if those videos are real and that technology is real that that explains why you would have to go to this elaborate cover up um to create these immat pings and get the world to believe it now Katherine T the main witness I have two of her blog posts here she has other blog posts as well but I thought these were the most compelling to kind of show the timeline and how her story has not changed they reconstructed her sighting based on automatic GPS she told me personally I

(1:04:15) talked to her um that she thought her sighting was at 1840 uttc she said she felt pressured by the experts to change the time of her sighting she saw the plane descending from the beginning to the end uh she said the plane was flying low was recreated to be between 2,000 and 10,000 ft uh she saw it descending she said the the plane was glowing orange and had

no navigation lights uh she said she saw two other planes with navigation lights at cruising altitude that the sighting lasted between 5 and 10 minutes had this orange glow she saw

(1:04:43) black smoke resembling a contrail coming out of it she actually said to me that she thought it looked like maybe the engines were malfunctioning or something that looked something like that um she couldn't see any fire or Flame Flames but did see the plain glowing orange the silhouette after I talked to her said does ma it does match what she saw when I showed her the silhouette of the thermal funnily enough she said well it wasn't green it was orange uh which indicated that she had no idea about the

(1:05:08) videos or that we were looking at thermal at all she didn't see any other boats in the area she didn't have her radio on to listen to Mayes uh she went inside and put the kettle on and came back out and the plane was gone the recreation of the plane has it circling counterclockwise around her boat which is the same direction of travel that we see the where the plane would have come from and what we see the plane circling in the MH370 videos now this doesn't mean it's the exact time when the videos

(1:05:33) happen but it does have a lot of data points that line up now the other Witnesses cuz that was one of the 19 Mike McKay sees the plane on fire at roughly the exact same time where the plane goes dark at the same direction as well people say that he can't see that far which is speculative um I mean it's very unusual for him to have created a sighting uh the very next day from emailing to his co-workers of the exact location and exact time where the plane goes dark he sees the plane on fire for 5 to 10 seconds and then it stops this

(1:06:04) will be consistent with the batteries igniting and then the automatic hon fire extinguishing devic is going off and putting the fire out right away um he sees it low on the horizon uh possibly at the max distance of a plane at cruising altitude between 35,000 or 40,000 ft uh when I use chat GPT I get different answers but one of the answers I got was the the human eye can roughly see about 310 mi in clear conditions at an altitude of 3 35,000 ft which would have been uh pretty similar to Mike McKay's distance from the plane people

(1:06:35) along the coast of the South China Sea actually he there was nine of them that hear loud noises roughly at 1720 UTC they say that it sounded like an engine um fishermen 10 miles off the coast 10 minutes later see the P plane flying unusually low at 1730 UTC this is going to be consistent with a fire event depressurizing the plane and beginning to fly low there was even a communication received by an unnamed uh 777 pilot at 1730 UTC claiming to hear the pilot or the co-pilot uh they did not want to be named because they didn't

(1:07:07) want to lose their job and and be attacked like many of the other Witnesses were uh Matias Chang he was a lawyer and adviser of the Prime Minister or actually that's Minister of Defense but the prime the former prime minister uh Maher um oops sorry uh the Malaysian government had been given uh conditional sealed evidence that on condition of receiving the evidence that they would not be able to say anything about it which is pretty damn unusual he also told alternative media it would have been a global impact

(1:07:39) to the world's economy H really unusual thing to tell alternative media Matias Chang apparently knew about what really happened to this plane and uh was being kind of Co and trying to get the information out but just kind of like our investigation the mainstream media wouldn't pick up on it uh another interesting aspect of him is he was arrested while representing a whistleblower in the 1mdb Scandal which is the largest uh um kleptocracy uh scandal in the history of the world based out of Malaysia from the prime guy

(1:08:08) who was a prime minister at the time when MH370 went missing so the leaker agent 370 my hero Lieutenant Commander Edward C Linn uh I put in foas for the FBI um the Foy of the FBI came back and said that it would be rejected for privacy purposes the Foya to the NCIS said it was rejected in total to be kept secret in the interest of National Defense or foreign policy uh we realized early on the leaker was going to be a US military personnel likely an operator likely had an emotional reaction removed the HUD data

(1:08:39) meaning they were probably a patriot cropped out the Drone as well maybe had to convince reges side andan the videos were authentic and maybe that's why reeside andan did not upload them right away uh may have thought that they were looking at UFOs only to be later told that this was us technology um Edward cin was assigned to the special project squadron 2 the vpu2 Wizards he flew in either the locki ep3 Aries 2 or the Poseidon p8 potentially both the locki Martin ep3 Aries 2 had realtime signals intelligence and full motion video

(1:09:10) intelligence uh that plane uh crew fuses the collective intelligence along with offboard data to create Battlefield situational awareness his role in that plane was exactly what you would expect he relayed the information to um the upper command so he would have had access to potentially both videos uh the code name against uh on his investigation against him was called Rogue Archer he had uh expert experience in signals intelligence which we had been talking about for months before we came across him uh his last deployment

(1:09:38) began February 2014 it was slated to end March 2016 um the reassignment date that we found shows March 25th 2014 um but we know for sure we have a quote from his lawyer saying the investigation into him began April 2nd 2014 14 this gives us a narrow of time of just the two months before and after the plane went missing even less like one month um which highly indicates that he would whatever happened to him was uh related to Malaysian Airlines flight 370 in May of 2014 he accidentally left two flight manifest in his flight suit

(1:10:11) from a deployment that included search and rescue code names um I don't know what else that could possibly be other than MH370 the time frame is just too short the defense argued his his defense argued that the classified information in question was available on on the internet to date nobody has pointed out what other classified information that could be seems like it would have to be these videos for them to come at him for Espionage charges arrested in 2015 they did an FBI sting operation on him in August of 2015 for one month before they

(1:10:38) arrested him this would seem to indicate that they didn't have any hard evidence on

him and so instead they ran a sting operation to try to build more evidence for the Espionage case which ended up falling through the charges would have resulted in life in prison it was the first major incident of Espionage by an active duty member of the US Navy since the end of the Cold War his uh charge sheet was heavily redacted um if you guys look at other Espionage cases they pretty much just tell you what the

(1:11:00) people did but for some reason everything was off fiscated around Lieutenant Commander Edward cinn uh he had classified secret information uh uh that part uh never mind um he was privy to the Navy's black program portfolio and had top secret and compartmentalized access uh knowledge could be extremely useful to penil us adversaries um wasn't really a spy case the military ended up having to admit that there was no evidence that Lynn exchanged any information uh with anyone from **China** uh and then he was abused while in

(1:11:35) pre-trial detainment by someone called the Goon Squad this is heavily documented as well um the agents didn't properly advise him of the crimes that he was suspected of or his right to an attorney while they were interrogating him which would seem to indicate that they knew that their charges were overcharging and they were trying to get more information out of him make him give up information willingly um each of the emails listed as compelling evidence to deny his release from pre-trial detainment were fairly

(1:11:59) mundane so this is again a situation where they couldn't even tell the judge what kind what the evidence was all about um because they were trying to keep it so Under Wraps the judge still said he shown a dangerous pattern of disclosed information but didn't point to any disclosures of classified information when they made that judgment the charges were OBC by the military they added a prostitution charge on there which makes no sense when you're charging someone with Espionage and trying to get them in life in prison um

(1:12:24) um took a plea deal with a 9-year sentence with three years suspended we looked at the uh appeals and the appeals Penal Code are consistent with potentially um consistent with uh video evidence as well um and hopefully can you guys do a Emoji just let me know you guys can still hear me in the space I just got a weird alert so I just want to make sure you guys can still hear me someone can Emoji in the space oh crap okay I'm G to try to rejoin guys if anyone's in the space right now as well can you just uh oh you guys can still here okay well

(1:13:16) here we go again thanks I'm going to rejoin real quick sorry guys this thing is awful okay can you guys just Emoji so I can see if you guys can hear okay I can see you guys again sorry about that delay here here we go again okay um so he accepted his plea deal um the the charges were uh shown to be related to potential video evidence he says he believes he was over uh sentenced um and they had to have people go ahead and uh testify against him that uh the sentencing would have been appropriate um which N9 years if you guys check for

(1:14:09) similar charges was way too much so this is a very harsh sentence which again would be IND indicative of some major major leak getting out there um now next thing Chinese hack

this is something that only I've reported on but the creepy video that came out also mentioned this satellite images uh supposedly of the South China Sea of this Chinese hack you go look at these pictures and it looks like three orbs around an object and there's three pictures of them as well um and there would they looked in the South China Sea

(1:14:39) there was nothing in the South China Sea I reported this potentially could be some type of um spy craft at play and if this is an Espionage event that the United States government took this plane then this could be a situation where China's saying you got us we know what you did but we can't really prove it right China even hacked Malaysia uh March 9th the very next day stealing crisis media minute notes and classified information about MH370 so the only reason why they would do that is that China could in my

(1:15:07) opinion could not be implicated in disappearance because you're not going through all that effort to find information if you're the one who took the plane right they were trying to figure out what happened to that plane they probably had their own satellites and they're trying to figure out why don't we see debris field anywhere um so I foiled like everybody um and I still haven't gotten most of them back back I filed the AO case I'm still waiting back for a historical reference number on that um it's been weeks and

(1:15:30) weeks and weeks with respect to that I spoke to somebody for about an hour and a half so we'll see what happens with this Arrow report that comes out like tomorrow I don't have any I don't suspect any good stuff um I already mentioned the NCIS case we found another NSA Foya by O'Reilly Tates back from 2014 that was also to be kept secret in the interest of National Defense or foreign policy it was also rejected um I also foed a bunch of other people once again nro NGA I fayed the Navy the Air

(1:15:59) Force the Navy and the Air Force audio radios uh said that they came back with nothing uh then I foed the Navy again and they asked for clarification um that was a few days ago so I'll I'll get you guys the response on those foas uh later on other relevant per information is that there were two fake passengers using stolen passports that change their appearance so if this is an Espionage event those could be operatives that were on board the plane uh I already mentioned the satellite coordinates could only be the South Indian Ocean or

(1:16:27) the um nicobar Islands we wanted them to be the South Indian Ocean but didn't work out March 13th uh was when unnamed us officials started leaking information to the media stating that the plane flew into the South Indian Ocean so was us officials happen to be the ones that were setting the narrative um cers builds a 3D Battlefield uh which can ignore those satellite movements I was talking about um I already mentioned some of this other stuff here as well the White House was calling Malaysia every day uh this

(1:16:54) would only be something that you would do if you're trying to set a narrative otherwise you wouldn't have the White House directly calling them Obama visited in April but they never mentioned MH370 that was the first time that he visited in over 50 years uh I had a source that mentioned that they were friends with the General's nephew uh General Joseph F

**Dunford** and that the that nephew had shown the general the videos and that they reacted in a way that confirmed their authenticity they didn't laugh at them they didn't dismiss

(1:17:20) them to me that's pretty wild because that guy ended up become the highest ranked military officer right after this and then went on to be board of directors at Lockheed Martin uh Rolls-Royce is silence you can check out the piece that I just did regarding that um they had to retract a Wall Street Journal article regarding Rolls-Royce and Boeing where Rolls-Royce and Boeing was saying that the plane had flown for five more hours um and that when we look at the satellite data the the satellite the Ping satellites one of them happens 8

(1:17:47) minutes the very last ping happens 8 minutes before the second last ping which supposedly is consistent with a plane coming into a gate so if this was some type of Espionage event they kind of screwed up because the uh they forgot to like turn that system off before they landed the plane somewhere uh let's see I think I got the rest of those okay so motive guys uh we're getting near the end here the free scale semiconductor scientists 20 of them way too many people on board uh one plane this would break company policies they

(1:18:16) were also sitting next to each other which means that they probably booked the tickets together which should have definitely flagged the company uh the was likely doomed due to not landing in Pangang for unknown reasons Landing in the ocean would have broken it apart uh we found a 2005 NSA security report on Commercial room temperature super conductive microchip development that references free scale nine different times free scale semiconductors also launched a major initiative serving RF power needs for us Aerospace and defense

(1:18:43) sector so free scale semiconductors was linked to Advanced microchips as well as to the military um directly so the scenarios here here is VIP passenger could have played their get out of jail free card this could have been a situation where they were trying to prevent the loss of the int intellectual property related to the technology that was deployed uh if those were our people maybe they're rescuing them there's a narrative where you could say that they were testing this on a doom plane though

(1:19:10) seems too complicated you just test it on an empty plane uh and then the Espionage scenario possibly preventing this intellectual property from going to **China** eight of those 20 free scale semiconductor employees were Nationals of **China** so this could explain why uh that this they potentially could have been defecting and this this was a big operation then to prevent that from happening because whoever controls this technology controls the world so now this is going to get into a little bit of the science stuff on the

(1:19:35) orb analysis uh the orbs are the first orb is uh approaching the plane at nearly Mach Three speeds 2,000 mil hour um using super conductivity in order to obtain Quantum properties to ignore gravity so creating like a bubble around the the object or it could just be a plasma ball entirely they're generating their own geodesics those dark lines in front of them uh possibly via acceler vibration through a pulse current now this is going to be consistent with Salvador P's

high frequency gravitational wave generator patent

(1:20:04) that's out there that was approved um cold lines are in front of the orbs not behind there's no visible propulsion there's no reference for this either nobody's ever seen anything like this before um the cold lines could be changing the pressure of the atmosphere they could actually just be expanding space itself is why it might be completely black in the thermal the heat signature and the orbs are spinning on their axis uh we see the orb triangle pattern consistent with that uh that three-phase electrical system as well

(1:20:32) I'm going to remove this part at 120 degrees uh sinyal waves uh tipler cylinders are predicted to be able to produce coccal distortions in SpaceTime emitting gravitational waves in a repeating wave pattern um this is just some circumstantial evidence the orbs in circle the plane over time uh the orb pattern changes into a ver vertical ring before the phase transition ition that happens the phase transition bends those orbs as they move towards the plane and we can see potential gravitational lensing when those orbs flatten out now

(1:21:02) in addition to that as well we've also recently shown that the orbs slow down a little bit in the satellite video right before the uh Singularity occurs and at the same time in the thermal video you can actually see them reorienting uh where you can see the Heat Signature all of sudden kind of disappear and then come back where the orbs are getting into their exact orientation they need to get into in order to begin the phase transition that seems like a very very elaborate detail to add to a hoax video um the plane

(1:21:29) disappears from SpaceTime instantly I mean fraction of a second blink of an eye and it's gone the zap is cold this is an endothermic event this is not an explosion that's happening in the in the videos um it's a transitional phase State change according to physicists it's not necessarily a black hole because nothing is really getting sucked in um and it's not cloaking because the smoke Trail stops when the plane disappears um since  $e = mc^2$  s energy equals mass time the speed of light

(1:21:55) squared this would in theory rule out Annihilation because otherwise the mass and energy would have to go somewhere this would be a giant explosion though recently we've now come to realize that there may if we can teleport an object there may be antimatter and if there is some antimatter that can be produced then you may be able to annihilate an object but I think it's a very low probability um so teleportation if you're using a super luminal speed this plane could go to another dimension it could go to another planet it could go

(1:22:21) to the future or I think the most plausible explanation is just goes somewhere else on Earth uh we can't break causality as we at least we don't think we can maybe the Mandela effect will end up being real uh so unless you change uh Dimensions or you change uh timelines right so if we're dealing with some kind of string theory situation scenario in our reality here that could be possible otherwise this plane is probably just going slightly to the Future um but I don't think it's going like 10 years to the Future we're

(1:22:51) talking like maybe a few seconds minutes hours at the most um teleportation could be to hide the plane it could just be as a show of force um and it may also be to put out the fire since we have this endothermic event the big danger of these batteries is called thermal runaway on them it's because these these batteries have so much energy in them so if we see this endothermic event which is an absorption of energy it could be that this event is sucking the B Energy out of those batteries and maybe that's

(1:23:16) just a added benefit of what's going on in these videos um another reason why we think the plane is potentially on Earth is those phones that were ringing right just the same reason why the plane's not at the bottom of the ocean if those phones are ringing for 4 days it's probably not somewhere in another dimension or another timeline either right now some additional science I already mentioned the double slit experiment the greatest mystery in physics that proves quantum teleportation is possible it's what

(1:23:41) allowed us to realize that non-locality is real uh which is the idea that uh that the universe is reacting faster than the speed of light faster than we can even see it and perceive it um time dilation is real which means that more mass equals slower time this is best shown by the movie Interstellar if you go near a black hole your time is going to slow down that means when you're looking out towards less Mass everything's going to look like it's going super speed and when they look at you when you're next to the black hole

(1:24:11) it's going to look like you're moving in slow motion so that means that time is a fluid symmetry out there and the time space time itself can be bent it can be warped that means our perspective of time now doesn't really mean anything uh wormholes have been shown to be theoretically possible by at least three scientific papers in recent years they all show that you don't need exotic material uh one argues that a thin shell could be used to safely transport an object and they all argue that wormholes

(1:24:36) could be humanly traversable which is the idea that you're not going to get ripped to shreds when you go through the Wormhole uh room temperature super conductivity can be induced via metamaterials like 99 or just yesterday there was like four other different composites that were creating uh potential room temperature super conductive uh metamaterials or also according to Salvador Pias by repeated pulse vibrations from transducers which goes back to the interviews that I had with him is that we may not even need metamaterials in

(1:25:02) order to induce room temperature super conductivity which is pretty crazy um the orbs appear to be mapping that plane that computer program can exist the pattern or explain the pattern we don't need these things to be manually controlled what we're seeing here is a field we're not seeing a metal ball on these orbs we're seeing the non-radiating barrier like the Distortion between our SpaceTime and whatever's going on or we're seeing some kind of ball lightning there uh the the combined toroidal moment can cohere

(1:25:29) electrons now this is where the super conductivity comes into play so what we're talking about here is that these orbs are kind of doing something magically here to the plane if

you want to think of it and that's creating a superconductive state which is then allowing the phase transition of the plane to happen so it's not necessarily that the uh uh super conductivity is just directly allowing the phase transition to happen is whatever electronic circuit for example like a coherent matter wave beam that locki

(1:25:53) Martin has a patent for that can create a state that allows for super conductivity which then allows for macroscopic Quantum coherence the idea where this object can now completely phase out um the orbs become a part of the relationship with the plane as the electrons around the the nucleus extend unshielded um so this is the idea that the electrons that are in all of the uh atoms around the plane can now just kind of cohere into a single matter wave beam and this is again how our matter wave not necessar a beam um this is how this

(1:26:24) plane can achieve that macroscopic Quantum coherence that's required to now act like a subatomic particle to obtain Quantum properties um when the orbs converge they create their own azth again their sphere around the plane the orbs converging actually triggers the transitional phase State change this is where the energy levels amplify as they are um compacting onto the plane this is what's allowing for that Singularity to occur um low temperatures can allow allow those electrons to couple and C here but as we pointed out with high uh

(1:26:56) temperature super conductivity we potentially don't even need that uh the fractal tral moments are what causes that Singularity um I'm just thinking there's any others I need here um yeah and so also the faster relative flow of time since time is a fluid symmetry less inertia therefore zero gravity when you achieve zero gravity zero inertia now you have a point where you can just push an object and it can accelerate towards the speed of light um it could also just be a matter of creating a bubble around

(1:27:22) around the plane and and warping the SpaceTime around the plane um like bending a piece of paper then P punching a hole through it as well um I think we got the rest of those okay so then the dangers of this um technology is that this could lead into doomsday weapons there's a lot of good things it can lead to um but it could also lead to Doomsday weapons this will be the reason why this would be classified the reason why this would be hidden it goes well beyond being told about aliens or floating craft this goes

(1:27:49) to be weapons that are almost infinitely more powerful than nuclear weapons so just imagine the classification levels that would be around this type of technology to prevent us from destroying ourselves um a couple other quick science things here as well uh we're near the bottom here high frequency gravitational waves from salvator pias they can create uh high frequency gravitational Waves by accelerated axial rotation and or accelerate high frequency vibration vibration being the one that's the key here um this can be

(1:28:17) used to propagate radiation through magnetic fields which can enable macroscopic quantum cerence uh the ability for uh macroscopic objects to obtain quantum mechanical properties uh multiple of these can be used to focus on a singular point to create uh the

curvature of SpaceTime Singularity uh you can create a gravity well in the path with this uh this can also read to Lo room temperature super activity you can enable nuclear fusion via this as well and then again that energy can be Amplified to such a degree that it can

(1:28:49) create a curvature of SpaceTime leading to the total destruction of a planet or asteroid just think about that guys because this is the that's the big key for why you covering this up right total Destruction potentially of our planet our civilization um and then I'm going to skip actually over the electr electromagnetic field generator but this one basically is like how you can allow an object to achieve zero inertia and super luminal speeds um the **debunks** I've already kind of mentioned most of the

(1:29:17) **debunks** that are out there with respect to there's I'm just going to go over probably the couple of the biggest ones the uh Pyromania VFX um it's it's similar but it does not match on a single frame uh the **debunkers** would argue that it had to be edited the problem there again is there's no reference right so they would have had to be blindly editing it which I have challenged the **debunkers** to find another movie or situation where somebody used that VFX uh and edited it and uh to date nobody has uh done that I

(1:29:46) also asked for people to come up with a very specific list of requirements of what exactly you would have to edit in sequence to get it to be a 100% pixel perfect match cuz they argue that it would be easy to do but um then they can should be able to create a reproducible list that anybody could follow to instantly make a perfect match the reality is they are not the same and that that VFX is not in our videos although it is again one one frame is uh slightly similar um I already mentioned the fact that 2D assets would not be used in a 3D

(1:30:17) rendered environment which we've shown from the requirements would be require would be necessary um people also put in some other **debunks** in here as well that were uh that there's frames that match there aren't any frames that match uh we did a you can do like a overlay of the frames and you can show the differences and that would that should bring back a white image if that was the case but it does not which shows that there are no uh pixel or uh frames that match there's also been the jittery **debunks** uh jittery

(1:30:44) uh jittery Trails **debunk** uh which is actually just the camera shaking accurately and if you use video visual effects or um like software to um you know what's it called um God uh stabilize the footage then you are going to see artifacts when you do that so you can't stabilize the footage to come up with **debunks** like that uh I've seen several like that and unfortunately um what we're really just looking at there is accurate camera shake the cloud **debunk** again I mentioned as well uh Six-Day old account anonyms sent that

(1:31:13) from a burner email to the photographer for some reason for the photographer to put their name on it uh I did warn that photographer that putting your name on a **debunk** like this after just getting an anonymous email is not only suspicious but would draw a lot of negative attention which is unfortunately exactly what happened I don't condone anybody harassing anyone like that uh but when you come in and you don't look at the evidence and you try to

**debunk** things you're putting yourself out there especially with your real name and

(1:31:40) that's probably why the six day old **Reddit** account didn't want to do it right they wanted somebody else to put their name out there which is pretty scummy in my opinion uh we checked those torrent we didn't find anything of these images there's no proof that these these images go back to predate the videos whatsoever and somebody even showed within one minute that you can create a higher quality image from uh a lower Cloudy cloud picture using AI um in addition to that there was some forensic analysis that was done that I don't have

(1:32:07) listed here I think the strongest forensic analysis was somebody found a flicker image of Mount Fuji that is a perfect pixel perfect match over the supposed Cloud picture uh with the exact angle and the exact Shadow on it as well which is ironic because when the Pyromania VFX came up we said that they don't match and they said well that's okay because you could just edit it and then we found the Fuji Cloud the Fuji picture Mount Fuji it's an exact match where like you can literally just put it over top it's an exact match even

(1:32:36) with the Shadow and then the **debunker** said oh no you can that doesn't that's not doesn't mean anything which is extremely ironic in my opinion um and let's see uh so the clouds do move uh the smoke naturally flows there's no jittery weirdness or anything in that um the prosaic **debunks** are countered by the evidence that we're actually looking at a citric session in here um I think I've already addressed the rest of these as well and also yes the mq1 C does experience turbulence when flying through the Wake some people

(1:33:04) argue both sides of it that there should be more turbulence less turbulence um if you look at these drones and even just commercial drones even in quite a lot of turbulence they don't shake very much um I actually have a video that I'm willing to break out at some point if necessary on that but there's no inconsistency with the turbulence of the Drone flying under the wake of the plane uh reverse engineering versus non-human intelligence a lot of people say well I think this has got to be aliens there's no reason for such an

(1:33:29) extensive cover up for just an anomalous event if this is in my opinion at least if this is UFOs I don't think you're doing this huge cover up you just come up with some of their explanation the assets that are filming are all US military assets so they either got extremely lucky and just randomly caught this event going on if it was a non-human intelligence or this was an operation they're filming before the orbs even show up the orbs are moving at Mach 3 speed so they This Plane wasn't trying to outrun the orbs there's no way

(1:33:54) it would ever been able to do so uh the pattern is created by a computer program so we don't need like aliens to explain anything that we're seeing here and I think that's the strongest evidence for why it's not right the fire event actually indicates a rescue motive or now that we put out an Espionage event right where they could have planted this fire they could have ignited this fire in order to intentionally divert the plane just to then Orbit later on to somewhere else and one of the things too

(1:34:19) is that we can't really attribute human motivations to human intelligence um if there is nonhuman intelligence that's a million more years in advance on us they're not going to probably think like we do they're probably going to be completely different level of Consciousness than we're at um so again the most important part is science can explain everything that we see and now the final run here so where did it go probably Diego Garcia if I had to put money on it um the fire suppression device the Islanders that saw the plane

(1:34:45) early in the morning with a red and white stripe uh that were adjusting the uh small like 3,000 people on a tiny Island they don't see jumbo Jets they see a giant jumbo jet that matches MH370 um going towards Diego Garcia you have the Philip wood exf data picture that has exf data in it that points to Diego Garcia You've Got The Black Vault foas that show that Diego Garcia is a CIA black site so they've got prisons there the no departures 72 hours uh after March 8th from Diego Garcia that was found on Facebook the flight logs

(1:35:17) that were destroyed by water damage for Diego Garcia in July of 2014 it's really damn suspicious all the conspiracy theories thought that this plane went there including Mark Dugan who's a famous author and writer Katherine T even said I think in 2018 that she thought that must have been where the plane went um the problem that everybody had is there was no way for the plane to get there at least not easily uh but if we have this super luminal event then it kind of fills all those gaps there's tens of millions to Black construction

(1:35:43) for dredging which would indicate there's potentially some kind of underground facility at this place um locking Martin is tied with a contract to upgrade Power and Water cuz we need more connections to Lo Martin there was even weird photos uh that were posted that show some vaguely similar looking people on the island that look similar to some of the crew members which I don't think they all really do but a couple of them do look quite a bit similar now I think that's that's kind of pretty weak evidence in general but

(1:36:09) still important to post everything all the evidence that we've got that's out there um sources that I talk to claim that this place is more important than Area 51 which makes sense because this place is there no nothing around it in the in the South or in the Indian Ocean they not South Indian Ocean it's a good place to test out technology good place to hide something no Radars nearby supposedly their radar can see 3,000 miles which would have been able to see the plane start to finish uh they also

(1:36:32) have this thing called the groundbased electrooptical deep space surveillance system there which is some super Advanced surveillance system that exists so uh pretty interesting base that's where I would bet anything it went now the hardest part what about the families what about the passengers um earlier today I posted thing uh a reply to Sarah uh I'm going to probably butcher her last name where she was the girlfriend of Philip wood if you guys have seen her appearances she knows that this plane did not crash she says several times she

(1:37:01) thinks the plane was taken uh she was thanking Jeff wise in that post for still looking into it so this completely destroys uh any narratives out there about hurting the families um

they want the answers and they have never gotten them they've never believed the official story settlements most likely forced most of the families into silence uh Kenji Brown Jackson was actually the judge who ruled against the civil suits being tried in the United States in 2018 claiming that Malaysia or **China** were the better locations for it this

(1:37:30) cost the families millions of dollars keni Brown Jackson was later appointed the Supreme Court by Joe Biden um instead the families got on average from my investigation around \$30,000 each basically nothing in addition to a \$50,000 initial payout in 2014 that was UNC contingent um if alive which I'm going to go ahead and be optimistic and pray that maybe some of these people survived they would have been in witness protection um they potentially could have been returned to their home countries in exchange for their silence

(1:37:58) **China** would very easily be able to keep them quiet uh but it seems like a lot of work um as the alien addict gu said if they did survive which is tough considering the lithium battery event the depressurization of the plane uh as well as this uh macroscopic phase conjugation um you know there would have been other ways to silence them is what I'll say even after that that could have been pretty passive I I'm praying that were not that evil honestly uh as a country in the United States and I'm just hoping that somehow these people

(1:38:27) are still alive somewhere uh one of the nephews of the pilots was told that his uncle was collateral damage to me this is a strong indication of an Espionage event you don't tell somebody your uncle's collateral damage unless the Americans were involved in it right the French father was told that there were two awaks in the area and that the Americans knew exactly what happened this could indicate that the plane was remote controlled as Captain Dan Hanley has uh suggested as well as field McConnell um and then the former head of

(1:38:56) indon Asian police said he was told what really happened to MH370 from his Malaysian counterpart so this is all the evidence guys for uh what we have going on right now I think that it's extremely powerful evidence but again I leave it to you guys um tomorrow I will be retiring from the investigation at the end of the day after I put in a couple more posts and hopefully a little treat that I've got planned for everybody um but I I've Loved this Journey uh start to finish I've Loved meeting all you

(1:39:24) guys and all the other people that I've met out there related to this it's changed my entire life uh all for the better and I just hope that we can get answers uh for the families and for everybody else who's out there so at this point uh I think I'm going to make melow demon um uh you know what I'll make UFO intros I don't think you have very many people blocked I'll make you a co-host if you want it um and if you want to assist here as well uh pulling some people up if you guys want to ask any questions

(1:39:52) uh make any comments if I forgot anything we can do Q&A for like 20 or 30 minutes I don't want to be a lot of like gushy stuff about you know whatever I love you guys we already did like the retirement stuff in general but you can say whatever you want I'm not too worried about it uh Melo did you have anything and you guys can go ahead and start if you want yeah

thanks for the summary I need to switch to my other headset yeah if you can help bring people up as well that would be sweet because uh I'm on this weird app so and

(1:40:20) by the way if one's requesting to speak and I'm not getting to you it's not because I'm avoiding you or anything like that it's just the app is super buggy and sometimes doesn't show people who are requesting to speak um but yeah this it's open for anyone who wants to request to speak uh just go ahead and request and say whatever you want okay looks like we got Billy Bob and before we get a bunch of people up here you can feel free to just speak up once you get added as a speaker um if

(1:40:46) somebody else is speaking just wait for them but yeah go ahead Billy Bob did you have a question or anything about the case or or what have you or while Billy Bob's waiting money Penny hey welcome welcome up money Penny if you have anything you want to say hey how are you gosh every time I hear from you um you bring me more information more stuff to study you have ruined my life my science nerdiness has gone off the Earth's planets I don't know the atmosphere it's just ridiculous

(1:41:16) thank you so much um wow I don't even know how you managed to do all that I know you had some notes but it shows how much your brain can cram in um one thing you didn't get into is the thing that um I could add a little bit about but um it's the broader picture what was happening in the world at the time you know was there anything going on and I was just looking back at some of my notes and I came across the Wolf of Wall Street I wondered if you wanted to mention it the 1MDB stuff yeah I think

(1:41:42) the I kind of mentioned it a little bit which is the prime minister I think it's Najib uh he was the one who was in charge at the time MH370 disappeared he was kind of pushing some of these narratives that we think might be fake and then right after that like a year later turns out he's been stealing 700 million plus dollars uh biggest kleptocracy uh scandal in the history of the world um which is pretty unusual so yeah from a broader perspective it's like you know he just happens to be in this huge scandal related to oil uh

(1:42:12) right after that as well I don't know that we have like direct connections but it's clearly pretty suspicious in general that that was going on so uh do you have anything else to add onto that money Penny no just that really there would be a motive there for the US because the Department of Justice Goldman Sachs had the largest exposure um ever seen within international government and in fact the fact is that it's been described as the world's largest financial scandal and is still actually continuing to this day

(1:42:38) because a lot of the funds and investments that were made from it are still uh in depth to each other to different parties not to mention money laundering awesome um Billy Bob do you have anything you want to say say if not uh mercus I'm sorry if I'm butchering your name hey Ashton um I just want to commend you for your work um I won't gush too much but uh I'm very impressed with the uh physics research and the way that you've um pulled together and assembled a whole bunch of what are essentially

(1:43:23) verifiable yet diverse and Cutting Edge um principles in in physics that actually very much lay out the plausibility case um to to a very high degree I'm really impressed with it well done yeah thanks I think that that that's the most exciting part for me so like this kind of goes into like what's next for me right like I'm my plan is I want to learn more about science and electrical engineering and and what have you that's out there um Craig I'm just going to mute you for a second here um and that's

(1:43:55) just because that's what I enjoy the most and I think that that's the path forward for proving that the stuff's real is proving that the science can be real um that's the stuff that's blown my mind the most so yeah appreciate that any follow up on that uh look agreed um I've uh you know that uh I had a I was lucky enough to to grow up in a very sciencey very engineering um orientated family um and uh my older sister who's a decade older uh worked as a science communicator and so I started

(1:44:31) getting to go into that Science Museum and see all of the exhibits that were demonstrating principles of physics and speak to science communicators and that kind of thing from a very very young age and um it it's just really uh imbued or or fostered that innate childlike curiosity that's in all of us um I was fortunate enough to have that happening in my world which was a platform that continued to nurture that Curiosity um and uh it some some anomalous events um took place which were outside of the

(1:45:07) Realms of known physics at the time that I was studying it as an undergrad for instance I had a dream that I uh about a car accident that then took place in real life three months later and was studying physics literally as an undergrad at the time and I just I had to drop out afterwards because there was nothing in the Paradigm physics that could explain how I could possibly have a dream to anything like that much detail three months yeah and I appreciate that Mer but I think we're we're just going to keep the stories

(1:45:43) short here because I don't want to get to questions and go quick but I appreciate you very much for asking your question and digging into and I hope that this can inspire people with from the science perspective uh for sure so thank you very much and uh I'm going to go to UFO intros cuz you've had your hand up and you're co-hosting so thanks man welcome yeah I just um wanted to know you can DM me but I just uh however you want me to um co-host I guess like anyone you do or don't want me to bring up should I look

(1:46:11) at their followers or whatever oh you you can bring up anybody who wants to and if we have a cycle people down after they talk that's cool as well I'm only going to do probably another 15 minutes of a question so I want to keep it pretty brief here um uh so we can I don't I think we've kind of covered what I want to cover from the investigation St I just want to answer questions for people if possible and and their short comments so uh Craig I think you you're unmuted do you have a question I don't know if you can put

(1:46:32) your hand up or not hey bud uh only got this for you I respectfully ask you your belief on the validity and the origins of the sender of the letter to Ashton also the UK Administration

Elite involvement in the event sorry what was the last part the second part uh uh the also the UK's administrative Elites involved oh yeah in this yeah so the the letter thing was the weirdest thing that's ever happened in my whole life um I yeah and I didn't uh make that letter I have no uh involvement with the letter um I I was

(1:47:12) kind of playing it out waiting to see if like there would show more stuff to see if like they were somebody who was trying to latch on to the investigation I even played the video on my stream multiple times start to finish to see if they would copyright strike me none of those things ever happened and then the the whole account just went dark like right afterwards so it was like they buffered that letter with a couple other videos the Miami aliens weird videos and the chant Thomas stuff and then there's

(1:47:35) this super detailed letter to me in the middle of it uh my opinions at this point are either it's a super stalker of myself and Malcolm Bendle uh or it's a situation where it's some kind of intelligence Community scop from either a foreign intelligence Community or our own intelligence or it's potentially real and maybe some elements are true and some elements aren't um it definitely changed my perspective a little bit because I had been talking about the rescue option as being the most likely but when you think about the

(1:48:02) Espionage option especially bringing in the **Russian** Gru intelligence report it does just seem more like it's a straightup Espionage by the United States government start to finish I was uh speaking about the administrative Elite that was implicated in the letter yeah administrative Elite um I think you would go back to the **Putin** Tucker Carlson interview where no I'm talking about the British uh United it's clearly stated the British administrative Elite yeah I'm not sure man it talks about the administrative

(1:48:33) Elite I've listened to about 40 times uh what I would say in general is that we're talking about like the five I right the UK United States Australia um I mean this is more than one country covering this up right it's the US is filming it probably us technology but they're in cooperation with you know Australia and UK so um end of the day does my heart good to talk to you I know you got a lot of people thanks you're fine do the best thanks no I appreciate it man yeah and so I think that that's um you know very

(1:48:59) strong evidence or I don't know about strong evidence but it's a St very strong motive for why they would uh do this in general um and and I've kind of leaned more towards it but I'm still a little bit skeptical just because it's such a such a weird letter so um good question though on that uh vinc we want to go to you thanks for being up here question can you hear me yeah we can hear you man what's going on been a long while man I stopped joining our spaces and all but yeah uh so basically I just wanted to say it's been

(1:49:29) a long journey I've I've heard you since August or something okay uh basically you know we uh throughout the journey you kept you you saw what they were trying to you know do to stop you like first there was this **Jonas** Cloud **debunk** and then there was this uh you know the guy who **scam**med you for like 1 or 2K I can't remember okay so basically I just want wanted

to say that you know man I I think you should just continue this investigation I know that this is just me being selfish and uh I might like a

(1:49:59) lot of people might agree with me over here I just think that you should continue this investigation like no one else is doing it you are the voice of the whole m370 investigation they've been ignoring you and all but I think this is this will be your like this is your only way of silencing the haters and I don't know continuing what you do pretty good that is what I think uh other than that bro I've Loved following you for the past uh however many months it has been it has been a great journey but yeah like Are you seriously retiring

(1:50:29) is that the standing consens consensus your final decision yeah good question um yeah I think that from the MH370 investigation and I think part of it's too that you look through the evidence that we just went over today it's really really long right we've dug through everything that's out there I mean there's probably some little Corners that we could still dig into but that's where I would pass it down to some of the other investigators uh like JK Philly fan and Arwin who've been digging

(1:50:53) into that if they want to post I'd be happy to promote some of their content if they're going to do that uh but for me it's a situation where you know **truth** be told that a lot of people out there maybe the people in this space and on this stream that are watching right now are ready for this but the vast majority of people out there are not even the people that are into ufology that want disclosure you know a lot of this is a bridge too far for them and I think that the world has to catch up a little bit

(1:51:18) before it'll get to a point where people can really wrap their brains around it and I'm talking people too that are like you know UFO celebrity people right like there's I don't think it's it's really unusual in my mind right that you've got people like um Lou alzando Ross kohart Steven Greer and you know Jeremy Corbell and like nobody wants anything to do with it right and these are people that literally are talking about disclosure and Aliens visiting us from other galaxies and stuff like this right uh

(1:51:45) Jellyfish aliens and stuff like this where it goes to show that like as Humanity we still have quite a bit to go for the science to catch up where people then can go okay well maybe these videos are real right so this is going to be a marathon it's not a Sprint and I think that stepping away from the case is the best thing where people can kind of go okay this guy wasn't trying to profit off it he was just trying to get the information out there and that maybe it'll start to like be this kind of

(1:52:11) Mythology in the Zeitgeist where people will maybe throw at the bottom of their article about MH370 right and then as time goes on and we never find this plane where they think it is they'll go hm maybe that is maybe that wasn't that was the **truth** about what happened in the plane right so that's my Approach and it's not mean I'm stopping I'm shifting gears and I'm moving towards focusing on learning how the science works I'll still post other stuff on Twitter and what have you uh maybe do some jokes

(1:52:34) about MH370 here and there right but um I I my passion is about understanding the science like once you've seen that uh it's hard to go back to being a normal person I truly think that we're looking at the answers to the teacher test here which tells us that like this is how the stuff works and to me that's an opportunity that I don't want to miss right this is how you catch up to all these other people who are super smart scientists right as you see it and you go okay now we should to reverse that figure out how that works

(1:53:00) so that's my opinion does that answer your question Vin yeah man um great I I just hope that this is not the last time I'm hearing from you on Twitter okay I just hope to keep on posting some [REDACTED] or the other about this I'll be posting but it's probably be boring science stuff it's funny because everybody loves the drama stuff that's what gets the most views when I post all the science stuff about superc contivity Quantum and and stuff people don't really see that but I'm not in it

(1:53:22) for the views anyway I'm just in it to make the people that are interested in that stuff for them to take a look at it so thanks for your question man um and real quick before we go to more hands I also just want to thank a few people out there so UFO intros thank you for co-hosting appreciate you man Melo demon has done spaces for me for a long time Artisan Tony was been a nice guy that has had me on his podcast I think I changed part of his opinion he's been in a lot of my streams hanging out vinc

(1:53:47) you've been here a long time as well I've seen you money Penny obviously thank you very much even s here who's never come up and spoken i' I've recognized you many times as well if I don't get to you it's nothing personal I just want to thank a few of the people that I that I've been on a lot around um like rrick as well I've talked to uh Z jalapeno I've seen you in the streams a lot Sarah is one of the nicest people that I've run across that's out there uh Heather birdie we we've converted here

(1:54:10) as well you know I appreciate you Heather um JK Philly fan I see you down there man you're you're a hero uh pepper zolan I'm probably butchering your name but you've got the memes out there uh William Bill man I appreciate you I hope everything goes well for you um thank you very much uh Prefontaine I've seen you supporting in a lot of the replies as well um and everybody else as well if I didn't name you as well um Mary Lise I see you down there as well I know you've been following for a super long time um

(1:54:36) and all the other people that are listening I just want to make sure that you know that you're appreciated um and let's do a couple more hands uh UFO intros did you have a followup I saw you put your hand back up and then we yeah just I wanted to say um yeah like I I'm not sure why you co-hosted me but I appreciate it and you know none of us are perfect we're all imperfect more and more apparent as you know we're all becoming more online but uh assuming you are who you purport to be Ashen I do have to give you props

(1:55:05) just for all the hours of research and work he put into this um that alone you know I I think is uh commendable for sure and yeah I don't know I just uh wanted to give you props for

that and then o just um well a couple things if uh any of you guys listening or or anyone you know have had a paranormal experience and you want to come on my uh on this platform this account we hold spaces like this except for they're more like one-on-one like interview style at least for the first 30 to 45 minutes and then you know we'll

(1:55:42) bring up people and do Q&A but yeah I just uh there's not a lot of places you can go to talk about some of these weird things that are becoming a part of our reality without being judged even I mean things have improved but even to this day right it's it's hard to find uh not a lot of people you can talk to about that so uh our our spaces obviously are judgment free so if you want to hop on shoot me a DM and we'll schedule it out thanks Ashton yeah yeah and I cohost with you because I figured you have like

(1:56:11) the least amount of people blocked so uh yeah thanks for helping on doing that um yeah so let's go to AR and Tony man thanks for coming up AR you there bud Tony if not AJ news sorry about that you're good uh I just want to say great job I I have never seen any anything quite as extensive of work that you have you know that's been done on this and um that was just a quick compliment but I had quick question also I like I like I like the espe angle so that being said and you know if if our government was

(1:56:55) you know our intelligence Community wanted that plane and they wanted to create the uh illusion that it was alien or something off you know what I mean is there current technology that they could have done it with without it being something you something hard to I don't mean hard to explain I mean is there could they have done could they have pulled this off giving the impression as sort of a sideshow you know to throw people off the trail so to speak yeah that's a good question honestly and man I I really

(1:57:30) wish it was an easier answer to sell to people than teleporting a plane because it's just like it's so crazy but um yeah I think that if the videos are fake to me it has to be a state sponsored hack and fake because I think you'd have to use AI to pull it off and I I don't think I'm not saying the videos are fake I'm saying I just wonder if there's some other way they could have done you know perform this act without it you know what I mean well yeah so okay so first of all I do think though that if it is

(1:57:57) fake to me the only way it could be is some uh United States government uh thing but yes in terms of other they pulling it off I mean the other option would be somehow some kind of cloaking event right I think there's actually some conspiracy theories out there that argued that you know maybe it was some kind of cloaking event or something like that um but the problem is that smoke disappears right but maybe you could say well maybe the cloaking event puts the battery fire out and that's why the smoke stops um you know not really sure

(1:58:23) there's just not enough evidence for something like that and so in my mind it's like 98% uh some type of super luminal speed event teleportation event 1% like an Annihilation event and 1% some kind of other option including cloaking right uh I just I thought about it a lot I just couldn't come up with anything else you know so that's just my opinion yeah I was just

asking because I had followed I've basically just met you like two or I I found out about this like two weeks before I met you so I was curious I

(1:58:53) hadn't heard anything like that yeah that's pretty much all we got at this point I mean I haven't seen anything like the the work that you've done before cool Tony I mean I think you'd have to go into like the intelligence Community to see the amount of evidence on a case like that oh yeah so anyway and thanks for being here man appreciate you and uh maybe we'll do another uh pii at some point in the future oh that'd be that'd be great thank you uh real quick a couple more things I saw star Captain dread join

(1:59:19) I've been in spaces with him forever and ever and he came up with warp nukes which is still one of my favorite things that's out there I saw shy Keenan jump in I think she jumped out as well though but she was one of the first VFX artists that I talked to uh that helped me con helped convince me and come up with evidence for why the the videos would be either difficult to fake or uh if not impossible in general um so let's do a couple more questions here AJ news how's it going hey Ashton appreciate your work on

(1:59:45) the case um obviously this is a decade old Cold Case and uh seems like the the main thing or one of the keys to to actually resolving it is is this Rolls-Royce data that's been suppressed by the government um i' I've got a question I'll try to keep it brief it's kind of a two-part uh kind of a two-parter um one is uh in regards to the Rolls-Royce data in terms of what specific government agencies are covering it up and what potentially could be done to kind of crack that and then uh the other thing is you've

(2:00:15) already touched on this several times but in regards to the the the main narratives the Crux of it is is kind of this uh what they call the whisper pings or the the ersat data can you just touch on just once again just uh talking about how easy it would be to manipulate this data and and talk about the delay that emeret had in terms of providing their data and how that you know how easily that data could have been manipulated as well yeah yeah the Rolls-Royce data I'm sure Rolls-Royce knows what's going on

(2:00:43) with this plane it's super weird that they put out there was a Wall Street Journal article that was going to come out and then they just like after like track it and updated the next day like the same time where they start to float us intelligence starts to float this idea of the plane going to the South Indian Ocean I I believe some people even posted and I I didn't quote in sources because I didn't have any strong sources but I remember somebody posted one of my reply saying that uh rollsroyce data engine data would going

(2:01:07) back every 15 seconds um and you know if they have like they know altitude changes like this is stuff that's not coming from satellites this is coming from like engine data so I think there's a pretty strong reason for why Rolls-Royce never would have released that data uh because it probably would destroy the narrative that was being formed Rolls-Royce as you can see by some of the contracts that I posted was directly connected to locked Martin directly connected to the US intelligence and defense as well so um

(2:01:35) that seems to be a common theme especially from immat as well the The Whisper data basically just takes the the iMat pings and then tries to take the capabilities of the plane and takes these like radio signals and then tries to map out a route and the problem with this whisper data is that it's uh the analogy that I've always given it's like trying to follow somebody who's got a white shirt on in a sea of white shirts uh it's very clear that Richard Godfrey was just trying to bend and mold the

(2:02:02) data and massage it to a point where he can make sense out of it right where you could say okay well I'm going to I find a ping here so I'm going to go ahead and say this is where the plane went next and it the whole thing when you look at it seems to fall apart right after the radar uh which is like the strongest real evidence that we have um and so faking that as well I'm going to there's one more piece I'm going to do tomorrow about iMat and the satcoms the satcoms all had zero day exploits all the

(2:02:29) different types of models of the satcoms it would have been very easy to hack them if they just change one number around it can change the complete direction of the plane and where it would have been going uh but even more than that I found an article earlier today that I'm going to post tomorrow in addition to that that talks about that the early they they basically released this one graph before May 28th and the graph makes no sense nobody can even understand the graph they can't figure anything out about the graph and people

(2:02:55) were arguing that the graph would show that the plane could have been going west to Diego Garcia right and that's where some of these conspiracy theories started coming up and then they released quote unquote the raw data which they've had at that point like 10 weeks to manipulate and spoof and iMat itself says we're confident in the data assuming that the data is not spoofed or or manipulated in any way it's like why are they issuing disclaimers like that you only issue disclaimer like that if

(2:03:19) you have weird suspicions about it right so um I absolutely think Beyond a doubt that that that data is fudged in some way or misinterpreted they used a novel analysis to come up with a new way to track uh the plane and that's where that especially that initial data didn't work they couldn't they couldn't use anything to make it makes any sense um and then it was until later when they had plenty of time and release that that again after the videos came out that they started to get a better picture of where

(2:03:47) that plane could have been um so I think that what will happen is that we're never going to find the plane the strongest evence is we just never found the plane where they claim like it must be along the seventh Arc and they search everywhere and they find nothing right so to me that's the strongest evidence for um something being messed around there um but yeah really good question on that so I think we'll just do like three more people here we'll do Damen Scott then we'll go to AJ who's been

(2:04:09) waiting around and then uh J Paul um so Damen you you have a question hey yeah thanks Ashton long time uh follower of your uh your spa well the spaces you been in the

YouTube streams uh great stuff I just wanted to give a a general comment on uh the people that are staying silent about this topic like Ross cart and and the likes I think they're pretty aware uh in generally speaking I think they're aware that there's a lot of eyes on them and a lot of people paying attention to what they're doing and they understand it's a

(2:04:37) kind of like a sensitive topic so I think I think it's it's not too farfetched to think that maybe that awareness you know causes them to be a little bit more cautious with what they acknowledge publicly you know and and they know that they're they're a heavy influence on the general perception of the topic so you know once you get into this topic you get a pretty a general idea about the craziness and the crazy Pathways it can lead you on and and pretty much makes everything almost almost everything possible so I don't

(2:05:04) think that they're necessar their silence speaks to necessarily you know discounting uh you know the MH370 stuff or anything like that I think they just you know in some cases I think they're just like more aware that a lot of people paying attention and you know this could go a lot of different ways and so that sensitiv is kind of like you know always hovering around um so I don't think that anybody should be discouraged necessarily by that they're you know they're being silent on the topic that's all I want to say no I

(2:05:28) think you're right I think that there's definitely an element to that at play but I I just happen to know for a fact that there are at least some of them I'm not going to name them but I happen to know for a fact because I've seen DMS and stuff where they've been asked where they they think that some of the videos could be fake and I don't even put that hold out against them right and that's I think what I've started realized early on I thought people might be disinformation agents of the government

(2:05:47) I had no idea right when you're talking about looking at this this kind of stuff and saying it's real you're like you have no clue what is could be going on right the conclusion I've come to now is that it's just it's more than what even a lot of people can really accept and rationalize even people that are you know adant um UFO disclosure fans I think some of them probably think that I'm disinformation right um people in here might think that too and I wouldn't even put it past you right because this

(2:06:09) is pretty out there stuff to be uh kind of pushing right uh but you know I'm not in that case and that's what I would want to tell them is I'm not I'm just a guy who was a normal person that came across some crazy crazy videos that changed everything about my life but um yeah I think that's another thing too that we need the science to come out because when the science starts to come out if we can teleport a Coke can from one room to another room like Danny shean says uh that's when people are

(2:06:32) going to start going oh okay maybe these videos can be real maybe they'll feel more comfortable to advocate for them or bring them up right now is that going to happen quickly I don't think so I think we're talking years potentially of that happening that's fine too I think um and in the meantime what can we do right we if we know the videos are real then we can look

into that science we can begin to push the conversations for what does this mean for disclosure right how do we not destroy ourselves with this

(2:06:57) technology and those are the kind of conversations I want to be having in the UFO Community but good questions on that uh Damien uh let's go to AJ do you have any question yeah can you hear me yep yeah I just wanted to say it's been uh really interesting following your work and I think in uh uh In Our Lifetime we'll will know the answer either way what happened to the plane I don't know what time frame you put on that and uh just another comment um just about uh smoking uh The Smoking Gun that I feel that nhr

(2:07:33) hasn't visited this planet is that um there hasn't been one whistleblower firsthand in um in history out of all countries on the planet who has come forward with the actual evidence uh we've had examples of Edward Snowden coming through with evidence um Manning we've had Julian Assange so I think the the the big Smoking Gun that NH there is no evidence is that there hasn't been one credible firsthand Witnesses on all the countries on the planet but thanks for your work and thanks for the space

(2:08:06) yeah and that's something I think about a lot which is like we don't even really need non-h intelligence to explain the videos and it makes me wonder like if this goes all the way back this technology goes all the way back to the Philadelphia Experiment which is crazy enough I'm starting to think that it might uh where they built a full boat just to be able to try to cloak it and then might have accidentally teleported it that's a lot of years to be uh refining this technology 80 81 years right um it could be a m could be I'm

(2:08:33) not saying it is but it could be a matter that like the whole alien stuff is just obfuscation so that people don't look into the technology that we've actually been advancing since we dropped the atom bomb right um now my personal opinion is there's probably something else going on there because I still have a hard time wrapping around getting that advanced in 80 years when we look at those videos we're looking at some crazy orbs in there but um definitely respect your opinion AJ so thank you very much

(2:08:56) man uh Paul J Paul thanks for joining man yes thank you very much I'm nearly 80 years old and I've been sitting in the back of your classroom since I think late August September I just you have my highest level of gratitude I think you have really created a a very strong Cornerstone not only Cornerstone but a keystone for bringing together you know the whole relativity and the quantum mechanics I think you've really got the science and I really greatly appreciate that and I look forward to your hard

(2:09:31) **truths** Beauty goodness and total all and I think you're you're absolutely awesome I I really I just I need to get your recipe on the martinis but um I just I'm I'm quite I I'm you know speechless and so I listen listen in silence to a lot of what's going on here and I would encourage you at some point later I would really be interested in talking with you about your dreams and what's going on with the unconscious because in many ways I think you've opened a portal to the collective the cultural and the

(2:10:05) psychoid unconscious and I think there's that's coming out of U of the cosmos and I think you're just keep yourself uh get your sleep watch your dreams and and I hope and I'll be able to also listen more when you do more hard truths and and one one last thing is Steve Jobs you got me on to x i I'd never been on X or Twitter I I thought Twitter was for twits but it's absolutely wonderful so thank you much and we'll be in touch and TR safe thanks Jay Paul and yeah I appreciate you I've seen you out there a

(2:10:41) lot I wasn't sure if that was you uh but I've seen you in the streams and everything uh I appreciate that a lot I do think that if there is a esoteric aspect to the phenomenon like this then Consciousness and Collective Consciousness could have a play in it um one of the things that I I'm I may be setting up uh another hard truse to talk to a scientist about the idea of um you know kind of breaking causality retrocausality which is the idea that we could have those types of effects be happening um which should be that's just

(2:11:11) mind warping stuff man well I think it's with lung and poy you know the whole synchronicity thing there's there's some things there and there's you know quite a lot to to go deep with this but I'm I'm very grateful for your your Clarity and and making it so people can help us to understand this but it's really at a turning point and so I'm I'm as I say I'm very grateful for all the research you put in here yeah and I want to talk to some other scientists too I'm planning some to talk about their

(2:11:40) various unified field theories um because I I think that that's really what the the key to all this is so that'll be fun and I look forward to having you in the man yeah yes I'll be there and the Archbold wheeler I think has some really interesting Clues to look at but uh but travel safe thank you guy yeah no problem uh swish I think we to swish and then Orrick and uh then we'll probably close it out after that swish do you have something hey um thanks for having me on now I'm here in Australia so it's

(2:12:10) different time zones and I apologize in advance if I'm asking a question that you've already answered but i' would first like to say thank you on behalf of everyone for putting so much time and commitment into trying to figure out with everything what's happened because I think it's kind of sick like these governments that know what happened and the fact they're just not releasing it because they're worried about all sorts of reasons is I just think it's it's just messed up so thank you very much

(2:12:38) for that keep doing that don't listen to any of these haters who say your your shit's fake this that don't worry about them keep doing what you're doing cuz you got 880,000 follows for a reason now my question is now again I apologize I try to watch as much as your content as I can but I'm on the other side of the world um my question is you've mentioned how the plane uh might have caught fire and there was Witnesses near the malds where where it's not too far away from Diego Garcia Island now if the plane did go on

(2:13:08) fire do you think there's any any chance will I I doubt this will happen do you think there's any chance of the passengers still being alive and if so do you think they will ever return

to their homes or are the governments just going to keep them away forever if they still alive yeah great questions um yeah and the first thing is that that's the first one about the countries covering it up is I think about it every day just going why how evil are we right like we are the baddies in this situation if we

(2:13:41) pulled this off the United States government the five eyes Etc like it's unconscionable to disappear PL manful of 239 people and give the families no answers like the families are screaming crying attacking people they know they're being lied to and we're just using the media to convince the rest of the people these people are just just in grief they can't accept it when it's like no they know there's some [REDACTED] going on right and with respect to the passengers um there's a difference

(2:14:11) between my mind and my heart on this uh my heart says that they're alive that they've been given new identities uh they've you know gone back to their home countries and and been told to be quiet gone into witness protection or the equivalent uh my mind tells me that it's very unlikely that anybody survived um between the fire event which is lithium ion batteries are billowing toxic smoke um if you look at I posted a video of one where it was just one battery in in the passenger area and you

(2:14:40) could see the smoke and this is 487 lbs 2121 kg of them so that's a lot of smoke uh the oxygen Mas only last for up to like 30 minutes at the most and this plane we've got it going for at least an hour and 20 minutes before the uh macroscopic phase conjugation event and then from talking to the scientists and Engineers like not on the podcast but offline they say it's very low probability that people would have come out of this alive um from that event happening so it's pretty dark um but at

(2:15:12) the same time the Philip wood exf data picture gives us some hope that maybe some of them survived and got to Diego Garcia or wherever else and that you know hopefully that they didn't uh that things went well after that you know so you know I'm I'm going to hold that hope because I'm an optimistic person I've always been one U but that's the truth okay thank you for your questions swish uh okay so we're just going to do three last questions and then we'll be done for here tonight I'm going to go to

(2:15:40) rrick and then Tony and then we'll end with UFO intros yeah Ashton thanks for all the effort and work you put in uh investigating this case um when I first reached out to you I was actually coming from a Chan Thomas level connection Chan Thomas was an electrical engineer by trade um and has known connections to put off and just like you there were he was censored and there were many censorship attempts made can you flesh out as best as you can what on Earth the possible or alleged connection is between Randall Carlson Shan Thomas

(2:16:27) you know Randall Carlson has some Advanced propulsion company like and MH370 like what is if if it's legitimate what on Earth is the is the connection here um I'm not sure there connection to chant Thomas per say other than him being an electrical engineer and having dug into a lot of stuff and claim to have um been able to protect earthquakes and predict

earthquakes but with respect to the letter to me um the gray bearded man was definitely Randall Carlson um people were able to figure that out I didn't know who he was at the

(2:16:59) time uh but Randall Carlson was greaty beard man that went on Joe Rogan I got connections to people that were actually there and they told me the story of what happened with Malcolm Bendle when he went on Malcolm Bendle went with Randall Carlson uh who is the guy that's been living in the malds that's mentioned in that letter as well apparently he's been living in the Maldives for seven years working on a thunderstorm generator uh I've talked to them uh I'll say that my opinion is that that device works and

(2:17:25) that that device based on Bob greener's paper that was published in nature uh can produce overunity which is coefficient of performance greater than one it claims to produce coefficient of performance 1.05 um and that there is some type of cold fusion that's happening uh cold fusion at high temperatures there and if there is a connection to the MH370 stuff then it would be that that type of technology is is similar to the technology that we see now the obvious connection would be cold fusion if you think of it could be like a plasma ball

(2:17:54) right similar to what we're seeing from these orbs and potentially plasma balls that are out there uh I hope to learn more uh this summer I'm going to the cosmic Summit uh as a guest and and possible guest speaker um and I'm going to meet a lot of those people in person and I can't wait to talk to them about it and try to figure out what those connections are so potentially more about the technology and stuff like that uh this summer so thanks LA and what what what what was the story because

(2:18:19) it's it's about the podcast that was never uploaded do you mind sharing any of that that's we have no idea yeah yeah yeah I can give you the brief abbreviated version is that um similar to me actually is that he went on they did the podcast apparently it was a little bit contentious and that the producer then pulled up a bunch of stuff and claimed that it was a debunk or that it was that uh um Malcolm Bendle might be a scammer or a fraud or something like that and that's why Joe Rogan chose not to ever publish it which is weird

(2:18:49) because when I got asked to go on Joe Rogan and we had the date set up and we were about to book it then the next day he comes back and says oh I think it might be fake I don't feel comfortable doing this blah blah blah right um which that's kind of a weird connection there as well because I actually think that this thunderstorm generator like really works um and I think that the world will know it works um in the near future as well so more to come on that Ashton thank you so much man are you cool if I

(2:19:13) upload uh push push Ashton's law to the Nast up top yeah push Ashton's up there as well and uh all Rick also thank you very much for coming up with the proving the lie I think that that if you guys listen to the evidence today so much of the evidence is proving the lie it's that yes okay you don't have to necessarily believe the videos are real because we've proven that there's no way that the United States government doesn't know what happened to this plane at an absolute minimum which means we

(2:19:37) know they're lying by ad Mission at a minimum as well so appreciate that I also see Amanda join I want to say Amanda she's uh my favorite follower she's one of the most kind-hearted people out there you guys should make sure you watch her uh she's been following along for a long time uh okay AR an Tony then UFO intros okay I'm glad I'm not last because I have a silly question okay my uh my imagination goes crazy sometimes and I want you to think about this before you come on the pii show again um

(2:20:06) let's say the military drone has the ability to well we know it has the ability to track the objects right and right what if it actually had the ability to remove remove the objects from the video li like on the fly yeah I mean I there could be some uh aspect to that there they those cameras are like super Advanced cameras that can be used to like paint objects as well in aerial surveillance um yeah I don't know so could it track the atmosphere or you know the conditions ahead of it and then just replace the you know the the

(2:20:39) backdrop can it just remove those and what I'm trying to do is get to a simple explanation that that some you know if some um some people want to think if they if they don't believe that you know we can create wormholes or we can teleport there may be other right there may be this silly kind of thought it's just my imagination sorry about it I think that the most logical one is kind of what um uh what is it uh Ken comes up Ken stabbing he's been investigating for a while and early on he said I think the videos are real

(2:21:12) but I think they've been edited uh maybe they uh edited in the zap edited in the orbs or something like that to me the problem with that and I think that's fine if people want to believe it honestly I've kind of I don't really care what people want to believe in general but um the problem with that scenario for me is that you know we never found the plane so where where exactly is the plane the is I'm using the Espionage angle though if they wanted the plane right they flew it somewhere else yeah they would need they

(2:21:37) would need equipment that would I'm not talking about editing the videos I'm talking about equipment that would be able to replace the the image of the plane and the orbs um just remove it live you know on the Fly does that make sense the equipment itself would remove the images of the orbs in the plane instantly yeah I mean I appre the suggestion but again that's my imagination going crazy and we can just think about it and when you're on the highi show next we can talk you can tell me why sounds good

(2:22:09) Tony thanks man appreciate it appreciate talking to you okay let's go to UFO intros man you're up thank you thank you man um yeah I want to be sensitive to your time I know you want to wrap this space up I just was going to ask maybe like your top three things you learned from this uh this whole experience but um you know if you maybe we should do I don't know we could do an interview too and you could talk about that then but yeah so I mean the top three things I mean first thing is the science uh

(2:22:41) science blew my mind science uh was somewhat consistent with what I already thought but went so far beyond what I was ready for for I think that also helped me to

understand the potential nature of the UFO phenomenon in general um in terms of the advanced technology that's being kept hidden and why it would be kept hidden right is that I always thought it's going to be something darker than what people are ready to accept and oh boy is uh being able to teleport an object uh darker because what you need in order for that

(2:23:06) to be possible is you need the reality to be a matrix you need there to be an extra Dimension um so that we can tap into the underlying ether or uh vacuum uh Beyond uh space itself in order to create this uh neg entropy negative entropy situation um that would allow for this plane to do these types of uh Maneuvers as types of super luminal speeds you also potentially then need to understand the idea that space is not empty that these orbs are extracting energy from the vacuum of SpaceTime that's all around us all the time um and

(2:23:39) then that basically means that we can achieve stuff like overunity free energy devices as well it's not free in the sense it's coming out of nowhere it's that you're borrowing it from the underlying fabric of SpaceTime in your in your system and to me that's uh revolutionary and I I think that it actually makes sense but that's one of the biggest things I've learned and then I've learned uh as well that not everybody out there is a disinformation agent I already mentioned this but that

(2:24:05) I think that everybody's got their own motivations the world is not black and white the world is Shades of Gray um and if it's Shades of Gray then everybody's just doing what they think is the best for themselves for their financial situation for their families and for uh civilization in general I think that I've learned the way they hide this stuff is because a lot of people are being paid lots of money to uh not say anything about it some of them are socially awkward and easily manipulated

(2:24:31) into staying silent h and then some people also just get off on the idea that they know and other people don't know because a lot of people say well how do you keep this stuff silent right and those are generally the ways and the last one is probably the biggest one which is that if you're getting paid all that money and you know the stuff real um the uphill battle that you fight to reveal that is ginormous just look at the flak that I've gotten as just being a normal person trying to do all this

(2:24:59) right now imagine you're one of these scientists or like what was just mentioned one of these UFO influencers and you're going to put your neck out there right everybody's going to come at you and if it turns out that it's not real then they're going to use that against you all the time probably like they'll try to typ cast me and use it against me all the time right so I think that those are the biggest things that I've learned out here and um yeah so I think that um I see there's a couple other people that want

(2:25:22) to come up but I think I'm going to end it here guys so I I will I do want to appreciate Taco Loo Who uh has been out there as well um I do just want to say thank you to everybody who was able to join this year space um we will do other spaces this won't be the last space I ever do but it'll probably just be the last evidence review one um thank you guys for all listening

to this tonight um I hope you guys have a wonderful evening and also thanks for listening when you guys could have been listening

(2:25:43) to the State of the Union but instead you guys uh came here and listen to me and talk about MH370 what I want to say at the end is that I've made all this evidence available out there I am going to do a podcast list of all the podcasts I did as well as all the pieces that I did on Twitter where you guys can Source them reference them you can use this evidence and come up with your own theories uh like and like what Tony was doing come up with Splinter theories if you want to do it I absolutely support all of that if people are are putting in

(2:26:09) the effort and the work uh I may even retweet your content and get it out there to a broader audience I I just want to be a member of the community that's making this community more positive the only point I did the only reason why I did this is cuz I just wanted to help people and I wanted to make the world a better place with this technology and I truly believe that one day in the future we will do that so thank you guys very much I appreciate you all and I hope you have a great evening thanks okay then we're going to close

(2:26:34) the space okay guys that was an awesome space um so uh thank you guys real everybody in the chat uh I want to thank you guys as well Sandy I see you out here sick puppy Izzy highness am mule uh rhubarb Chief guys where three uh Joe seeing you a lot rotary seeing you in here so much man James and uh Pig James if you're around too appreciate you guys His Highness Alex um Z jalapeno Lobster even the trolls here thank you guys all for being here tonight and hanging out with us Kathy D thank you very much uh Ray

(2:27:14) Tracer Wall Street uh Wall Street jour guy uh I forgot what if that was your total name but thank you very much man I didn't uh thank you in the in the space or there as well uh Dale um everybody who's been around Arwin of course guys so thank you guys for hanging out and doing all this I'm not going to do another Spa stream tonight but I will do the last MH370 stream tomorrow PJ Mike just Jeff thanks Dorian appreciate you guys as well Z jalapeno all you guys um so yeah tomorrow we'll do the last MH370

(2:27:44) investigation space or stream and we'll talk about whatever you guys want to talk about we'll have a good time we'll chill Friday night it'll be awesome take it easy everybody peace

(00:05) 37 contct 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:13) form and says now I am become death the destroyer of worlds it is show up I don't know what more I have to say I think you know I got to hear Tu b side uninterrupted um I think that's pretty much it yeah I mean that's it it's crazy that it took that it took making your own space I hopped in there to simply answer a question before I could get my word out the both co-hosts had to mute me three other people had to speak before me it's like dude like get the get it together you that's how you can tell

(02:03) that it's narrative control it's narrative pushing and one of the reasons why I made it this far is because red took notice of what's going on and we had each other's back to watch this [REDACTED] we love ufology we love this and do whatever the [REDACTED] they want and then when it when the block gets too hot because too many people notice their their their tactic is to attack the people making observations and it's like uh no no we're not this ain't you know I Kristen uh were you listening in the

(02:44) last space um yes I was and in regard to the Luc and Lula space I was absolutely appalled that there was no real control of that room and it was really unfortunate and I don't know what it is about today but it seems like everybody is turning on everyone and it's like anyone in the UFO community and it doesn't matter how low of rank you are like for example I'm like an extreme low rank I I I can I can tell you a whole bunch about a lot of subjects especially of the occult nature um but I can't tell you that much about UFO

(03:30) I I come because I enjoy it and I enjoy listening and um learning from everyone but it's just like I don't know what it is about today it's just everybody is at everybody's throats it's not full moon I have no idea what's going on that room turned me into a control freak I was like I need to be in control of this room like I if I don't get control right now I'm going to lose my mind I cannot believe that like people can't even defend themselves after an allegation without being interrupted like that

(04:03) drove me insane go ahead UFO Sarah yeah sure hey so um I'm gonna try and get this all out really Qui 30 seconds um I'm new but not really I've been around for a couple of months and I have to say that with the soft disclosure happening right now um I'm just listening and I know that with soft disclosure happening right now there's a lot more influx of people who are interested in getting interested in this topic that are listening and some of these people probably don't know a lot you know some of these people maybe know

(04:42) more and some of these people have been researching stuff like this for a while and I think that my two cents is like it's time for maybe you know like a wash out you know start bringing up new voices in these spaces giving other people chances to bring to the table topics that they've gone out and and researched and not invite certain people up to the stage don't

give them the platform to allow to be taken care of like I mean to talk out a line but the thing is is you know as someone who has been doing this forever as well you

(05:16) don't know me that's okay I've been doing it privately most people do that privately uh we're scared to tell anyone we're people but I'm like scared to talk Gerald at all yeah I and and and I'm not that in real life I I have uh you know I have thoughts I have theories I you know I'm not extremely you know scientifically whatever but the thing is is that yeah that's my thing kind of really hard and I've heard that from a lot of people too who aren't comfortable speaking but they see what's going on

(05:51) they they back me in Tupa they they just and that's not healthy for disclosure right we want everyone here talking sharing their ideas feeling comfortable people come here and the the the worst part is because it's UFOs and like you said people are afraid to even talk about their experience right it's almost traumatizing on that front this is the first place people can really open up about these topics you know what I mean and then they just get hit with this [REDACTED] crazy [REDACTED] it's so sad dude when

(06:11) when when I started Skyfire news R and tuba tell me like yeah there's like this hate group and you know they're running this op like anybody that puts an opinion that disagrees with them they attack them they do this they do that and like I'm seeing it every single day and then I join the spaces and it's nonstop gaslighting like there's no group there's no yes there is like it's so obvious at this point right like it's false allegation in front of our face and we were all there we were in the

(06:45) space we heard them say tuba just accused me of being a pedo and then tuba goes to respond right or I or I asked to hear the audio let's hear the evidence and they just interrupt him like what is this clown show why would that person Carlos ever be in another space again I'm sorry Carlos you've lost credibility you shouldn't be platformed you shouldn't be listened to but do you think Ralph's gonna do that do you think Ralph is GNA take a stand and be a man and be like you know what Carlos is

(07:16) [REDACTED] he represented that right in my space right in front of my own eyes so I'm not going to associate with him anymore no what is wrong what this is a clown show go ahead Ashton yo thanks Keem yeah I so I got cut off in that uh that space as well when I was trying to respond to some of the allegations and things that I had heard on there and like you just said it's um a lot of bullies right it feels like I'm back in high school here and you've got the people that were bullied but they weren't bullied enough so they

(07:46) want to be the bullies themselves and that's kind of what it is about narrative control like what UFO Sarah said for example you know she's just like a normal person she's an awesome person I've been following some of her stuff for a while now and it's intimidating for people like that right these people intimidate them because they see them gaslighting they see them controlling these narratives they see them doing what we saw Carlos do there which is taking something out of context to warp it in his mind to use it as an

(08:11) attack and then they're crying that they're the victims right when they're the ones doing all basically everything like you pointed out in that that space Keem is that they're the ones engaging in everything unilaterally right it's not a matter of what both sides need needing to um you know um make some concessions like they just need to stop what doing entirely right that's that's the sick part and you saw them do it to me as well like I refer to people by their first name because that's how I

(08:38) address people like so when I'm talking to Karly Ray and her husband Nicholas who is known as Tiny clouse right I'm not saying their last names first of all doxing people is not even a crime anyway so if you are so afraid of your first name being said you should probably look at the [REDACTED] that you're saying if it's that bad this guy Nicholas tiny clouse or whatever literally called me a crazy person using my name directly defaming me to his 60,000 followers like a psychopath right because these people are mentally

(09:08) unhinged and emotionally unhinged and when I listen to them like I listen to this Carly Ray Person cry bullying and gaslighting everybody on stage and then they have a total complete meltdown and act like I've killed somebody when I use her first name which is just a play on words of her actual username like that to me is just way over the top right that is total gaslighting that's trying to play the victim when you're the person who's the bully um and that's again what's wrong with this community

(09:38) so that's just my opinion go ahead UAP Mike the fact that Ashton should be calling other people bullies is hilarious that guy's whole MO is Bully every podcast he went on they were like dude you're an [REDACTED] so I mean again just hilarious he docks people's like full names you know just use their they're aliases dude stop being a [REDACTED] weirdo and using people's like government names and [REDACTED] stop doing that so let me address that because you just made two false statements in one sentence right you just did the exact

(10:11) thing I just mentioned I didn't use anybody's full name nobody on any podcast th said any of that [REDACTED] that you just mentioned like government name whatever this I didn't I just said their first name because I'm addressing them by their first name which is just stop using people I'll call people whatever I want to call people Mike well then you're gonna you know what you reap what you s Ashton if that's what you want to do calling people by your first name is equivalent to let's see what was in the

(10:36) top of that space was somebody making a false and defamatory claim that I'm a sexual predator that that has been retweeted by your buddy King milart and some other [REDACTED] loser in there right guilt by association you guys are the ones that are talking about guilt by association as well it's all hypocrisy and projection from you so it's okay for you and not other people right you are the hypocrite in this scenario Mike not me d right dude it's you do you not see it you are the one who talks about j6

(11:04) and you associate with Jake Chanley you're the one who talks about guilt by association not me I'm pointing out your hypocrisy there on j6 what the [REDACTED] are you talking about he I'm

talking about you being a hypocrite that's what I'm talking about being there and you are guilty by having king milk fart and platforming him and being his friend and R is not guilty of anything dude he didn't go to jail he literally is retweeting defamatory [ ] about me being put him in The Slammer then detective go

(11:32) ahead and lock him up you [ ] idiot cuz you can't CU you're a [ ] loser failure it's all you've been and you feels like high schools because everyone [ ] hates you like they did then can we can we put the breakes on this for two seconds and uh bring it back to why we even created this space Carlos got up in a space previously to this mic and said that tuba uh I I first let me let me back up it even more um said hey we need to quit calling each other record I brought up to R I said hey look like I

(12:05) don't see tub and red calling criminal defamation is actually a crime by way as opposed to doxing people people like to tweet calling me a call People's first name immediately apologized and unliked it when he realized that's what it said yeah but he still did it okay but please listen so Carlos jumps in and says well tuba just called me a pedo last night so then Carla excuse me tuba comes up to defend his point and Carlos just keeps interrupting him and won't let him talk so that's why we created the space now

(12:34) tua's response was I didn't say that what I said is is that uh Carlos his friends were sexualizing my daughter um so you know what what's really frustrated me Mike is false allegations after false allegations nobody's held accountable for gas lighting from these people welcome to the [ ] internet no but like that's not problem right you can't do that on YouTube [ ] idiot what the [ ] are you talking this is the problem though right where it's like people think that oh it's the internet

(13:10) so I'm just going to act like a total [ ] right Cowboy we'll sadle up and do something about it I am right now and this is the thing you see my name is my name is my real name right unlike you Mike my name is my real name because I am not afraid of that because I think that people should be accountable to the things that they say with their real name oh you're the policeman and that's the difference I'm not policing people I'm just telling you if you want to lash out don't be a hypocrite don't project

(13:32) your own insecurities not you TR to expose them in DMs like you did to Dave Bey I saw it dude threatening to expose somebody being a liar is not threatening them right like that's only a threat if you are a liar whatever whatever gymnastics you got to do to make it okay sure gymnastics dude listen to yourself you're literally saying that it's the internet so you can act like an [ ] you're telling me that I'm doing why I'm just telling you that is what it is that is own behaviors man what am I

(13:58) previously you said that it was a bad look for Lou aland to follow I like you and now of a sudden I'm the baddest guy in the world like come on you're not man you're not you're not I'm not saying that but like you're kind of having a little bit of a meltdown about this right now I'm trying to point theocracy that you're stating right now that's it right you just you just went off on

me I call me a bunch of names I didn't block you I didn't do anything like that because I understand

(14:18) you got to get it out time one at a time go ahead go ahead Mike I don't know what should I be grateful that you didn't block me or something what the [REDACTED] do you want from me I just want you to see your own actions and realize that like if you want the community to be better yourself then be the change that you want to see and if you don't then keep doing what you're doing that's fine but don't be surprised if you called out can you demonstrate my actions that have been really detrimental to the community I

(14:45) think you just record this space and just listen to it man like is that how you want to act as an adult that's what's ruining this oh so again that my whatever I've said this evening is the detrimental Behavior that's ruining the community I think yeah pretty much at a large scale it's not you individually it's people with that attitude the attitude that this is anonymous place I'm going to act like a [REDACTED] to everybody all the time guy the me you you're not the problem this is also the

(15:11) problem too Mike like what you're doing right now right like this idea that oh you believe in something I don't like you we you have a smoking dog man as your picture man you you believe in aliens right and you get upset that I'm like on your side and you're coming out here and you are trying to attack me over things that you don't agree with right this is the problem with the community man do you not see it not only do I not agree with it I believe you are being a useful idiot for the intelligence Community it's more than

(15:36) that you're so okay well let's play this out just because this is the I we're doing it right now how does this hurt disclosure how does this help the intelligence commun I'm literally saying the intelligence Community is the one responsible so just walk me through the logic because you are a clown and the fact that you were running with this and trying to associate it with the UFO Community makes us just look like clowns also so I just guilt by association it's not guilt clown by association different

(16:04) Mike let me ask you a question why is there that space from uh one of your you were in the space where you guys were saying the missing plane story uh from action who's gonna steal who's gonna steal the plane I mean I'm sure red could find the clip go ahead red yeah yeah red play yeah I'm sure right this Ian I'll put it up in the nest I can't play it but I just want to say Mike you had previously said it was a bad look for Lou Alando to follow KF new accounts after he gets banned yeah I don't

(16:39) understand it I don't know why he does it so if you think that's a bad look don't you think it's also kind of a bad look to kind of like platform him with some voice in this community when he does all this weird harassment to people and I do want to say you you came out against him with that false claims he made about tua's daughter and I respect you for that I didn't come out I did the research and figured out where the miscommunication was they really believe it but I'm I'm not going into it I don't

(17:02) appreciate for that you're my favorite you're going to go whistleblower but I I just I agree with you it's a bad look for Alando to do this and I think that extends to our entire I don't think it really matter at all I still like you Mike where Mike how come you're the only one that comes like where's Carlos he's supposed to be here yeah they tried to mute me remember that that was funny I don't know what he probably doesn't show up because you suck no I mean the answer right is that they

(17:30) here I'm inv and when I was on their space yesterday too it's like why am I getting like sound boarded by like four losers at the same time right like I feel like and the sad part is these aren't like kids right you would think is this like a 12-year-old but no these are people that are in like their 30s and 40s right that are doing this [REDACTED] like this is just emotional midgets it's just car stop spamming emojis uh you've been invited and caros spamming the Emojis too is like I mean is he

(17:57) okay come on up Carlos don't can you please stop spamming the fart sounds I couldn't help it all right I'll stop you're better than them Mike I I like what that one Larry guy said to you when uh you you three were mentioned in Brian's article kmf uplifting Tweets in UAP Mike he's like Mike you're better than them and I believe that you are better than them yeah I mean I'm better than I want say something nice about Mike Mike I appreciate you come here don't fall for it Mike I appreciate that you you

(18:24) interact with me without just raging out all the time and I appreciate that you don't block me so that I can join your spaces and defend myself when I'm being talked about things like that so I appreciate that about you man so we don't have to agree I that's fine I I don't I I don't want I think the world will be a boring Place everybody agreed anyway Mike You Know You're Gonna Go whistleblower and be our friend one day you know it you know it in your heart it's gonna be dude I I drink every time

(18:47) you say whistleblower that's the game I play a drinking game called whistleblower and I go into your spaces and every time you say it I'm shitfaced like five minutes in uh if you're just joining us now and you're extremely lost because for some reason I did this on my personal account uh I've recently launched Skyfire news which covers the UFO news and there's a war inside the UFO Community uh it's a Civil War uh it's non-stop attacks and I'm trying to get to the bottom of it

(19:19) yeah the soundboards is so pathetic Jesus Mike what do you think it would take for kmf to stop uh these these false claims against people I don't know what the [REDACTED] you're talking about like false claims I just saw him like retweet something that someone said about Ashton and then tagging Ashton in it yeah so what would it do you think he can change I mean you know that he what he's doing is not is a pretty egregious right and okay we don't need to get into details but do you think egregious he's a troll I mean he's

(19:50) a troll what do you want me to tell you yeah so do you think he can change or no what are your opinion just your op do you like to I mean I you know here's what I don't do in my life

spending a lot of time about thinking if I can change trolls okay I'm just it's just your opinion do you think he can change or not not whether or not you can change do you think he's capable I don't know it depends on what you're talking about he's changed a lot since I've known him already so he's already changed so like

(20:13) one example is early on one of the first interactions I saw with him was when he joined Lou reviews stream and you know called him a fat [REDACTED] or something like that right and uh recently when I went on he I watched part of the clip because I was clipping and editing my portion and he came on again and did the exact same thing again this was months and months later this is kind of an example of not changing at all right where it's like that's just like 8-year-old stuff right so like do you think he can actually change his

(20:38) behaviors or is there something going on with him or he's always going to be that way just if you don't want to answer is fine I'm just curious your thoughts I feel like Joe is who he is and sometimes he probably regrets some of the things he says and does like a lot of people out there so um yeah I I doubt do you think elzando following him and liking his wait wait wait red one one second R I'm sorry uh Carlos if you don't come up on stage and defend your position then I'm going to kick you from the room it's

(21:10) that simple you made a wild claim I'm asking you to come up here and defend it and prove the claim that you made if you don't [REDACTED] come up here and I'll give you a solid five minutes uh I'm just going to kick you from the room because I'm not going to let you uh sit in here and listen to this anymore you're going to have to go jump by your all buddy go ahead red yes I just want to touch on uh I even forgot what I said but oh yeah you said Mike Ray that elzando following him was a bad luck for alzando do you think

(21:41) Alando like following him and liking his tweets and same with uplifting tweets do you feel like that enables them or like do you feel like that kind of gives them legitimacy within this community that maybe shouldn't be bestowed no here's what I think I think those guys are legitimate yeah I might have to do a one lik the legitimate content they put out and has like very little knowledge of much outside Tears Don't him but like all kmf does really is kind of like talk [REDACTED] about people I never see him like

(22:10) be like this interesting look at this interesting sighting from 1953 and here's a picture and here's a I never see that you know what I mean all right well first of all I do yeah I see him post plenty of things that he he posts scoy conversation I see him post all these Scooby-Doo like really crazy titles and some of them are pretty funny or he does a lot of those weird NE de Tyson Al the Neil de it's so you think Lou likes that chat real quick um how much better is this space than the other space man

(22:44) some of these spaces out there boring as hell they're so boring you know at least this one's got stuff going on you know it's toxic but at least it's got stuff going on but not right the there for you bud it's right up there um I mean do what you do but just just right there easily accessible it's right up there what's up there the clip where you said Carlos like sexualizes

children yeah you accused him of sexualizing children I did okay so play the we'll just have someone play the clip no I would go in

(23:14) front of a judge I vaguely remember something like that but I think the context is important right because sh Show of a space right it was a [ ] show he promoted that fake Reddit account with those lies da and it was so much that he had to apologize and you apologize too UAP Mike so like he even acknowledged with his apology that he did wrong no that's said to me in a Carlos said to me in a space multiple times that that is 100% your account to [ ] liar you piece of [ ] that's exactly what he said to me that's

(23:42) exactly what oh are you kidding me when it's when it's provably not my account and it involves me it involves an accusation of sexualizing my own daughter it's not sexualizing children how is it not how is it not Mike and then when he was given the evidence he decided in the space to say no you're a [ ] liar Tupac Cabra it is Tupac cra's account you yourself had to come in and say Carlos sorry it's not it's not Carlos you had to correct him so Carlos was pushing Carlos was pushing that

(24:09) Carlos you remember that mik you had to correct him can you confirm that happened confirm what happened that I that you corrected him about the red account I'm not gonna say anything because you guys are just like jumping all over me because you said something that wasn't true the truth the truth J stop everybody stop all right ring too bro you stop I'm just saying wait wait wa stop guys guys stop Mike do you do you remember correcting Carlos on the truth of that story absolutely not well there's a clip of it I think

(24:42) Moran learner is posting it later what the [ ] is this Moran learner is posting it Mike your friend your friends your friends promoted a false they promoted a false conspiracy they manufactured something that involved the sexualization of a child my child and then they promoted it online as if it was mine KN KN that it knowing that knowing that it wasn't knowing that it wasn't Mike you like calling me a pedophile what do you want me to do why are you changing why are you moving the target why why are you see this is a

(25:14) silly ass thing guys one at a time guys guys tuba you're interrupting Mike you're interrupting Mike you're no Ral oh my God I represent myself I have no asks other than for Skyfire news to report the top report the topic on the topic accurately okay uh and you know with as little controversy as possible uh that would be my ask them andion my ask of you is to I just asked them what they wanted sorry

(26:18) guys stop being obnoxious about what I think is a hoax but feel free to do whatever you want okay yeah I appreciate that man so yeah in my sense I'm just going to do what I want to do right because I'm just a normal individual person but uh I'm not trying to offend you I'm not trying to hurt the UFO Community anyway I just assure you of that uh and then I'll let the other guys respond to you know how they can feed back into skyfires go ahead noncredible go ahead non yeah I mean I would definitely Echo the things

(26:44) Mike said I mean wow that actually be kind of rad but uh I I would also say to um be able to differentiate between criticisms and attacks um analysis and slander things things like that and you know to acknowledge that Joe is an [REDACTED] but there is no evidence of him uh you know being a us or foreign agent or asset uh in Direct Control running uh you know the spearhead of a u a what do you call that uh a perception management campaign on Twitter yeah if I could respond to that too because I think it's a good idea that we don't just oh you

(27:26) ason uh just quick yeah you could you could uh be willing to consider you're wrong and not be a [REDACTED] just in because the point oh yeah doesn't seem like you credible okay sit quiet for a minute I just want to point out too like you made a like I actually unblocked you because you begged me to unblock you like several times so I actually did very the very first thing that you did was you made a space where you were the L of space was I don't remember exactly what you were calling me but it was uh fatory and not nice at

(27:59) all right so when you the one where I was like just yes that one the one you said that I'm a terribly like because this is what I'm talking about like you listen to what you just said and like not only you're a huge hypocrite but you're the exact thing that you think that I am right and that's that's the ultimate problem here and that's what I want you guys to just get like some level of self-awareness on um I do need to make a little bit of a Continuum correction I made that space

(28:24) after you blocked me again um kind of kind of fuzzy on why because you bought me so many times but it's probably because I was like hey uh like I'm mad that you said like no one's tried to claim the reward when I technically tried to claim the reward so like this that this part too I want to help you out here because you obviously haven't been following the reward was not to like try to debunk the videos the reward was for the hoaxer to come forward with the source files of their work right and like I don't know

(28:51) if you just like smoked too much weed and never like figured that out but I've said it like a hundred times no I was just stretching the truth to like make a play at you bud exactly you were stretching the truth and you were gaslighting to make a play at me right this is the problem with the community I appreciate you admitting it for once because this is what needs to stop when you do this toxic [REDACTED] you are bringing everybody down people believe this fake [REDACTED] and then they build these fake narratives in their head about me based

(29:16) on the fake stuff that you're spreading man do you not get it I I think if anyone had looked at my post they would have known like cuz like I responded to people who asked me like what do you mean you're not really trying to claim the reward and I was basically like yeah I know I'm not uh right so I mean anyone who read would know what was going on but I would just say um like man I spent months like trying to talk to you like a normal person like I you blocked me out because I said I had definitive proof but you

(29:44) didn't right you didn't have definitive proof that's why you got blocked you didn't look you never asked of course I know I off the because you're trolling man like you know why you

got blocked I wasn't trolling then but I was trolling after let put this let's put this on pause and we will come back to it um new on the stage we have vit vit if you've been paying attention uh to this like hate group versus red bettered by the term hate group so I'll I'll say give that Big D disclosure chat what are your

(30:15) thoughts on it yeah what I miss no I'm just kidding um you know I don't know I just I kind of heard Ashton talking a little bit about you know the problem with the community and that that's the only reason I want to jump in because honestly Ashton sent me some pretty here he go I would say unprofessional you doing this Pat comments to Oh I thought I was allowed to talk I'm sorry go ahead Ashton no go for it no go It Go as don't interrupt please I'm just trying to be again clearly you're proving my point of

(30:51) being unprofessional again I'm just saying man it's it's kind of hypocritical to be coming after these guys and saying being whatever I could show the messages you sent me man and they're very unprofessional I never said anything like that to show them I won't show them no please do ask I'm gonna show them on my stream right now I'm streaming just because just in everybody knows I'm just gonna clear the air here and respond to this because I knew this Pat loser was gonna come up and say this

(31:16) [REDACTED] right like wait out resp he's triggered he's wait wait everybody stop everybody stop everyone be quiet Ashton read the DM M uh out loud please uh give me like a minute I got to pull them up okay okay perfect go to somebody else let P finish whatever [REDACTED] he wants to say uh go ahead Pat Uh final statement on the messages yeah um honestly it doesn't matter Ashton's proving my point right now he just call me a loser it's [REDACTED] okay I'm ready with the DM please read read them out a go ahead

(31:50) Ashton okay so the first thing was that somebody sent me a screenshot of one of the replies on one of Pat's uh vetted podcast YouTube things said I'd love to have you have an interview with Ashton Forbes a one-on-one without anyone else chime I think you'd be very good interviewing people with controversial beliefs and ideas I thought the Chris letto would be a great guest Pat replies I've invited Ashton on he thinks I'm lowquality streamer so he gets ghost so he ghosted me and then said I never

(32:14) invited him so I sent this message to Pat because I've never interacted with Pat on Twitter or anywhere else and it's a quick question why are you lying to people in your YouTube replies this is the first message between us the one I just sent you right now Ashton our Booker is sent you an email and you never responded you look silly now why are you creeping my YouTube replies this looks desperate and weak on your part I'm a lowquality streamer remember like this guy's clearly got out some kind of

(32:37) complex don't worry dude I will never get you on my show you've changed my mind on that I'm sure Joe Rogan would you have you on Flex arm right and what this comes from is I heard this Pat loser guy talking on some other podcast finish I will I'm going to finish them I just want people to give the context I heard him talking to somebody else where he's sitting there

talking about me with this other YouTuber saying he thinks that I made the videos and all this other [REDACTED] where he's never even

(33:02) talking to me right and this guy claims that he's a podcaster he never reached out and spoken to me so I say I didn't someone else send the screenshot to me I probably didn't see your email if you sent it to the MH 370x one because I'm over 300 behind and not having you on isn't how it works anyway but yes you're a huge loser and so is your podcast thanks for proving it to me bad news for you I'm going to finish bad news for you is that no one goes on your show and you got banned from spamming it on [Reddit](#)

(33:27) too sucks to be you that's referring to the the ufob community lastly don't worry I won't reveal the DMS or badmouth you you're not even relevant enough for that lol good luck with your podcast dude and then he sends back smiley face or crying face thanks for this I hope you appreciated it okay go ahead thanks for proving my point Ash okay uh but all right uh two second time for everyone to laugh because that was funny um okay so I guess what Ashton's trying to say V it is you accused him of Faking the video

(34:07) or something uh go ahead V respond yeah that that's correct I made a video professionally made a video right like I do everyone does and that was my theory I said I'm 99% sure that I believe Ashton either made the videos or knew who made the videos if I could offer if I could offer an opinion I think uh V has a point where like Ashton's being toxic but then Ashton has a point because he's being falsely accused of something you know I see both sides I understand a lot and I wasn't going to reveal it but of course

(34:45) I I knew when V came on to speaker the first thing he was going to do is try to take that shot at me right because that's kind of like the type of person that you are when I read these kind of replies right and this is why you got banned from [Reddit](#) as well cuz you're trying to spam your podcast to get impressions on there right and all you had to do is just be a normal person man like why are you taking it so personally why are you and some guy talking about how I had a public bre who who's me and this guy Ash I did

(35:09) video YouTuber because I looked through this clip when somebody sent me this link right so you were the guest I think on the show I don't even remember it right oh well why you call him a no-name YouTuber cuz he literally a no person had like 100 followers dude who cares how many followers you have is that how you people do I didn't that judge people no it's not look man Ashton every every word that comes out of your mouth proves that you're projecting everything you're saying you're rude you're unprofessional

(35:37) you're vile and you're going to sit here and lecture people and how you're the one who started this professional listen dude you came out stat laundry one guys one at a time okay go ahead finish your stuff I'll let you go thank you look man you came out on the scene and you're making claims you're going on podcasts you put yourself in the public eye ridiculed to be vetted to have people to have opinions on you sorry if that bothers you dog people are going to have theories about the things you came

(36:11) up with you have your own theory about MH370 and what happened and how UFOs came and teleported it away and whatever [REDACTED] right so other people are allowed to have their own theories about you doc that's part of the process what's that part of the process is you calling people no-name YouTubers losers I never called you a loser in my video I never said anything about you personally if anyone wants to go and watch the videos you're going to look like an idiot Ashton because that's not how I

(36:43) was I'm very professional in my videos I never condescend anybody I never say anything vile about anybody that I make a video about and for you to say nobody wants to come on my podcast dude you don't know that I do daily videos I don't go out and get interviews dog that's not the process that I do but if I'm being real I've turned down lots of interviews of people wanting to come on and I am actually setting up more but that's neither here nor there man so look you do what you want with your

(37:14) stuff and I'll do what I want I just thought it was odd that you're lecturing people on how to be professional and vile and I just didn't feel that that was fair that's all I have to say I'm out yeah no I mean I think that the professional thing would have did to do is to reach out to me or to reach out to me directly I mean I I'm easily we did reach out dog again you lied about that we did reach out you said you didn't see the email if you don't get that I don't know about that how am I supposed to

(37:40) know that dog I get it you got 500 hey dog hey dog you done have a meltdown can I talk dog Jesus Christ man you do reaction videos man that's the reason why you don't have people on your show I've seen your crap it's low quality that's why I don't watch it um I but I wish you the best in your your stuff I think everybody deserves to make money how they want to do it right all you should have done all you needed to do was ping me on Twitter uh I I think I might you blocked me on Twitter no you

(38:07) blocked me and I use that in my video so you unblocked me when you had your unblock a c apocalypse or whatever the [REDACTED] you called it okay so but you had me blocked dog so how am I supposed to reach how am I supposed to Tweeter DM you that's why our Booker who we pay and hire to send emails out and anyone that's Keem are anyone professional here knows that that's what people people have Bookers they use other people to reach out and coordinate that stuff I mean I can see honestly I don't remember

(38:37) what you did to get blocked but obviously it was the right Mo okay if I could change gears here um vett you recently um uploaded a video and I don't exactly remember what the criticism was but I think it was a criticism of blue Alando maybe I'm wrong about that and you could uh better educate the room and you were recently attacked I seen I seen you had to like pin a a comment on one of your videos being like bro I like L Alando and what was that about oh also the Bots wasn't there some bot situation

(39:09) what happened there yeah we got hit with I did a live stream uh the other day just a couple days ago because the video I had uploaded something was wrong with the audio and

everyone pointed that out in the live chat so I did a live stream yeah we got hit with all not even blocked I don't know if they're Bots or real people uh but yeah they they attacked people are so upset what what were you attacked for what exactly got uned I I didn't have chance ghosted him guys he said one email that didn't get a

(39:36) response I've ghosted him I mean I I don't know what do you mean like what were the messages that they asking yeah yeah why why do you think um you were attacked like what was it about I mean I don't know why uh to be honest they're just putting stuff in like you know basically kind of what y'all are talking about Patrick's a child you know molester I mean just sit just throwing [REDACTED] at the wall about me and spamming it 10 times through 20 different accounts because then after after I saw

(40:07) that because I I I happened to just randomly click on that video after I see did he actually make a video about me I lit didn't even check I've never even seen video one of Mike's friends or part of his friend group come out and say the easiest person in the world to get a hold of I can't remember who it was but literally came up oh it was disclos your mic right when you all this weird [REDACTED] about vetted and like his past and stuff yeah disclosure know thaty oh okay my bad I didn't I I don't know I thought it was

(40:37) one of your homies Maybe I'm Wrong well yeah about the Lando thing um that's interesting because um I actually tonight that I'm going to release in a video tomorrow I guess I'll give you guys a little preview um but I got a message from L professional dog about the video that I made today in fact so before he tweeted out about Michael Moran um he said they sent me a message giving me more details on what had happened they asked me to keep it Anonymous I said I can't do that because I don't do Anonymous sources on vetted

(41:15) um I said I got to make this public otherwise I can't share it and they said I can make it public so I'm gonna talk about that tomorrow um so Lou and I have zero issues um the only thing I was questioning was again it's just I just ask questions on Ved and I get it pisses some people off um so you know Lou um had no issues with that just like Jeremy Corbell that watches my show has no issues even Stephen Green Street has no issues with my show and I rag on him I rag on everybody you know I I come I ask

(41:47) questions about everybody why did the guys at disclosure tonight like come out at you like that because I made a video about him because I made a video about uh basically pie of [REDACTED] podcast one a story that Mike disclosure had told and I busted him on spreading a fake story online yeah I busted him on it he deleted it I still had it I made a video on it they weren't happy this guy like jul and their connection with r just question that just questioning um and then when they got that phone they did a live stream where they got a phone call

(42:17) from Lis alzando um I just made a video about that and I just always question how is Luis alzando connected to disclosure tonight M dis and Rick doie like how does that in my mind how does that sense it's funny CU he wants they really close I actually love Larry Larry if you want to come up here I know you're kind of on the disclosure tonight mix for a while they're really close

with Lou not talking about Rob Heatherly so these guys like the thing about these guys like him right like you just saw him

(42:47) have a full meltdown over being ghosted right and then trying to like claim that oh he's too good to have me on his show like you know extreme grifter right while at the same time saying that he's attacking everybody else he just admits that he's doing it on his show which he does right like because he's he's doing reaction content like the lowest quality bottom feeder [REDACTED] right so if you're this kind of bottom feeder person like Pat from the vetted podcast don't go throwing stones at other people man it's

(43:16) just going to come back to you every single time pat embarrassing stuff man I've actually got some new information that um tonight in fact that um Lou is not fan of Rick doie and Rick Dodie has lied about his relationship with Lou um so that's interesting because Lou hasn't come on disclosure tonight since Rick's been a part of it and that is true um so I don't know what's going on there fully but all I know is me personally trolling every time right I want to keep Rick doie at a distance Ralph uh I asked you in the

(43:57) previous room I said you know why do you uh keep saying uh you know the pedo stuff has to end and the trolling stuff has to end on both sides uh when I don't see tuba and red making pedo allegations Carlos jumps in makes an allegation that tuba called him a pedo and then tuba is trying to explain what he said and he keeps getting interrupted over and over again so I had to create this space to actually hear what tuba had to say and tuba go ahead just so Ralph can hear it go ahead tuo oh yeah okay so what

(44:32) happened was uh I made a comment the comment was people like Carlos and his friends like the docs harass and make uh uh sexualize children they make comments sexualizing children which is absolutely true it's absolutely true uh noncredible noncredible up here sharing this thing ah there there the real abuser is tupacabra always shows his true nature as he lies not being Li lot of lots of zes in there non-credible but you're totally wrong the it wasn't a lie what I said I didn't call Carlos a

(45:10) pedophile I said I didn't say my opinion Tu but why are you addressing me like it's my opinion when I sh somebody else L of there I guess my question is R are you still going to associate with you know Carlos the guy that like goes in your space as he lies Love T dude go ahead Ralph I think Elon Musk took him from us we lost two of Ralph are you there Ralph you there but guys are just trying to cancel Carlos is this what this is we are trying to cancel I want people held accountable for false claims I'm so sick

(45:52) of the false allegations I don't think serous Mike dude ever since I've been here I've just every space I jump into somebody says some wild [REDACTED] allegation that isn't true like I'm so sick of these people you do bring a certain gravity with you Keem um just you know maybe try listening can I tell you what my one of my first experiences was you told me my wife was in other men's DMS when I first talked to you but she was she was that was pretty funny though it was inappropriate Mike I we

(46:26) apologized but it was kind of funny though so so is that a false is that a false claim no no it's not yeah well this is you know this is probably why when I see you I'm gonna slap the [ ] out of you I swear to [ ] God it started off with you coming into my space inse weird which was a weird misar if somebody comes to me and says as your girlfriends and other men's DM I'm probably a going to be upset about it I'm not long story short um I was like okay well if this guy's just going to

(47:02) sling false allegations that me and my company that I'm G to sling real ones right so I went through the timeline I seni your wife was calling Lou Alando hot and I know that she said on previous uh conversations that she's been in DMS with these other gentlemen so I just said something that was true you know so you think yeah right see you're laughing about it it's a false ation because again contextually you try to make it seem very sexual like that is like it's an extra marital thing right and and

(47:34) this is why Keem when I see you I'm going to slap the [ ] out of you dude that is [ ] that's like some man code [ ] ask your girl ask your girl about that what she would expect so I'm just saying just know that's what like the rule is in the world when you talk about a man's marriage like that just know that that's a [ ] you got some [ ] balls saying that you got a problem with false allegations when you running around talking [ ] like that but because what I said was the truth

(47:59) your wife really you it's not the truth it's not the truth again you know it's not you keep saying this is why TW that out or not this is why no one is going to give you credibility and no one is going to give you credit because you do [ ] like this right do you see how you're making yourself a clown right now in front of all I archived the tweet on the way back machine it'll be there forever you goad yeah you're like a 40 something year old loser who's pretending this is something that's real

(48:26) but you know he has even got a statement from Susan Go's office come on man do some real work it I'm just saying what I said is factually correct and true and can be backed up by multiple different data points and Mike you don't want to assault anybody but at the same time like you know this is the thing right keem's good at being a troll I'm not as good as him but I'm I'm decent and the thing is when you you project your insecurities when you get upset like this about it right like if you didn't

(48:55) get upset about it you have not touched the vagina don't talk about marriages or relationships dude I don't want to talk to you are just you wouldn't know what it's like to be caring about another person like this so just shut the [ ] up and here's the other thing I I stopped like talking about it as soon as I realized how upset you were Mike just so you know I don't care it doesn't matter to me like I'm just telling you the fact that it's ironic and if I were really that upset I'd block you but and like

(49:23) I'd block all you did block you did block him right you I blocked you guys cuz you suck as a news organization that's what I said that's not true you like our post come on I admit you like

the post literally untrue I have never liked one of your post wow no I was I was saying in your mind you of course you would never like it because then kfm would them in your mind so you believe in ESP now this is great I just I fully believe that you appreciate something wrong with me guys I like this stuff much I don't spread false allegations

(49:53) the thing I said drama what's wrong with and it was a little trolly but it's factually true Ashton are you gonna you gonna give him the same talk you gave me earlier or we just gonna let this slide bud sorry what do you what do you want I'm not following thought here help me out uh well because you were like oh the reward oh I'm stretching the **truth** right and it's just like come on yeah Keem did start to stretch the **truth** a little bit Keem I think that was a little bit unfair um and I I kind of jumped in on

(50:22) too cuz I saw how Mike was overreacting and I kind of you know pushed his buttons a little bit and I apologize to Mike it's not appropriate to say that about somebody's wife 100% apologies aren't worth a lot but okay again guys guys guys we have to put this in context all right this is in response to him saying that we're dragging veterans which we did not do certainly weren't being fair yeah I don't know I don't know Keem let me just say it seems to me like that's not an appropriate response

(50:45) to that allegation I that you know just a you know an adult that might say that well I've won all my internet Wars by being **truthful** and honest oh really is that what the scoreboard shows no they wouldn't believe that cognizant ape they would never believe that screenshots of them um anything more to add uh what was I gonna say I forgot I think Ralph can speak now yeah uh let me try to bring him back up and I would love for us to be able to have spaces where both these sides mean you can see that there's only a couple

(51:27) people from one side that come into these spaces and then you know the other spaces it's always just yelling and booting people and stuff like that ashon maybe try coming as you are and not as like uh a lar like [ ] with like uh raming us you know questionable uh service issuing myaces by the way come as you come as you streaming them it's great content um well I you you're I'm going to kick you then if you're going to stream my spaces without permission that's [ ] [ ] okay sure

(51:58) whatever you want man uh but that's part of the problem too right like I think we could just we can talk like normal people to one another and maybe we can wet you know kind of fill this wedge that seems to exist here and maybe try to accomplish something like I think everybody here actually wants to disclosure to happen or at least get to the **truth** bro I have been here for years I don't know talking about I've worked on I've all right I'll be perfectly honest I've had a couple projects that have face planted all

(52:24) right but uh you know I've got stuff in the works UFO Lake group we're we're talking we're I've got asks requests out there to get people in some big names actually I'm working on to get some interviews are you gonna get Lou so we I'm I'm working on [ ] we're gonna get some we're gonna land some big names that I'll bet you Skyfire ain't even gonna land so I love

that for you Mike I love you doing this I love that for you I do too man and I'd love to be

(52:51) able to support you but it's hard for me to do that when you guys are just reaming you want you want to know what attacking me and when I join the space all selective hearing you got that Ashton I don't need the air the airplane Man hoax guys support that's not what I'm worried about okay no problem well I I I do think that more people uh need to do what Skyfire news is doing need to do doing uh need to do what um you know vet is doing right you know we need we need more content creation and less nonsense for sure sure

(53:27) like come on like enough's enough like uh oh finally Ralph Ralph go ahead respond I wasn't gonna say anything about v no I just I'm glad to get to talk to what's the gentleman's name that's the vetted guy Patrick Patrick Patrick um have you had an opportunity to have a conversation with Rick Dodie opportunity dude's everywhere no would you be receptive to that 1 million per.

(54:01) okay only if he's only if he's willing to everything on the board like I'm allowed to ask any question I want Absolutely I'll set that up I'll follow you and then we'll do a DM and I'll set that up 100% I would love to do that love to see it yeah Skyfire with love to see that one for sure um noncredible any final thoughts because I think we're winding down here well this was a good hour I just uh to to kind of Hit the topic of the day you know can we get through this [REDACTED] I mean I think a lot of people ready get through this

(54:40) [REDACTED] but you going to have to plow through a lot of roadblocks and some people are going to have to make more concessions than others uh and you you only got one to one and a half of the three people you need to even try to start it so so that's you said kmf is an [REDACTED] can you talk to him and maybe get him to stop being an [REDACTED] you're kind of close with him aren't you I I don't know about close I mean Twitter close-ish maybe but uh see red that's kind of part of the process like unless

(55:11) you're ready to get off your horse and like you know we're you're GNA need get some good faith uh I mean I can't tell you shit's just gonna stop you said the guy was going to jail you told the entire internet that king milk fart was going to jail for like 18 months there is no way he is ever going to forget that going at all like I said you're definitely gonna need to learn the difference between H criticism and slander uh I I do think uh if I could interrupt for just two seconds sorry but um I do think

(55:48) this has been kind of manipulated to where uh we're now like acting like red wants peace uh red was not yeah red red or tuba was not seeking any peace it was Ralph that was trying to organize a peace treaty that's why I said you have one to maybe one and a half well Panda was asking could we maybe get KF to stop being an [REDACTED] and I guess that would be dependent on you know to who yeah these are guys are definitely not to Panda he uh Panda never sailed other people like Brian Johnson and like other random people about it

(56:27) I'm not sure you I mean there's again you somebody can be an [REDACTED] be giving criticism

Fair criticism especially public figures but uh you know ah you know maybe I mean we probably to stop like doxing you maybe I mean I would try appreciate that thank you because well that's the thing though I mean I think the the worst I've ever heard Joe do since I've been here is like say one person's name once in the immediate imately got booted and then like the kmf harassment archive called that guy C like 20 times and said that

(57:01) he was like supporting like all this like crazy [REDACTED] you're always talking about you see where I have a problem R do you have any response um no I mean I think people are a lot of people and like Brian John's article said a lot of people are kind of like in the group because they're afraid to get targeted and I kind of think that's true for a lot of people I saw the uh harassment archive was also saying that I get where Moran's coming from on that I one person tell Moran to call me okay

(57:32) I'll tell him name one person I'd say noncredible Jason for sure [Laughter] um start laughing that one godamn well you've never called him out I'm gonna I'm gonna go I'm G to reach out to milk farts I'm G to have a chat with milk farts I'm going to see if there's any way that like uh you know uh we can move forward here and if he's receptive at all uh I'll reach out to red and tuba and uh let's try to do some like public thing where no more allegations you did that come out we

(58:12) just get to the meat and bones of this of like ceasefire all right and we'll just we'll see how long that lasts like maybe the some of us that are not involved in this like myself or Ashton or vett it we could all take on like how long the ceasefire is GNA last that would be a lot of fun there has been multiple ceasefires no Panda's got that harassment archive account that's gonna count anything that comes across from that thing is on him that's more un learner but also there's been multiple seires like I've always

(58:42) said my problem is with kmfs behavior not even him as a person I personally feel like he's being used and is gonna take the fall for some things that he's being told to do by others uh he's literally a py and doesn't even realize it it's very sad but uh and it's just weird that all these people jump in front of him but like I said my problem's only ever been with his behavior if he stops his behavior I'll stop defending the people he's attacking you know what I mean but people need to

(59:03) know they're supported when they get like hit with this mob [REDACTED] it's very strange and like I said I've seen people run off by it so that's why I do it it's very strange you haven't talked to Susan go yet ah it's very strange you never consider what like the actual Pentagon be do in here as a third party to stir the [REDACTED] pot Panda I got to tell you that bud well I can speak for everyone here if there's anybody here that definitely works for the government this awesome Forbes and on that

(59:33) note I'm just joking ashon on that note uh we're gonna leave it here uh I'm so tired I need sleep uh thank you everyone and for all my fans that are here that are lost trust me there's a lot you got to get caught up on go follow Skyfire news good night everyone okay chat that was

fun um wow so I didn't expect to stream tonight I was going to finish up the there's how many more pieces do I have left I've been trying to blast these pieces out we got the Rolls-Royce stuff out I think

(1:00:12) we're good with all the Rolls-Royce oh no we still have the Rolls-Royce engine stuff to go oh boy there's at least tomorrow is going to be a busy day um may not be streaming tomorrow where's my other one the iMat stuff the Rolls-Royce stuff the Espionage post the Edward C Linn Post so we got like four more four more to go and then we'll be done with MH370 investigation um and then after that it's mostly going to be science probably people everybody's been asking me what um you know what what I'm going

(1:00:50) to do next I I don't know I don't care I'm I'm again I've always been a normal noral person I've always had a normal job as well which I'm probably going to go back to doing and focusing on for most of my time um I am going to do some nerd stuff this weekend and I I got my capture card set up for my Nintendo switch that I haven't uh used in over six months maybe over a year uh and I'm going to play some strategy games this weekend I'm going to stream that on YouTube and on Kick and maybe on X I

(1:01:20) don't know if I stream it on X probably going to get attacked but might just stream it there anyway um tonight I've got uh Sonia pan we're going back on her show tonight it's late at night uh for the United States viewers if you're on the west coast it's not too late west coast I think it's like 11:40 uh p.m.

(1:01:40) good night Dorian appreciate you man uh so let me just go full face here with this so as we wind down here there's a couple more podcasts I still have planned I probably will If people really really want to talk to me I probably will um I probably will actually you know do other podcasts with them but I'm hoping it's not going to be all about MH370 I may try to Pivot it more towards what uh My Views are the UFO phenomenon and the science as opposed to the MH370 stuff um I I've seen just from interacting with people and stuff out there people have

(1:02:13) been sending me screenshots of like the Matt Kim post on like Instagram had uh about MH370 had like six seven million views um somebody posted another video back from November remember that someone uh posted on Tik Tok of me that had like 40 million plus views um so people know about the videos whether or not they believe they're real or not is inconsequential because what's going to happen is that uh end of the day the they're not going to find the plane in the ocean you guys have seen the the news articles that come out

(1:02:45) they're not going to find the plane they're going to continue to not find the plane eventually people will come to terms with the idea of maybe that iMat data is not right the moment people realize that immat data is not right they're going to come they're going to figure out the fire scenario right 19 Witnesses support the fire scenario it's by far uses more evidence than anybody else more evidence than Jeff wise more evidence than any of these other independent group people use right and

(1:03:07) then they're going to start to realize that maybe those videos are real even though they seem impossible so that's why I'm not worried about it at all right time is going to vindicate us this might actually be a Bob Lazar situation where like 10 or 20 years down the line the stuff starts to pop off yeah so um once again I'm on Sonia Pon she's a UK streamer she has a really good show that I went on once before already I'm going to give an update uh some of the updated evidence I'm going to be updating the evidence as

(1:03:36) well uh that you can kind of see here um the drift the the drift stuff that I posted the orbs slowing and reorienting the raw Telemetry data not being available until a week after the videos were published The Independent group not even knowing that the data was legit until June of 2014 which is after the video both videos were published uh going into the connections of Rolls-Royce with locked Martin and Rolls-Royce with the US government right which goes to show the cover up here um and it's only going to be a 20-minute

(1:04:09) segment so it's going to be very short so I've got to think about exactly what I want to say regarding the missing plane it'll probably be pretty similar to what I just said to you guys right now right I just want people to know you know what like what we do here now is we position ourselves in such a way where when it turns out that this plane didn't crash in the South Indian Ocean it's going to become inevitable that it has to be our theory is the is the predominant one as hard as it is to

(1:04:31) believe right that it was a fire that it was some kind of teleportation event that we've got this crazy advanced technology and however long that takes that's fine right but what's going to happen is every time this stuff gets brought up every year every time MH370 gets brought up people are going to go what about those orbs what about that Ashton guy what about MH 370x right it's pretty wild yeah it's going to be Sonia pan on TNT you got it um so let me me switch sonal Pon on TNT it's uh 2:40

(1:04:58) Eastern 1:40 p.m. or a.m. this is a.m. us time 2:40 a.m. eastern 1:40 a.m. Central 11:40 p.m. West Coast time and that's also equivalent of what 7:40 a.m. UK time okay so it's going to be a 20-minute segment it'll be really good she's awesome she's super nice lady uh I was really happy to go back on her show because she's one of the better podcasts I had where I started to realize that like people were much more open-minded I joined conspiracy um uh spaces and spaces that are like um you know

(1:05:33) right-wing spaces politics spaces and everybody's chill as hell and even I bring up the videos sometimes and people are still chill about it right it's only in the UFO Community these people flip out and it's just bizarre right but yeah it's pretty interesting so yeah that's the reason why I've got to go to sleep here so I can get a few hours of sleep uh before it starts that's why I wasn't going to stream um and if I can't sleep I'll probably put out the last post or um the

(1:06:00) the Rolls-Royce follow-up post about the engine data where they had the Wall Street Journal stuff um yeah and yeah and that's the reason and then the sorry the other things that I'm going to do as well for the people who are interested this Buster Rhymes this Buster Rhymes

thing cracking me up for some reason chat uh I am going to post uh we probably I don't know if I'm going to do a new evidence link cuz I can just update the evidence uh on the Google Doc but I am going to make a new uh Google doc of all of our

(1:06:31) works to date which is a lot we haven't updated The Works to date in like three months now granted there was less and less works that are related to MH370 and there's been progressively more related to the science but I want to have a dock of like every single tweet that I did with every single work right so and have it sorted the same way the evidence is uh because what was happening when I did that before was that people would just link those to people all the time right um have a good night sick puppy and

(1:06:57) sorry I didn't say hi to everybody today but uh I'll do that at the end I'll say goodbye to everybody um because I want to have the Google Doc that says here's all I want the Google Doc of the evidence list I want the Google Doc of all the Twitter posts because I if I end up writing a book which I I hate writing everybody I freaking hate writing uh but if I do end up writing a book then I want to be able to reference all those um so I can pull in some of that data save me some time because I've done a

(1:07:21) lot of writing um and then the other thing as well is get the podcast list I want to have another Google doc of all the podcasts I already have most of them actually it's probably not most but where is it here it is um like this is how many I have right now but I've been on alien addict five times I've been on investigate Earth five times so this list is probably like twice as long maybe not quite and Elizabeth Lane did she just never post it I don't know some of them might be hard to find like

(1:07:54) Coast to Coast AM is that on there there's Coast to Coast AM the muon are they listed they're here okay I think I went on Oppenheimer Ranch three times uh finding Howard Hughes is going to be tough as well because some of these are radio uh just frankly we did or quite frankly we did two of those um so yeah it's a it's a long long list guys and then there's the ones that I'm not even going to promote that we did right Julian Dory Danny Jones the lur Lodge those are pretty much the only

(1:08:28) three uh it's sad because those are some of the ones that had the most Impressions but it just goes to show that the drama really drives Impressions right um but yeah man we've we've hit the the the circuit man we hit the circuit uh have I talked to alien scientists yeah I went on I went on alien scientist like three times twice or three times but only once to like really talk about the case where is the alien scientist one yeah right here here's the alien scientist one I'll post the alien scientist one in the chat

(1:08:55) because there you you asked for it um any other questions yeah Artis and Tony I I probably will I might actually do that I might actually post them feed them into chat GPT and have it give me some outline or summary for it um it might help yeah I honestly think that there's not many people in this world who' have done more podcasts than I've done like this is it's it's crazy I started probably in October and since October I've done a podcast almost every

single day on average some days I did two podcasts um

(1:09:35) it's slowed down a little bit but not really I've had them like every single day even now um and I'm actually you know it's fine I don't mind doing podcasts I like talking to people uh but it's exhausting especially if you are working eight hours a day you're streaming for a couple hours every day then you're doing podcasts um and then you're also trying to do investigation and and um you know dig into the science like there's just not that much time for all of these things

(1:10:04) you know and having a normal life I used to hang out with my parents a lot more because they're older and I want to like see them it's part of the reason why I uh why uh I live near them and uh you know it's even hard to do all that right um same with my aunt who I like a lot um and it sucks cuz I gave my aunt a shout out on the only podcast that ended up getting deleted so maybe I'll have to give her a shout out on the uh Sonia Pon tomorrow yeah Tony I would love to go back on your show again at some point in

(1:10:37) the future man um and I think that there's a lot of podcasters that that want to have me on again right um it's it's now getting to the part where there was like scheduling issues right I maybe have done more more podcast than elando a lot of people too what they do is is they only go on select ones right where they are going to get they're going to get the right questions like if I had gone on vetted for example with with Pat which you know let's go ahead let's I'm gonna apologize

(1:11:07) to Pat from vetted I was rude to you you are correct and I was rude to you on this stream as well you're correct um I'm clearly the type of person that will uh lash back out if you come at me like I'm going to defend myself I'm going to Stand My Ground I'm not like all these other celebrities out there that are going to play the pr game right that's not who I am um and yeah so you know I did uh I I was a little bit offended when I saw him talking about with this guy on on this one um YouTube thing that I got linked

(1:11:39) to right um but I would have gone on his show absolutely I would have gone on his show right if I had saw that email I would have gone on his show but if you guys been watching my streams you know I haven't had time to go through the emails I'm hundreds behind my email box even got filled up I wasn't able to even get anymore um so that's why the people that do reach out to me they reach out to me via Twitter via DM some of them have phone numbers or my personal email right the people that know me the ones

(1:12:03) that are like the big- time influencers and YouTubers and what have you um but it's very very easy anybody that out there is want to get in touch with me the simplest way is to Simply reply in one of my tweets and say you want to talk to me or I I try to follow all the podcasters so that they don't even have to do that so that they can literally just DM me directly like Joe **Rogan** did right um because when you reply to my tweet and say you want to have me on you're going to have like 50 people saying don't listen to this guy don't

(1:12:29) talk to him don't talk to him which is wild but yeah um yeah and so and also what we're going to do too guys is that we're going to end up talking more about the Imp we're still going to talk about the technology and I don't know if I'm even going to retire the MH 370x hashtag I probably won't I am going to come up with some more and better um thumbnails I've got a program that will help with some of that cuz I needed to use AI to automate some of this stuff it's too hard I can't do

(1:12:56) all this by myself uh and I'm probably going to slow down the streams so I don't do them every single day um and Adam if you want to uh join the Discord you can DM me and we can we can work something out I'll post the Discord link for people who are not in the Discord and they want to be in the Discord um this will be a 10 use one uh until tomorrow so some people that don't understand how the Discord works is you have to go to the verifi channel and you have to go through the verification otherwise it won't let you post and you

(1:13:26) have to wait 10 minutes so go ahead and do that if you email me on the m370x at proton email I probably won't respond right away um that's what happened with vetted and he got super butt hurt about supposedly um not uh supposed ghosting him or whatever um but keep in mind I'm probably after Friday I'm I'm done with the investigation stuff so new investigation stuff I will not be posting um I'm what my plan is is to hand it over to Arwin and JK Philly fan they're the ones who've been really

(1:13:58) digging through this the most and I may amplify some of their content get them some viewers if they want to keep going for it um but for me I just want to step away a little bit from it uh I think I've done enough right and again what I'm going to do then is probably I'll still be happy to talk to people and if people want to talk about MH370 stuff I'll give them my opinion I can go through some of the evidence that's fine I just want to stop doing new stuff right and then so that gives me more

(1:14:24) time to focus on the stuff that I want to do which is the science side of it because I've got a lot of stuff to learn on the science of the electrical engineering uh what i' ideally like is to move more into the moving the conversation forward for disclosure one thing that I will say and this is definitely a trust me bro situation is that I have a very strong understanding of the landscape now of the UFO community and disclosure community and the UFO celebrities as well right I actually don't think that any of them

(1:14:52) are really disinformation uh I think that they are all doing what they think is best oh I didn't do the lights tonight oh well I think they're all doing what they think is the best for the community in their minds they all also have their own personal incentives too right like some of them want to make money this is a lot of their jobs as well right so they're trying to get better uh at you know being making more money and Etc and this is where it creates all these Blurred Lines and it's the same thing as well with the people

(1:15:23) like Sean K Patricks of the world and those people is that they're trying to make money they also have their other job that they're doing they're private contractors um so at the end of

the day I don't want to be anybody's enemy out there um but what I'm going to do is going to cut through the [REDACTED] right we're going to push through to what are the real implications of this what are the real implications of the UFOs what does this mean if there if there are aliens right what does this really mean

(1:15:51) for our civilization what does this mean for our species what does this mean for our future these are the questions that should be asked these are the big questions the hard questions right um and a lot of the UFO Community it's about how many different species are there like come on man the this is a lot darker than that and so I would hope that the people as well that like uh interview people like Lando who I have nothing against I don't have anything against anybody in the UFO Community um that they ask them the hard

(1:16:20) questions can this stuff be used as a weapon okay yes it can how do we prevent that from happening is that what is holding disclosure back right these are the questions that people should be asking people because this then helps us understand the landscape of it you know so uh yeah so that's also why I've been trying to make amends with some of these people as well and the simplest way is don't come at me man a lot of these people are so upset and they think that my personality is so off-putting well

(1:16:52) don't come at me me like there's literally if you don't come at me I've never gone after anybody directly now other than perhaps uh James Fox and Ross Kohart and Lando I did one time come after them and I apologize for that um but a lot of these other people they just come at me right and then they get surprised when they get pushed back it's like just don't come at me and there'll be no problems man uh but if you do I'm going to defend myself right so and the reality is I'm probably a

(1:17:21) better troll than you are you know um I grew up in all of social media I've spent many years deep in the uh the troll the troll um the troll what are they call God damn it what are the war things um The Trenches the troll trenches guys so it's going to be very very hard uh to uh best me on that front maybe you can maybe if you're good enough but unlikely okay guys well I think we're going to call out there for tonight I'm going to go get some sleep oh yeah you I think you'll be able to watch it on on

(1:17:53) uh Twitter guys so it she does it through Zoom but I think that it's she live streams it on on Twitter so I'm going to retweet it I always retweet every podcast so if it's live I'll get a link to the live and then I will post it on my ex and if it's not live then you'll see it tomorrow morning on my ex but probably it'll be live so if you're a late if you're up late or if you're on the west coast you can watch it live um and yeah yeah Lando is definitely uh definitely related to

(1:18:23) intelligence like the thing is guys you don't ever fall out of that Community when you're in that intelligence Community 100% he's involved right um I don't know I don't honestly think he's actually running those people I think that my true opinion is that those those the people on the trolls on Twitter just love him right and he just doesn't he doesn't stop it right the difference is if I had people out there like acting the way that his followers ACT first of all I would

never want that I've already

(1:18:51) said it like I don't want people looking up to me as some kind of God that's the last thing in the world that I would want if you if any of you guys start looking up to me as a God and start making weird Michelangelo memes about me I'm probably going to call you out um and then uh I I would definitely uh you know say that that's not appropriate I would come out against that kind of behavior as well and that's the difference between I aland I aland doesn't do that right I think I don't

(1:19:17) know if he gets off on it or he has a little bit of an ego I'm not really sure but he lets that stuff Fester um and that's what makes it look like he's directing them that's that's my opinion I I don't think he's really directing them personally no um but I know that red and and maybe Tupa think that but that's you know when you see it from that perspective I think it makes sense you can think of it that I actually think that there's way less um government influence in what's

(1:19:40) happening on UFO Twitter I think it's just the natural you look at all the drama uh what's happening the the intelligence Community doesn't have to do anything the intelligence Community doesn't even have to do anything they just let the drama play out and nothing gets done done look at the UFO Community if anyone out there has been in the UFO Community I'm not trying to offend you but this community has accomplished nothing literally nothing in decades right and uh you can tell why because

(1:20:05) it's all about the interpersonal drama it's not about trying to accomplish stuff very like almost nobody in there is even trying to do any actual investigative work or trying to prove anything then they all fall for like oh this has been **debunked** okay we're going to let that go well it's like guys if there's a UFO thing going on then some of this stuff is real and that means you are letting letting it go way too easily it's the same stuff that's happen in the MH370 stuff um so yeah yeah okay guys well thank you very

(1:20:35) much uh Artisan Tony special thanks to you for being here uh thank you weona PJ uh Mike uh Joe Dalton Kevin s23 bad Sama complier I see you all over the place buddy I appreciate you man I appreciate you when you donate as well to alien addict and those guys um uh you know I know they're they're kind of a smaller streamer so it's nice to support them I don't know if I said higher bye to you Kevin Jack Matt um Bootsy I saw you all day today Eve you've been here a lot appreciate you Adam appreciate you man

(1:21:07) as well yeah send me the mcdouglas Boeing stuff I'll take a look at it I'm sure it's going to be dark uh big poop man it's nice to see you around here James and pig James I think I saw Pig James as well uh nice to see you guys glad to have you guys around uh John do crypto nice to have you um let me see if there's anybody else I haven't got to guys um sick puppy appreciate you I think you left already sha Reed anybody else I missed guys thank you very much for being here tonight thank you for

(1:21:33) hanging out app glad you appreciated this and let's uh talk uh tomorrow so tomorrow uh I'm also doing my last MH 370x in uh evidence stream or space SL stream so I'll go over all the evidence one more time I'll give my opinions on what I think happened I'll let people come up I'll let people if they want to criticize or throw their own opinions out there or whatever that'll be your opportunity to do that or ask questions if you want uh it's probably going to be about two hours I want to get through

(1:22:01) all the evidence in about 45 minutes or an hour and then open it up to some questions and stuff like that keep it kind of tight and close it out and that'll be a nice night cap on the whole MH370 stuff so thank you guys have a great night see you tomorrow

Thick 'D' Disclosure with Steve Bassett and Rick Doty - YouTube

Transcript:

(00:28) question this Malian 370 contact 12m night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] [Applause] [Music] there is this fundamental imbalance the world this is why you have this what I call

(01:46) huge disparity between destruction and construction which what we call okay Chad hey welcome everybody sorry for that um oh been a long night been uh talking a lot of people it's been exciting um oh got my hairs all kind of all over the place um we were uh taking a look at this stream tonight uh Steve Bassett who is a disclosure Advocate his background is the uip hearings um you know he is doing a space tonight we're going to jump into that for a little bit and then uh yeah after that I'll probably close it out early I'm going to

(02:29) have to finish up some MH370 stuff U make sure I get all the stuff in there um I've still got three pieces I'm still working on and uh been overdue on a lot of that stuff so as you guys know it goes slowly especially since I've been doing my normal job eight hours a day uh but thank you guys for being here tonight wow there's a lot of people in the chat tonight hey Dorian you were first today Aaron PJ Stevie mystical Kimberly James Sandy Amanda Z jalapeno um benator Laura chle I see you Pamela yeah we need the Lulu cam she's

(03:12) uh you guys she's asleep so she's she's in her pissy mood uh oh yeah we're scruffy oh I'll shave tomorrow for you guys so I'm not too scruffy hey Kimberly hey Joshua um uh yeah so I've been trying to mend some bridges with people guys uh including Jack sarfati and Ross kohart um not really sure what's going on with everything right like uh it's I don't know I think that maybe just everybody's getting played against each other we've just been disclosing stuff that's so far

out of

(03:47) the Paradigm that I think that it turns people off um it makes it really difficult to for anyone to like believe that a lot of the stuff can be true so we will see oh ghost you're back back h no more meltdowns ghost um okay guys let's let's jump in onto this and let's listen to what this the space is all about let's see if it's exciting I've been invited to co-host uh not going to coost because it'll boot people out although maybe I should coost I don't know hold on here we

(04:23) go group is tiny but it will be a nonprofit soon and the first time be able to raise them you know tax tax deductible funding Kimberly Kimber in support of the new paradigm Institute um and you've got muon that is expanding and growing and has hired a substantial lobbying firm uh it's going to be a political force and there's probably 15 think tanks underway right now I don't even know about other organizations are turning up and so forth probably try to do some these are basically efforts with

(04:53) people whoy what had a decent amount of time to get in position to be part of the post disclosure world and by large the people that I'm referring to it's positive they want to fix things all right and that's a good thing okay now the rest of the human race though has to catch up go and that's not going to happen until we crew on the next hard **truth** so for right now we're in that last phase where preparation is going on in order to get off to a relatively Good Start once we enter the new paradigm this world changing event

(05:33) that will change world view and the question is can you convert that world view change into real solutions so that we can actually start improving the situation on this planet for ourselves and the planet itself or make it even worse so in that sense it's an unbelievable opportunity worth you know investing one's life even giving one's life and a number of my colleagues have in a sense worked their whole life and we're still working on this issue to the day they die um and so that's exciting

(06:02) all right it's also frustrating because clearly we the gun hasn't gone off yet yeah the lighting's good right so the the media the the social and political not social but the the populist media has emerged is is important here Twitter spaces podcasts all of this is is really doing a fantastic job of getting the issue out to rer people uh at any time so that they can start making decisions themselves and and there are countless examples of this and they're growing all the time that's very good so

(06:38) leadership what can I say you're either in a post-disclosure world everybody that steps forward look at them real hard and ask ask yourself this question are they here to destroy something or are they he here to build something are they here to fix something or are they here to break something and the answerers those two questions pretty easily will tell you right away whether you want to get behind a little darker you want it lighter or you want darker guys and so that's G to be an exciting thing to to look for you like

(07:12) the blue so that that's the basic answer to the Le leadership issue that you asked me uh

and of course we could we could we could go into item by item the things that need to be fixed but I think I think that answers your question and I I had an analogy in there kind of like and I'll get to use that again next time another question yeah thanks Steve and and I think he was asking about education too which is the sort of a fundamental building uh block for um informing the the future Generations obviously as far as I'm concerned you

(07:41) know I have a philosophy of education which I can get into later called Galactic Scholastic for the children and then um other things as well so um I agree with everything Steve is saying and and I really love the question because um you know we have to you know it's a it's a big job trying to trying to do this whole disclosure thing to get you know the government to want to do actually real but then there's the whole issue of and I think uh I want to do a shout out to William Bill uh he's going

(08:10) through some stuff and I just he sent me a message I appreciate you William I appreciated you being out here in in the chat um you know I know that a lot of this stuff means a lot to a lot of people out there and uh you know I haven't it's not unnoticed is what I want to say I guess um also is the light good benator the Privacy implications uh one of these uh I don't know what her name was I think her name was Moody got super upset that I was streaming without telling everybody in the space that I'm

(08:41) streaming where I'm just like you're in a you're in a public location like if you're in a public location there's no expectation of privacy some people are weird chat some people are weird um I may try to read some of this while we're while we're doing this my to back to at least like or lighter you know thisy what's chat what we do the lights the lights is good gone and uh he said that with real enthusiasm right after David brush's testimony and I was really with him on that so I'm like hoping for

(09:39) it I think the whole system needs to blow up um and I know that that would that would look like Anarchy but okay let's keep our system but let's get the money out but my question for you is don't don't you foresee these things these things as being so um how's my light chle tell us how reing from ashes which is what I want I want the whole thing burned down metaphorically speaking get all new people is that what you what what how smoothly do you think this is going to go don't you think it's

(10:13) going to be outrageous that they haven't told us the **truth** for 90 years well um sorry don't to start off well um I happen to let's turn it upside down the fact is government's been lying about this issue for three quarters of a century and each year that goes by more and more people know I don't know what percentage of the world's people know the government's lying but I know that in the polls going back away sometimes we get up in the low high 80s in other words the question would be do you think the government's

(10:48) telling you the **truth** about this phenomena 87 8% would say no meaning they know they're ly so I think actually the fact is that pretty much everybody knows or most people know the government's Laine therefore confirming the ET presence instituting a a control

disclosure plan start getting the information out even the deepest classified information in an orderly way in a reasonable amount of time but starting right away after the ACT is passed it is going to have the opposite effect in other words if someone's been

(11:19) lying to you the only way to regain the trust is to start telling them the **truth** and so acknowledging that you lied in the past is **truth** there actually is purple so no orange it's not gonna destroy the trust in government is already being Destro it's going to stop the process of Destruction and reverse it hopefully assuming the government capitalize on that and I've said this many times I've said given the social media ability of billions of people to focus on something literally ask an influencer right you know you start an

(11:58) ice bucket challenge and next you know 20 Bill 20 200 million people have done the ice pocket CH what can I say that's the world we live in and so given that level of scrutiny once the government acknowledge the ET presence the questions will be oh we're talking about the ET presence the the cast will be endless the the hearings will go on and the questions will be endless uh and if I'm the government you just don't lie anymore you just tell the **truth** government Ain never tell Tru chat one the way the governments get away from

(12:31) lying is they tell a lie about something that people don't have the time to deal with so if they lie about say a situation that leads us to war most people are not gonna have to go fight that war we need the **truth** Seekers on don't have to fight the waru in their life so it's like fly just has its effect a lot of people get hurt most people doesn't affect them that's how the government is able to do that this is not that case the ET **truth** embargo is pretty much well known now for from one

(12:59) end planet to the other well the LI is understood the **truth** when it comes out will go worldwide overnight so that's that's a whole different level of change and so I am thinking that if I'm any with the exception of certain governments there are certain autocratic governments out there they're never going to tell the **truth** until they're pretty much destroyed dragged out the street done away with but fortunately there are few most countries don't have to go through that Africa they just need to start

(13:27) telling the **truth** and so dis closure could begin that process and of course the moment governments start telling the **truth** to the people the people start trusting them more and then you could start solving problems and so that is the upside of ending the **truth** and bar uh and obviously that's not talking about bringing everything down and starting from ashes or getting rid of government for a while you never want to live in a country with no government trust me never uh if it's a small small little Island state with a population of

(14:01) 150 possibly but any country with a couple of hundred million people there's no government I assure you it will be hell on Earth if you can live a week you'll be lucky I what you're saying Steve I was just having a very passionate conversation about this actually tonight and I agree we must you know we must respect that which we have that resembles a democracy still it is much better than the alternative there's there's avenues for citizens to get to the **truth**

and and and do activism whereas you know in a full-on fascist

(14:31) system such is not the case and and we're in the most powerful country in all known history and so to attempt which we would not a violent revolution would certainly not work it's Not Gon to work but we it's fixing things we just need to fix things you know you move into a house and it's got problems you fix them now if you're really really rich you tear the whole house down and you build something even better over that get that but we can't do that in this case right we don't have the money

(14:57) or the time so you just have to fix things and we know the things that need to be fixed we really really do whether it's the education system the political system the geopolitical system the environmental approaches and on and on we know what has to be fixed we just don't do it it's that simple it's like a kid right we're like a child the child knows what they're supposed to do they we do it period how you drive the parents crazy well we're driving the world crazy we simply will not fix anything so

(15:31) that's the that's the mentality we have to have almost all activists are trying to fix something all activist mov are trying to fix something um I need a always some uh Injustice some unfairness something that's clearly not not acceptable uh and it's being conducted by Authority and activism is to change that always try to fix something and it's tough and it's hard it seems it takes a long time whereas the opposite of that how to cause real trouble it's so easy to do this is that

(16:03) that discrepancy that imbalance that human race has been fighting since its very earliest Origins I think we're smart enough now we understand it primitive early men did not they didn't understand it right but we understand we also have science and technology and knowledge that allows us to actually solve problems and and get around this disparity this imbalance between construction build Bridges don't blow them up build DS don't blow them up build cities we've been say destroy them to the ground that's not hard educate

(16:41) people don't just let them go off and wander around in the woods drop out of school make college so expensive you can't go there right and on and on and on we know the solutions toally guys people in is to fix things now just very quickly the Hollywood disclosure Alliance which is what's underway right now it's the biggest project is not yet about fixing things it is but it is about the post-disclosure world because the first thing the world needs to do is learn and learning is not you know at premium right now all right

(17:19) uh it's not working so well and there's a lot of complex reasons for that the point is is they've got to learn so you got 8 billion people and they've got to have some understanding of what just happened and what it means and that is going to require huge amounts of money and resources and media to generate the content that's going to provide that and the content can earn money no question about it that's it has you so the Hollywood disclosure Alliance was was created in the network the film

(17:44) industry chat Amanda does not know why Pig James uh Pig James added the pig because he wanted to differentiate there used to be like four other James in the chat it's legendary stuff the ET people the UAP people who have worked with very little money uh under the **truth** embargo under heavy statement uh to try to do find the **truth** and bring them together so that they they uh one gets the knowledge and the other gets the resources and they can start generating much higher quality and more content that ultimately is going to educate the

(18:17) world and this is happening now predisclosure as it should and I'm glad I I I wasn't thinking we're going to be able to get it done in time but in a sense this extra time that we've gotten because of certain events uh gives us a little more time to prepare but the Hollywood disclosure lines is about getting the information out so people will have an understanding of what's about to happen so that they're more inclined to respond to the leadership that we hope to see to fix things okay

(18:46) this is what's happened this is the new world let's rethink everything and we've got these ideas and that ideas and let's do this let's do that let's pass this law let's raise money for this etc etc let's get this treaty let's have this diplomacy and on and on and on it that is an extremely simple way of describing what is coming and so the last thing we need to be thinking of is destroying anything tearing anything down we need to fix what we have solve the problems and then as we start to uh

(19:22) create a much more comfortable safer environment uh then we can start building from that and before you know it and it wouldn't take that long circumstances human race is facing on this planet and the circumstance the planet deis I think could be in a much a very very comfortable place within less than 25 years hours that's something that should be discussed every every College in the country should have people up on a stage in front of the faculty students talking about that and they don't virtually

(19:56) nothing because the colleges and universities have truly failed Us in the **truth** and barber they will do nothing and have done nothing the journalists have done a lot the government has done some things the college universities literally laid down and do nothing and so if they can get in the game and we start having these discussions in thousands of universities and colleges about okay how do we fix this how do we fix that how do we just in this post disclosure or what does it mean what are the possibilities regardless of whether

(20:25) the ETS may bring us or not bring us what they have to say or don't have to say their very present alone once confirmed is a transforming Paradigm Shift anything beyond that is gravy and I think there's gonna be some gravy what do Steve bass do beautiful Steve yeah I'm honored to to be a helper and participant in Steve's Hollywood disclosure lines thing and people say ET is just feels weird to me does it feel weird you guys chat when people talk to about ETS create this content which they love to do because

(20:56) it's the best content you know I make some of it myself I Vibe with it but to make it based on **truth** and that was a brilliant thing to connect the top experts with the with the the

top um makers of of film TV and everything else and uh you know I love how you know I've always loved Steve but you know the more I get to know him the more I Vibe uh because like me you know he's attempting a uh you know he's been doing it forever he's been doing it first for those who are just joining us and are not aware he

(21:19) was the first lobbyist ever in history to do this and he's been working diligently ever since and he he's been there uh uh diligently every decade of of this **truth** embargo which he also coined the terminology of but I think it's so brilliant how he connected historically I in my opinion I'm sorry he gets he gets he doesn't like when I speak hyperbolically but it's true um you know connecting the best of the the mainstream media and just media with the best scientists and experts in the field

(21:45) that he knows you know quite well um you know I also have a philosophy of **Truth** in a post-**truth** world which is sort of my contribution uh among other things and and um yeah he's hitting it from every possible angle so I really appreciate I want to get to Christian because I know he has to put some children to sleep hey Christian what's your question well I I don't even know if it's much of a question it's more about should we ask how many species there are I see disclosure a little bit more complicated and I guess I don't

(22:10) know doesn't feel weird to you I I know what's gonna happen there no there's no going back I just don't know how fast it'll be I think their plan is uh I heard actually Richard Dolan on it's behind a pay wall but I think it's worth it uh on his firesight uh shat podcast on Sunday he uh was talking to Carl Nell and Tim gallet and it looks like they briefed him basically you can tell like he you know he let his the way Dolan was talking was different is usually he's very skeptical of disclosure you know

(22:49) he's like secrecy really strong and this time he was like well there's a plan disclosure is going to happen but uh basically he said that uh there's a lot of none of these people know when disclosure is going to happen no offense that are not so good very n they're not the on who decide happened um that yeah there okay let's and then he later went to talk about cber fields and one of the in the so presentation of Carl Mel had a PowerPoint presentation and that was one of the reasons for not dis closing it

(23:25) said uh I think it was at a PowerPoint said poor C agreement let me read this I se it yeah so things like that like what were the what that's important to humanity right you make a deal with uh nhi nebuch has plenty of space anyway so there's a lot of things like that that are very comp Richard said Richard said uh it's gonna happen but there's people that they're not even Pro disclosure necessarily they're just realistic they're like we can't keep the secrecy we've been keeping for 80 years it's not

(24:02) possible to do that anymore so we gotta you know we gotta give some information out like a partial disclosure but there's still people in power very powerful that they're like over dead body gonna have to take it out of my cold dead hands and uh yeah so so that's that's where we're at like seem very confident that it's going to happen but it's there's a lot of nasty stuff that

has happened and it's very awkward and uncomfortable and they don't really know how to tell this to the public like

(24:39) right now a lot of people already know in government what's been going on but they're like terrified the public because of you know the unpredict it's very unpredictable what will happen you know we talk about like yeah this is awesome you know whatever but uh the average person that has lot of other problems they might be I don't know it's just differ you know some people would be scared some people will be fascinated some will be skeptical but over time it's going to evolve or in 20 years

(25:13) there's barely going on to be funny if the Skeptics are probably gonna be the weirdos and probably even less that but uh yeah I the other thing Steve with everything on I mean we got we're in the verge of World War II Ukraine um you know Gaza all these getic elections and I'm like man that all these distractions that you know how do we deal with those you know and because that's what it's mostly on the news and so what kind of question should we ask I know I think it's gonna happen I just don't know how fast it's gonna

(25:50) happen how much of a priority it is for people in government right now I think a lot of them are kind of scared and uncomfortable with the situation and then you got Timber C and others that are pit bulls but you know I'm shut up I think you get my point thank you you guys are GNA red pill the aliens want us to fight so why they keep us distracted fighting each other that's uh not my view I think the ETS are actually going out of their way to advance the process sightings have gone up substantially in the last couple

(26:23) of years uh I can only I can only refer to what is happened going up um in terms of in order to project the future first you have to understand what's happening otherwise you just throwing darts into into the dark uh more has happened on this issue in terms of advancing the disclosure process in the last seven years than the previous 70 um it has been an extraordinary Cas many of it's been absolutely Game Changer now again when you've been waiting 70 years already seven more years doesn't seem

(27:02) like species but uh that's just this space is kind of boring chat for those that were just born say around the year 2000 it looks to them like we're we're heading straight out of the Galaxy and they're going to be flying around the Galaxy on Starships uh so it's a perception the I think that the safest thing we can say is that we've made extraordinary progress the issue is fully out uh people keep coming forward with high ranking stations saying there's extraterrestrials here legislation has

(27:37) been passed an extraordinary piece of legislation almost passed think tanks are being formed the stigma is virtually gone the amount of media covering is the greatest ever a couple thousand articles a year of reasonably good media and another four or five, from just small stuff all over and that's dis aish uh the process is no long thank you very much Izzy appreciate your donation man people are donating again now huh disclosure such a buzzword why now for all the **truth** besides technology that's that's a good question Izzy I think that

(28:09) this stuff's been hidden for 80 years and at some point they know it's going to get out it's it's a discovery right it's not um this kind of technology is not an invention it's a discovery what's the difference is discoveries are inevitable discoveries will come out no matter what learning how fireworks is going to come out no matter what right um and that's why I think what's going on uh christly brought up a good point or sorry chrisly uh brought up a good point I think that a lot of us are

(28:37) focused on the idea that hum that all life has to look like us consider the wild differences between us and deep sea life if anything humans probably originate like anything humanlike probably originate here now two aspects of that one yes I think that the what your your beings look like are going to be somewhat related to where they've originated now here's the flip side what if aliens end up being exactly like us look at how complex human life is look at how complex our DNA structure is um to me I used to be somebody who

(29:08) thought for sure we could have just evolved here but now I think there's no way we evolved here from single cell organism I think it's much more likely that we were planted here that's my personal opinion at least and that I wouldn't be surprised at all to find out that there's an alien race or aliens that look just like us um and could be wrong just my my opinion you know if they are out there I I like the ultraterrestrial hypothesis as well which is the idea that they're here on beside us right and they could be like a

(29:39) breakaway civilization that's like I don't know under the water or something else okay taking you back to your regularly schure program which is where we are now and so we are in fact standing literally at the Finish Line I mean it's a few yards in front of us all we have to do take a few more steps and the race is won and we move on to the next phase and what are those steps there's surely only two that have to be made they're well defined if you go back in time it's much more difficult to define

(30:13) those steps meaning okay step one step two step three then we can what is one what is two one is you don't know you do the best you can but it was very difficult now it's not so hard two steps Mark Warner calls a hearing in the Senate Intel committee week 10 sessions two two two witnesses a session that's 20 Witnesses under oath cameras running fulltime couple hundred million people watching we know roughly who this Witnesses are going to be and I can assure you it'll be like having 10 15 brushes

(30:45) testify that's it it's over at that point it's over the only thing that's missing is the president to step forward fir two steps check me we know that's all we need so that's pretty close to the Finish now it doesn't mean you crossed it it just means you got those two steps to make and so my project uh shift storm shif shift.

(31:07) org which is still up is about getting tag tweet messages into Schumer Rubio and Warner saying look we want the hearings guys I'm make you can send as many as you want you can send hundreds of them and they fill up their notifications box they all have Twitter accounts every member of Congress that's a Twitter account you can't post it their theme but you can

post in a notification spot by using a handle at Senator schum and so Danny sheenan has got a project going at new paradigm Institute where you can contact all your members of Congress and

(31:35) we're just getting warmed up but time's a wasting right we're dancing on the edge of nuclear war the political situation is fur the Decay we need that Paradigm Shift you know it's like that like that analogy I had before we really need to win that Lottery right now we could use that billion bucks so let's win it let's get it done so it's that well defined that's how close we are now now the only way someone would be able to understand fully what I just said is if they were paying attention across the board on

(32:05) this issue for years I don't expect people to be able to do that I don't you know I have very few colleagues that that that have a picture quite like this that's okay that's the job of the activist and devote your time to trying to understand the overall processes to get a sense of where it's going and then help people get there you do all that's all you do you don't do anything else you don't have a side job side kid you know you're not running a crypto uh uh marketing deal or something that's

(32:33) all you do that's all I do Danny that's all he's doing pretty much so understand this we are right there at the Finish Line Mark Warner has the power to do it that the fact that he has it is not shocking feel like I should ask question and I I I don't you know I was a I read the Greek [REDACTED] when I was younger and the Greek gu gods were famous for toying with the Greeks I me all they do is torture them drive them crazy make for some great plays and it's like the gods do drive us crazy and so when we get to

(33:06) the Finish Line it's like they start throwing cream pies at us and and and trying to trip us up with ropes or whatever or there's a solar eclipse or whatever the hell it's it's odd but it seems to happen that way and so as we approach disclosure we've got one of the most dangerous conflicts in history in Ukraine we one of the most dangerous middle e developments in history in the Middle East we've got three or four other major areas in which people are dying and just committing genocide uh and then we've got Mega

(33:39) threats in terms of China's interest in Taiwan the development of nuclear Hypersonic missiles the possibility of the weapons of space and on and on and then the politics in the United States is basically collapsed to the level of the fifth grade so I didn't see that com I mean I you know I was kind of I knew problem I didn't quite see this problem Dorian and so as we sit there sick minded individual on the edge of the greatest shift in history we're tied up in the very problems we need that shift to happen to

(34:14) fix it's a wonderful little dilemma isn't it it's it's the classic case of going to the bank to get a loan the only way you get a loan from A bank is if you don't need a loan if you don't need the loan you can get a loan if you do if you do need it you can't get it it's kind of like that so the activist job is to punch through that Rick do one way or another and that's what you're seeing happen Danny's doing stuff I'm doing stuff Gary Nolan is doing things ask question much as we

as we go in this

(34:44) kind of complicated quiet Peri quiet period but slow period when all this other stuff is happening don't think that the issue is not being pursued behind the scenes that has continued unrelenting uh people are being briefed people are learning that they're talking uh sometimes they're coming forward and saying they want to do something but thing behind the scenes activity on this issue has not stopped and Witnesses keep coming forward there are thousands of potential witnesses to this issue who have firsthand or very strong secondhand

(35:12) information who have clearances who have clear defined careers and there are thousands of them and we don't need thousands of we need about 10 12 15 really good ones 10 Bob salises by the way was just given a keynote speech at the mve on and posing this year make sure you go it's in Dallas for so that's the way I invite youall to think about it you're standing on the Finish Line not at the beginning of the race at the very end pay attention to the efforts being done to finally Crosset help if

(35:40) you can don't impede right try to stay optimistic right uh because you know it's been a long race we're tired we're exhausted I've run marathons I know what it's like but it's amazing when you run a marathon or triathlon when you get toward the end got a lot of Boom you thrilled right uh and it's kind of cool s feeling quite like it this has been a different kind of race and so as we get closer to the Finish Line instead of getting more thrilled we're getting more angst more concerned or the cognant DISD

(36:14) and so forth because this is unlike any race anyone has ever run including yourself but you are running it and you will finish it and when we finish we all cross the finish line together first or last when disclosure happens the entire world crosses that line together next question beautiful indeed I just want to let you know um for the second time we got we got um Rick Dodie here I he's he's here on a regular basis but he's here because he he has had a chance to Vibe with you and he's been describing his own disclosure activism

(36:47) with the uh the world famous to some Infamous but um quite interesting aier uh group and such um and I'm trying to bring them up but you know it's a bit of a GL app not my fa um Rick uh you might have to leave and come back um if you're not able to get the speak least it's you know not Steve who's who's holding things up in terms of **Truth** collaboration here and first encounter while you're let me add let me add something else one more one more thing look there there are a number of

(37:16) reasons why someone like Colonel I'll switch this to live chat and some others may talk in terms of longer term meaning thanks Izzy 2030 five years or whatever where's doie does that mean that they know that that's the plan and that's going to wa work out no it does not but from their perspective a a less urgent way of thinking you see them is preferable for them for whatever reason the dod knows the game is up but they wouldn't mind having an extra four or five years NASA same thing so forth I'm I'm okay with

(37:54) that it's okay I'm not going to get on Colonel now because he he's projecting out to 2030 2035 but I will say this the idea that the government can control it in such a way to get it to 30 boring this thing is literally happening around them it's an avalanche coming down the mountain and you can talk about well where you'd like to far Avalanche will last and so forth but the fact is it's going to do exactly what it wants to do and so I'm I'm not offended by that I'm simply saying put

(38:28) your money on it could happen at any moment not 23rd you've got a much better chance to cash okay is Rick here yet uh he's been here listening and I don't know why he can't Rick make sure you verify when you join the Discord please the can't figure that out go to the verifi channel he may have to do what I did reboot I rebooted the whole computer and worked fine uh who knows why but that's the that's what the only that c me yeah we're gonna have to get this spicy guys I don't know if know

(39:01) I it's not our fault it's it's it's just an error with the application but it's okay we're gonna make it work and this is the best we've done so far it's great to have you audible and and not like through my zoom yeah this is wonderful so let's get to ashon who's who's co-hosting for us you got a question man we'll get Rick in here yo hey Melo how's it going tonight uh Mr Basset uh quick question what is your uh this is a question I just like to ask everybody

(39:24) who's kind of into ufolog what is your definition of disclosure you know I would guess from listening to you the last 30 minutes or so that you know for you it's about uh you know the aliens or ETS being kind of revealed to the world but how how would you describe it in your own words you know like true disclosure go ahead thank you well I made it easy for myself I self-defined it it's my definition right so it can only be that um he and there was a reason for disclosure the one I talk about 95% of the time is the event the

(39:59) capital D disclosure event it's a little confusing I could have called it confirmation but now didn't it didn't quite work for me disclosure is a strong term you just need to make a capital D so disclosure is Christmas which is a capital x St Patrick's Day which is coming up capital x it's an event it's a poer now and it is defined only as the confirmation of the address for presence wherever they're from by heads of state not by a senator not by an astronaut not by a talk show host by The Head of State in an

(40:39) efficient capacity and ultimately every head of state will do it that's disclosure capital D that's what we're pursuing that's as simple as it could get small D disclosure is also to me pretty basic small D disclosure is simply the process of revealing information so Dolan writes a book and uh has some chapters in there about a particular case that small D disos if uh uh new Fork is collecting information on 40 or 50 or 100 sightings that's small D disclosure the government releases some documents that had been

(41:12) tied up before that small D disclosure everything is small D disclosure guys you got small disinformation or disclosure misinformation that's that's not really disclosure that's agenda or well it's not it's not true and if it's not true it's not you're disclosing a lie what have you done

you've accomplished so it is it is a revealing of information and that that's going on all the time in the world and not just on ET issue but in everything right we're learning about

(41:40) this and that kind of want to cut them off and about science and about the history of the world and all this stuff it's all disclosing revealing of the world to ourselves through our our our cogniz and ability primarily driven by the scientific method which I consider the greatest invention of humankind that's all small D disclosure so I've just made it as simple as it could be everything that happens leading up to that event is small D disclosure the event is capital D disclosure the confirmation and then after that it's

(42:09) all small D disclosure again only disclosing stuff is juicier more interesting ladies are ladies in chat are upset but it's still just more information want that uh simple and you you struggle less I appreciate that sir can I ask a quick followup on that which is um do you think that with large D disclosure do you think that people will believe heads of state if they come out I'm kind of skeptical as whether or not you know if Biden comes out and says there's aliens out there I feel like a lot of people are gonna go okay no

(42:36) there's definitely no aliens now what are your thoughts on that well that's the beauty of the process under way so the president is not going to come out and say there's ETS here just take my word for that would be politically ill advised and terrible maneuver and and that's why the president every president has known there's an ET pres every single one one way or another some have known more than others most haven't known much but they know they're here they just chose not to do anything about

(43:02) it they got a full plate and that's a tough nut so they let the de military point is every pres is know but that's the way the way things are going is exactly what we want that's a good question the hearing process under oath in front of the world of not one two 10 15 but maybe 20 witnesses that like grush making it absolutely clear and then and they can show videos I mean they could show gun camera clips for days if they wanted to they can produce the evidence which will absolutely lock it down I don't think they have to

(43:33) produce all that much David Crush was a lot but imagine 10 talk large D disclosure chat and so at that point the president simply comes for small D doesn't doesn't doesn't satisfy us confirms what everybody has already figured out yes we're not alone that formalizes it that's the confirmation of it that's disclosure with the capital D that's what opens the doors that do something that's what makes things possible that were not possible before when Edgar Mitchell said there was an ex

(44:01) trest presence in 2009 at a press conference in a press that I put on did that open doors everywhere did the government start passing legislation did ETS open up and start talking to the CNN no it has to come from the head of state it's it because it's that level it's that big it's it's it's it's even bigger than the issue of War War's a pretty big deal guess what you just can't get in front of a camera and say we're going to war with **China** any number of people could do that

(44:31) and lose nothing even the president cannot do that the president can get the cam Tom say we're going to war with China no we're not the only way we can go to war with China is the Congress declares war in China and if it doesn't there's no war now people say well pres say that big deal that's not but there are ways that things happen there are protocols the way we function and one of the ways we function is some things come under h of State and because this is this is an absolute total classified

(45:00) matter national security base the only person has the ability to classify everything true appropriate protocols is the president nobody else has that same level of power and so when the president confirms everybody knows that as far as getting the extra information out the president will support it and it will happen though it will be an orderly process as the process that Schumer and rounds put into that bill which is a little too much for the defense contractors and they push back but they're not going to win that one so

(45:30) think of it that way uh will the people accept it of course they will of course they will me little when when we declare war in a nation guess what the people have to accept it oh they may protest they may jump up and down but there's nothing they can do about it and a bunch of guys get drafted and go to Vietnam new new uh it doesn't matter whether they accept it or notam name thick D disclosure unlike War this is not like that at all this isn't a bad thing this is an extraordinary thing and so people are going to accept

(46:01) it because it's true because it's formal and because it's extraordinary and it could make our world a better place so I'm not too worried about people accepting in fact I view the human race is dying of thirst for it literally crawling across the desert desperate to get some truth and that truth will be like giving water to a person dying of thirst in the desert that's how I almost VI new space name guys or new stream name thick D disclosure with Steve bass thank Steve I want to stop you there for a sec

(46:32) just because we got Rick up here everybody repost the room I don't I don't like to say that often but this is the first time these two incredibly consequential people I'm not going to flatter them too much because they don't like it but um it's the first time they're they're talking together we tried to do it uh last week but now we got them working hey hey Rick can you speak now hey Rick yeah can you hear me you sound perfect I want to let you and and Steve mostly talk with me maybe

(46:54) gently moderating because you guys have both you know been at this you know different angles for those just joining and playing at home you know we got the legendary sorry he doesn't like what I say we have just just Steve B Basset just a guy who has been the original person uh in DC doing this originally the first guys what if we asked uh Rick do you if he's into thick D or or small D disclosure guys to attempt to do so now now now we're on the razor's edge of history and it's actually validation and then we got

(47:26) Rick um you know who's you know there's a movie called mirag men about him and he he's also very influential but from a different perspective a rard Pamela likes the hard D

disclosure chat I hope I hope my other nerds in the chat are paying attention to what the ladies are saying here guys it's not uh it's how you use it chat uh consult and write the X Files or at least give them the information for it um and now he is as he's told us recently in some very interesting spaces um working for disclosure in his his own

(47:56) way and so I think it's really interesting to get these people who've never met before who are around the same age who's who've lived through all this history the most interesting history of all known history let's let's let you guys mingle a bit Slick Rick thank you let's go um yeah uh I'm I'm really uh uh my honor to be on with Stephen I followed him on the Paradigm research group uh I've followed uh what he's done can magnificent work over the years how old is the group that I uh amen the advanced

(48:35) working group 79 years old we were we met last week in Washington or two weeks ago Washington DC uh we did uh have contacts with um Senate the Senate side we're more aligned with the Senate than we are with the house um and we've uh facilitated some whistleblowers on our side and uh we stepen named a few or a number but I we know of our group knows of 88 whistleblowers that have been cleared by dodig uh and all of them are either military or former military um there are 36 polygraph examinations given to them some of them

(49:20) uh like I said 36 out of the 88 and these are the real real the real things the real people that have had hands-on experience with UAP UFOs iec's what however you want to call it um picked up pieces of craft or picked up biologics and and put them in body bags these are the real live people that had contacts those are the ones that we want to get in front in front of a senate or Congressional hearing we want them to tell their story about exactly what they did when they did it and how they did it now in order to do

(50:05) that there's a number of hurdles that Congress has to go over and one of the biggest hurdles is the dod the CIA and the DIA they're putting so much obstacles so many obstacles up uh against disclosure uh especially the US space force uh where we thought initially they were going to cooperate with some form of disclosure uh then he turned um turned around and said no we're not going to do that um there's too many sap Pro special access programs that we can't talk about and we understand that and and our group

(50:47) certainly most of our group don't want National Security jeopardized or all almost all retired military or intelligence Personnel uh we have some that aren't but uh mostly that's the makeup we certainly don't want to jeopardize National Security but there's ways to release the data skiren the sap programs to let the American people know exactly what the United States government has been doing for the last 77 years tell us about those ways and and and and the people are not going to be happy because as as you all know I

(51:25) was inv D with disinformation back in the 70s and 80s and uh it was my job to disinform people well I got off that horse a long time ago and now I'm for disclosure but I can see operations occurring right now within Dia that uh I would call it a deception we didn't call them disinformation programs back then we call them deception operations and I can guarantee you

right now there's a number of deception operations going on right now to keep uh the full disclosure out of the public eye what do you think they're

(52:05) doing Rick in terms of that can you give us any examples or even hypothetical ones that they might be doing yeah they're they're spreading this information Sean kpatrick we know Sean has a Billet now what's a Billet a Billet anyone that has special Access program clearance has a Billet number a certain number mine was back my 42 that was my Billet number it's on your uh briefing forms or your na uh your your non-disclosure forms or your security clearance forms Sean catic had a Billet number so he had access to

(52:45) special access programs he also had access to something the Navy uh had research uh the special research under velop uh underwater uh research agency within um the DIA and the O well actually was in the oi but part of it was NSA and so he knew he had access to that information but now he's going out and disinform people he's uh uh stating that uh Captain grush isn't telling the **truth** or the information that Captain grush has given is not credible that's that's disinformation right there and the

(53:30) Articles the newspaper articles one one key way to disinform the public is leaking information to the news media The Washington Post New York Times Wall Street Journal um I can guarantee you the government has contacts within every one of those newspapers those major newspapers and I when I when I was in Albuquerque uh station at Cartland Air Force Base I have contacts with every one of the newspapers radio stations and news and news uh channels in that state so it's easy to leak information and it's publicized and then now the public

(54:10) reads information that's not accurate that's that's those are a number of different ways you can disinform the public thank you for that answer Steve do you have any um response to what Rick was talking about there as well or any insights sure I could give you an hour uh first of all let me point out something that's very important inside and outside there is the inside to this history and there's the outside and UAP social media should be a meaning that the people on obviously have a great deal of knowledge about the

(54:51) history of this and so forth whatever their role and we we want access to that knowledge we want them to be able to use it the people on the outside of course don't have quite that kind of access however they do know a great deal about the issue and they're less compartmentalized uh sto piping is common within the government approach so you've got people one thing or another thing whereas in the outside world you have a lot of individuals that that look at everything so but overall it's the inside outside is going to have to come

(55:25) together to get this thing settled and move forward in a positive way that's why I had no interest from the beginning in demonizing the government I mean I was I've been upset with my government at times uh and I'm irritated with the **truth** embargo in some ways but it's not touch my irritation with the government over with in Southeast Asia or how they handled the 911 events and the do took place so I think the the the ET issue is much more how would you say constructive platform on which the inside and the

(55:57) outside and get together Rick is an example of that he's not the only one uh the reason that I I work to change the term UFO cover up to **truth** embargo it's another one that I own uh it's a nickel just just send me a nickel in an envelope every time he is that the **truth** I mean UFO cover up implies illegal action on the part of everybody inside now that's not the case everything they were doing would have been easily supportable in court of law under the National Security acts occasionally they

(56:27) got out of line yeah get but overall they weren't breaking the law and they're not criminals so to criminalize them is to alienate them and that's not the way to get cooperation so we I switched to the **truth** and barment okay that's my first response my second response is forgive me uh what I need to do is just turn the sound down because I started my phone up because I I hate to leave it off hang on let me just get that one second there we go think of this whole thing like football game okay you're moving up the field you're

(57:01) making some progress but you get resistance all the way right right up until the one yard line you're gonna get a touchdown eventually if you're good but you're you're not going to stop resisting you right up until the one yard line that's why it's very hard to SC score in the Red Zone you got teams that can move up and down the field like crazy they get inside the 20 they can't go anywhere because the resistance is tougher so we're in the red zone now we've been in it for some time we're

(57:24) very close to the finish line so is there going to be you know strong defense yeah of course there is there going to be people going to try to push back yeah of course they are does that mean they're going to win no we're going to score a touchdown when you game so the fact that there's issues and some problems is hardly surprising the third point is this there is a perspective from the outside that can be very useful at all so let me give you a perfect example Sean catr story that I tell the picture I

(57:57) paint of that is very different than what you're hearing from more inside people because they're looking at it through a different L it's okay here is how I think what happened to Kat but it's based upon a premise which I've put forward countless times uh it's fact it's my my number one thing and and no one is putting this forward I I've been trying to get on some of the major networks and I having any part of it right now but that's okay I got podcast lined up forever what is this fundamental got

(58:25) podcast lined up forever premise I know that feeling everything you've been seeing for the last seven years basically one degree or another has not been has not been about the government realiz try to me guys figure out what's going on in this time which is generally what people think are calling Steve to keep it brief the Millennials and gen X's a lot of people think oh they finally realize there's something up there set up some organizations pass them laws whatever and it's completely not the case at all

(58:56) nothing to do with the government trying to figure this out the government's known people their hands up are just dead right now it's engaging in every conceivable way possible

every form of research including very complex Consciousness research remote doing everything else that could be connected to ETS in any shape or form probably jump in re-engineering studying the technology spending billions of dollars in USS they've been doing that for 70 years so then what is going on in the last years tell them that she's a woman

(59:23) for the next question when disclosure comes whether it comes from our president first or whether he has to go third after Xi Jinping and Vladimir Putin which would be a very bad thing for us but when disclosure comes can you imagine how many members of the press are going to jam every single briefing room of every single military intelligence and National Security office in our country and around the world with 10,000 questions the people are going to be their hair is going to be on fire the media is going crazy can

(59:54) you imagine that's not that's the day after disclosure if the president were to just get up one day on the wrong side of the bed come out and say hey here's a bunch of footage there's ETS here I'm going back to bit that can't happen before disclosure happens they needed to set up all the infrastructure they needed to pass the laws they need to brief Congress they need to get prepared for that day and that's what this is going who's got to land his plane land that plane the the NASA sets up U

(1:00:25) next question are you kidding me but it's helpful makes a look they set up the UAP task force they set up the arrow why so that they go find out what's going on no because they need to have something set up they were both poan villagers but they needed to be staffed falling asleep chat did they tell the people that they were working in a pan Village probably not I want to look at the AR K Patrick that you're qualified guy you've got a a fine career and we want you to run this office but you can't do

(1:00:54) anything no maybe I don't know not sure but it's an awful job you shouldn't have taken it it's all been preparation for disclosure itself and what makes this so tough is they can't say that the government can't say look the reason we're doing all of this and all the briefing and the laws and everything is that we got to get ready for when the president confirms the ET presence because of course the government's position is still there is no ET presence and so they've had to

(1:01:20) misrepresent it it's that final Act of misleading of misdirection I guess you could say but it is for a higher purpose and this is where things get sticky there are a lot of people that know this I certainly do and many others right but there's some people that don't are some people that sort of know it but they're hoping it'll work out kpatrick is one such person so kpatrick is put in charge of this office which has got a good name just legislation being passed everything is moving forward nicely so that we can

(1:01:52) get ready for disclosure and that hearing is coming oh boy and he doesn't have much to do he kind of avoids the line light okay he's not but he's in a very tough position really he's he's not gonna be able to do much he can't disclose anything really and then David brush drops out of the sky lands in well in front of Ross K and then eventually in front of the house

subcommittee and testifies under oath we've got non-human Tech which I've got colleagues up at yinyang that have known

(1:02:21) that for 30 years a lot of American people yeah he confirms it it's totally in front of he confirms he confirms we have bodies basically brush in that one moment confirm Roswell yeah he confirmed the ET presence informally right and that was not in the plan and so now katrik is sitting over the head of a pton village and and a fairly credible guy just said we have the ET craft what do you think's GNA happen next everybody's going to go to kpatrick and say what do you know about that and he can't say a damn thing and

(1:02:51) even if he knew it was coming he was hoping it wouldn't come until they got disclosure but it didn't and so he's stuck there he screwed and he knew it and so in his frustration and anger he mistakenly lashed out against grush possibly because he thought but if you push back against grush that would be make people more reluctant to come to him and say can can you can you confirm that uh Dr peror but that wasn't going to work so he embarrassed himself it was only going to get worse after that there

(1:03:16) was nothing you could do grush coming forward didn't mean oh that's disclosure let's get the hearings let's have it no too many things going on it wasn't supposed to happen he was a true whistleblower the 88 people that Rick is talking about are not whistleblowers they maybe two or three they're Witnesses brush was a true whistleblow because he stated that the policy was illegal and he was very likely breaking the law to some degree or another to come forward and tell the **truth** about that that's a true whistleblower that's

(1:03:43) why he's getting death threats and that's why see anybody who's just a witness called a whistleblower the question just a patriot telling the **truth** if you're a whistleblower you're a traitor and people are sending death threats through social media and so that was the problem that katri faced it was utterly impossible and so then he he writes a lame article in in in Scientific American but this is just story time he was kind of a sacrificial man and ultimately he realized he had to go and there are those in the Pentagon

(1:04:14) that Tred to take advantage of that I got like five more minutes left of this space u all that took a little advantage of that may Twisted a little bit but it's not going to work it's you know it's defensive Red Zone on the two yard line they're not going to they're not it's not going to work for them and so moved on a good question get a new interim director and if they can get disclosure meaning we get the hearing in front of the Intel committee for I'll just take 20 of those 88 witnesses that

(1:04:41) dick Rick is talking about then the president comes out and disclose and then the new director is no longer the mayor of the P Village he is the mayor on the head of the director of era all domain anomaly resolution office fully empowered like the Death Star in the postdisclosure world to deal with the **truth** controll disclosure process that will be reintroduced by the Senate shortly after disclosure like no a very busy person that organization will be very well funded and we'll start getting somewhere that's the outside tape of

(1:05:16) what Rick is seeing from the inside so wow still the **truth** is probably the combination of both both are important I hope that yeah thanks uh Steve appreciate that very much I think that you know from the UFO disclosure aspect Sean K Patrick's not really a very popular guy you know I think that everybody agrees he's probably pushing out some dis disinformation out there at least for the people that believe that UFOs are legit um let's go to some other should we get another question in there I know

(1:05:41) some people have had their hands up for a long time Melo do you happen to know who was first okay Melo might be able not to go on mute um I See's waiting a long time go ahead yeah thanks guys Stephen um I'm sorry uh okay Stephen um I have a couple questions um and there's some things that I would like to say but um I really don't um I don't feel the freedom to say them that's fine yeah and um I need a sound a lot of it has and and the reason I say that is because a lot of it has to do with my background and and the the

(1:06:34) fear that they put into people in those positions in those three-letter agencies um it prevents them from stepping forward a lot of times when they know things um they've they've basically taken an oath or they've signed papers that um that have been a guarantee of their word to not say those things and so I'm I'm thinking when you talk about **truth** and you talk about the the change in the paradigms that um that Prevail in in Washington DC in in in and within our agencies um it's it's that's a really

(1:07:19) difficult process I mean that's something that's going to take a long time to do now we may have certain disclosures like the Little D disclosures you were describing earlier um and we may even have some big D disclosures I'm curious of how those big D disclosures would change the Paradigm in Washington DC or change the modus operandi in Washington DC um so that people really um they they wanted to see the **truth** come out um but they knew that the narrative was always going to Prevail and so you have these think

(1:08:02) tanks and and some of the think tanks they you know they spin these narratives they they try and figure out okay we have these **truths** whether they be scientific developments or whether whether they be political developments and they try and figure out through these think tanks and through different groups what is going to be the best narrative or the most believable narrative that will still protect National Security but but we're going to put out as much as we can but there's still going to be these certain things

(1:08:37) that question they're you know you're going to get the **truth** but you're not going to get the whole **truth** okay understand would you say about that oh yeah sure look uh you you withhold something this profound for 77 years you build a whole infrastructure around it bury it underground and put it under de classification you study stuff for decades and then at some point the ability to the Dam breaks and there people say okay well the dam is completely collapsed let you know wave our fingers at the water

(1:09:13) little at time that's not the way it work what nevertheless you'd like to have some control different and that's where Mark not mark But Chuck Schumer made history on the 14th

of July um it's kind of cool when you're an activist and involved in something really intense that you kind of you kind of realize history before it's history that's kind of cool for now I person again so what happened on the 14th of ju wow Chuck Schumer sitting there in the center he has stayed out of the the

(1:09:49) process of legislation that was primarily emana from the Intel commit he's very political person as the majority so really stays he doesn't want to politicize this and it Go moving along quite nicely as about as nonpolitical or partisan thing as there ever was init said this some of the Senators said I'm gonna probably drop off this this is par and they treated it that way so good so CH stay but then brush grush said we have non human ATT non human bodies by the way when he said that he had he had already run

(1:10:25) everything by doer that he was going to say in that heory and they cleared him the only time I think he stepped I guess you could say out I'm just leaving right now I can't do it anymore guys okay whoa we we did as much as we could do there uh Steve's a nice guy he's very knowledgeable um but man I I need little more fast-paced back and forth you know um just hearing people go off for 15 minutes straight is uh not my idea of a conversation um so wanted to switch off that guys we're going to switch gears

(1:11:09) here real quickly on this um so I've been uh out there trying to mend some bridges guys if you saw my replies and if you have questions feel free to put them in the chat here right now um um and uh melo's asking me to come back what do I need to come back for man just let me let me be done with that space um so I've been trying to M some bridges you saw probably my replies with Ross kohart like the reality is early on I thought that um that maybe people were dis information agents oh no I'm dropping no

(1:12:04) okay okay cool um and I think the reality now is that it's a lot more complex oh the lights looking pretty good uh the situation is that there people are just um they just don't believe it right you just don't believe it I mean just it's hard for people to believe that you can teleport a plane now I've been saying that you can teleport a plane and that the science will be proven you can teleport a plane and I think that's good enough right we've done enough um what I've been doing is pushing the Paradigm far

(1:12:38) far beyond what people are ready for right are we going to see an interview with Jack sarfati I hope so I think that an interview with Jack sarfati would get huge amounts of viewers um I think that just the conflict in general people would the **debunkers** would would want to see them yelling at him yelling at me I would let him I don't care um I was trying to mend Bridges with Jack sarfati as well um and hopefully we can get that to happen I'm not entirely sure um because I mean he's saying the same

(1:13:09) stuff we're saying right like he's saying the same stuff obviously I don't know the science as good as he does he's guy's been doing it for 60 years or whatever right um but he can teach us some stuff right plus I'm kind of prickly like he is I feel like I'd be a good understudy for him you know and you know I probably have similar feelings about some of these people in the

UFO Community like he does too yeah I think people would love that interview honestly and we have a pretty big following these days so um it can

(1:13:40) get him a lot of exposure to the stuff that he wants to do yeah I I think him calling me a wise ass would be like the the least controversial name that he would call me either way I think it would be hilarious uh um no I didn't really chat directly much with Ross but he did like my tweet where or my reply where I mentioned apologizing to him because again like I'm starting to think though that it's more of a situation where just not only is the information we're disclosing too hard to believe uh but

(1:14:10) that they think that I'm disinformation right they think like oh this guy's talking about teleporting that can't be real right how could this random guy know about all this right and so they probably think it's disinformation right and the reality is this is why it's so easy to keep the stuff hidden there no side really understands who's lying and who's telling the **truth** you know and um and and that's what I think will make it uh easier for people to uh you know when we we need to start rebuilding the

(1:14:38) bridges I guess is the way to look at it right and also if I start mending the bridges with sarfati maybe we can get sarfati and pz together Salvador pz um in the same in the same space at some point in the future which I think would be awesome because I mean they're both talking about the same thing right they're both talking about this idea of teleporting stuff being able to be real and you know moving faster than the speed of light and I have a feeling their equations are identical as well the the **truth** is that I don't think

(1:15:07) either of them are the people who've discovered this right neither of them are the ones who discovered this they're both just trying to get the science out there and there's plenty of credit or whatever these people want to go around I I personally don't give a crap about any of the credit right right uh I just want to help get the information out there to help you know the world and I have a connection to Tim Ventura as well uh he's a super cool guy I think that I kind of look at myself a little bit

(1:15:37) similar to Tim Ventura where Tim Ventura is the kind of guy who's been talking to a lot of these engineers and scientists behind the scenes right and uh I think that in some ways like he's he's easier to approach than I am for sure but from my perspective like I just know how to use social media a little bit better just CU I'm a little bit younger so uh pretty interesting um no comment on the shellenberger thing uh he did follow me at one point I'll say that but um I know if you're dealing with like uh journalists that

(1:16:19) are big as shellenberger you don't really talk about it too much right but I will agree I have huge respect for shellenberger right but one sec chat keep in mind that the even for people like shellenberger what we're talking about here is too big hell just teleporting a plane is too big right right just teleporting a plane is too big even if there was no other consequences most people can't believe that teleporting a plane is possible and these are people that are disclosing UFOs right so the idea that not only are

(1:17:07) we teleporting a plane but that it's also the largest conspiracy in the history of the world and our own government is the one responsible uh that's a lot that's a lot for people guys that's a lot now is it true yes I'm 100% convinced that it's true I mean it's just the evidence is overwhelming right the evidence is absolutely overwhelming uh we're in a situation here where we know the government US government knows what happened to the plane we know 100% sure that they know and the story doesn't make any sense we

(1:17:41) searched for this plane everywhere where they said we should find it we didn't find anything right that The Logical conclusion is that the data that led us to that location is not correct right the moment you throw that data out it's really apparent what happened it was a fire and it was probably some orbs teleported the plane you know crazy enough as it is uh so you know it's it's a lot for people to take in there's a lot of a lot of these people have everything on the line a lot of them probably think that we are

(1:18:13) disinformation ourselves right um so this is a lot more complex than I thought it was at first if you if you had me now talk to me 6 months ago it would be a totally different story I probably would approach it a slightly different way as well probably in a more diplomatic way the reason why I was so aggressive early on is I didn't know what the f was going on man I really had no idea what was going on right um yeah guys like I don't even the **truth** is like people ask me about like Joe **Rogan** and like am I upset that Joe **Rogan**

(1:18:52) canel the thing like not really because the more I realize like how much the these videos the MH370 videos literally bro broke people's brains guys like I'm not that's I don't even joke when I say that the MH370 videos broke people's brains they actually broke their brains people were melting down just at the idea that those videos could be real people have made up fake stories in their head that I'm hurting the families and **scam**ming and grifting people all this stuff is fake right but because people need to believe

(1:19:28) that their reality is stable and that we can't do all these crazy stuff they're willing to believe literally anything about me right this just goes to show how how people's brains get literally broken by this kind of information and I don't say this to put them down I'm just telling you this is just the way a human mind works it's called cognitive dissonance I've talked about it before right is that what happens is you have a preconceived belief and if that preconceived belief is

(1:19:55) attacked then what the Mind does automatically is it attempts to make up fake information so that you can maintain the preconceived belief right this is you can see this happen throughout your life all over the place guys all over the place right same thing that's happening here is that they know that teleportation cannot be real so what does that mean that means Ashton must be a liar that means Ashton must be a grifter right this is how cognitive dissonance works works right we've addressed all the **debunks** nobody has

(1:20:27) ever addressed any of our evidence never once not even tried just keep this in mind guys nobody has ever once in the last six months ever addressed any of our evidence ever

nobody not a single person just think about that for a second how weird is that nobody so when people talk about like this is where I'm talking about when the alien the The naaska Mummy people think the NASKA mummy people think that they're going to get some kind of glowing reception they're going to get crucified the media is going to crucify

(1:21:05) them social media is going to crucify them uh that's just how it is guys like I think that I've already gone through that Awakening of realizing it's it's well beyond even what I thought with um Bob Lazar right Bob Lazar yes Ellie that is confirmation bias you must have just joined cuz I literally said that but welcome Ellie to the chat uh Bob Lazar like he he got crucified right they destroyed his school records potentially they he thought he was going to be a hero right it's even worse now and to who who

(1:21:45) posted it a second ago some okay so Lobster says it broke brains but it also woke up some people like you guys are now awakened right the people in this chat have been awakened like they've realized that there's some crazy ass technology out there that's way more advanced than anybody expected right and here's the thing chat when it comes to ufology I think that the people that were awake were ready for it to be something that's like way more than we were willing to accept and we start talking about teleportation

(1:22:21) Tech that's way more than most people are are ready to accept guys hey William I love you too buddy I hope you're doing well man um and so you know I think that there's only two ways that you can either adjust your world view to incorporate the idea that this stuff can be real and that's what we've done right is we haven't tried to change the parameters we've just adjusted our world view the people in this check go okay well I aliens can be real it makes sense aliens have to get here somehow or they think that okay

(1:22:54) you know quantum mechanics and general relativity can be unified and when we unify them now this leads to a possibility where we can achieve super luminal speeds right and what does that mean there's some huge implications right those huge implications are and I'm doing my best Steve Basset impress right now pression right now um those huge implications are that the world that our reality is a matrix oh did I say the wrong thing I meant confirmation bias okay Ellie is correcting me chat it was confirmation

(1:23:28) bias not cognitive dissonance Rip but it also cognitive dissonance a little bit as well um so our world is it's a it's a matrix right there's an underlying framework to it and in addition to that we have this idea that space is not empty once you combine both of those factors there's no issue with super luminal speed this is where we open the world up to Magic right and this is the part that's so challenging for people and the reason why it's so challenging is that regardless of if you're a **debunker** or if

(1:24:05) you're a Believer regardless of if you're on the left side of the political Spectrum on the right side of the political Spectrum a lot of people only believe whatever Academia has taught them right and Academia is not out there saying that we have an extra Dimension the Academia is not out there saying that there is empty space has you know uh energy in it right and since

they're not saying that then people don't believe it to be true they think it can't be possible hey Diamond welcome my

(1:24:40) man uh I love Diamond guys Oppenheimer Ranch project make sure you guys are following him he's out there solar Marshall's out here as well and yeah solar I know that you think that the Bob Lazar stuff's fake I personally don't agree um I think that he's been discredited for sure but there's no way someone's coming up with all this stuff on their own man like especially like the uh the hand thing as well that turned out to be real like he he knows some stuff when I whether or not he's on

(1:25:11) the up and up like he had compartmentalized access to information right I don't think anybody does what Bob Lazar did unless you really saw something and the reason why I say that is because it's the same thing for me as well right people don't uh people don't do what I'm doing and come out with this information put yourself on the line and put your real name behind it and tell everybody your whole personal life story unless you confidently believe what you're disclosing right and again I can

(1:25:43) be wrong but I'm not a liar that's the difference right um yeah solar I've seen it all man I'm not trying to put you down or anything but I've seen all the the discrediting and what have you I've Seen It All About Bob Lazar end of the day like some other people mentioned in the chat um you know the testimony of David grush uh does um let's see support a lot of what Bob Lazar was saying he could be a liar you could be at this point doesn't even really matter right like we know Area 51 The Groom Lake and the

(1:26:14) testing facility there is real um at this point if you believe that the witness testimonies uh uh to Congress then the government has some craft to me the question is what's the nature of the phenomenon right that that's to me the big question is at this point is not whether or not we have craft or whether or not the stuff is real it's a matter of like you know are there really aliens visiting us are they extraterrestrials are they really just us and that you know we've had some kind of weird memory

(1:26:44) loss of our history or is there something super effing crazy going out there so um what I'll also say too is that yeah everything could be wait everything could be assist equals op I don't I don't know what that means uh here's my opinion guys you want my true opinion A lot of people asked me what I believe about aliens and stuff like that and uh my true opinion on that at this point this is just a guess guys this is just my opinion it's nothing don't take this to the bank or anything but I think that if this kind

(1:27:20) of technology is real like we can tell teleport objects then the most likely scenario to me is that we're some kind of prison planet that aliens could literally be us or they could be something completely different maybe they're mants I don't know but I would say that they're most likely thousands or millions of years more advanced than we are and if that's the case then we're just literally ants to them and we could be some kind of Prison Planet the craziest to me would be like if aliens look just like us that

(1:27:51) aliens are us and that they like they like crashed here a long time ago and we've lost our like technological superiority that we used to have just because of our Amnesia of how we die or something like that that would be super crazy to me but yeah that that's my best guess when it comes to what this all means is that I think that technologically we are the equivalent of cavemen and that we think that we are like super powerful but I think we're just literally cavemen and we think that we've discovered all stuff we've got

(1:28:23) computers and all this stuff and we think we're super Advanced but we are just like at the at the end of the of the ruler on the opposite side of where we think we are right now right that we've got so much further to go right that's what I truly believe about our civilization at the moment and that would imply that there's could be other civilizations that are much much more advanced than us and when you think about that like um Step G Dr Steven Greer would say that means they must be uh benevolent but I don't agree I do not

(1:28:59) agree with that I don't think that they have to be benevolent just because uh you know that they haven't destroyed us yet I think that the in the cosmic scheme of our civilization has just been like the blink of an eye right and for that perspective like we could easily be a zoo or a prison planet and they could come and wipe us out whenever they feel like we've become a threat or that we've achieved a certain level of technological superiority right uh so I don't know right I again I'm this is

(1:29:33) just my opinion it's don't have hard facts for any of this of course um but that's probably where at this point what I would what I would think and um it wouldn't surprise me if we have alien bodies somewhere just because for me the strongest evidence of alien bodies is actually the ebo scientist post that's actually the strongest evidence for me um because that's just too damn elaborate do you guys remember when we did the ebo scientist uh review the ebo scientist review took me like an hour to read

(1:30:07) through on chat I actually like almost lost my voice just going through it it was so long and it's all like detailed physiology of an alien body like to me that's that's the best evidence like that is wow okay if somebody went out there and they made up a whole physiology of every single uh system within the alien body that is damn impressive I mean it's not impossible to make that up but that's just really impressive and a lot of the details were super were like literally real like the stuff about the lab stuff

(1:30:44) I told you guys was like I know for a fact all the lab equipment they talked about was real and all the terminology really the lab stuff and people were trying to pick it apart and all they could pick apart was like oh he said distal instead of medial for like which finger or which joint it was I'm like that's it okay it was like 25 pages long and that's all we that's the the best we've got okay um so I don't know I don't know Chad I think that the world is really exciting and and we will see

(1:31:11) in the future um yeah no I did record the ebo scientist post it should be on one of my live streams I if you listen to it I literally get exhausted through it and I couldn't even pronounce

half the medical terms and that's scary because I'm literally in healthcare I have to build a lot of this stuff and I don't even know how to say a lot of it right but when you start to get into genetics and a lot of that like a lot of terminology is really hard to pronounce so um yeah the ebl scientist post is really

(1:31:44) convincing and Not only was it really convincing but they got deleted on [Reddit](#) in real time wall in the middle of answering questions like their account got deleted like they were posting replies to people and when they posted the reply it said their account was literally deleted like that's like okay to me that's like the government is stepping in using their back door and they're wiping that person's account out because they're talking a little too much right cuz why else there's I've never even

(1:32:13) seen that happen on [Reddit](#) before why would they even do that right if that's fake then you're not deleting someone's account in real time that's that's the part to me is like hm that's super weird that's more convincing to me than any of these videos of aliens or anything like that way more convincing but that's just my personal opinion um people wanted me to react to the uh the space on news Nation let's let's take a look at that real quick chat Amanda Amanda guys I I was like join

(1:32:53) Ashton the most amazing online chat discussing disclosure and then I look at it oh this is me thick D disclosure with Steve Basset and Rick doy I appreciate you man I appreciate you uh bringing it up here um whenever people try to call me out I I try to always respond as much as I can then I realized oh that was my that's what I called it thick D disclosure uh what do I think about the flying triangles yeah I guys so my opinion oh thank you so the ebo scientist use January 11th if you want to go back through the live streams I've done a

(1:33:33) crap of live streams Uh crap load of them the tr3b flying triangles I used to think that was all fake I thought the tr3b stuff was like some madeup mumbo jumbo honestly that's what I used to think um what I will say is Eric Davis you can't trust what Eric Davis says guys Eric Davis is literally at scientific papers talking about teleportation and then he'll come out and say that like it can't be real it's like but dude you literally wrote a paper about it like Eric Davis in my opinion is spreading

(1:34:08) disinformation so be very careful of what you believe about him now the reason why I think the tr3b could be real now is that I've literally seen three orbs floating around a plane in a triangle formation right so to me I don't know I just know that we've got some crazy orbs that can make triangle formations so I'm not ruling out triangle black triangles and stuff like that and even before that I always thought that there's been a lot of triangle formation stuff but I've never really seen like a solid black

(1:34:37) triangle right so I don't I still don't know if these triangles that we see these um tr3bs or if that's like a physical triangle or if that's just three orbs in formation I have no idea but like I say to a lot of stuff guys my mind is wide open when it comes to this stuff at this point I think that like everything could be real um man this Cobra Tate Ryan Garcia thing is going wild I'm not

going to report on it but also just for the record guys if you were confused by my post this morning which I think

(1:35:12) apparently a lot of people were this one okay if you're not if you don't if you don't get this one all men of caliber ever do is ignore the scops and try to figure out how to reveal advanced technology to the world um uh Andrew Tate showed up on my my home screen today and it said all men of caliber ever do is ignore the baddies as in like the hot women or whatever uh that are like trying to take advantage of you and then uh try to figure out how to defeat the Matrix that's what he wrote he said

(1:35:45) all men of caliber ever do is ignore the baddies and try to figure out how to defeat the Matrix so what I did was I took the the same video and I just changed it around ignore the scops cuz I think this was from 007 where she ends up being a spy right doesn't she end up being a spy and like trying to rip him off and he ends and like the secret is he knows about it here I think right and and then he's thinking about like all the different scops that are going on right on how he's getting like outplayed

(1:36:12) by her and what have you honestly this I love this one this video he just got a hot woman just like touching on him he's just drinking thinking about something else I love it I love this video he's just like how do I reveal advanced technology to the world she's like she's definitely a spy she's 100% a spy guys he's like yeah I know she's a spy but sex is pretty good let me drink my Rolling Rock whatever he's drinking right here um okay so now you guys get this joke hopefully doesn't go over you guys

(1:36:46) head um this was crazy man this was crazy I wish I had more time to edit this down today but I was super busy with stuff I had to do work was working on some other stuff I mean it's crazy this guy literally says he was part of the search operation and that he knew they were talking about searching in the wrong spot because he was searching over to the West the next day I knew the very next day look at this kidding me I knew the very next day I knew the very next day which direction that the Direction the airplane went and I sat there for two

(1:37:23) weeks he says and I sat for two weeks and watched why the and watched why the world entire world was searching in the wrong location guys this makes no sense how can people look at the situation with this plane and think there's nothing going on the more [ ] I look at the more I'm like guys I like I don't know if I got to hit you on the head with a hammer to make people realize that like planes don't disappear in 2014 that's not what planes do planes can't disappear we have monitoring the whole globe why would we

(1:38:00) be searching in the South China Sea when all these governments know the plane's not there just think about that for a second Malaysian government knows the planes not in the South China Sea they've got everybody searching in the West in the an in the the nicobar islands where literally the plane that disappears in our videos but they are still the TV is talking about the South China Sea how does that make sense doesn't make any damn sense please say a few words on the Duncan Cameron and three UFOs black hole

(1:38:39) clip uh is that the one that somebody linked to me I may have to do that tomorrow guys yeah this case never made any sense the poetry and proses uh comment this case never made any sense and I think that's what got me to some degree so interested in it because it never made any damn sense I remember following the narratives hoping for one that made sense and then they're like oh well it was a pilot suicide I'm like huh pilot suicide and I went along with it because a lot of cases of planes crashing are pilot suicide that's the

(1:39:16) only reason why I went along with it and then once you start to realize like no this is not you start to dig into this you realize there's no [REDACTED] way this is pilot suicide no way man no way yeah and so this is why poetry good good comments poetry says I used to follow Jeff weis's blog I didn't buy the Russian thing but I knew he was right to the plan exactly what I realized right away is a lot of these investigators they knew that this plane didn't crash because you don't have a there's no

(1:39:44) debris field right but then they started making up all their own theories right and I will criticize them slightly here although I still respect them which is you know Jeff wise was so close he just he implicated the wrong government it's not Russia it's the United States Florence Tangi who I have the utmost respect for I I love her I have a mini crush on her just because she's so smart but the plane in my opinion did not go to Vietnam right I think that that's where her theory diverges is the idea that the

(1:40:23) plane continued on its direction as opposed to cutting back right and this is the difference between our theories and both of their theories is that we use more evidence than anyone we take all the evidence in we don't dismiss any of it all the witnesses as well and then we just say okay the only thing you have to fake here is some iMat pings and why does it make sense to claim that the iMat pings are faked cuz we didn't find any debris field not not find a debris field we didn't find any debris we

(1:40:54) didn't find a plane above or below water anywhere right it's like there's yeah no no crash field no crash right it's it's really that simple if you don't have a debris field there's no crash in the ocean there's no way we could have missed it it would be gigantic it would be a gigantic to Bri field I used to follow Victor anello's blog back in the day that's how I knew that the uh suicide pilot scenario is [REDACTED] because I remember I read his blog post about how the simulator data didn't

(1:41:28) match up that the simulator data was just mh150 to Jetta I remember reading that and I'm like huh yeah that is mh150 to Jetta it literally goes from qual Lampur to Jetta to the Northwest and they try to claim that that's the suicide route that's not a suicide route that's not him practicing a route no no chance and this goes to show how different like the media and how the media crafts the perception of events is they report oh the they found a a ping that was similar it's like what one plot

(1:41:59) point there was also a plot point for Diego Garcia does that prove that it went to Diego Garcia right it's wild um let me find the other post so also guys uh check out the podcast with

Brian from searching for the political identity um did a good podcast with him it was about an hour it's a little bit shorter I also today finished a podcast with Steven Steven Deer uh is that how you say his name deer Diner I'm going to go with deer uh he's awesome uh we've done like two or three parts with him

(1:42:33) super cool guy right and I I went kind of off on the **debunk**ers on this one we went through the whole Cloud **debunk** on this one and he didn't know about it right and so a lot of people will have um criticized me for not addressing the **debunk** so I went ahead and address the hell out of all of them so you guys can check that out if you want um Elon Musk retweeted this post this is the post that I replied to yesterday people pinged like 10 people pinged me into this and I'm like okay what's going on and I see this I'm like wait a minute

(1:43:15) this is the dude that talks about super conductivity that like has a really I don't know if he used AI to come up with this but this is really good analysis he uh even talks a little bit about the like the lattice structures I think in terms of the they can create high temperature super conductivity and I replied to this yesterday and apparently Elon Musk retweeted it and now it's got like 10 13 million views right oh he didn't reply to me but uh where's my reply there it is 40,000 views on my

(1:43:59) reply on this one and this was me posting like afterwards as well so um yeah pretty interesting okay um now where is the so Elon Musk definitely he's Elon Musk is 100% seeing the MH370 stuff it's his platform we were getting hundreds of millions of views he knows kim.com it's uh 100% certainty that Elon Musk knows also I'll try to reply to more of these questions there's 103 I'll try to reply to more of these guys we hit 80,000 followers that decided that I would do an AMA um also when people post Clips like

(1:44:42) this I like to go ahead and retweet them probably going to do some more of that kind of stuff uh so let me finish one more Olive guys and we'll keep going oh wow it's late okay guys we're going to do the uh the news Nation piece and then we're going to stop after that CU wow it's getting late and I'm going to be really tired so Steven deer uh uh stream or sorry podcast with me is going to drop tomorrow or at least the first half we went for an hour which is long for his his only go like 30 45

(1:45:32) minutes um so that was pretty long where's the Ross kohart thing okay so now you guys are starting to get the joke good I almost posted Andrew Tate's original so that people would understand the joke but then I was like I'm going to have a million people yelling at me about how Andrew Tate's the worst human being I'm like dude I'm just making a joke I'm just making a joke guys I literally follow everybody who's large because just in case they would ever want to reach out you can only you can

(1:46:03) only DM me if uh I follow you so that's the main reason why I follow everybody doesn't mean I think they're the greatest person in the world thank you be happy I appreciate that message she says I think you are chosen because you Encompass skills and smarts needed for **truth** finally you said last week you must be protected and I've uh thought that since I found you

made me cry wow that's really really nice comment be happy very nice happy or very nice comment be happy appreciate you um yeah **truth** is I don't know uh I

(1:46:36) really don't know I mean I've been I've been talking about some crazy stuff that even me from a couple years ago would probably be on the **debunker** side saying that I'm full of **[redacted]** as well so that's the part where like it's hard for me to get too upset anybody who uh who you know doesn't believe it cuz it's it's a lot to take in you know it means a it has a lot to do with a lot it means a lot with respect to the nature of our reality um the real reason why I'm confused is in terms of why I

(1:47:07) haven't been talked to or silenced is that uh and we'll get to the don't worry we'll get to the news Nation thing guys is that the Malaysian Airlines flight 370 thing is potentially the largest conspiracy ever right and that's the thing where that's the part where I think they would have quieted me the technology side I think that they would just let it go because they're going to be like no one will believe it anyway right the MH370 conspiracy side of it's the part where I kind of expected them to talk to

(1:47:39) me because holy **[redacted]** the US government's implicated this goes all the way up to President Obama this goes up to President Obama I even voted for him right that's the part where I would figured they would be like hey man shut the hell up right like stop talking about this because people are going to start putting it together man like you guys started putting it together like we've put it together um the cover up was not even that good and this is the part two where you guys should listen to to Stephen on

(1:48:09) the podcast tomorrow because we talk about this where I talk about like again that the cover up wasn't even good on this like it was so sketchy the way that the information was being withheld and how they weren't searching in the right spot and all this stuff like none of this makes any sense there absolutely even without the you even without the MH370 videos we know we know something else happened to this plane right we know it I wish there was a better example like you know let's say that the MH370 videos didn't

(1:48:40) exist I would say the next most likely scenario is that they remote controlled the plane just like um Captain Dan Hanley was talking about to me that's the next most likely if if teleportation is not possible which unfortunately I think it is uh I would say that it's the remote control scenario makes the most sense because this plane just simply did not crash into the South Indian Ocean right it's just that simple and the debris that they found is out in Africa to me that debris has to come from like somewhere closer to Africa

(1:49:13) it's not coming from somewhere near Australia so that debris had to have happened somewhere near the Maldives at least in my opinion right uh what's this whoa hello 6.1 million views hell yeah what's this wow that's awesome this is how people are knowing about it right because people like I and this is the thing too like I'm not telling people not to share stuff like I just tell people like look you got Tik Tok or whatever go nuts dude I'm never getting on Tik Tok so um you want to share my

(1:50:04) stuff on Tik Tok go crazy man 40,000 views 40,000 6.1 million right go crazy man go crazy share it you know that's huge I love it uh let's oh we can do some questions real quick here uh Hey morning yeah morning Enrique hey that UFO chick appreciate you uh have we seen your channel that UFO chick I'll give you a subscribe although you don't have any videos no videos that UFO chick you need some videos um if have you investigated is this the first time this technology has been used um it may go all the way back to the

(1:51:09) philadel okay I think this this technology could go super far back guys I have no idea what's this oh is oh these guys I got got a guys I have to say it's kind of an honor to get added by these people that are like I I must be in this one I don't know where I'm getting added at people at me with like people like pucker Carlson like Joe Rogan and stuff and Alex Jones I'm like those guys are so far above me and I'm like oh okay that's pretty nice um okay here it is here's the here's the clip

(1:51:49) found it I knew we get I knew someone would post it CU I've got like 77 likes on this reply to him to Ross kohart we're trying to mend the bridges with Ross kohart I think that a lot of these guys just come from a old school mentality 10 years since the disapp 370 and we're closer to an explanation of what happened now than we were then but the Malaysian government said oh that's you UFO chick you're the one from the alien addict thank you very much appreciate appreciate you that's awesome Okay let's listen to this for a

(1:52:23) second yeah welcome to the stream I think this is the first time I've seen you on here yeah Artis and Tony I think what I like about Artis and Tony is that Artis and Tony doesn't have a huge platform but he's like a normal guy like me right but he's much more he's been much more on the ground level the UFO Aly stuff than I have been um but that's what I want people to realize too is that I'm just a normal guy who got into the craziest [REDACTED] ever right to me this is the craziest story in my whole life um

(1:52:58) the letter to me is the weirdest [REDACTED] that's ever happened in my whole life so if you haven't seen the letter to Ashton Forbes Google that later on YouTube um cuz man that is just mindblowing um but when you come with this from a normal perspective you have no idea like here's the thing again I'm G to say this one more time I know I'm repeating myself here but when you come into this and you are like getting redpilled like crazy and you're like this is the hugest conspiracy ever and you don't know who's a scop

(1:53:31) who's disinformation what's real what's not anymore right and this is the reason why I was so aggressive early on is I didn't know who the I just thought like everybody was paid for right I was sitting there thinking like these people are all being used or paid for or what have you and now now that I've Had The Time of like 6 months of dealing with it and all the stuff and all the BS and the attacks I think it's really just a matter of like this is so far out there so beyond the Paradigm that most people that are

(1:54:07) rational thinkers think it can't be possible right and to me that's that tells us that there's some things we can glean from that right the big one is that this is most likely not human

technology at least not of original or origin in my opinion uh because I don't think that we could get so technologically advanced that the secret technology breaks people's minds uh without help so that's the part of the reason why I think it's reverse engineered cuz the only way that we could have technology that's so

(1:54:40) mindbending that we literally have orbs that can float around and teleport a plane to me that's got to be reverse engineered somehow right that's why it's mindbending because this is actually technology that's thousands of years more advanced we just got access to it early too early that's that's what makes the most sense to me and if that's the case then it makes sense why even the UFO disclosure people like hate us it's not even necessarily that they know they might not even know right like imagine Ross

(1:55:14) kohart Ross kohart might not even know this technology is real right he's just sitting here talking to people about metamaterials and Aliens might be real he's not having people come to him being like no we can actually just teleport an object from one room to the other faster than the speed of light cuz that's some mind-bending stuff man this actually makes me wonder and this is the thing I've been wondering about as I've been learning the science is like does this break causality like guys if you check

(1:55:44) out our science streams from last week we were talking about this cuz when you start everything we know in time itself is based on the speed of light so if we are going faster than the speed of light what does that mean about time that's the thing that keeps me up at night like can we actually travel back in time I know we can travel forward in time that's easy traveling forward in time is easy the question that keeps me up is can you travel back in time the way that I perceive reality would tell me no you cannot but if you

(1:56:17) can move faster than the speed of light you can bend SpaceTime itself this is the part where like I need to talk to like people like Jack sarfati and some more people about this kind of stuff till we can figure it out now let's go ahead and take a look at this because we're know we're getting sidetracked so I won't say I'm offended I'm not really offended but I'm disappointed that Ross kohart doesn't even bring up the idea of the orb videos I mean guys everybody knows about the orb videos

(1:56:47) we've got hundreds of millions of impressions okay hundreds of millions if you go across all the social medias like we had somebody just show us that they got like 50 million impressions or something right on their one channel my guess is we're like close to a billion Impressions on this right which is huge and no media will pick up on it so at least at a minimum you deserve like and there's a conspiracy out there that some orbs teleported the plane to the zenu dimension or whatever at Le I don't care go ahead and say it

(1:57:17) if you want to say it right but at least give the videos a little bit of credit at this point guys we're not in a situation where they like found the whole plane somewhere we're in a situation where they found nothing they didn't find any plane they found debris that washed up in Africa right I think we I think we're okay to at least talk about the videos on on TV right so this

is why I'm a little disappointed in Ross kohart but I my my guess based on what I my interaction is he's got a little bit of

(1:57:49) lingering C CN brain and he's he's getting over his CNN brain right when he comes to the ufology topic but he's still got a ways to go that's my true opinion and I I actually don't think Ross Kart's a plant anymore I just think that he's being a little bit used and that he's not been told the full **truth** about the nature of what this technology can do this week it's open to relaunching a new search and an American deep ocean exploration company is offering to do it 239 people were on

(1:58:18) board that flight to Beijing when it disappeared Somewhere over the southern Indian Ocean joining me now is news Nation special correspondent and investigative reporter Ross colart who's covered the story for the last decade Ross it's always good to see you I mean talk about a development kind Myst time especially for those families years without any sort of answer I know and it's heartbreaking Mary I've I've been talking to Australian families who've lost loved ones Malaysian families and Chinese

(1:58:49) families and all of them feel the pain and it gets worse as each year goes by and now the Malaysian government's talking once again about possibly funding another search there's been is it is it weird to anybody else that they're talking to Ross kohart about MH370 stuff did he do any investigation into MH370 like beyond the videos just like in general like why is the UFO guy being talked to about MH370 been two previously of course both I don't know what breaking points is but sure unsuccessful there's been I think

(1:59:33) oh and just real quick guys there I do have some podcast planned they're going to go beyond the retirement time because they're just scheduling reasons so that's just how it is 43 pieces of debris that are thought to be related to the plane that have been recovered for the record guys there's not 43 pieces that they' found um they found 43 pieces that they think might have some chance of being connected to the plane as far as I know there's still only three pieces that have been confirmed tied to the plane

(2:00:04) okay so when you talk about 43 and then there's really only three pieces it's a little bit misleading little bit misleading some of these pieces is like I think some of them are even like cup holders or like you know water bottles like you know some of this stuff absolutely is not part of the plane some maybe a lot of maybe some of it is right again not inconsistent with our Theory anyway but yeah over the years but no definitive answer yet on what yeah the New Evidence there's no nobody knows what the New

(2:00:34) Evidence is um I think that what they mean is they're talking about uh Richard Godfrey's analysis I think where like basically and I think there's a graphic later on where they've decided like there's one part where where somehow they didn't check it already but like I've looked at the search thing and they already checked they already checked all up and down the seventh Arc there's nowhere else for it to check and this is why guys if you have any of these experts come to you and say that the

(2:01:02) videos are fake or whatever you just tell them like okay where did the plane crash point to it on the map because they literally checked every they've test they've looked everywhere there's no way you can hide a debris field of this size they looked everywhere and found nothing so you just tell them point on the map where you think that it is right and that's is where it shuts up shuts them up every time exactly happened and that's what the that's what the families want they want to know how

(2:01:31) this disaster happened and I think also a lot of people uh want to try and elay the conspiracy theories that have come to pass there's a hell of a lot being said about MH370 which could easily be disproven if the wreckage is eventually found okay so that's a fair comment yes I mean if they find the wreckage they could disprove the MH370 videos right that's why they're never going to find them oh thanks UFO chick appreciate you appreciate you the Latino lover yeah guys the Latino lover if you're not

(2:02:07) familiar with this um money penny made this yesterday uh my favorite part about [Music] this why is it not working there we go I just become super hot in the middle of this I literally just become like Latino in the middle of this and for somebody says zav at the end here uh is that a cat picture in the background as well this uh version of me of a cat picture in the background oh definitely that's definitely a cat damn look how hot I got holy [REDACTED] man even this might turn me gay wow and I have a chain all of a

(2:02:53) sudden this is this is the [Applause] [Music] joke chat I'm not going to lie I love that graphic I'm actually probably going to use uh that graphic as my new intro cuz that's how much I love it and it's a little bit shorter than my super long one so definitely like it uh um but yes if they can yeah that's that's Lulu's inner cat honestly yeah that Lulu is wrong side of the door Kitty she every time she's outside now she like hits the glass and then I open the door for her and she just stares at me she doesn't

(2:03:35) even come inside she just stares at me like a cat does I swear she's more cat than dog um but yeah if they found the debris if they found the plane that would diffuse all the conspiracy theories but they didn't they searched for three years they searched for three years and didn't find one piece of the plane like where do they think this plane is hiding where do they think the plane's hiding chat there's nowhere else for the to to hide the plane so anyway let's keep going and you talk about uh you know all those

(2:04:08) searches and and and individual investigation what does pmsl stand for chat let me know I don't know what pmsl stands for I'm not I'm too too Boomer that have been conducted the Malaysian government and other countries have spent 130 million oh yeah yeah and I turned into Iron Man at the last second I love it dollars searching you know for this aircraft just in 2017 they found nothing then now you have this Texas based company coming forward uh that's offered to lead the search um they say they have new technology Ross what do

(2:04:36) you think that actually looks like new technology well ocean Infinity led by a chap called Oliver plunket is one here you go chat okay chat we're going to **debunk** possible contact

with a flight recorder okay they did not find a flight recorder okay there's no black boxes there was no possible contact with the flight recorder they knew this location was [redacted] how did they know the location was [redacted] the frequency was incorrect the frequency that the black boxes transmit on is extremely specific and this

(2:05:22) frequency they detected was not that frequency it turned out that it was just the devices that they send in the water that were searching for it was defective it had a it was broken so this is total [redacted] like this goes to show how easily this is news Nation guys lying to you guys on National Television there was no possible contact with a flight recorder they knew there was 0% chance right they've got this huge Ark and they've searched all along it right and look at this is the closest location for the

(2:05:54) wreckage they only Circle the one the rest of the wreckage is over here in Africa in South Africa this is over 3,000 miles away 3,000 miles away and they they found this debris in a year or like 18 months this debris supposedly had to float let me look it up had to float 10 miles per day in a straight line over 500 Days in order to reach this location or any of these locations let me just say that one more time the debris had to float over 10 miles a day in a near straight line for 500 straight days what what 10 miles a day there's no way in hell

(2:06:54) that this debris was floating randomly over 10 miles per day in a straight line no chance this is why Blaine Gibson who is finding the debris in South Africa question the narrative there's no way this plane crashed along this Ark over here no chance in hell the debris would have washed up in in Australia it's not washing up in Africa have a good night mystical Wonderland and here's the thing it's not waves that transport the objects it's the wind so this is why my next post guys that I'm going to post

(2:07:29) tomorrow uh read through Jeff wise's blog this one right here I'll even link it to you guys is like this is why I sent Jeff wise a message because I'm like Jeff wise your your journalism is actually good you just got the wrong conclusion he even talks about how wind is the the main factor for debris floating around right and the problem is you read this first couple paragraphs from it and you realize what's wrong with Jeff wise right he thinks that he this that bla Gibson's a crackpot bla

(2:07:58) Gibson's literally just finding the debris in Africa and uh Jeff wise can't think it's real because Jeff wise thinks to playing with Russia right and the problem with Jeff wise here was he didn't adjust his perception you know to me this idea marked him instantly as a crank this is a great way to discredit yourself chat if you make a post like this this is discrediting yourself entirely some random guy is finding debris and you are literally calling him a crank that's your your perception is you think he must be a

(2:08:36) crank because he found debris somewhere he's just a guy that found something this shows bias right here right is you're not willing to open your mind now the difference between that and our investigation is that we have looked at all the evidence and we've made our story based on as much evidence as we possibly can right I wish Jeff wise wasn't so obsessed with

Russia I don't understand what his obsession with Russia is it's crazy man Russia is not as advanced as we are not even close

(2:09:06) man um but so and he talks about the wind is what causes debris to float and then I read uh the Florence the Changi article that came out today as well same argument she basically talks about how far it would have to go and the part two is that the wind then means that it's dependent upon like how the debris is sticking out of the water like think of like a sailboat right and this is why there's no chance this this debris is floating 10 miles a day there's just no way um because if the debris is

(2:09:38) underwater it's not going to float that it's not going to move that far it's just not going to move that far guys so this is just wild and here's the other kicker is that I found a Reddit post talked about the MH370 debris and says that the debris analysis is all [redacted] debris analysis is never or or drift analysis has never been used to find a single plane ever in the history of the world they used drift analysis to try to pinpoint the uh Air France 447 crash completely failed it actually caused

(2:10:09) huge delays in searching for the Air France 447 uh debris because they ended up searching in the wrong spot because the drift analysis was complete [redacted] so drift analysis is garbage and that's why that's the first post I'm going to make tomorrow is going to be about the drift analysis probably in the morning as well I'm probably just going to throw out all the the pieces tomorrow tomorrow is going to be debris the iMat pings uh and then the probably ESPN scenario in the afternoon and then on Thursday I'll

(2:10:38) probably do a piece about Edward C Linn and uh maybe one more uh Arwin found some good stuff about free scale semiconductors as well and Rolls-Royce oh I didn't have rolls rice list on here hopefully we get through all this before Friday we'll see we'll see and then on Friday guys just as a heads up I typed this in the chat and then I deleted it I'm probably going to start streaming some video games oh no there's a new game coming out on Friday that's a strategy game and I [redacted] love strategy games so I'm

(2:11:16) probably going to do some streaming of that I'm going to stream my my switch and and do some of that stuff so if you're wondering why there's random video game streaming happening well first of all I'm retiring on Friday from M 370 uh B I need a little bit of a break from it and c I love strategy games so we'll see so don't be surprised okay let's let's get through the rest the vessels that led the most recent search and they did sorry one more thing I want to address is what po poetry and

(2:11:42) Pros I don't know who you are but I kind of love you um all speculative computer modeling is [redacted] yes science is not models guys science is the uh study of observable reality when you do models that's not science that's uh speculation right and and Co Illustrated it the best I don't know if you guys remember this but the IM models or yeah imhe I think that's the right one their models had like millions and millions of people dying and maybe like well beyond what ended up happening they

(2:12:19) had all the hospitals over being overwhelmed it was absurd none of it ended up coming to fruition because this is like when you use models in extrapolation it never uh mimics the real world the real world has way too many variables and that's the reason why so whether or not you know you think covid was a **scam** or legit it doesn't really matter the models were totally off by like magnitude of like 10 or more um and this is why you can't use models to determine that oh and it's also confirmation bias right where they are

(2:12:52) if Ellie is still in the chat confirmation bias right where they're going we have to figure out a way where we can get the debris over here right even though that the plane supposedly we think crashed way over here it's okay well let's just invent some models that will allow the debris to float all the way over here right that's confirmation bias right if you wanted to test it what you do you throw some pieces in the water over here and then you figure out where they go and you wouldn't have any

(2:13:15) preconceived notions about where you think they should show up but that's not what they did instead they reversed the argument they go here's where the debris showed up here's where we think the plane crashed now let's figure out the models that will allow that to happen that's confirmation bias phenomenal work but they're only as good as where they're told to look oh and for Artisan Tony it took a long time to find Amelia air Hearts plane first of all I don't think we've even found it

(2:13:42) necessarily second of all that plane disappeared well before we had satellites right we we've got satellites everywhere this is the part where too people try to argue um you know they try to argue that oh well the Titanic we never found the Titanic for 100 years guys Titanic disappeared early 1900s man that's a completely different scenario than the plane disappeared in 2014 right completely different scenario uh yeah I'm retiring right as Malaysian Airlines might renew hunt first of all guys keep in mind this is

(2:14:14) only happening because of the 10e anniversary like this is the exact news buildup because they like to take advantage of current events right and I I knew this was going to come I don't even know they'll necessarily do a search if they do a search I would say I'm 99.

(2:14:31) 9% sure they're not going to find the plane some people are going well they could have they could have dumped the plane there yeah they could have dumped the plane there but there that's too much work man way too much work right this is a sloppy cover up this is not an advanced cover up right it's very unlikely they flew the plane over there and crashed and and dumped it somewhere in the last few years if if anything they would have found it years ago they would have dumped it there right afterwards and we would have found it they're not going to find the plane and

(2:14:59) that's great I hope they search we actually want them to search because the more that they search and find nothing the more the people have to address the MH370 videos and no Tony you're you're on point I'm not trying to put you down at all man you know I respect you but yeah but that's that's the big difference though because people do bring that up they say oh

well they didn't find Amelia airheart or they didn't find uh the Titanic right but it was a completely different time right planes cannot

(2:15:28) disappear in 2014 and Beyond we have satellites everywhere and part of the problem with the MH370 mystery is that we started out with the assumption that the plane was uh in some way incapacitated perhaps by a fire and that eventually it fell in you guys hear that he literally mentioned the fire scenario right there that was like a Freudian slip like I that was so weird that he mentions the fire right there they are possibly incapacitated by a fire I mean that was kind of an idea that was floated but not really people kind of

(2:16:07) ruled out the fire thing right away this makes me think that Ross kohart while he was in this interview was thinking about the MH370 videos how funny is that he's like oh it might be incapacitated by fire okay now you're talking into the sea after it ran out of fuel now there's been alternative theories that have speculated that there was a rogue pilot that um perhaps it was a captain zahari that why is even floating the Rogue pilot nonsense this is this is why Ross no disrespect man you shouldn't be floating

(2:16:43) the Rogue pilot nonsense there's no evidence whatsoever for the Rogue pilot [REDACTED] [REDACTED] no evidence right um I mean if you're a rogue pilot last contact this is where the plane crashes right here right here if this is a rogue pilot scenario you are crashing the plane right away this idea that they flew to panang and said goodbye to his hometown and then dodged radar in Indonesia to go around the penins the island of Indonesia and then fly south and then crash the plane down here it's effing insane that's that's sillier and

(2:17:19) more nonsensical than teleporting the plane it makes no sense whatsoever there's no evidence to support it and it makes no sense whatsoever it's not even possible to disable the plane that way you can't even make the plane go dark by yourself it requires disabling four apus which are some kind of power unit right there's no chance that this was a rogue suicidal pilot scenario nothing is indicative of it the main have a good night Ellie we're going off we're dropping off line here in in few minutes captain on Ross is a

(2:17:56) mentalist he actually does kind of remind me of the show The Mentalist I'm not really sure why C and that it was somehow some kind of suicide mission this is of course disputed by the Malaysians and indeed vigorously disputed also by some of the investigators here so all the investigators and the Malaysian government says that it was not a suicidal pilot scenario let's just let that sink in for a second so now if you think it's a suicidal pilot scenario you need to come up with a way for why the government and all the

(2:18:31) investigators are saying that it's absurd right now you have to actually build a conspiracy why would the government cover up a suicidal pilot scenario makes no sense if it's a suicidal pilot scenario they can just admit that a suicidal pilot scenario they're like oh it's Asia and they're trying to save face save face from what why would they risk a giant cover up to protect the pilot if he's suicidal absolutely not the reason why they're defending the pilot is because there's

(2:19:05) no evidence the pilot did it his mental history checks out psychological profile checks out his background checks out his wife supports him there's no evidence his voice is totally normal in the last communications this is not a pilot suicide scenario that's the reason why they're defending him and that's the irony is that the people that would make fun of conspiracy theorists are the ones literally making up silly conspiracy theories about why the government is protecting from a suicidal pilot scenario literally

(2:19:36) everyone's ruled it out here in Australia but the fact that there might have been a rogue pilot that this could have been a dreadful murder suicide for some unexplained reasons could explain why the aircraft has been outside the existing search area because uh yeah poetry and Pros you are on fire tonight do you remember the Atlantic cover story that ratified the suicide of pilot it apparently began in the New Yorker I believe and you know who the person who was who started the suicide pilot scenario Jeff wise wow that was a pretty

(2:20:11) big uncovering to figure that out that Jeff wise was the one that started I think he had to issue an apology because it was full of [REDACTED] but everyone's still run with it to this day because there's what's the alternative orbs teleported a plane yeah so it's either orbs teleported a plane or it was a crazy suicidal pilot scenario that makes no sense whatsoever I mean it's a tough choice for a lot of people a pilot could have done a controlled landing on the sea okay controlled Landing get out of here

(2:20:44) just get out Ross get out man controlled Landing in the sea after eight hours of running the plane out of fuel this is just totally Nut Job [REDACTED] right we've already ruled it out the the the investigators have ruled it out the government has ruled it out and now you're telling me that they didn't ever crash the plane they ran it out of gas but then somehow we're like okay guys I've flown this plane for eight hours I've killed everybody on board and now I'm going to slowly land into the water

(2:21:16) no chance in Hell complete nonsense total and complete nonsense guys and they could have glided the aircraft considerably further glided the aircraft like oh we ran out of gas and now we're going to it's like we're in where we're in our car right and we're at the the fuel is at zero and I'm trying to to really just barely touch the gas pedal so that I can try to get as much fuel out as is that what a suicidal pilot is going to be thinking like hey I got to make sure I land this thing safely so or land this thing

(2:21:51) quietly so that nobody ever finds it why would a suicidal pilot somebody was trying to kill themselves who just killed 238 people is that what their mindset is like I just need people to just think logically right just use logic and reason please just use logic and reason guys this was not a suicidal pilot snare I'm a th% sure then aircraft that just ran out of fuel and then deploy those infl driving the new search yeah yeah well I guess when you don't have any answers all possibilities are still at play u

(2:22:28) but certainly the aviation hoping for ANS not for reason in this uh latest update they deserve closure that's for sure Ross coldheart thank you so much good to see you it's a pleasure

thank you thank okay guys you you got to forgive me for thinking Ross might be kind of in on it right right like he does this 4minute 3 minute segment and half of it is him talking about the suicidal pilot scenario that makes no sense whatsoever so okay maybe I was a little rude to him here when you realize the depth of the

(2:23:03) UFO conspiracy the videos are the true fate of M get in touch with me Ross planes do not disappear in 2014 look up cers you'll wake up one day I have faith um no I I don't think that Ross is actually disinformation I just think that he's old school TV New York Times kind of journalist and what we're doing and disclosing is just well well beyond what he's prepared to accept that that's my true opinion I think this is well beyond what Ross cart is ready to uh to accept um mitchu Kaku he's I I love mitchu Kaku right

(2:23:44) he's one of my favorite physicists he talks about a lot of the stuff that is aligned with the stuff that we've been disclosing um the thing about people like mukaku that I think is problematic is the conspiracy angle right A lot of people like mukaku want to think that our government is probably not going to be implicated in something this dark this is this is dark chat look what we're looking at here disappearing our own plane disappearing a plane and kind of Espionage scenario is like this is Criminal Behavior this is starting a

(2:24:21) war type Behavior right there's a lot of people that can't accept this just from the perspective of patriotism so I think mitaku could be on board with the science but the conspiracy angle is probably too much for him and that's why like I tell people like I wish we didn't have orbs teleporting This Plane cuz holy [REDACTED] like not only is this just straight up catastrophic disclosure but this is also the largest verifiable conspiracy of all time I mean maybe you say CO's a bigger conspiracy but whatever I'm

(2:24:57) talking about verifiable stuff that like you just got the hard proof right like we got hard proof so you know again pretty wild chat okay I think we're going to close it out there I said we would only do an hour stream tonight and we're two and a half hours deep already it's uh getting pretty late would you interview Ross or Rick Aston I would talk to anybody that's the truth um it's not that me not talking to them that's the issue it's the issue of them not talking to us that's that's the hardest part right

(2:25:36) so we'll see there was um what I'll tell you guys is that there was a Australian TV station that wanted to talk to me to me but they just went dark I didn't really message them a lot more and if I had to guess I would say that that the thing got nixed because um their producers Executives whatever came and said no we don't want to we don't want to do this or whatever right it's pretty tough Chrisley says when you say we're not going long I expect another hour and a half yeah exactly um I'm starting to

(2:26:14) lose my voice here as well guys and I got to wake up for work tomorrow so um yeah tomorrow guys I'm not 100% sure if we'll do another stream tomorrow um I I really got to get some of these pieces finished so if I get all the pieces that I have expected finished and do a little bit of work on the special thing that I have presented or getting ready for Friday then we'll

probably do another stream tomorrow but no guarantee anyway guys I want to thank you guys very much all the support everything the 80,000

(2:26:43) followers the the hardcores all the guys I see in the chat that I've seen a lot of times in here um sometime in the future we will we will disclose advanced technology of the world that I'm very certain about um but I think that the landscape's more complicated than what I originally expected so um yeah anyway guys thank you very much thank you Pamela thanks Eve Amanda B everybody else is in here have a great night I will talk to you soon good night MH 370x [Music] [Applause] [Music]

Superconductivity Updates and Searl Device - YouTube

<https://www.youtube.com/watch?v=BICfQJ1GR8>

Transcript:

(00:46) Malayan 370 contact 120 decimal 9 night malan 37 breaking news tonight A Malaysia Airlines flight with 239 people on on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(01:51) impress him takes on his multiarmed form and says now I am become death the destroyer of worlds okay hey chat one sec camer okay welcome everybody hey Aaron hey benator hey Michael hey William what up I already pissed off the Science influencer Guy already pissed off the Science influencer Guy uh we're gonna be talking about uh super conductivity

(02:55) tonight uh we are going to be talking about the AO position and then we're going to dig into the John surl over Unity device this is uh so I think we're just gonna get right into it hey PJ Mike what's up um yeah no no memes today no uh no no cosplay today but we'll bring it out anytime we want I was actually surprised a lot of people enjoyed it more people than I thought enjoyed I thought people would be upset that I was going too hard on people but I got tons messages about how they enjoyed it it was pretty

(03:33) funny yeah so let's get right into the news uh we were in a space today and uh it was about Ik99 and we're not going to let Ik9 I'm about to go to war on the Ik99 stuff with all the science influencers um I was even thinking about starting to retweet some of them should really call them out um because we're not we're not letting this get suppressed again there's no chance uh so let's start with my a o uh application I think this is a great application guys great application we will **debunk** all UFO videos discredit all

(04:24) sightings uh and then I'll dress like this while I'm doing it right that would be awesome

uh check out the podcast I did with uh Brian for host of surgeon for political identity this was about an hour long really good one I'm going to post a YouTube video of it in the morning probably um just because I posted so much stuff today we also uh found this weird thing about Blaine Gibson from Jeff wise's blog actually on his Deep dive into the stuff increasingly doubtful about the validity of the imrat data and its

(05:06) interpretation weird that's a weird thing to say from the guy who literally found the debris right increasingly doubtful about the validity of the iMat data and his interpretation and then Gibson shared his information with some members of the independent group and made everyone swear to secrecy why would somebody do that and then you started getting death threats it's pretty damn bizarre man um I think Mike exner replied this is another lie I know Blaine personally he stayed at my house three different times over the last 10

(05:46) years Blaine knows as I know that the iMat data is real and the nowal is well documented validated Mike exner man I just I feel bad for people like this I just feel bad for people like like this like his whole life is a lie and he just believes Authority that's just lying to him straight up to his face like is there any surprise that the independent group was so easily manipulated like of course they were easily manipulated they're like they found literally nothing their their their entire investigation turned up

(06:22) nothing nothing at all and they have this level of Cockiness to their terrible analysis if my analysis 10 years later turned up literally nothing I would feel terrible about it we were able to figure it out in less than six months we had a pretty good idea what happened within like three months and these guys 10 years later still just lost in the woods sitting there thinking that there's actual analysis so I asked him to tell me what was he talking why what would I mean if he knows him so well why would he only tell him about the debris under

(06:58) a secrecy order go ahead and let us know Mike to be honest with Mike at least Mike uh has the balls to like come and talk to us versus a lot of these other like independent group people like even the ones that blocked us right those people are just in straight up denial at least Mike is like trying you know um yeah this Trump thing with Tesla is not really not really doing it for me but we I retweeted it for the Skyfire people um here's the money slide this is the one you see in the thumbnail about the super conductivity stuff from today

(07:42) right partial levitation induced by a magnetic field in homogen in homogeneity which means that basically some parts of the magnetic field are passing through the metal and parts are not is evidence of a type 2 superconductor zero resistance was replicated by other research team an RT superconducting phase exists in PCP o oos right I mean what what do we want here what what more do they want there's literally a graph as well that we'll show here in a second when we go talk to our science influencer friends cuz we've

(08:28) now got multiple videos yeah hit the like button everybody hit that like um Jack texara as well we'll come back to the super conductivity thing in a second uh I did post about this scotus thing just because I don't know you're not going to see me post about Pol actually you

might see me post more about politics I haven't decided after MH370 I just might just let it all fly I'm just I'm like realizing like the UFO community that's like like CNN brain to the degree where they've already blocked me I just don't

(09:04) even care about them anymore so I'm probably just going to let my politics fly um but anyway I posted about the Supreme Court thing because we do have a lot of uh Trump supporting fans so or followers so I figured that would be worthwhile uh the Jack Tatiara thing sentenced to 16 years in prison today 16 years he got for posting the Ukraine stuff in a Discord for six charges so he had six charges of willful retention and transmission of National Defense information he got 16 years so what was what was it about

(09:40) Edward C Lyn where he got one charge of mishandling classified information they gave him a nine-year sentence supposedly that's available on the internet with no details disclosed you know kind of makes you wonder kind of makes you wonder everybody Okay so we've got full levitation video uh here's your full levitation so this is 600 times magnified so this is a very very tiny Rock but you can actually see full levitation here over the magnet uh this is for scale in the background right but you can see the

(10:17) full levitation here so you can see this this zoom in here where there's you might say oh well it's tiny tiny bit of it might be touching but no you can kind of see that it's it's not and even so even if it was just this this is still full levitation so we've got full levitation here of the rock um which is like this should be enough for people but for some reason like this is not even some reason this is still not enough for people out there right like what I I don't know how do people

(10:46) rationalize this away there's not even a rational explanation for this other than superconductivity they want to be like well it's uh something else right like what what is wrong with people here is uh flux pinning so this is actually showing as they spin the magnet around they're spinning the magnet but the rock is staying stable The Rock's not like rotating to orient to the magnetic field right so this this is what we would call flux this is the equivalent of spinning the magnet Over the Top of the Rock

(11:21) right so that's what it says upright in Center or flux pinning fixing for the second sample meeser effect flux trap so again the idea here is that the magnetic fields are wrapping around parts of the Rock and other parts of it they're be able to pass through it and that's what gives you this levitation effect right this is just a room temperature Rock it's not cooled in any way um so this is what we call high temperature room temperature super conductivity right here's a third video right this is

(11:52) the third sample and this one as well you can watch it it's not not as great in terms of seeing the levitation [Music] um but this is where they they lift it back up here and you can watch it just kind of like you can tell it gets it's getting stuck in place right like look at this behavior that you see here you're seeing levitation here right like it should fall over but it's not it's just sticking there so all of this is highly indicative of the uh room temperature super conductivity hi kley hi Sandy hey rotary

(12:36) hey Paul hey William JY alapo brazza who else benator Bulldogs I think I got everybody Paul Shields if I didn't say you Zach yeah um we we might have more uh a squared or Ashton squared in the future that's that's definitely in the cards uh we'll see I'm going to switch this over to the headphones um so this was a big day for APS for super conductivity I joined the space today hey John do nice to see you as well CH tashera oh yeah maybe tashera okay Jack tashera I don't know I don't know

(13:21) how to say his name um so a huge day on the AP APS conference I also uh posted this paper here with which didn't really post correctly but Exotic super conductivity um just for a refresher if you guys needed to know about it um superc conductivity has zero electrical resistance which means that electrons can flow freely without bumping into one another which causes heat Cooper pairs form under certain conditions which allow electrons to flow freely in a wave like dance the Cooper uh the conditions to achieve coer pair formation were

(13:56) thought to be in only extreme temperatures where s rtsc comes into play um uh rtsc which stands for room temperature super conductivity will change everything about our civilization from being able to transfer power over long distances with no loss of energy uh to allowing computers overclock significantly higher and database Farms no longer have to have the cooling requirements that they do today then there's the cool stuff like hoverboards and mag trains we might even be able to create magnetic fields powerful enough

(14:27) to contain Fusion power pretty incredible everybody um physicist me coming other ways other than just cold temperatur to induce super conductivity metam materials is one way and in the paper quoted here they found van hoo hve hve singularities forming modulating oscillating states of electrons so if you get that if you get that modulation just right might be good William Bill I hope you do well in the hospital sir great um okay let's see what else we got here uh renewed MH370 search so I get ping I got pinged on

(15:13) this uh like about a million times today like a million times on this article so this article here is about reopening the search blah blah blah you know whatever okay so um first of all guys they're doing this cuz it's the 10 year anniversary there's always going to be articles like this around the 10 year anniversary situation is very political um they want to seem like they're doing something and then of course we support the search like they're not going to find the plane so good luck although some of the

(15:44) conspiracy-minded people think that they will potentially find the plane that they've planted the parts there but it would be a whole another conspiracy they would have to be like well we found some parts but we can't find the black boxes or some crap like that right there just it's just not going to happen there's too much stuff that would fall through right it's like oh so you found giant pieces of the plane but no luggage and no bodies and uh no black boxes right there's no way so wishing them the best

(16:12) actually I hope that they were able to find like the plane in a convincing way so that I could be like yep turns out these videos were fake guys like they found that plane there really

was a suicide despite the fact there's doesn't make any goddamn sense whatsoever I mean makes literally no sense at all but you know so yeah that's the state you know um I even wrote a letter to Ocean Infinity guys I actually wrote a letter to Ocean infinity and I wrote one to Jeff wise as well I wrote a post to Jeff wise

(16:44) chat I'm just going to read what I wrote to Jeff wise instead of posting it in the thing I wrote you'd be a lot cooler if you could get over your weird **Russia** fetish and I mean that in the nicest possible way some of your work is really good but you're too hung up on thinking the US doesn't use propag agenda your research on the drift analysis is solid it makes no sense at all once you start to think about it just consider that the IMAP PS could have been easily changed either via the satcom hack or afterwards

(17:11) explaining why it took them so long to release the raw data hope you're doing well Jeff Ashton pretty good message huh pretty good message just in case you don't believe me there you go that's proof that's enough proof oh did that even show on the screen oh maybe didn't show on the screen well I deleted it now so um okay so I sent him a message should we read the ocean Infinity message uh I'm not going to show this because it's got personal information in it but I'll read the message to you this

(17:51) is the message to Ocean Infinity I'll go full screen full screen face also we'll have a sip cheers to Jeff w also if uh what's his name Jack s FES out there Jack I apologize I'm the idiot Jack you're smart you're smarter than me you know everything I know nothing Unblock Me Jack let's be friends come on Jack you know you like teleportation I like teleportation we got a lot of common interest I'll take you out for a good mer low uh we can go to your nicest restaurant you want um so Jack sarati come on be big be a

(18:32) big boy unblock me I want to talk to you okay cheers also to Ocean Infinity nice see you Amanda cheers guys I think we're gonna have to do something for the ladies tonight oh oh my button came undone guys just kidding chat okay my name is Ashton Forbes and I've done more investigative journalism MH370 than anyone on the planet over the last 6 months including researching all the old press conferences and every line of evidence available I encourage your continued search because you'll come to terms with

(19:18) the reality that this plane isn't at the bottom of the South Indian Ocean eventually the by far most likely event was a lithium ion battery fire related to twice unscreened two 487 lb with two pallets in the forward cargo bay near the main equipment center this event is supported by at least 19 Witnesses including Mike McKay and K T once you realize that 10 rows on an Excel spreadsheet are not hard evidence and it was a novel method of interpreting them you'll realize the entire SI which is South Indian Ocean narrative falls

(19:53) apart that's why you never found a single piece of the plane there nor the black boxes nor acoustic detections from the hydrophones and no radar signatures from four countries and three Advanced military bases nearby I lastly suggest you Google cbers by looh Martin and realize that even in 2013 2014 we had full Global persistent surveillance of the entire planet the

US government 100% no doubt knows exactly what happened to the plane and would have pinpointed the crash site the next day at the latest sorry if this information

(20:34) disturbs you you're not wasting your time by searching because like I said it would help the world to realize what really happened to the plane as you continue to find nothing if you ever feel like you want to know what really happened to MH370 you can email me back or call me at my give my phone number so I can't share the thing or check out my research on X at just X Aston I'll be taking from a bre a break from the case since it made so many people angry to come to terms with the **truth** thanks Ashton

(21:07) Forbes yeah I kind of want to be insulted by Safari some more guys I feel like I shouldn't have been so rude for him um oh hey Ellie I see you in the chat hey uh John Doe I don't know if we already said hi to you or not anyone else I not say hi to so that's my letter to Ocean Infinity might be a little too snarky what do you guys think maybe a little too snarky let me delete out the phone number maybe a little too snarky I might post that though tomorrow I'm not sure haven't decided yet um okay full screen

(22:00) so let's see I wrote that to Ocean Infinity it's been a day chat it's been a day okay so let's figure out I don't know if I really want to troll these science influencers that much more they're they get testy chat they get testy it's not as snarky as I was to chle though before so not as snarky oh there it is see question mark there he is this is the dude okay I said this poses the equivalent of **Mick** West **debunking** UFO's cherry-picked perfect solution fallacy we can see the graph just

(22:57) fine for that's

(24:34) there we go oh I should have read that out correct me if I'm wrong but weren't you the one calling lk99 **debunked** over the summer not sure I can trust your judgment if so even if your interpretation of the graph is correct which I doubt because I can see it to go to zero it's still relatively high temperature this is still a revolutionary Discovery it feels to me like you're trying to poo poo on to save face and or for some other weird gatekeeping reason we now at least three videos of flux painting and mezer effect

(25:01) anyone denying this is denying what their eyes tell them right this is the thing about super conductivity at this point how many videos do we need chat like people are just don't want to accept it right they don't want to accept reality anymore um let me see if we got any more any more stuff up here also guys I think we're going to hit 880,000 I know you don't want to hear this okay whatever random loser damn that's too bad um I just like what was up with all these people just like there's gatekeeping everywhere

(25:45) right like gatekeeping in Academia gatekeeping in ufology it's just it's disgusting I'm just going to blast through it because I'm not B doing with this anymore um what's this oh yeah yeah yeah yeah we're not we're not going to talk about covid stuff on stream or on Twitter or at all um why am I pinged in this sure uh let's see what else we got here real quick oh guys check out

my awesome recommendation why can't they make the communities in Twitter equivalent to **Reddit** posts and and threads like why do

(26:27) we can't we get yeah guys this simulation's getting wild everybody guys I don't want to call it a simulation anymore because it uh yeah I think Andrew cot's in in Mena guys he's in Mena for sure um calling stimulation like takes away from like all these like the value and sanctity of life in general and all the other esoteric stuff related to it so I don't really want to call it a simulation um I think we'll I don't know I'm going to call it the Matrix but you guys can call it whatever the hell you

(27:05) want to call it right but yes why can't we just make the commun communities like uh sub**reddits** like I don't know like wouldn't it be Doper if um you go here and you press the community thing here and instead of like just more posts like this like this is exactly the same as oh this is the same stuff as just like more posts but just in a separate thing like I want to have like sub**reddit** like what are the top posts by likes right and then I want to have like comments underneath them that I can post

(27:42) on I don't want just more Twitter threads I already have a Twitter thread I don't need like more right can't they do that is that too hard that would be great if they could do that I don't know maybe they can't do that maybe it is too hard um wait what skeptical inquir fellows also get paid to blog AKA tweet they have to report their financials and they have millions in Revenue that are paid to these fellows such as **Mick** West Neil degrass Tyson and Bill Nye is that true I might investigate this

(28:28) let me write this down for later after we figure out MH 370x I might expose these people I'm sure they're full of crap and they're getting paid to like **debunk** stuff uh skeptical inquir fellows **mcwest** NG NDT build n it would not surprise me at all I'm going to look at that some other point um let's see what else we got going on here God this person's obsessed with me man they really obsessed with me okay what else we got um citizen of you are we following these people trying to follow the people that retweet my

(29:19) stuff this nature dick boy Hammer guy is like I can't get a read on him honestly like kind of a kind of a bag but then has okay okay takes every once in a while yeah **Reddit** deserves to die this dude's correct see look it we got a lot of good takes here on the **Reddit** post um he'll crack me up dude military industrial complex I do enjoy chat um thinking about how much the military industrial complex hates my guts right now for disclosing this stuff or maybe it's just like a game to them and they're just like enjoying

(30:08) it really don't know but you know what cheers to you military industrial complex cheers to U CIA Spooks and NSA Spooks who have to monitor my uh my communications cheers okay we're probably getting blocked by that science influencer I'd say that's a high probability oh whoa JK Philip fan already found something dude oh [Music] wow you guys know who we're looking for you guys know who we're looking for how many are

(31:13) there should we apply for this Bill Nye there he is Bill Nye Science educator wow so these are like all people are just completely full of huh oh this maio muli guy or whatever I'm pretty sure is the guy that's tried to **debunk** halud off he's like a biologist oh no maybe it's it there's More's more than one maimo okay never mind I don't know which one's which oh so these are the people that control Wikipedia Neil degrass Tyson so it's just like a who's who of losers right yeah **Mick** West writer and pod he's

(31:52) called a podcaster investigator no no no **debunker** yes **debunker** yes lives in fome California now already know we know where he lives as well I'm sure that's near La which is what I already had thought okay so this is just like a who's who of grifters right this is just a who's who of science grifters wow holy crap good find JK Philly fan uh yeah we're going to be exposing the hell out of this for sure not right now but for sure in some point in the future that's a that's a great find wow Adam you want me to okay guys

(32:35) you want me to um look for people who do you want me to look up chat yeah this is a great find wow no atams at all there's not even a single adom on this list guys who which uh which trash **debunkers** do you guys want me to search for Susan G whatever her name is oh yeah there she is Susan gerbick founder and leader of Guerilla skepticism on Wikipedia project what bro bro wow this is wild uh rot I'm gonna give you a **timeout** man I don't know you're being weird in the chat and um I'm not feeling

(33:22) it so 30 minutes you can come oh no I just timed out the wrong one oh God oh God William not like that William oh William no no no no how do I get him back chat oh no William you should I think you should be back in like 10 seconds if not I'm so sorry I clicked on the wrong person oh my god oh bat oh boy uh anyone else have other people they want to search for uh let's see Adam Curry Steph Barrett who's that I don't know who that is psych psychiatrist psychiatrist oh God I gotta learn how to spell chief

(34:20) investigator y these people are giving themselves names like we do chief should I be called Chief investigator instead of lead investigator Chief investigator of committee for committee for skeptical inquiry like basically this is like jobless jobless person uh William's back okay he's back guys we're fine he's back friendly fire man down yeah this is like a who's who of quack scientist wow this is impressive I never thought I would just get a straight up list like this that just includes like **Mick** West

(35:00) Neil degrass Tyson Bill Nye like all the worst people I sad part is I used to respect Neil degrass Tyson now I have no respect for him wow wow chat Captain investigator Ellie that's not a bad one like Captain Planet but the captain investigator this is the list of all the fellows as part of the skeptical Inquirer somebody said that where was that somebody said that apparently you had to uh what is this do you have to like you get paid or something for this who I need to reply back to that person who was that guys who was that oh here it

(35:48) is bro yeah we're getting that in DMS chat let go we're following this person y send me a DM tell Prefontaine to send me a DM about that yo this is paid disinformation agents right there

wow this is this is like straight up just we've got them dead to rights here if they're getting paid for this position then that's literally paid to bunkers like this is a list of just disinformation agents yeah this is nothing to do with that like this is a separate company like this is significantly different

(36:44) this is why **Mick** West M makes claims like he's not getting paid by Twitter and YouTube because he's not instead he's getting paid by these guys and who pays these guys how does these guys make money how does skeptical Inquirer make money right that's what you follow the money um how much you want to bet they get grants or something from the government I I doubt it's from all from donations let's click on this though nonprofit receives no government or corporate funding committee for skeptical rely on

(37:17) contributions so my guess is they're getting contributions from individuals then wow who P who would pay for this we need to look into finances since they're a non for-profit this means their uh Records are probably on the internet skitso Enemy Number One Sweet appreciate you yeah no homo man I love you too no homo executive head of MH370 investigations um what you want to Randall Carlson's definitely not on there guys there's no way no way 0% chance um guys now I kind of got to know now we kind of got to know

(38:01) um income statement skeptical Inquirer don't there I think their stuff has to be online I think it has to be online somehow maybe I'll save this for another time let's say skeptical inquire balance sheets thought they have to be available we'll find them if you guys want to dig into that on the side we can do that Graham Hancock's none of these people are going to be on there guys guys you guys are uh Lex fredberg which one's that no lexes at

(39:07) all no no Graham Hancock no anybody who's into crazy stuff is not gonna be on this list to be somebody on this list you got to be like CNN brain like Cosmic CNN brain right like perac CNN brain right yeah anybody on this list you should be extremely skeptical of them extremely how much you guys want to bet if I Google this person's name in covid I'm going to find stuff supporting covid vaccines very first hit chat am I psychic how did we get here the best vaccines ever very first hit I didn't

(40:02) even have to narrow the search down I just typed her name in covid That's it a decade ago there's this woman talking about it pandemic claims new victims wow is this her article what was her name oh well that's annoying wow anyway what was her name Mercia let's see if it's not I want to see it's quoting or in the right context uh that might not be the right context guys oh actually she's now this is actually like pooping on it oh yeah I don't know this is some

(41:14) article oh here we go there she is booah found it a man that was easy that even take effort stopping the next variant oh God yeah I mean okay guys that's proof right oh Peter hotz yeah you guys got me kind of obsessed now as finding this out this is this is crazy is hotz on here no he's not he's not on there yeah that's just anybody on that list guys like you should run away you we're gonna make a post about that tomorrow I think I can't I can't even hold it back I want to find the

(41:55) finances I want to figure out how they're getting paid uh and then we'll take it from there okay guys I don't want to go all night tonight let's uh do we do enough super conductivity stuff I think so I think we did James E Alcock top of the list with an asterisk okay well Amanda wants us do it Amanda's my uh favorite um non-entrepreneurial follower actually no it's pretty much my favorite in general okay he's psychology is it like a requirement that you be like super left wi to be one of

(42:35) these people I bet Canadian educator yeah for sure for sure you got to like just absorb that CNN like that CNN gets injected into your veins to be on that list I'm very very certain these people if you get them all in the same room the levels of smug are going to reach like epidemic levels like everybody's just trying to outs smug the other person most likely right well how many douchebags did you **debunk** today oh I **debunked** five o i **debunked** 15 I I stopped 10 people from falling down to Kon rabbit holes and the

(43:15) elections are stolen misinform Jesus why do all these people have the hugest savior complexes in the world blows me away thank than man appreciate you okay guys let's uh I think I want to investigate the sural Z Point Energy generator tonight um the sural Zer Point Energy generator the the functions a magnetic capacitor and works by a process that traps virtual photons with the decrease in entropy leading to decrease in temperature you guys are going to realize why this is important as well uh no Jacks Are F probably hates those

(43:57) people dude Jack s fatti literally thinks he got a alien telephone call from the future um but you know what that's okay Jack I won't even make fun of you for it let's be friends let's be friends Jack I tell you what Jack if we if you unblock me if Jack sarfati unblocks me I will destroy everybody on that list for you jack I will be your vengeful arm of righteous Fury against all the de bks that's what I call them now the deers um you know what I'll even I'll even go to bat for your uh psychic alien

(44:37) phone call how's that you want someone on your side in your uh psychic future alien phone call I got you I got you man I can support uh dudes who got their vCard taken by uh aliens that's no problem for me so yeah psychic alien phone calls sure I'm with you just go out there and say that they teleported MH370 and I'll do whatever the hell you want man oh he he'll get the message crley he'll get the message he probably won't he probably won't um I might even I might even uh tweet at guys if I tweet at jackar fotti

(45:15) **I want you** guys to like Ping him like a million times in the replies **I want you** guys to Ping him like a million times in the replies as well make sure he sees the message he sarfati has an entire thread of **leaked** emails Amanda don't tease me don't tease me Amanda an entire thread of **leaked** emails guys I can deal with sarfati guys sarfati was do you guys see him on uh Alien scientist yesterday it was actually hilarious right he was uh he was so pissed that Jeremy couldn't figure out get the sound work no press

(45:55) the button press the mute button you've got it muted and Jeremy's like so chilly he let like uh no I pressed that button it didn't work this hilarious dude guys this is GNA be depressing

oh he's blocked he's got me blocked guys is this his last tweet guys find me a more recent tweet that I can somehow reply I can sneak into the replies I gotta be able to sneak into the replies chat oh we're definitely getting blocked by that uh Andrew Co Cody guy Co C coat I don't know I give up okay what do I want

(46:37) to look up I want to look up uh Sur Z point generator I want to see a video chat guys videos are twice as fast as information maybe even faster uh why I'm not clicking on a Facebook link that's that's not happening we're not clicking on Facebook links so if that's all we got then there's not going to be any videos chat um how about this one and used for was insufficient to program s to reestablish the original magnetic using modern and more efficient materials something is happening originally the layered materials were

(47:21) constructed and magnetized by the notun Midlands electricity board under the direction of John surl modern magnetic materials have advanced considerably and old ones discontinued so a series of tests need to be conducted to establish the optimum materials and processes these tests need to comply with the working criteria required and must lead to a cost-effective man guys what are we looking at here is this just some magnets going crazy right here seems like it okay we're guys I want to sneak into Jack's replies hold on guys I can't

(47:56) reply to this I need someone to reply post a link to one of the replies in there in his in his post any reply guys you just don't know how to deal with people that are facturing process as we would say in the traditional sense toxic right you got to feed I understand Jack you just got to feed his ego no dude it wasn't even B it wasn't even uh High School physics he goes Elementary physics he's like Jeremy I thought you knew your Elementary physics it's like dude I didn't even learn physics till High School who's learning

(48:36) physics in elementary school pretty funny no I would absolutely let him just be a huge right I would just be like okay that's fine just teach it to me you can be a to me if you want it's all good I don't know in recent times SRC has been reestablishing the the original research due to the very limited funding that has been available 7,000 rotations per minute seems fast only a partially functioning demonstration prototype of the SG principles I'm pretty sure this outside ring is spinning that way and

(49:10) the inside ring is spinning this way has been possible this prototype consists of the innermost of the three composite thingss required and several rollers technical description physically The Sur effect gener the vibe I get from Jack saati is like he's getting told information but like he doesn't really know it firsthand and also I'm pretty sure he just stole Salvador P's Super Force like was he just presenting his own thing that was just literally the Super Force by jackson by uh Salvador Pas

(49:39) like that's what it seemed like in the the Jeremy thing despite that um mystical oh we don't talk about Patrick from the vetted podcast on here we don't talk about that erator the CG apparently we missed an email from Pat on the vetted podcast and he got super butt hurt about it which it's like dude what just ping me on Twitter man sorry I didn't get one of my 5,000 emails

from my MH 370x random account consists of three concentric Rings each made of a composite of four different materials which are also concentrically attached

(50:24) to each other the three rings are fixed to rotate around them load begins to decrease which one's the temperature which one's the temperature which one do you guys think the temperature is our rollers typically 10 on the first R maybe this one over here on the right this temperature 25 on the next and 35 on the outer ring surrounding it's actually crazy that the temperature would drop on this guys it's actually crazy the rollers on the outer ring are coils which are connected in various config configurations to supply either AC or DC

(50:58) current at a variety of voltages multiple magnetic poles are imprinted on the Rings and rollers to form frictionless magnetic bearings these also arrange the static charge into opposing charge clusters which cause the rollers to rotate around the circumference of the Ring what's that noise you guys hear the sound effects like it's raining you just took one out what does that do what does that do sometimes what happens something go flying did something go flying chat holy you you see that one of the things when

(52:00) flying might want to put a top on it that seems very dangerous holy crap you see that that seems dangerous whoa what's this thing doing sand it back down okay that that was certainly a thing that exists Okay cool so that's neat um yeah it looked like it kind of broke right maybe I should put a top on it so it doesn't do that oh let's see Sandy for let's sneak into your applies yes thank you Sandy should I call him Dr

(53:14) sarfati let's not make it like to over the top wait is he a PhD what if he's not even a PhD actually maybe it's just better even if he's not a PhD is he actually even a PhD oh it says he's a PhD we're going to call him doctor even though I don't call anybody doctor guys just to just to really like butter him up actually I'm just going to even say that uh what what what what's the LIE he said about me I can't remember how's it is it that jib cutter

(54:27) your jib is that right he'll he'll know these terms is that how it goes he's old guy cut of your jib yeah that's right nice there we go there we go there we go we really really give a quick HJ in the parking lot guys if you guys don't know what that means don't Google it okay yeah oh uh oh we're going to get upset oh boy oh boy I don't know what all this is what this is oh more about the Ser generator okay good find good

(55:30) find I want to see if we got blocked by our science influencer friend yet what is this why does that why does that look like me how did she do [Music] this oh my God I'm stealing how chat how do we steal this I'll steal that later that's that's my new intro everybody holy crap that's my new intro why they become Latino do I become Latino have this this is awesome that Superman is nothing impossible except that the I'm stealing that it what and neglect suffer find with all the children it's now my turn dirty crawl

(56:30) material fly I'm not watching an hour and 40 minutes but that's cool though uh wow well we're stealing that later tonight how did she make this it's true chle everybody does become

Latino honestly good good uh rare chly W guys rare chly W in the chat everyone becomes Latino in the future it's pretty much true you blend all the races together I feel like the average is Latino probably I just I thought look at that just become Latino random Latino like I look at that I just got so much hotter holy

(57:19) is that an earring though do I have an earring in this look at that chain guys I gotta get a chain I might have to get a chain my hair got a lot better wow crazy I probably do look better than Cambrian and sunglasses probably true I got to get uh I gotta get lasic surgery and then I can you know rock the sunglasses better I don't really need to be wearing these glasses at this range I just force of habit is that earring though I can't tell uh let's see do D how did she do this this was amazing that was Wow money

(58:01) Penny Money preny free uh well I don't know I don't want to make the other ladies jealous but free uh Marlo date with money Penny for her awesome uh awesome video that she made there that might actually be our new intro guys I wonder what she even how she even made that that was incredible we're definitely got blocked I'm fairly certain we got blocked chat these science influencers are prickly Bunch chat oh look we can what I can see jackar Fat's thing here now oh I can reply I snuck into his

(58:54) replies okay let's suck him off a little bit harder chat it probably won't let me reply when I try I can't I can't reply him off too hard or you know I can't suck them off too hard we got a um got to make it sound natural there we

(59:57) go ah I can't reply was a try it's a good try reply him off chat I'm trying to reply him off oh we haven't got blocked yet we have not got blocked yet chat not who retweeted it who retweeted it some Korean person is upset hell yeah who is this oh I don't I don't even know what they're saying I know it's Korean because I can tell when you have guys if you want to know the difference between Korean and uh Japanese and Chinese Japanese and Chinese actually share one alphabet uh is it

(1:00:44) kanji I think kanji is the shared alphabet if there's circles then you're looking at Korean so you see circles here this is Korean so this is an easy rep easy follow easy follow chat I'm a strange person you know what that even makes it even better even better and who knows this is probably a guy this probably not even a woman right people just love anime in Asia it's just how it is right uh I don't even know what this says but I kind of love it I just kind look awesome 246,000 views Wow all I know is easy easy

(1:01:27) follow we haven't got blocked yet so that's good that's good oh Darth Vader I see you out there yeah Katakana and uh the other one is the other alphabets guys it's been a while since I took it can you reply if you remove Jack from the recipient list I don't think so I don't think you can reply at all I need him to uh block me yeah if you can DM him if you have the capability DM him tell him tell him I love you jack I'll Never Let Go Jack I'll never let go I just didn't know the way he was

(1:02:10) before right guys people told me too he's prickly pear but I didn't really get him chat now now I get him wait wait wait did we hit coffee expert e easy follow did we hit 80,000 followers chat yes I know about son luminescence I've posted it God how come when other people post son luminescence it gets a million views or whatever 9 million views but when we post it we just get like 5,000 views messed up chat oh we're close chat one more follower 79,90 one more follower for 80,000 followers chat can you believe it

(1:03:03) because I cannot 880,000 followers almost never been on TV never been on Joe Rogan we've been on Alex Jones once and Tim pool once on Coast to Coast AM we got 880,000 followers it's wild chat no NOP I refreshed still we got 880,000 followers incredible chat chat I want to say thank you for following thank you to the 79,90 followers out there uh never in a million years would I thought that I'd have almost 880,000 followers on any social media platform in fact I never even thought I'd be on social media and yet here we

(1:03:50) are we're social media in the hell out of this and I'd say we're doing a good job we're doing a good ass whoa it just switched oh three of you people just went on your alts and followed I know you did whoever whichever one of you guys was I see you I see you thank you very much this is celebration it's the 880,000 follower celebration everybody Cheers [Music] Cheers oh this 880,000 uh follower Olive is going to worth it oh cat cans tell your wife thank you very much she was the 80,000 follower uh and also Waldo you are also

(1:04:34) the 80,000 follower I don't know who is it but you guys can both be it you know what you can share share the fame oh yeah let's I wish there was more buttons to button down oh we need the we need the music chat we need the music how far long how long ago was that though God that was so long ago chat oh it was so long ago I think it was like weeks ago where's the one with the music I want to play the one with the music and dance a little bit guys this was the space yesterday I should have shared this tweet in the space

(1:05:34) yesterday oh Ashton's on my mind all the time it's like every time I join a space it's like ashon has 80,000 followers we have to talk about him all the time oh nice thank you guys the reach around that I'll give Jack sarfati and the DMS that I won't share it'll be cringeworthy cringeworthy I'll be like Jack sarfati I don't even like Salvador Pas you are so much smarter than Salvador Pas is it is could you please bless me with your knowledge Jack please sir and he'll be like you're such an idiot and I'll be

(1:06:13) like I know I'm so stupid I'm such a dumb dumb brain with my lack of Elementary knowledge of physics could you please please bless me with the with your thoughts please Mr please Dr sarfati definitely um oh our Corridor crew thing is really good too guys we got some good ass content though we have some good ass content let's just be honest with ourselves our content is good very good oh maybe I didn't forget to post the beyond the Paradigm thing huh oh this guy Professor Simon this guy's this guy's sweet I like this

(1:06:56) guy God people don't even pay attention to the good stuff 20 only 25,000 I shouldn't even be like mad like there's people out there that would kill for 25,000 views in their posts right

and I'm sitting here being like Oh only 25,000 views on this they're talking about freaking Quantum tunneling and EM drive and Quantum teleport or uh faster light communication people are just like it's not very exciting uh we probably will have to post the videos one more time as well uh oh yeah that was

(1:07:34) good probably should put that on uh we don't need that probably do need to make a link to all these uh these videos these were hilarious man when the people are just getting so mad uh this was good where's the music video sorry chat we're still looking for the music video yeah by the way guys if you guys post clips from any of my podcasts like this and they're good honestly they don't even have to be that good but very highly likely probability I'll retweet you just heads up so if that's your thing if you're

(1:08:11) trying to reach for retweets it's an easy way to do it oh I definitely posted it twice I definitely posted it twice I did post a paradigm thing twice we'll just remove that one guys here's the the plasma ball chat look at this plasma ball look at that what that's what that's got to be what we're looking at right like this is a perfect representation for what we're looking at in the MH370 videos look at that you can see the ring formation here it's going to be like a slightly different but this seems like

(1:08:52) it also so I have to do I a I have to update the evidence list I have to come up with a new podcast list and we have to come up with a new all all links like all MH370 evidence links which going to take a while because the last one I think was like November so it's going to be a lot of content to roll through um it's not going to be super easy the good news is I haven't done that much MH370 stuff the last last month hasn't been that much stuff these people got blocked Oh Black Vault God okay where's the good stuff

(1:09:40) okay we're getting close because here's the MH here's the Joe Rogan stuff God look how many views this stuff gets the drama gets so much views chat the science gets none the drama tons of views semiconductor industry y'all y'all gotta guys look at this this was a month ago guys do you know what Nvidia is at right now nvidia's at like 850 right now this was uh a month ago not even three weeks ago Nvidia is up like 100% year-over-year nxp is at 255 I'm just saying semiconductors are money

(1:10:27) in the bank I'm glad to have a lot of money in them uh let's see uh let's see the sentient life thing I am going to do more Clips after I finish retiring probably and then uh maybe later this week though I'm going to do more clips from the podcasts and post them out there and then I'm going to repost the audio versions to drive more links to the audio um cuz audio is way easier and yeah I don't really trust YouTube okay guys I'm still looking for the song I'm still looking for it we're

(1:11:04) almost there we're almost there God well God this is the worst picture this one still makes me sad this actually still makes me sad it's honestly I can't even watch it I'll just cry I'll actually just cry on stream I feel like we let the families down in a way here it is it's time chat time for the music interference patterns created by the sound waves pure geometry a new

device called Levy print uses soundwaves to levitate and manipulate objects for touch free building resonance frequencies

(1:11:59) everything vibrates have you ever like if if we had a an electric razor we plugged it in on table it's going to move around isn't it you've ever seen that that's the beginning of the concept because it's vibrating everything vibrates at a frequency and if you know that frequency you can control things L print is a system that can guys if I was on Joe Rogan we've broken a lot of people's minds that's that's true at the same time I think most people probably just thought him some crazy

(1:12:34) person most likely right we need the science to get like probably one or two more years I feel like the science will begin to catch up and then Joe Rogan might be like hey Ashton you want to talk about that MH370 videos again they never found the plane they searched again multiple times found nothing it turns out people are teleporting objects hm maybe those videos aren't crazy anymore maybe it wasn't uh Pyromania VFX maybe some random satellite or random Cloud picture isn't actually in our videos I think that's what it'll

(1:13:06) take okay levitate manipulate different objects to assemble complex species this is a generator that has no moving parts it's all based on Geometry of course these objects could be small spheres but also H droplets of glue things that we can levitate move rotate sticks the levitation is created by sound waves that have a frequency approximately double the highest frequency that we humans can [Music] hear [Music] he

(1:14:40) [Music] he I provide a new novel matter to energy and energy to matter propulsion device for water land air and space travel did you see Elon Musk jimmy essentially sending a shot off the to people who he thinks are going after which is that I have knowledge of something and a limitless energy device this may sound corny it does sound but but love is the answer it is the [Music] answer Chris let was [Music] right

(1:15:55) [Music] hey hey hey [Music] I love this [Music] picture that a future where we are a space fairing civilization and out there

(1:16:59) stars this is very exciting this makes me look forward to the future this makes me want that future you know the things there need to be things that make you look forward to waking up in the morning you wake up in the morning you look forward to the day forward to the future the future where we are a space fairing civilization and out there Among the Stars I think that's very exciting [Music] there are some ideas about having space like so so you can only move at the speed of light through through space but if you

(1:17:52) can make space itself move move that that that's like that's Waring space um space is capable of moving faster than the speed of light right uh like the universe in the Big Bang the universe expanded at much much more than the speed of light by a lot yeah um so um but the if this is possible the the amount of energy required to warp space is so gigantic it's boggles of M it is so gigantic it's called breaking the swifter limit there's actually a specific term for it okay guys

that was the 80,000 follower

(1:18:35) celebration I hope you guys appreciated my dancing my sick moves the sick beats show Lulu oh guys that's that's going to get me bit that will get me bit Lulu come here get Cheetos she likes when I B baby her not really uh Lulu come here for some reason at night guys like she does not want to be picked out uh Lulu will have to wait till tomorrow although that's a good recommendation by kley in the chat um but yeah picking up Lulu especially if she's on the bed or on the couch uh is a really good way to get

(1:19:18) bit she does not mess around she does not like to be picked up or moved out of her spot it's kind of like if you guys have a cat you know and like you try to move them and they bite you it's like that it's a lot like that actually also she'll have a total fit you know what I'm going to let you guys hear her have a total meltdown let's hold this yeah show Lulu at 2,000 follow 200,000 followers show her at 100,000 guys I'm just going to show you how much she has a meltdown you you'll be able to hear it

(1:19:54) Lulu hell chat literally literally all I did was ask her if she wants to be picked up that's I didn't even touch her I literally just asked her if she wanted to be picked up that was her response was she knows what getting picked up means and uh has a complete meltdown just from asking her if she wants to be picked up like if I just go near and go hey you want to be picked up and then she just goes straight on meltdown mode like it's the end of the world it's weird huskys are huskies are crazy chat they're literally

(1:20:56) crazy it's pretty funny I'm sure you guys could hear that that's she's pretty loud she's yeah she's pretty bad-natured I'm not going to lie she's not like having a labrador that's for sure but I still love her still love her chat uh she's still sleeping she didn't get up she didn't even move actually she just sat there and gave me her ugly face and growled at I hear her oh hi I'm actually afraid now I'm afraid now she'll she'll lose her mine if I

(1:21:31) grab her now CU she's all worked up she decided to come out though okay um quickly guys I think I'm just going to link the surl Zer Point Energy thing in here now one thing that I found was interesting about it when I read through this paper was that it actually talked about the temperature decreasing I want to see if I can find that um and he said something about increasing the  $r$  IUS increases the magnetic field strength um and that there could act as a magnetic capacitor which I thought was kind of interesting because I think a

(1:22:02) capacitor is where you like build up charge right um talks about how many magnets you have the magnetic rollers so those were what we were seeing in that video um some kind of phase shift so there's definitely going to be some kind of resonance that you have to get it into to get it to work correctly right uh let's see okay the that the temperature dropped when functioned if the temperature of the environment were to decrease as a result of the operation the generated it would imply a decrease in entropy in the immediate vicinity of

(1:22:35) the device entropy is a measure of the disorder or randomness of a system and

according to the second law of Thermodynamics the entropy of an isolated system tends to increase over time why do I think that that's interesting let's see what what the next part is here it is worth noting that the second law of Thermodynamics places fundamental limits on the efficiency of any energy conversion process including those that claim to generate free energy also known as overunity the law states that energy cannot be converted from one form to

(1:23:11) another with 100% efficiency and that some of the energy will invariably be lost to heat this means that any device that claims to generate free energy would necessarily violate the laws thermodynamics and should be regarded with extreme skepticism and now this is the difference between your CNN bra uh CNN brains and everybody else right now for everybody else this is where you realize that um that we can figure out how this works right is that we we're going to break the second law of Thermodynamics not break it we're going to cheat it because

(1:23:51) we're going to use the energy of the vacu vacuum State itself and that will allow you to achieve what is coefficient of performance greater than one right um and that's that seems pretty pretty spicy if you ask me um in this case it can be given special consideration as despite the above statement the overall temperature of the systems and surrounding was being was decreasing most likely due to the fact that virtual phonons photons were being utilized with an electron being absorbed by the conducting surface or copper

(1:24:27) encasing as a positron was released to trap another electron and another virtual Photon that is created is again captured thus decreasing the overall entropy or temperature this is why it's called zero point because this is the uh the fact where you are tapping into the energy State I do kind of need a a a dog cam where is she over there um yeah I was going to do show do a show dog situation but she's chilling over by over there now um I'll have to show you I'll show you guys tomorrow I don't know she just

(1:25:09) hates being picked up in the in the afternoon in the morning I I can pick her up in the morning guys like she jumps on my lap in the morning like I don't know it's weird it's like only when I'm working when I'm not streaming she hates you guys maybe it's you guys that she hates she doesn't mind what I'm streaming but when I when I get in front of you guys she never wants to be picked up okay um the claim that the seral effect generate could levitate is also not consistent with our understanding of

(1:25:36) physics and electromag magnetism levitation refers to the ability of the object to float or suspend midair without any apparent means of support it requires a careful balance of the forces to achieve however the Sur the Cal effect generator indeed was decreasing entropy in the surroundings levitation could be achieved achieved as a result of increasing the curvature of space which could be interpreted as anti-gravity or the system now requiring more virtual photons due to the higher demand and is thus trying to achieve

(1:26:03) equilibrium which would automatically make it to levitate that's pretty cool that's that's pretty cool okay guys wait a second I'll give you guys a uh I'll give you guys a quick Glimpse

at Lulu hold on get one second oh camera's stuck I'm G to try it out oh there it is chat there she is she is she is chilling she is chilling there and she is liking it no I'm failing to pick up Ellie I'm failing miserably I am not uh able to pick up dodges at this time oh

(1:27:08) my God this is this is even more cuteness than I can uh withstand at this point Okay so we've got the Dodge cam I honestly need a Dodge cam look at that you know many more viewers I get would get with the just a Dodge cam amazing absolutely amazing look at this vicious wolf in the wild chat this is a wolf in in nature here the white wolf yeah yeah she's just she's sleeping there she's enjoying life hey Lulu she doesn't want to she doesn't even want to get up also guys huskys do uh this thing where they don't want to

(1:27:48) move their head so they just like move their eyes only uh it's pretty damn cute like she'll just keep her head like stuck there and then she her eyes will like move to the side to like look at you it's pretty damn funny yeah she's she's getting a little tubby she's getting a little tubby we might have to put her on a little Lulu diet though she getting a little chunky she's also just ignoring everything I'm saying right now as well so good Dodgers though okay um yeah that actually that camera

(1:28:23) situation worked out pretty well she doesn't like that rope though for some reason for some reason all the ropes that I get she doesn't want the ropes that the other dogs have is the ones that she wants yeah huskys have the soul of a cat on cocaine that's that's actually like the best analogy I've probably ever heard in terms of how it is honestly I probably should do my streams like this maybe I will from now on that was pretty easy I don't think I'm going to buy another uh another camera it's pretty

(1:28:52) expensive camera I mean not super expensive but yeah it's up there okay um so I think actually we're probably going to call it there anyway so I'll put this link to this uh serral Zero Point Energy System if you guys want to check this out feel free to check it out on your own time um tomorrow we we didn't really get to ultra magnetism I've got so much stuff though chat I've got 50 I got 50 things open so 50 uh web pages we got a ton of stuff to dig through tomorrow chat um we will we'll look through some more

(1:29:29) science tomorrow uh I'm also going to post I got at least one piece ready to go the one about the debris patterns I got that pretty much ready to go I'm going to post about iMat and their I'm going to post a piece about Espionage as well and then uh also got a point a post probably about free scale and the one about Edward C Lynn so a bunch of posts and then I'm going to work on a special thing for the anniversary I don't know if I'm going to be able to get it done in time editing stuff takes a long time

(1:30:09) but we'll see so that's the plan for the next few days chat um I'll go ahead and go full screen on Lulu one more time she doesn't even look alive in this she just look like she's like out yeah Lulu has a better lighting setup it's true it's pretty true actually actually I didn't even have the lights on I forgot I forgot to do the lights today guys you guys should have told me I didn't have the lights turned on my lighting setup was so ghetto today okay guys anyways uh I'm going

to

(1:30:39) go to sleep you guys have a good good night um and thank you very much for following MH 370x uh take it easy everybody peace such dog chat

MH370x - Superconductivity and Chill (Cosplay) - YouTube

(01:02) malan 370 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the hind of scripture the Bhagavad Gita Vishnu is trying trying to persuade the prince that he should do his duty and to

(02:07) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds chat welcome to the stream this is the extreme stream everybody this is where we go through all the news all the **truth** we're the **truth** Seekers **truth** seeks zes everybody I've undergone a spiritual revelation we have the new persona Ashton squared more powerful than four

(03:14) orbs I wear black on black I'm black that's it from now on how are we doing out there tonight everybody how's everyone how's everyone doing out there that's a rhetorical question you're all stupid you don't know anything everything you know has been **debunked** everything anything you thought was real was not the **truth** where are my haters bring the haters to me I demand their presence guys you just don't understand how smart I am uh everybody else is just a peasant we're the only ones who know the **truth**

(04:03) and all these idiots in ufology constantly spewing their [ ] it's so hard sometimes chat it's so hard anyway welcome to the stream tonight welcome to **truth** seek zor there he is we be hitting that blue pill hard tonight yes we will Chad I still have my Martini so arrogant so arrogant am I related to Jack sarfati Jack sarfati is my cut my nephew Jack sarfati doesn't even know basic physics Elementary physics guys Elementary physics you didn't learn physics in elementary School Jesus you're an

(05:04) idiot I learned all my physics by the time I was done with sixth grade sometimes it's really hard just bring myself down to the level of the little people who know nothing they' listen to all these bullshitters out there I hope you guys like my new person personality Ashton Square just escaped from The Matrix broke away from the agents they were trying to tell us about alien bodies and flying hovercraft it's all [ ] government never lies to us ever everything they do is

true if you don't believe the government

(05:51) you're some kind of **Putin** loving America hating qanon shaman loving insurrectionist we're here to bring you the **truth** we're going to **debunk** everything that's out there today thank you for being here get that perer W going white wines only fellas white wines only okay in all seriousness here we go oh some cyber punk music we probably do need some you know what we do need some damn I failed I missed cyberpunk music

(06:56) chat um we'll try this one [Music] out let's get our headphones on Jack into the Matrix here we go okay it's time to **debunk** some science tonight chat let's do it nothing nothing gets my balls excited more than **debunking** science with the

(08:00) **truth** Seekers okay first of all first thing we're going to **debunk** is this stupid video we're showing rocks floating you have to be an idiot to believe that this is a rock floating obviously it's tied with a string obviously because rocks don't float **debunked** easy easy this is actually just this is VFX this is VFX okay so maybe he's he's circling it with A raod to show there's no string there this is easily VFX I could do this in 20 minutes all you have to do is give me Unreal Engine and I would make this

(08:43) 100% no question they say this is what a magnet how do magnets even work what even is a magnet sounds like some Voodoo that you learn in Science school I learned all my physics in elementary and I was done no more physics after Elementary School this is fake as hell super fake they say there's a new uh new video coming out tomorrow going to be I already can tell you it's fake it hasn't even come out yet and I already know it's fake easy CGI AI can make this Sora Sora can make this in 5 seconds guys everything CGI the world is

(09:31) a simulation everything is fake escape the matrix uh just like I did then you two can have an awesome successful YouTube channel just like me some of you are probably wondering why is my why am I not centered in the screen because I have [ ] style chat I have style this this is this is what cool people do this is what cool people do yeah grock can make this even even grock even the worst AI grock could easily make this oh and you say oh you have another video oh well do you have another video yes technically there's

(10:18) another video this is also AI it's all AI this one's probably a string right it makes it look like they're pushing it with a straw but easily AI easily a string this isn't even Chinese characters guys this is just some madeup words that they put up here easily **debunked** and this this isn't even real this is just some screenshot somebody made and Photoshopped it right easy photoshop on this science isn't even real everybody you're here with the **truth** seek zor and we only bring you the

(10:57) **truth** so yes supposedly some smart people that are phds at the what's this even called American physical society that doesn't even sound real apparently tomorrow they're doing some some kind of presentation about emerging superconductors yeah it sounds like a lot of words for I'm a big dumb Dum and I can't tell CGI from reality let's let's just go ahead and

entertain it and click on [Music] this okay let's just let's read the details let's **debunk** this so that they can't say that we didn't **debunk** them

(11:47) even though we did high pressure equation of state and phase behavior of ybh nanoparticles now that's just pseudo science chat that's it's just pseudo science 12 minutes you think you can get through some pseudo science in 12 minutes impossible the time the amount of time is 12 minutes that rules it out that **debunks** it alone remember chat this is the **truth** Seekers we only seek the **truth** TR r o f **truth** what's this next part partial levitation type 2 super conductor characteristic at room temperature and atmospheric

(12:33) pressure those aren't even real words chat PCP o s s they just made up a big acronym it's got way too many letters in it crack Pottery this is crackpot science obviously it's not even full levitation partial levitation guys if it's not full levitation it's fake and if it's full levitation it's also fake who even are these scientists hun Kim hun Kim again ooh he's at the College of William and Mary oh sounds very smart Suk B Lee sunion IM Su and where are the Americans everybody now this is how you know it's

(13:30) a scop bunch of Koreans yes they're better than us at video games I'll admit it I'll admit it they're better than us at video games but they're also better than us at Super conductors pseudo science chat the only thing that can be real is what you see and that the fact that I escaped The Matrix those are the only things that can be real [Music] I don't know who Stephen is but he sounds like somebody who doesn't have good style what is the rest of this look at this you can tell it's fake by how many

(14:14) different presentations they have there like 10 15 presentations in here it's something called the American physical Society how do we even go to this you know what we might even just go to this how do we even know this is real how do we know this is real let's go to look at the button like their website's not even probably real um let's go to bulletin home uh see this is this all just looks fake this website doesn't even look [Music] real let's see oh here we go March meeting 20 24 okay so they did a good

(14:52) job faking their website okay it's pretty good job Faking It Let's if we can't go there then there's no way it can be right oh join us at the Minneapolis and online okay okay they put some work in they put some work in let's let's see how much it costs inperson view the inperson meeting experience let's even see of course it's it's going to be a grift this is going to be just a big grift where they just charge people to come in here uh where is it registration learn about the virtual

(15:26) median where is he here [Music] where do you see the how do you how do you get tickets doesn't even doesn't even seem real I'm not logging in we're not making accounts yeah this is definitely a **scam** everybody once we find out how to how to join we'll see um prepare for [Music] registration contact the register badge pick up holy smokes one day pass \$500 \$500 I can go to Tiana for this price I could get three psychic readings from grifters on UFO Twitter for this price \$900 for a virtual ticket

(16:27) \$900 less resource countries now that that sounds like someone needs to go to Dei \$1,000 for in person \$1,000 this is definitely a grift everybody 100% grift grift in you science is fake uh nothing special exists in this world uh we've already figured out everything I'm here to bring you the **truth** t r o f guys this this is why you join this is why you check me out cuz I'm just here bringing you the **truth** with uh some synth wve playing in the background you think for \$900 they'd at least give you a lost badge feet they

(17:15) least wave the Lost badge feet I mean are they going to wheel out the alien bodies here as well is Hae mous going to come out from behind the curtain and wheel out the alien nasab bodies hell for \$900 David grush better show up if David grush isn't here for \$1,245 I want a refund these grifters in the scientific Community grifting people for money it's disgusting showing them fake videos of rocks floating around talking about ambient pressure super conductivity at room [Music] temperatures it's embarrassing chat

(18:08) embarrassing I will debate anyone anyone right now bring them in here we'll debate them on the price of this we'll debate them on the science and their pseudo science and their terms of Magness will burn everybody as a witch we'll burn them all oh guys this just sorry it triggers me it triggers me and there's just people grifting off of everybody out there all the time lying to them lying to them and telling them lies don't exist \$900 you know how many laptops we could buy Shane for \$900 oh don't even get me started on Maxwell

(19:04) don't even get me started just bunch of fake equations just grifting people non-stop embarrassing everybody let's look back at this schedule let's look back at this so-called schedule so what what else do we learn in this uh physics Meetup of scientists pressure induced superc conductivity and by layer nickelate and which a bunch of letters and numbers after it probably don't mean anything I'll pass this is like \$900 for one day this is like \$100 per session you're paying \$100 per session you could

(19:49) you could get some Burger King you could have it your way you can have it your way chat you get some Burger King and some Arby's and some Arby's pressure evolution of crystal structure magnetism and electrical res resitivity in bilayer and tril layer nickelates they're just making stuff up they're just making stuff up and charging you \$900 replication and study of anomalies an lk99 lk99 is big in **debunk debunk** the alleged ambient pressure room temperature super condu yeah alleged alleged unless somebody shows it to me

(20:43) and they make sure that there's no CGI going on in front of me and then even then I need them to sign several legal statements then maybe maybe it could be real Maybe you know we might go to xace we might we might go to xace you just feeling the energy we going **debunk** everybody right now jackar fatti loves white holes that's just a true statement that is a true statement jackar fatti got a cell got a phone call from Aliens in the future and he loves white holes loves them loves them just thinks about them all the

(21:36) time this actually a true statement that's the **truth** this is the **truth** seor everybody I'll clip it I'll don't clip the [ ] out of it strain effects and super or structural correlation and Par

electric tellides half those words aren't even real chat half those aren't even words you got to sit through 12 minutes of them just making words up pseudo science easily debunked analysis on unconventional superconductivity in some woo woo woo words under high pressure versus experiment oh you did an

(22:19) experiment oh okay Mr Science Guy look unless your experiment has volcanoes with lava flowing up I'm not interested I like to see what I do I don't think I know what what is thinking thinking is ghetto I don't think I know possibility of super conductivity in try layer rutles rutles then popper nickelate under high pressure look they could have just had one this is just a repeat of the ones they already did before they could just had one presentation showed us some fake videos and then every everybody can move

(22:58) on we got 15 segments here of doing the same thing over and over I already debunked it in the first one it's already been debunked but they just keep going they keep going super conductivity induced by whole doping in the nodal line semi metal something or other magic word that they just made up look doping I know something about doping Je you inject those marijuanas you inject them you know inject as many as you want to in your bloodstream just saying just saying but I don't know about doping some magic

(23:40) materials that's the point of magic it's not real chat it's not real probing the super conductivity of kagami metal CSV SB with self field critical current look when they're talking about probing people you know it's fake aliens are fake alien invasions are fake this science is fake all these people are fake presentation's fake and they're all grifting you they probably'll probe you places you don't want to be probed that's probably what really goes on in this segment structural routes to stabilize

(24:25) super conducting blah blah blah same fake names they made up up here at ambient pressure look we live on earth I don't know what kind of pressures you have on mars or Alpha uh Zeta reticul or whatever and then drama Galaxy but on Earth we only have one pressure and yes I know that pressure changes when you go underwater let's that's a topic for another time we'll debunk that later none of this means anything this is all just pseudo science have you even written a paper chat have any of you written a scientific paper before how

(25:06) about you go write a paper and prove it to me that it's real oh you're saying there are papers those are fake too those are probably fake too oh wow it's hard to bunking stuff just takes so much energy band Gap and ramen signature look Ramen is some noodles that I eat that's what I know about Ramen okay undoped and see you doped lead phosphate appetite these are all just fancy blah blah blah I did some science stuff didn't work debunked words what I what I know is true Shan katrick would never lie to anyone in

(25:53) ever in his whole life I've never met him I just know I can tell by looking at him that he is 100% truthful person and he debunked all this stupid UFO crap anybody's talking about this UFO crap is just full of crap they're just grifters everybody these rocks that are floating are grifters too new pressure induced semic super conductor ooh sn3 S4 using original Diamond Anvil cell

what does that even mean anything look I played Dungeons and dragons okay I still play every day pretty much with my people and Diamond Anvil cell is a

(26:36) madeup weapon that's nothing that's not a real thing that's how you upgrade your armor okay look I am a level 16 Rogue okay half Goblin Rogue I know one or two things about Diamond Anil cells more than these scientists and then because it's not enough they've grifted you for two and a half hours taking your 900 hard earn dollars and then they have one more session still after that characterization and stain measurements of half hostler superconductors look we got say everything's a superconductor we got y

(27:21) ptb i l a ptbi you got sn3 S4 l a n i 07 it's all madeup [Music] words **debunking** sciences and this is that barely even calls itself science just so easy so easy guys okay let's go check out let's see what's going on in this uh space we got going on here guys we' got more people to **debunk** I have a feeling we'll find some in here oh yeah oh yeah having to State you know overreach and to be able to seize private property quote our response was how many other issues have you raised on this on you know let's see what these Dum Dums

(28:18) are saying concept of eminent domain none just this one shean told it a brief we're going to **debunk** all these guys then they had retreated and said okay well then bunch bunch of science Believers up in here you know I I don't know I can't see where he's getting this Source from but I'm assuming it's somebody pretty seriously close to the you know discuss going on about this um it definitely sounds to me like number one Mike Turner was a big part of torpedoing the uh eminent domain in subpoena power and he Mike Turner was

(28:56) echoing the same same lines right these libertarian values of um you know government overreach and oh no they're going to seize your private property goddamn liberals everybody [ ] load of [ ] oh they're going to seize your property they are weaponizing true libertarian values which again I'm not a Libertarian fan anyways but like if you believe in libertarianism these people are hijacking in a whole [ ] ideology and are using it to deny Humanity like obvious **truth** and it is it's horrifying

(29:31) no UFOs have been **debunked** I'm going to have to jump in here yeah plus real quick isn't uh Mike Turner isn't he next to like one of the biggest like air bases he's right Air Force Base and by the way Karen's here Karen told me nothing is there or she doesn't think so and I I'm now suspect of Karen that she's a federal agent sent here to throw everyone off the trail of right Patterson Air Force Base and good luck with that [ ] because no one is gonna buy that all right we have um Ashton

(30:00) Forbes here yes Ashton hello yeah sorry I go by a squared now uh I'm the **debunker** here uh first of all Mike Turner is a hero and uh there's nothing weird going on right excuse me there's nothing weird going on right patters you guys you guys are all just weirdos and UFOs have all been **debunked** I've **debunked** a lot of all right wait a minute all right I can't I hope that was [ ] Ashton doing a bit for simping for Mike Turner oh my God he'll do anything for attention he's got [ ] no love no more is it true

(30:38) that Mike Turner you'll do anything for Mike Turner's attention I cannot hear you guys you're Downing veterans right now uh it's painful to listen to wait is Mike Turner a veteran well he supports veterans is this like an AI or some [REDACTED] Bro classic Asing right there guys start talking down to Shaner Patrick next he is a scientist he know real science are you even trying are you even trying I think I think there there was an attempt to Gaslight me somewhere all right hold on Ralph's here

(31:13) Ral Ralph I was watching a video of yours recent that was rather interesting of some like glowing [REDACTED] yeah my friend and uh in Washington filmed that well it what I did is I took the video that he sent me and I cleaned it up but that was real that was that's what I call the real deal right there but uh Ashton you know if I [REDACTED] around with you a little bit don't don't get too don't get your [REDACTED] hurt okay so but I mean are you for are you for real bro or are you in here just trying to troll us that's what

(31:41) I want to know first of all you're a smart guy but you're not the smartest guy in the room I just want to let you know that the feel like we got a lot of muon people in here you guys what speak up little [REDACTED] we're not we're not big mu fun fans in here yeah what are you talking about I mean like we don't hate muon but I'm not I'm just saying like so confused CIA operation let's just call what it is let's be honest muon is some CIA stuff for sure as Aston what do you want dude

(32:14) all right but is James car I thought this was the late night spicy Sunday I'm here here to deunk some sh someone help me here who's that [REDACTED] Intel guy that's totally sus out with green Wald oh he did the [REDACTED] UF the JJ Abrams UFO documentary he's like not Toody yo [REDACTED] Bender yo Brian Bender's account oh yeah that rip R piss how do we okay I just want to say that anybody that wants to open up a sock account I'm going to give him 50 bucks it's called ashard forbidden ashard forbidden uh

(33:02) please make it a squared and make sure you get my uh style correct I only wear black on black on black and multicolored Shades you become so irrelevant we don't even know what that means bro are youen eminent domain here what Ash what where is MH370 on eminent domain mh37 those videos are so fake that's so debunked guys all right put the put the boo Steven Green Street and John Greenwald are my heroes you guys are it's you're embarrassing yourselves yeah we're embarrassing ourselves got it

(33:40) buddy at least Tara is able to pretend he's willing to debate me I'm like you're dumb ass yeah like this is not even like this is we whoa noncredible just came in with some reverse psychology I like that I like that I'll deunk the hell out of you non-credible let's do it right now what's your talk this has to Bei what incredible what is your favorite alien species right now right off top of your head first one comes to mind uh I'm playing Mass Effect I'm gonna go with sorry sorry that's not

(34:12) even real that's a video game debunked easy yeah you're right video games don't exist good job EA is just a scop guys don't worry they're not funneling your money away for black

budget programs don't worry the loot boxes are good EAS the kind of guy playing hell divers right now with heavy armor dude he's playing [REDACTED] he's playing Minecraft with bu 12year old I thought I thought he Ashen you a DOTA streamer guys video games are for nerds uh that listen to muon presentations this is a very serious very very serious

(34:50) debate why do you keep plugging why do you keep plugging Mo I gotta give him that that was pretty funny though uh video games are for nerd and people in muon I'm just GNA start insulting people like that's like for people in muon native Ashton sounds like his callbacks or sound like a guy who couldn't survive one night on the streets of any major American city no for real you sound like what's his name there that [REDACTED] Supreme gentleman who shot up all those college kids [REDACTED] oh wait minute is that that

(35:25) was he sounds exactly Ashton sounds like exactly like that kid what's his [REDACTED] name [REDACTED] all right let's go to Red he has his Elliot Roger Elliot Roger why did Red was gonna say yeah I don't know why he left Larry wa let's get spicy Larry up here Larry is said he's all late and I don't like that we're gonna yell at him for it hey everyone we're doing cosway tonight go ahead sorry red oh you're good I was gonna say just real quick I was was going to put my experience on muon but like some of the

(36:00) questions they ask you they're asking you like your like really personal information like like heads up before you even talk to somebody so I was hesitant I didn't I didn't share mine because they're asking for like your your uh your home address like all this [REDACTED] I'm like I feel like just that would be step two yeah so I don't know I just felt a little suspect about that no doubt all right we're gonna we're going to reset here spicy [REDACTED] Su day I'm GNA get to those requests don't

(36:38) worry yeah we've got UFO Chronicle podcast in the houseen estimate trying to make it AKA Jared scream Ray no smoking gezer UAP investigations Matt Josh holiday Jesus plight Kronos llama llama stolen Moon Larry get up here and fight me uh Garrett Joey Joseph we have investigation investigative Earth podcast yeah you should come up here and fight me too fight me about UFOs um ring down fire Mike I'll fight put bring up a topic Mike pick your favorite UFO topic I'll **debunk** it dude you're not getting more followers by

(37:27) coming in here and like trying to trying to be whatever the [REDACTED] you're trying to do right now it's just super awkward all right Kristen's got her hand up hey Kristen how are you welcome to the UFO leak group Sunday spicy even um Linda Thompson actually follows me on this app and she yeah mentioned that uh website is not working and that if you want to report an incident you can go to a new Force which is in letter N letter u letter f o rc.

(38:09) org and you can report any sightings that you see yeah new Fork's legit they're civilian run and they've been around a long time yeah I just wanted to share that since their website the MoveOn website is broke and um she had mentioned that on her stuff and they finally h husband pointed out today that her that they they finally removed her from all the move on junk and I was just like okay oh man I hope she has a party she's been complaining about that

for gez at least like what two years now trying to leave exactly Elon Musk fix your your your

(38:45) spaces I can't even tell talking here mama Linda I can't even tell who's talking you got investigate Earth podcast also here I've heard that the of you are also you were once an MH370 Advocate are you still on the MH370 train man you know what uh you know well actually we were the first podcast that brought Ashton on actually no P of time UFO spaces you're gonna have to take that up with him is it really you think it's UFO spaces Ashton what do you what what do you say about the UFO spaces

(39:24) claim that I that wasu shame your has been **debunked** that has been **debunked** everybody **truth** is why you let that go on check dude epic all right so here here's my question guys so you asked me the question about MH370 what is y'all's thoughts on ms37 before I can respond y it's a pie of disinformation probably originating from a government yeah okay y probably dis not credible I'm agreeing completely with so so what is y'all's thoughts on UFOs in general I I just got to get to read on the room before I all right I

(40:06) think they're real and the government many governments including the United States one probably have recovered quite a few of them I got you so you so so is is your is your stance on MH370 is it the stance of you think it is an actual disinformation campaign against UFOs or do you just think it's just **[REDACTED]** in general I think it's um so my take and and I'll go to non-credible after because I think he's he's got a pretty nuanced take on this too so my take is that the intelligence Community will try

(40:43) to convince um enemies and allies alike of **[REDACTED]** all the time um and they will use current events and they will create really sophisticated and convincing pieces of misinformation around them and feed it to people right and it's just I mean literally it's just to **[REDACTED]** just make misinformation and uh sometimes it's to find out if people are leaking things so that's that's my take let me go to non-credible and then we'll go to um Ashton I will definitely say uh the official story where it might be one of

(41:21) the less questionable of the 10 or so like narratives that have been put forward I mean I know even Ashton covered it there were a bunch of conspiracy theories about that thing you know there was a lot of just disruption and interference plays seemingly going on like something happened to that plane like clearly like governments with the right capability probably would know what happened just as much as they knew what happened to that sub and it was created as a piece of disinformation for probably more than one reason but

(41:47) generally just to muddy the waters around the event and then clearly it was recycled and turned into a new intelligence product around the time time of the hearings and it's been sort of an underlying social engineering of the UFO Community it's also been recycled again uh for instance by our foreign adversaries in **Russia** I mean I've seen **Russian** like bot networks latching on to like very uh the more speculative parts of Ashton's story um and yeah it's just networks you know it it they they did it good enough

(42:21) they could reuse it and they organically introduced it like to the internet well enough which person was talking I can't even yeah all right let's go to Ashton guys obviously it was a suicidal pilot that guy goes I just want to say I think it's a lot less Nuance than that I think uh some guy made a fake video uh put it online and then took his countdown and Ashton's a [REDACTED] [REDACTED] inel saw saw something that he could exploit and The Mask thing didn't pan out uh like anything else so here he is smart

(42:56) narratives very smart person was that was that the milk farts or was that some other idiot which one was that one the one without the orbs face real quick which idiot was that one that was talking just a second I can't tell they're all so stupid which one was that you you Dr which ID was that was that that the milk farts [REDACTED] okay got it yeah so obviously you don't watch enough cable news otherwise you would know there was obviously a suicidal pilot scenario watch cable news and whoa easy there boss let me talk and obviously

(43:24) this was a scop to distract it was obviously disinformation to distract from everything that was super important that was going on in the UFO Community for the last 6 months it was actually to make the UFO Community look bad obviously because this community is a sterling Sparkle of just great information and getting stuff done in general you're just upset no one likes you whoa your conspiracy theories hurt the families and I think it's just a little offensive that you guys bring all these conspiracy theories up about what

(43:55) Russia might have done with the thing or whatever obviously it was video game bfx if you couldn't tell that within the first 10 seconds then obviously how many are right now you again you've obviously watched a little too much CNN anyway that's my rhetoric how how many how many how many uh how many martinis deep are you all right sorry I only talk to people that have uh double or triple digit IQ that's what I thought 117 by the way what does that even mean I think this guy's everybody we need to put some

(44:27) respect on his name hey guys so listen so you think I would pay 50 bucks to get approved by some [REDACTED] inell organization you of course of course you know exactly how much it costs you looked into it no it's probably like \$300 I remember hearing a radio advertised for advertisement for it in like 99 though hey guys listen listen let me respond real quick um here's the thing so you your guys's narrative is is that Ashton and MH370 is hurting the UF F Community I think ashon every person he encounters all right

(45:01) wait let's let him get it out now yeah listen The Narrative is though is that you're saying that Ashton and that whole deal is somehow a government sop or some [REDACTED] youthful idiot well listen you're you're making no sense because what Ashton is actually going going against is is the government which is saying that they have advanced Tech that are hiding from people oh my y'all's argument is [REDACTED] wow can I respond to that um shut up Ashton how obviously aliens can get here they don't need to go faster than the

(45:36) speed of light you can literally just walk from Alpha centuri and they could get here in like a few minutes so obviously we don't need any faster than light travel for aliens to be here

they get on the bus like like milk farts does and pay a dollar and take the bus over to his mom's place yeah guys I mean guys you do realiz you are you guys are the toxicity in the UFO Community right like most hey dude you know that Ashton said that a woman who had been sexually assaulted wasn't attractive enough for

(46:06) someone to rape you do know that right and he said I was liing when I was he talking was he talking specifically about you when he said that he no he's talking about a girl and I'm not going to repeat her name but I could show you the post if you'd like was that supposed to be a joke by the way it was it was funny into histor then I'll just racist you're an in too yeah shut the [REDACTED] up S Queen is here listen I'm I'm just trying to get to the bottom of like why you guys think why why why do you hate Ashen

(46:35) so much because he's actually done [REDACTED] tons more research what are you talking about he's I hated him he wouldn't be here loves me we've gotten together it's only the milk farts and the whatever credible loser guys and whatever the other morons that don't like me cuz I debunk their their stupid Lando stuff that's the reason Ashton Ashton Ashton what are your ties to Malaysia and Singapore by the way oh I'm a I'm a foreign agent of the Singapore government um I mean what are

(47:07) you talking about idiot Jesus Christ Russian government oh my God it's spicy you already made me use the mute button wait a minute going to Disaster Recovery King King I love that Luigi had hey are you are you guys government employees I'm just curious no Ashton's family's evolved Disaster Recovery out there oh we lost scop there you go Queen be left thank you Aston you want to elaborate part you're G I'm gonna put you down now because you just made me lose somebody I really wanted to hear

(47:39) from because you just wanted to get your shots in on a right there ruin my space make sure you go back to your mom's your mom's car milk farts go get your go get your juice box and go to sleep buddy go get your juice box and go to sleep I am enjoying this like plural that he is throwing on the end of your name can someone just explain to me like what is y'all's actual official take on you no one ever has just one nobody in this space has a job Chad let's just be honest with each other [REDACTED]

(48:09) you what and are hey by the way are you guys vaccinated sh's laughing at [REDACTED] you maybe oh my god dude yeah maybe I have I have a number of vaccinations actually oh [REDACTED] which ones are they if you don't mind me asking you like to all right so um I think I have my flu shot I got my flu shot this year good job and yeah I have a bunch oh [REDACTED] like t dap P yeah Tdap right Joyce [REDACTED] run me through all my [REDACTED] I have to do all these things hey he tbing the fu all those shots and [REDACTED] is like a full tness I do

(49:02) have all right sa Queen is back shut the [REDACTED] up all right sa Queen welcome Ashton in a desperate grasp for relevancy is now casting his net wider into other paranormal Realms hoping to snag unwary followers with the Allure of mystery despite the MH370 h tirelessly parades being debunked time and again Ashton continues to lash out in a series of petulent almost

drunken TI raids reminiscent of a child when caught in a lie this Behavior might stem from his earlier failures notably as a League of Legends streamer where he similarly

(49:45) struggled to leave a mark perhaps 40 and streaming a child's game was not the best career path now as a wandering the fringes of the Paranormal Community Ashton's attempts to drive engagement through deception only highlight his incapacity to contribute anything of real value instead cementing his legacy as a cautionary tale of What Not to become in the Quest for understanding the unknown he is the definition of a useful idiot get [redacted] ass clown ah that's got to be the gayest thing I've ever heard that was great that was uh

(50:30) you guys write fiction for those kind of skills for surreal Content what's with the homophobia over there investigate Earth come on man I mean I mean come on it's not homophobia it's just gay it's true it was pretty gay are you even suburban and like under the age of 21 like those kind of jokes first black and I am a [redacted] and I'm gay those jokes only work if you like get the stuff correct the the sad part about a lot of the [redacted] that you guys put in here is like you don't even get the

(50:59) narratives correct like you're so desperate to dig around in my dirt on my history that little narck is it half this [redacted] this person just said at this AI produced thing you spent so much time to make about me correct or League of Legends what game did you play as a failed streamer it was a MOA [redacted] ashton what what narrative do we have wrong that you've got right exactly he's such a hypocritical person just about every single thing that you guys say basically I mean this is why like I can tell you guys have never had a job

(51:32) before right like in your whole lives you're wrong the real narrative is that I was the orb the whole time Ashton oh let it all out let all your impotent rage out I want to I want to absorb it come on what else you got come on milk farts what else you got milk farts I bet you do buddy go ahead what what do you got in your mom's basement we know you live in your mom's basement Chad your friend over here he's he's actually getting upset he came in here to troll he's getting actually pissed Ashton is Chad your

(52:04) friend friend yeah I'd say Chad is my friend we uh debunk all the stupid UFO stuff all day long so the two guys with the names Ashton and Chad are calling things gay I find that kind of funny first of all my account is not called joke I never called anyone gay number two do you guys actually give a [redacted] about UFOs or are you just in the UFO Community just to talk [redacted] about that's a good question I wouldn't have spent five months of my life on MH370 trying to figure out what the [redacted] was actually

(52:38) going on if it didn't [redacted] matter to me what was the point of that [Applause] statement get [redacted] ass clown all right let's go to d i I just want to know if Ashton did you hear what Ashton orbs said and if you didn't can you repeat that Ashton orbs and I want to hear what Ashton says the real Ashton ass clown which part oh my God don't [redacted] this up man what you said about the truth about the orb guys this is the TRU sec I was the orb the entire time that's the truth what do you think must have

(53:23) been pretty dizzy I don't have a good oneliner good statement you never did yeah I just thought it was funny so I wanted to highlight it thank you the fact that someone else's named Ashton in here just shows you that you guys are so you're sumps for Ashton what he's dealing with inves this is a fan account and Ashton blocked me whoa of Ashton but yeah okay cool this is like my fourth par account that Joseph's made about us here what can't have an orb for head and like that be some sort of yeah get banned for doing

(54:03) it if you buy followers what do you what is so offensive about the yeah why does that bother you buddy do I not have enough followers for you Ashton why is your why do your such a thin skinn little [REDACTED] Aston for real yeah that's what I am yeah I said why are you which one up queen I'm so happy you're back listen listen can can any can any of you say any intelligent can you anything intelligent one thing this guy sucks this podcast yeah get get rid of this uh get rid of this uh dick no no my God he's asking

(54:40) you to say something intelligent you better get rid of him quick the smartest person in the room clearly and we need why do you want to get rid of me because I say you're you're ship's not cool censorship not this guy clearly believed in mh3 what's your Ashton what is your family doing in uh dis stance on Aliens he asked us what our stance was and then like tried to clown everybody for for what I'll tell stop talking so much for then go for more sound effects though those were pretty good hey well

(55:16) if if someone will not interrupt me I'll tell my stance on Aliens and then I want you you guys stance on Aliens okay is that cool no we're asking you okay so here's my stens we've done a podcast for seven years we have highly investig we've done a lot of stuff we believe that there is potentially a spiritual connection alongside a actual physical connection of aliens whether it be interdimensional or reverse engine technology which is what Ashton has went into with m370 so all I was asking you guys was

(55:46) what is your stance on UFOs uaps and give me some type of intelligent response stupid [REDACTED] in what I'm listening to for the past 20 minutes minutes that's all I'm asking give me one thing intelligent that you think about UFOs uaps or reverse engineering all all right question is uh is is graphic design your passion as well well actually I am in marketing graphic design but go ahead okay all right so we're gonna guys let's keep this under a minute answers and uh we'll start with wuang we'll go

(56:20) to Red and then anybody else who wants to answer their stance on UFOs for Miss uh investigate Earth pod podcast all right so the question is what is my stance on UFOs pretty much okay so pretty much I think that they are interdimensional and pop in and out of uh I guess our Dimension whenever they please because a lot of the times you'll see disappear and reappear keep character but there's also physical aspect where you have abductees you have uh residual I guess things that they leave behind like you see rings on

(57:02) the ground or imp imprints of the landing gear stuff like that who's next all right go red and then non-credible yeah I was say I pretty much agree with all that um I I think we're dealing

with multiple facets so uh species that are living within our universe interdimensional as well and um also wanted interdimensional on the and already multiple people that are I know why you still act like it was anything close to being real it's literally bendy bmk someone's already reproduced it and then secondly I don't

(57:40) know who this investigation earth guy is but you came in here and I think that was you saying like something's gay something's gay and then you asked about someone's vaccines what are what do those things have to do with UAP or UFO you came in here trolling they're trying they're just trying to because they're big they're just figure out if you listen to what the government tells you right or if you can think for yourself because you shouldn't listen to doctors or like infection experts [REDACTED]

(58:03) [REDACTED] only benchmarks right those are the only benchmarks that exist you're not that smart buddy I mean you're not smart I don't have 117 what's that out of like 200 sorry my iq's that yours boss um milk part didn't drop out of if I can address the red red octopus uh person as well here now um everything in UFO Aly has been deun address everything out there has been **debunk** all right well then why are you here so so the point obviously is that think Ashton Ashton why are you kid can you stop talking for a second little

(58:42) child little buddy little buddy I understand just repeating back what I say isn't a smart move little buddy just stop talking listen clown listen ask clown no why are you here no he's not he's not he's not B good one this is why it's hard to talk to children but in in all seriousness if you're talking about the phenomenon everything out there has been **debunked** so what you choose to believe in is yours if you think there's extra dimensional aliens visiting us that's been **debunked** a million times

(59:09) over honestly it's stupid but if you if you believe in it then you can believe in it right and if you believe in that kind of stuff then you should have no problem believing that we can teleport a plane because how else do you think that's possible that is a [REDACTED] huge leap literally uses an extra how do you think do youens aliens get to us I believe I believe more in aliens in UAP and I told ashon this on the podcast I believe more in Aliens and interdimensional beings than I do in my street 70 I want to say

(59:40) that clearly but here's the thing about Ms 370 um I think it's actually more realistic because if you actually know what our US government and the weapons and advanced Tech that we have I mean I know you're I know you're doing the thing I'm just saying guys have you ever researched the actual technology that the United States government has what the [REDACTED] what do you mean like why do you just run around assuming no one else has looked into like technology before because you because you guys

(1:00:14) REM like have you guys heard of the Tic Tac salvator PES the information agent all right I can't I'm sorry that you guys can't accept that it's not my fault I thought you loved science though and scientists but now you don't when it's Salvador Pas I mean how is it scient mean I love every scientist [REDACTED] what me neither how is it scientific to have like by the way I was joking

about the extradimensional thing I don't mind that it was the point of that was to show that like if you're

(1:00:49) somebody that like believes in a bunch of esoteric stuff you probably shouldn't be putting down to other people that actually believe in real science can we do a PO can we do airplanes is the real science could be but in the brought up it's been a poll real quick guys are a little over the top with the uh yes you would make good radio host that's for sure [REDACTED] [Music] Jo do not bring him up again can we can we do can we do a PO can we do we do a poll can we do a poll real quick holy [REDACTED] holy [REDACTED] yes I'm oh my God I'm holy [REDACTED] you

(1:01:50) guys love me it's great oh my God it took me you guys think about me you go to sleep before you guys have sex at night I think they do I feel likeing Warfare holy [REDACTED] you when I think about sopus and no keep going when I think about people who can be easily ConEd yeah I'm looking at a bunch hey guys what grade are y'all in by the way yeah I don't know if these guys ever graduated I told you I dropped CH chat take screenshots chat chat take screenshots I'm going to put the password in the

(1:02:33) chat hey my wife is a first grade teacher if any of y'all need tutoring oh wow you hear that Ashton yeah he's being honest you guys should take him up on that some how many we got like four soundboards in here wow no there's like 18 million soundboards these people can't communicate with normal it's like they're so socially awkward like they just communicate with soundboards all right all right stop with soundboards all right whoever is [REDACTED] y'all are just I'm gonna start setting people down for

(1:03:16) soundboards can we have a serious conversation for no no is that is that not more soundboards Mike I will bump you down [REDACTED] she is in charge she's not kidding I'm gonna make sure Hey listen I'm gonna make sure I talk about the space on our podcast just to show people how [REDACTED] [REDACTED] you guys are n i don't even give them the benefit it's better people you don't know how to have a good time bch slapped you in the face for salami now would you oh you got us good well I'm going to

(1:04:01) talk about how you were on our late group space and had such a great time but you're lying on your podcast about it we've never talked about you by the way well didn't you just say you were gonna no I'm saying I'm saying that we're I'm not having a good time by the way actually I I just I'm here actually but I'm just here I think you're having a good time and you just don't want to admit it I don't think almost like an obligation that's why you're here it

(1:04:32) almost it definitely seems like an obligation whether it's a social one or not I mean who knows bring milk back up it was more fun it's not an obligation I I just I just happened to come in here because I saw Ashton was in a space and I came in here and I was like and I saw king milk fart because I know he's talked a lot of [REDACTED] about Ashton I think some some of the other ones so I was just CU part got mental problems but that's you know that's the whole thing oh boy all right what we got going on

(1:04:56) here welcome home honey I'm glad to see you well listen listen red octopus I'm watching you listen I will leave I will leave after this question I I have a no you're gonna leave now because you're [REDACTED] annoying [Laughter] bye that was censorship Joyce you're communist B Joy face she's got that big disclosure and going hard tonight let's go to some hands yeah that guy was so annoying thank you hold s Queen has her hand up wait no Rez is re is new to the space let's go to re s Queen and then

(1:05:43) wuang yeah you kicked him I wanted to ask a guy that's been doing this for seven years while a room full of UFO people have never heard of him but he got kicked you got apology just little and then Ashley this guy all he's got to say is you're a reditor it's true though right you are redditors right all of you pretty pretty much no I got I guarantee that every single person the speaker panel is a reditor primor [REDACTED] no you goddamn virgin Reddit is our whole demographic though no Ashton Forbes is a literal

(1:06:24) milk question serious question godamn can I ask milk farts a question or no you should just like ask you when you have the chance yeah so is it true that when your girlfriend broke up with you you got so angry that you flipped tables and got arrested is that a true story ass clown for favor is it a true story most Parts most Parts what's the answer buddy City USA population no farts no farts did you flip over tables and get arrested cuz you got broke up by your girlfriend just let us know is that a yes is that is that silence a yes no

(1:07:08) have you ever had a girlfriend is does that say yes or no milk farts whoa have you ever had a girlfriend Ashton have I ever had a girlfriend no guys I've never had a girlfriend now milk farts what's the answer I answered three times so that's a no [REDACTED] [REDACTED] so you didn't go I I must have missed hers thanks yeah sorry this is hard Tru what somber truths he's so upset dude that silence guys that was the H as I hope when you got to go I hope when you go got to get get a mix you don't drive

(1:07:53) okay all right yeah these are meant unable it's kind of fun it is no coincidence that a noname podcast which as no notable contributions to the field besides random right-wing Q andon cheerleading has latched onto Ashton's grift this circle jerk of failed grifters will only continue to grow like a tumor discovered during a colonoscopy in a climate where misinformation and psychological warfare these people are so insane they're like completely obsessed me hilarious dude this is good can you imagine spending so much energy

(1:08:33) on somebody capiz on you guys imagine spending so much energy on somebody that you sky is being found you missed out our whole Steve m1c sketch up model with fly the repeating frames and key framing issues frames CG Aston continues toch yeah I had the the going on you miss it for like the first an and understanding of these specific elements Expos the fallacies in his narrative in this tangled web of misinformation one need only this done yet or is this still going 41 sh holy [REDACTED] leg you guys have time to uh hear

(1:09:23) the benefits he 41 he's trying to be an LOL [Music] streamer perhaps he told us about U I love how they think that I was trying to play play League of Legends and I'm 41 oh everything

makes so much sense now I guess I'll just say for the record that's not true but uh go ahead if you want it's absolutely true yeah we got more then when he failed at that like he would have been like 38 or 39 we give the technicality Ashton tell us about your uh your family's Disaster Recovery efforts good one no I'm serious do it t

(1:10:06) wait a minute KF we got it's the woo tang anyone wants to know just DM me no just DM me I'll let you I'll let I'll let you know after tell me about how many times you got arrested I'll be happy to zero times I find that hard to believe let me my little speling Ashton you said something about if you believe in I guess interdimensional craft or them being able to reappear elsewhere then the MH370 Cas said you've been pitching should make sense and it's not that I have an closed mind to the situation

(1:10:43) it's that the facts of the matter are that visual effects artists have a recreated it and B found the exact effect the Pyromania effect and it lined up perfectly including the dot at 2:00 yeah so those aren't facts first of all they didn't recreate it nobody's recreated it as a statement of fact and that's we've seen it yes and they're dog [REDACTED] and they don't match and I can tell the wrong one within 5 seconds so obviously doesn't match the stupid power Mania VFX also does not match Ashton please it's not

(1:11:15) even the right color man your Intel is so bad that you keep asking me how many times I've been arrested kid stop talking I don't who a criminal record little kid I don't know who you are and go to sleep take go take a nap I don't care I'm just answering the question I was addressed you can go back to sleep talk to your mom and have her give you a little good night sleep KF that's not exactly true you have a warrant out with the NASA police that okay pending that NASA police warrant I have never been

(1:11:47) arrested so whoever gave you uh hey just look into king milk fart's criminal record they [REDACTED] you over because they gave you bad Intel look kid I don't care about you I understand yes you do because you you spent 20 minutes on your last stop having a meltdown explaining to your viewers how Lou Alando must have that's the only thing I want for you just please go talk to a psychiatrist please that's the only I want for you I don't listen to anything you say now just be clear go talk to a psychiatrist

(1:12:20) I'm going to address the wuang guy um wuang guy some elence wipes my criminal record wait a minute KF we're we're KF you have mental problems and you are obsessed with people and like the weird [REDACTED] you do where you like look into them and stuff is like psych psychotic and sociopathic and you need to seek mental help and I'm not saying this as a joke like you literally need to talk to a therapist like and you also just need to get offline and you need to just go outside and like live in the real world

(1:12:52) reclaiming my [REDACTED] time yeah thank you all right wait a minute now Ashton I have known king milk fart for a long time but he has not run around thinking this MH370 video is real and then like threaten yeah essentially threatened to expose people in DMS if they didn't you know stop saying that this like visual effect was something they saw way back in the day so

despite whatever you know kmf uh may be he's not that and that is a little embarrassing all right no that's very embarrassing let's be

(1:13:30) perfectly honest that I saw that happen but I just want to say I think there is a difference I'm going to non-credible I just want to say simply just like practically everything Ashton says to varying degrees outside of mundane obvious realities he speaks from a place of arrogance and ignorance and he [ ] sucks but I'm glad he's here because he's um he's actually you know really I do give him credit for coming to the uh did crash crashed okay we're going back we're going oh you think we're done with this

(1:14:22) we're not done although we are probably going to drop in a little bit here I'm GNA go to sleep I'm tired been a long day yeah a lot of these guys are basically just want to be bullies that got picked on in school all the time and now they're like getting it out on other people like Bernie you you nailed it like that's exactly what most of these guys are it's honestly like funny but it's also sad because the sad part is like they're not funny at all and they're just like hateful people and

(1:14:49) they they cling to each other as well because they're so sad and their lives suck so much we like they have to like reinforce them each other um it's it's pretty pathetic but I do like trolling them it's it is kind of fun yeah no Ashton's a hypocritical little [ ] oh I think we lost him all right well Ashton left yo I just wanted to say no one should be calling anyone's jobs ever on here like that is psycho that's crazy um don't do that yep he he imp Panda did it to me as well I did what well Panda wants you

(1:15:41) arrested apparently for the crime of getting under my skin no for the crime of uh dma because that's what he says whenever you ask him what crime Monro here all right Monroe has his hand is here like a polite Southern belt go ahead I got I got I got to go of diarrhea so I'm not I won't talk for another like 15 minutes be right back I just had a question for Ashton and I I just well he gone littleit but but um I know he made the point about macro scale phase conjugation but I don't [ ] he didn't

(1:16:22) even say it right reviews that was his point that he was trying to make about like uh you know the three orbs and phase conjugation the patents and stuff still here oh I know he is uh but the thing is I think that with the MH370 video like the visual effects and stuff like they've already disproved that he focused on the this is the this is the IQ of these guys they already disproved that I saw it on Reddit he would have a drooling on myself but whenever he uh mixes it with the MH370 it loses a lot of people oh

(1:17:03) no and also he's a lot of people because he's saying he's focusing on the science understand just [ ] and [ ] dick they're so upset dude this guy does so many drugs it's just I'm aston's orbs and uh I I just want to say that he he he cares about me at the end of the day and I appreciate that hold on I need one other co-host so I can bring up I can bring Ashton back up here get another co-host in there one other co-host oh I got them all blocked though I can drop no that's all right TJ I

(1:17:40) don't think you were listening I didn't say I needed someone to drop want to wrestle yeah who wants to be my get wrestling your hand the problem is like half these people have me blocked so won't be able to speak are we up can't hear anything all right the CIA operations going well now we got our man on the inside we're in I'm back up chat sorry it was uh I got booted out this app I'm using broke did you hear my question about kmf why it's okay to go into his past but then it's bad when he

(1:18:16) does it is that who's who's the hypocrite there I'm confused me or him I'm pretty sure it's you yeah I think your logic's a little off try again also for the record I never called his job or whatever [REDACTED] I but I'm pretty sure I've heard that he works for his mom though which makes sense there's no way this guy's getting a job with anybody else it's not related to him so you have looked into him such a class of statement you've obviously never been a part of the working class action you

(1:18:44) don't know how the might be the only one on the speaker panel who actually has a real job but no keep going he su the working class keep going though who was that was that the non-credible [REDACTED] or was that one of these other idiots I'm definitely not a [REDACTED] and um how much smoke today uh it's my day off after uh working eight out of nine days I'm a real work man how much did you drink today eight out of nine days you guys no I'm asking Ashton how much did you drink uh I had one drink are we okay

(1:19:18) or you want to call the uh the binge drinking police on me how much have you smoked fun please on me Mike it was a big drink yeah I'm going to call L reviews right now why get get L reviews in here oh who was that talking about macros phase conjugation so what was the the problem I had you had with it is it oh I I mixed I mixed the MH370 stuff if I didn't talk about that you would like me but because I talk about MH370 you don't is that what about it what can you hear me yes we can hear you go ahead okay so uh I

(1:19:52) I'm saying that you know you you've got great science like a lot of things that people don't know about like you know you could talk about plas yeah this is low hanging fruit I'm just I'm just going off guys like bouncing signals off the osphere and stuff but sometimes with the MH370 your uh your message get falls on deaf ears because it does fall it's been like that that video effects like most of the people that I've I look up to in in the field of like uh graphic arts um like they they you mean the corridor

(1:20:34) crew huh you mean the corridor crew just say who you mean I'm not going to say names I'm I'm not one of those but that's who **debunked** is so that's who you're talking lots of people it's not just one person pretty just them he's trying to be cool with you Ashton you dick like what's wrong with you also M West keep going dude you definitely have antisocial personality disorder Ashton in this in this okay girls calm down I'm just saying that that you've got good some

(1:21:04) good science in there but I think that the the uh where you're tying it in with the MH370 I think that uh good feedback it's hard to prove that and in science like we we oh they

def talk about ontological versus epistemological and you know how we determine the nature of reality and what is true but um with some of your science it's it's like I think Miss Penny or uh I forgot her name her the other day she she made a good point about your stuff is that you got great science out there stuff that would is

(1:21:50) like Star Trek type stuff that most people don't understand and could learn from but the MH370 narrative I mean to me it's dead in the water personally and I mean thank you for your opinion I appreciate it well it's just it's just my opinion everybody's got theirs but I'm just saying that the science yeah but yours is from Texas Matt and so so imagine if somebody took something we got NASA Johnson spacing we and they want a whole thing about I like what you do but this fact you're like

(1:22:23) Catholic it just it bugs me or the fact that you're trans it bugs me or the fact that you do this particular Behavior bugs me or the fact that you're vaccinated all of our buttholes look the same dude you're a [REDACTED] idiot imagine if you just work [REDACTED] or if you just kept your opinions to yourself about stuff that had nothing to do with you right especially when you're in a community where you believe all kinds of esoteric stuff right like you does it how does it feel to have an entire

(1:22:49) spaces where every single person here just an [REDACTED] you gotta you gotta let him like get his his SK outs you got to grow up a little bit man you're such a little kid you're like you're like you're like a 35y old going on like 11 God damn it it's just it's so embarrassing for you all the time so uncreative so uninventive I mean come on man you can't you You' done it like 40 times this is the people that have four sound boards that are they're telling me I'm uncreative you guys are such losers you

(1:23:22) walk people they don't have a job bro and I'm pretty sure maybe only like one or two people somebody questions you you say you're a redditor bro like five [REDACTED] times to me and then you blocked me like a [REDACTED] that's we finally get to the truth of it he blocked me guys guys he blocked me on social media because I was acting like a [REDACTED] he obviously he cares obviously he cares we would never bring it up I don't bring up the people that blocked me because I don't give a [REDACTED] about any of you you said

(1:23:50) nobody has anything to say I said that you said [REDACTED] you read it five times and then blocked me and I didn't so you guys can we just focus on the things we all have in common like how similarly all of our buttholes look I love how you guys just like all affirm each other too when you're just like huge losers and it just comes to a situation where like you come to these spes so that you can make yourselves like feel smart about one another yeah Matt's not a loser it's just embarrassing like do you guys did you

(1:24:17) serve in the military what is wrong with you guys why are you calling me a Los you piece of garbage did you ever serve in the military that's straightforward question do we have any serious people in this space or I'm serious TJ is a very serious person Matt is very serious that is true too but I want to make sure people know TJ is a very serious person ESP TJ the guy

who got a ripped piece of clo over his face driving his car by himself to go collect WWE figurines that's the serious person oh now we

(1:24:55) wrestling what's more serious than hobbies are bad guys hobbies are just aw the difference between you guys and me is when I say something it's true when you guys say something it's all [ ] and that's the that's the difference between us the metric for that when have you proved anything that you've said about MH370 is true when people constantly rebut maybe when I found the leaker who the person that saw the cockpit from 4,000 feet away no talking about the person that was in being in

(1:25:23) the person that went to prison over potentially leaking real videos when did you guys find the even know hold on let me answer let me ask one question and then you can ask her when did you find the leaker when you supposedly proved it was fake oh you didn't you didn't find a leaker cuz there isn't one you IDI to say that it's fake you don't need a leaker of course you don't because you guys don't know what proof is you don't even know differ opinion and a fact circumstantial proof know what proof is

(1:25:46) and so is uh finding the guy that leaked the videos God you guys are such idiots in fact in fact if you can't tell us who the leaker is right off the bat there's no reason Edward C Lyn done can you find out who the person who maybe the hoer is dead maybe they're a Bitcoin billionaire not bring you on yeah what happened with Rogan buddy I went through all that I already said it all you can you not make any of it wasn't there more to does Joe Rog I think Joe Rogan I remember when you guys all thought that

(1:26:22) I was Ling about it like you always think I lie about stuff and then I just Hammer you down with the truth over and over and over again I'm not saying you're lying about the Joe Rogan thing I'm saying Joe Rogan definitely bailed okay and I think he bailed because it was abundantly clear that this video was fake now I hope that you guys think that for the rest of your lives I really don't care at all what I would say is if it turns out that that video ends up being real well then I hope you think a

(1:26:51) lot a lot about this convers now from now whatever I want you to sit there thinking in your mom's basement oh [ ] I am an idiot in your mom's basement hey besides the plane thing what are you going to do here just whatever I want man like what I don't know we'll find out maybe I'll just join you guys because you got hang out with us hoax bro a plane hoax is all you got hold on we got Stone here Aston have you ever served in the military let me let me ask let me respond real quick to that

(1:27:25) cuz somebody says this is the only thing you've ever done so what have any of you ever done for the UFO Community ever what have you ever pushed forward in any respect related to UFO disclosure I damn sure haven't pushed a hoax for a [ ] I saw the double murder last week by myself any of you anybody anyone anyone wait a minute just anyone anyone on the speaker panel shut up then I will tell you I you Joyce and I used to run a Blog where we used to let experiencers like creatively tell their stories with like pictures I used to

(1:27:56) have like all sorts of wild [redacted] up there uh until uh I think like Jeremy mcgaw's friends tried hacking it or some [redacted] well you know what and I appreciate you Mike this is why I follow you and your wife because you actually try to help people out right now does that actually prove anything no of course not right but at least it tries to help people out they're looking for answers out there right and it's something that builds things up as opposed to trying to tear people down all the time that's

(1:28:19) what I think this community should be about right but you got a lot of people in here that don't ever do any of that bus one of yours too busy you ever watched one of your own live streams dude yes I understand what having fun is when I like to do that as well but when I do it it's generally lighthearted when you do it it's like some kind of weird I'm G to dox you and ruin your life kind of vibe which is like what about that female scientist you're destroying on your literally called people's jobs dude

(1:28:47) and they've testified about it publicly testified about it publicly yes my yes please she publicly stated how you called her place of work to try to [redacted] get her fired dude because she was defaming me so I called her work up and told her what they were doing [redacted] yes I she was defaming me like you do which you shouldn't do was defaming mh3 she was defaming me personally the only reason why you even know that it was me is because she told you she was defaming me like you do was defaming mh3 you idiot not you

(1:29:25) [redacted] psychopath the only reason why you even all right I gave Ashton a **timeout** because okay I guess we're done with that well that was fun okay guys yeah well we trolled them a little bit and we gotten a little bit of verbal altercation with the milk farts and the other douchebags but on on a positive note tomorrow we are going to go through the findings of this super conductivity thing right and the super conductivity thing is potentially going to have a real video of actual superc conductivity similar to the ones that we've already

(1:30:08) posted which I will show once again um none of those people in that space even know what science even means um setting up a Blog for influencers is not pushing the conversation forward I just wanted to be nice to Mike um but yeah yeah I mean yeah that's that's the Mad Drama Oh well they they took me down from speaker so we're just going to we're going to leave that we got in what we needed to get in on there there's not going to be any uh more uh nothing productive was happening from that I'm looking for the other super

(1:30:43) conductivity video so we're hoping for another video like this sorry guys I just felt like trolling tonight didn't really feel feel like digging into uh the real deal tonight uh I don't know just had a long weekend felt like doing something else yeah they can talk about me I like to be in their heads all the time right uh so I want to remind them every once in a while that I'm still here and so that they don't forget about me uh and yeah it's uh yeah I mean you can see how obsessed they are with me right it's

(1:31:15) like really obsessed like wow I mean I didn't even the first thing they talk whenever I go there instantly everything is the whole conversation is about me right like wow impressive

stuff man impressive [Music] stuff I'm glad you guys enjoyed that tonight I'm going to go get some sleep I'm going to catch up I'm going to go I've got work tomorrow and then after that tomorrow we are going to jump in and we're going to get a catch up on what the super cond uh super conductivity uh American physical

(1:31:51) Society uh presentations show us and then I'm also going to finish up the last few pieces that I've been pushing off forever about MH370 we'll probably get a lot of stupid comments like Oh I thought you already retired I thought you retired yet nope we got how many more days left let me look at the calendar five more days till the retirement I am trying to plan on something kind of cool for Friday and then that will be the end of MH370 investigation like I said I do have a couple podcasts that look like they're going to

(1:32:25) happen after that but not many so I'm trying to cut back from that as well I would like to make lk99 but I don't think we're going to need to I think the science is going to come out anyway guys so we'll be good on that I think that tomorrow will be the big day here in terms of what you guys see um you know the you can see the presentations that I was just showing before and you can see that this is no joke obviously I was joking about it in the beginning guys um what time's the pii show UFO Shane's going to be there

(1:32:58) that's funny um no that that would be interesting uh but I have another I have another podcast tomorrow as well that I actually have to do so um so yeah anyway I'm going to finish these last few pieces that I've got going on uh about the debris is going to be the first one where is it where are they oh here they are the debris the imats and then I there's something special I'm trying to piece together for the uh the anniversary I'm going to try to put together a little video I don't

(1:33:29) know if this going to be my first foray into video uh editing so we'll see how it goes anyway guys um can we schedule Friday ahead of time so we don't miss it not sure anyway thanks guys for being here on the troll effort if anyone got offended I apologize uh I'm just trying to have some light-hearted fun at people when you get in some of those spaces with some of the trolls though it gets a little nasty uh so I'm not making a habit out of that but I just felt like it would be a fun little thing for tonight anyway guys

(1:33:57) have a great night and we will talk tomorrow get ready for super conductivity get ready for more uh investigation and then uh for the anniversary on Friday guys good night everybody peace
